GENTLEMEN,—Though it is possible, it may not yet have occurred to you, the public in general pretty clearly perceive that the time is not far distant when the Manchester and Leeds, and Manchester and Liverpool Railway Companies must be united—consolidated into one great and powerful Company—whereby an entire batch of Directors, Engineers, Managers, Secretaries, clerks, drivers, stokers, policemen, and the hundred other hangers-on and consumers of the means of railway concerns, will be rendered entirely useless, and so may be dispensed with, to the vastly more economical and efficient working of the great railway thoroughfare between the east and west coasts of the kingdom. Think of the want of a junction line, and of the entire absence of all friendly concert and agreement as to the times of departure of the several railway trains from the termini of the two Companies at Manchester, these great disadvantages, it is to be feared, being altogether of your own creation, and even yet perseveringly persisted in, notwithstanding the repeated remonstrances of the other Company! Think, too, of the saving of time and money, and of the additional dividends, which must needs arise in case of the amalgamation of the two Companies, and you will then perhaps perceive that the late offer of the Manchester and Leeds Directors to *lease* your line, paying to you half-yearly *your present amount of dividend*, was a *bona fide* offer, and one, too, which had you but agreed to, would have left that spirited Company a very handsome surplus for working the line.

I am, Gentlemen, your most obedient servant,
MANCUNIUM.

PROPOSED "GENERAL BOOKING-OFFICE" IN LONDON.

To the Editor of the Railway Times.

SIR,—Having noticed an advertisement in your paper respecting a General Reference Office in London for railways, I beg to suggest in lieu thereof a General Booking Office for all railways in some central spot in London, which I think would answer a double purpose, and be satisfactory to all parties.

1st. I propose that each Company should have their own omnibus running from this central office to their respective termini, and that no driver or conductor be permitted to take any *fare* or *fee* under fear of dismissal.

2nd. That passengers should be booked by the clerks in the office, and such a fare taken as would "free" the passenger to his destination without paying for omnibus fare or other expenses.

3rd. That all Companies disposed to form such an office should defray the expenses between them.

4th. That such Companies should form a Committee to manage the establishment, engage proper officers, and make such arrangements as would facilitate the object of its establishment.

5th. I would suggest that to prevent loitering on the road to the railway, no omnibus driver be permitted to take any passengers on the road (except those who may be going to the railway).

The advantages offered by such a proposition, are—

1. Saving of time to passengers.
2. Avoiding the extortion and frequent robberies by cabmen.
3. General advantage to the Company.

First—As to the saving of time to passengers, it must be obvious that if a passenger pays his fare (at Charing Cross say), which includes the omnibus charge, he receives his ticket, which on his arrival at the terminus of the railway passes him from the carriage without trouble or delay.

Second—Avoiding the extortion, &c. Parties booking themselves as above would avoid extortion, too often the practice of dishonest cabmen, who loiter and contrive to arrive at the last minute at a railway station, in order to demand that which they think the passenger would sooner pay than lose the train.

As to the advantage to the Companies, I think that numbers who now go by coaches, would then go by railways; and, in fact, wherever *facilities* have been given to travellers, the result has always been favourable to the parties or Companies affording them, and also it will often relieve the terminus of a railway from confusion necessarily attendant on a number of persons rushing to be booked at the last moment.

B.—A Station Clerk.

PROPOSED HUDDERSFIELD RAILWAY—MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—The town of Huddersfield is only three miles distant from the Manchester and Leeds line; and as the country is nearly a dead level, and consists principally of land in pasture, I feel surprised that no steps have as yet been taken to form a branch line. A single line of railway, worked by horses, would be amply sufficient, and might be constructed for from 20,000*l.* to 30,000*l.*, I should think. The Heywood branch line, two miles in length, cost only 10,000*l.* altogether.

I trust the Leeds Directors will not lose sight of this matter. Are they progressing with the Halifax branch? Do they propose following the good example set by the Grand Junction Company as to church building or schools? It would be most desirable if they would publish weekly the amount of sums paid to other Companies, and for coaches and omnibuses; also full particulars as to the amount of *goods' traffic* through to Hull and Leeds, as compared with the *local goods' traffic*, as I term that to and from Rochdale, Oldham, Halifax, Bradford, Huddersfield, and Wakefield.

Are they favourably disposed towards the branch line from Hebden Bridge to Bradford? or do they intend to form a branch to Bradford, from their Brighouse station, of five or six miles in length? If the latter, immediate steps ought to be taken.

I beg to remind the Directors, that information on all the above points, in their Report next month, would be most acceptable to the shareholders.

A HOLDER IN THE LEEDS LINE.

London, February 7, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I read, with some degree of interest, the letter of "Observer," in your publication of the 15th instant, having myself often thought of the greater disparity between the goods and the passenger traffic, on the Birmingham and Gloucester line, than on other railways similarly circumstanced, and expected some such defence as that set up by

Digitized by Google

"Bristoliensis," which is on the wait-awhile principle. "A Shareholder," I think, is nearer the mark, and in my opinion accounts satisfactorily for the miserable amount of receipts from goods traffic.

I have been employed in the carrying trade, canal and railway, for the last fifteen years, and am convinced from experience, that the high bearing of military men, the nice technical forms of lawyers, and the fanciful theories of literary men, are not conducive to a profitable investment of capital in that trade, unless the entire management of the business be left to a practical man, who may be enabled to avail himself of the influence naturally attached to such qualifications.

"Bristoliensis" says, "when [?] the Bristol and Gloucester Railway is finished, then, and not till then," &c. &c. I say that the traffic can be increased now, if proper means are used; strict economy, regularity in the deliveries, and a proper classification of rates, will command traffic on any railway, in fact create traffic. With respect to the rates for goods, I see the Company charge between Birmingham and Gloucester for bottles (wine I suppose included) in cases, 9s. per ton; for cheese, 12s. per ton; and for apples in casks, 22s. 6d. per ton. They might as well say, we will not carry apples, for at that rate they will get none but an odd cask or so now and then. The list abounds in similar discrepancies, and "Bristoliensis," I think, will admit, if he examine it, that many of the articles enumerated therein are virtually prohibited from being conveyed by railway. C. W.

Railway Progress in Germany.—A letter from Stuttgard, in the *German Journal of Frankfort*, says, that several difficulties which had arisen relative to the Wirtemberg or central railway have been removed. The road will start from Louisburgh, and will extend to Goppingen, from thence towards Baden and the Rhine, and towards Bavaria and the Danube. Advices from the frontiers of Poland, in the *Frankfort Journal*, say, that the preparatory works for the railway from Warsaw to the frontiers of Austria will be finished before the end of the year.

A Dangerous Opponent.—A worthy, whose residence is not many miles distant from St. Winifred's Tower, and whose attachment to the barley bree has often brought him into contact with

"The mosses, waters, slaps, and stiles,
That lay between him and his hame."

to the endangering of his life, while in a glorious state of elevation, about the beginning of the new year, set out for his domicile in the most approved zig-zag fashion; but having unfortunately "ta'en a thocht," he lost his reckoning; and, instead of keeping the highway, rolled over the railway enclosure, and proceeded down the line towards Ayr, unconscious of his danger from the coming train, which was momentarily expected. He had however been observed by some individuals, who raised the alarm, and a party ran along the railway to apprise him of his danger. Before this could be done, however, the train came up, and the engine having touched the unconscious pedestrian, gave him a very unpleasant push, and landed him on the opposite line of rail, with no other injury than the bruises and scratches occasioned by the fall. Just at the moment of his rising, the party in pursuit came in sight of him; and, instead of finding him killed, as they expected, their ears were saluted with the following defiance, shouted forth with all the force of drunken wrath:—"Stan' yer grun', ye cowardly vagabonds!—Aye ye may glower wi' yer ee e'e, and laugh and boast as muckle's ye like, but *I* ken ye, an' tak my word for't, ye'll grup it for this nicht's wark." After this ebullition of impotent wrath, he turned round grumbling as he went, "I could kick as mony o' ye as could stan' atween this an' Stin'ma."—*Ayr Advertiser*.

CITY ROAD BASIN.—TO BE LET, the Large and Commodious Warehouses, Sheds, Stabling, &c., No. 3 Wharf, City Basin, City Road, London, lately used by Messrs. Kenworthy and Co. in their extensive business as Carriers. The Rent and other particulars may be known on application to Mr. James Oldfield, at his Offices, Aldermanbury.

YARMOUTH AND NORWICH RAILWAY—VALLEY LINE.

PROVISIONAL COMMITTEE.

Bollingbrooke, H., Esq., Norwich.
Duff, A., Esq., London.
Herring, W. Esq., Norwich.
Lacon, Sir E. K., Bart., Yarmouth.
Lawrence, Capt., London.
Longe, J., Esq., Spixworth-park, Norfolk.
Read, H. W., Esq., Norwich.
Reynolds, F. R., Esq., Yarmouth.
Stephenson, George, Esq., London.
Tyndale, Capt., London.
With power to add to their number.

The Committee have the pleasure to announce, that at the request of the Committee appointed to watch the rival lines of Railway between London and Yarmouth, all opposition on the part of the promoters of the East Anglian line to the passing of an Act for the formation of the Valley line is now withdrawn, and the Bill will proceed, supported by the principal promoters of both lines.

HENRY PATTESON, Secretary.

6, Warneford-court, Throgmorton-street.

NOTICE TO THE PROPRIETORS OF STOCK IN THE EDINBURGH AND DALKEITH RAILWAY COMPANY.—The Dividends authorised by the General Meeting held on the 2nd instant, in terms of the Report of the Committee of Management, will be paid at this Office on and after Wednesday the 16th inst. between the hours of Ten and Four (Saturdays excepted); and Proprietors, who do not call personally, may send a Mandate addressed to the Manager, either to pay the amount to the Bearer, or to remit it by Post.

D. RANKINE, Manager.

Head Office, St. Leonard's Station, Edinburgh,
Feb. 7, 1842.

TO CAPITALISTS, ENGINEERS, &c.—A most valuable patent for improvements in obtaining motive power having just passed the Great Seal, the patentees beg leave to call the attention of capitalists, and those interested in the economy of power, to this highly important national object. The advantages attained by this invention are a great saving of space and fuel, with the positive production of a power equally energetic and controllable. Such parties as are desirous of treating with the proprietors for a limited interest in the patent, are requested to address their communications, post paid, to J. Buggs, Royal Polytechnic Institution, Regent-street.

EASTERN COUNTIES' RAILWAY COMPANY.—Notice is hereby given, That a Special General Meeting of the Shareholders of the Company will be held on Tuesday, the 22nd day of February instant, at One o'Clock, precisely, at the Company's Station, High Street, Shoreditch, London, for the purpose of determining upon raising all or any part of the moneys authorised to be raised by an Act passed in the Fourth Year of the reign of Her Majesty Queen Victoria, entitled, "An Act to amend and enlarge some of the provisions of the Acts relating to the Eastern Counties' Railway, and to authorise the Company to raise a further sum of money for the purposes of the said undertaking," and also for the purpose of determining upon the modes and terms of raising the same by the issue of new shares, and the said meeting is made special for the above purposes, and also for the purpose of declaring forfeited certain shares in the said Company, and for confirming the forfeiture which has been made and declared by the Directors of certain shares in the said Company.

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE, Deputy Chairman.

Office, High Street, Shoreditch,
10th February, 1842.

SMOKE NUISANCE.—Shortly will be published, an Account of the Patent and other modes of Preventing or Consuming Smoke. Drawn up by desire of the Leeds Smoke Committee, by WILLIAM WEST, Professional Chemist, Leeds.

The work will contain a brief account of every plan submitted to the London Common Council, the Leeds Meeting, and other public bodies, and of several not before published; and will give information at once clear, concise, and impartial, showing in how many ways this important object may be effected, and enabling parties about to erect or alter Engines or Furnaces, to choose the construction best fitted for their locality and purposes.

Price, without plates, 1s.; or, for distribution, per dozen, 9s.; per hundred, 70s. With Lithographic Plates and Explanations, 2s., with a proportionate reduction for quantities.

COAL, IRONSTONE, and LIMESTONE.—TO BE LET.—1. A field of several thousand acres of Ironstone and Great Mountain Limestone, of first-rate quality, lying contiguous to each other, with several seams of Coal producing the best Coke in the immediate vicinity, all within the Manor of Wolsingham, in the County of Durham, and having railway communication to the sea.

2. A field of several hundred acres of Coal, in the Manor of Seaton Carew, in the County of Durham, intersected by the Stockton and Hartlepool Railway, and distant within 3 miles from the Port of Hartlepool. The recent winnings of Coal in the near neighbourhood have established the existence of the main seams of the Durham coal field at workable depths.

For further particulars inquire of G. H. Wilkinson, Esq., Harperley Park, Bishop Auckland.

LONDON, WESTMINSTER, AND METROPOLITAN WATER COMPANY: to be empowered by Act of Parliament.

Capital £400,000, in shares of £50 each. Deposit (in order to comply with the Standing Orders of Parliament) £5 per share.

DIRECTORS.

Major Adair	James Hunt, Esq.
George Ashlin, Esq.	William Robinson, Esq.
Hugh Biers, Esq.	Richard Till, Esq.
John P. Clarke, Esq.	Joseph Workman, Esq.
John Dixon, Esq.	Matthew Wyatt, Esq.
John Howell, Esq.	

(With power to add to their number.)

Bankers—Messrs. Glyn, Hallifax, Mills, and Co.; Sir Claude Scott, Bart., and Co., 1, Cavendish-square.

Engineer—Robert Stephenson, Esq.

Solicitors—Messrs. Swain, Stevens, and Co., 10, Whitehall, and 6, Frederick-place, Old Jewry.

Hon. Secretary—Gustavus William Blanch, Esq.

The object of the promoters of this undertaking is to supply the inhabitants of the metropolis and its vicinity with that most important desideratum—a plentiful supply of water of the purest description.

The plan proposed for attaining this important object is that which was submitted by Mr. Paten to the consideration of the Committee of the House of Lords in the session of 1840. Its practicability has been fully tested by extensive experiments made by Mr. Robert Stephenson, which most satisfactorily set at rest all doubts of the eligibility of the project; it is, therefore, the intention of the promoters to apply to Parliament this session for the necessary powers to enable them to carry into effect an object so important to the public welfare.

The proportion of the western metropolitan district, which it is intended first to supply, comprises 70,000 houses, and it is estimated that within the first two years the occupiers of 25,000 houses will avail themselves of the advantages offered by this undertaking. Taking this very limited number of houses at an average low rental of £2 per house, the income derivable will be £50,000, and after deducting the annual expense attendant on such a supply (which has been carefully estimated at £14,000) will leave an available annual income of £36,000.

The requisite capital, according to the careful estimate of Mr. Stephenson, and which he is satisfied, from his intimate knowledge of the ground, will not be exceeded, is £230,000, and the necessary cost of laying down the mains and services to supply the 25,000 houses before-named is £160,000, making a total outlay of £390,000. Assuming, therefore, the capital to be expended at £400,000, the return to the proprietors will be an interest of £9 per cent. on the capital; and having defrayed the expense of bringing the water to London, every additional supply, both to houses along the line and in the metropolis beyond that estimated above, will add to the interest of the invested capital.

The Vestrymen, Guardians, and Directors of the parishes of the borough of Marylebone, and also those of the parish of St. Pancras, have earnestly recommended the inhabitants "to promote, by every means in their power, this laudable undertaking, so pregnant with the highest advantages to the community."

Applications for shares may be made to Messrs. Swain, Stevens, and Co., 10, Whitehall, and 6, Frederick's-place, Old Jewry, London, where, as well as at the Company's temporary offices, 7, St. Martin's-place, Trafalgar-square, copies of Mr. Stephenson's Reports may be seen.

LONDON AND BRIGHTON RAILWAY.—Notice is hereby given, That the trains now run throughout to and from London and Brighton.

From London.		From Brighton.	
Morning	9h. 0m.	Morning	8h. 0m.

BRISTOL AND EXETER RAILWAY.—Call of £10 per Share, being the Eleventh Instalment, and making with former Calls the sum of £70 per share.—The Directors of this Company, under the provisions of the Act of Incorporation, hereby give NOTICE, That the Proprietors of Shares are required to pay, on or before the 31st day of January instant, at any of the undermentioned Banks, the sum of Ten Pounds on each of their respective shares, viz.:—

London—Messrs. Glyn, Halifax, Mills, and Co.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. Wm. Jones, Loyds, and Co.; the South Lancashire Bank.

Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillies, Ames, and Co.; Messrs. Stuckey and Co.'s Banking Company, or at either of their Branches; the West of England and South Wales District Bank, or at either of its Branches; the National Provincial Bank of England.

Exeter—Messrs. Sanders, Sons, and Co.; Messrs. Cole, Holroyd, and Co.; the Devon and Cornwall Banking Company; Messrs. Milford and Co.; the West of England and South Wales District Bank, or at either of its Branches.

The Bankers are instructed to charge interest at the rate of 5 per cent. per annum on all arrears.

FREDERICK RICKETS, Chairman.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, Jan. 7, 1842.

Interest at the rate of 5 per cent., will be allowed on payments in anticipation of calls.

BIRMINGHAM AND GLOUCESTER RAILWAY.—The Eleventh Half-Yearly General Meeting of the Proprietors of the Birmingham and Gloucester Railway will be held at the Bell Hotel, Gloucester, on Friday, the 18th of February next. The Chair to be taken at One o'Clock precisely.

The Books in which Transfers of Shares are registered will be closed from Wednesday, the 9th, to Friday, the 18th of February, both days inclusive.

NOTICE is also hereby given, That the question of Additional Trains on Sundays will be brought before the meeting.

(Signed) C. R. MOORSOM, Chairman.

12, Waterloo-street, Birmingham,
January 25, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY—OPENING OF THE DIRECT LINE FROM BIRMINGHAM TO DERBY.—The Directors give NOTICE, That the main line of railway between Birmingham and Derby is now open to the public for the conveyance of passengers, and that in future the Trains will start from, and arrive at, the new station, in Lawley-street, Birmingham.

HOURS OF DEPARTURE.

From Birmingham.	From Derby.
*12 40 a.m., Mail.	8 20 a.m.

NORMANTON HOTEL AND REFRESHMENT ROOMS, at the junction of the North Midland, York and North Midland, and Manchester and Leeds Railways, where upwards of thirty trains arrive daily at the station. FRANCIS JOSEZ (for some years Manager of the Burlington Hotel, London, and late Manager of the Palatine Club, Liverpool) begs very respectfully to direct the attention of the Nobility and Gentry of Yorkshire and the surrounding counties, Railway Travellers, and the Public in general, to the above Hotel, which is now open under his management, and to solicit the honour of their patronage.

The House has been built, fitted up, and furnished throughout with an especial view to obtaining every comfort and convenience that can be conbined in a private residence or a public establishment.

That most essential of all requisites to the "way-worn traveller"—a Good Bed, may here be obtained replete with every comfort.

The spacious vaulted cellars (so constructed as to maintain a perfectly uniform temperature in all seasons) are amply stocked with Wines of every description, of the choicest Vintages; and with Spirits and Malt Liquors of the first quality and the finest flavour.

Of the Cuisine Department it will be sufficient to say that it shall be second to none in the kingdom, whether served in the Coffee Room or to Private Parties; while the moderation of the charges (which include attendance of every description) will be such as cannot fail to command universal approbation.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STRAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second-hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B.—Castings, Slide Lathes, and Planing Machines, on sale.

THE THAMES TUNNEL IS OPEN DAILY, (Sunday excepted) from Nine in the morning until Six in the evening, and lighted with gas.

The present entrance for visitors is on the Surrey side of the river, close to Rotherhithe Church. The Tunnel is now completed to the extent of 1176 feet. Admittance 1s. each.

NOTICE.—The Tunnel will be shortly closed to the public, in order to finish the works.

By order of the Board of Directors,
J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City,
10th February, 1841.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by steam-boats from Chelsea, Vauxhall, Lambeth, Hungerford, Adelphi, Old Shades Pier, and London Bridge, to the Tunnel Pier at Wapping. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

TO THE BIRMINGHAM AND GLOUCESTER RAILWAY SHAREHOLDERS.

GENTLEMEN,—

A LETTER from your Solicitors, Messrs. Whateley, addressed to you, appeared in the *Midland Counties' Herald* of yesterday, in which they disclaim having *strongly* recommended me for the appointment of Manager or Superintendent.

In my general recommendation to the Directors their names do not appear; they are afterwards described as other parties *connected with the undertaking*, from whom I had received Testimonials; and I feel confident that forgetfulness alone could have caused their doing me so palpable an injustice as their letter conveys. The following is a copy of their Testimonial in my favour:—

"Birmingham, August 25, 1838.

"From the opportunities which we had of witnessing the practical information respecting Railways which you displayed during the progress of the Birmingham and Gloucester Railway Bill, we are enabled to say that we believe you fully competent to undertake the management of any railway with which you may be connected.

"We are, Sir, your obedient servants,
(Signed) "J. W. and G. WHATELEY.
"To Mr. Humphrey Brown."

I remain, Gentlemen, with great respect,
Your most obedient servant,
HUMPHREY BROWN.

Birmingham, February 4, 1842.

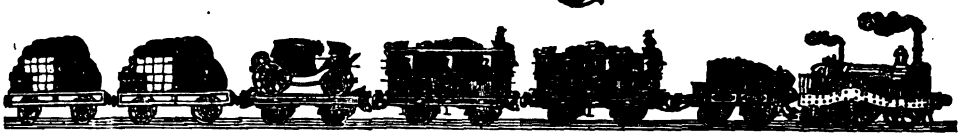
OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.



Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, February 12, 1842.

SUPPLEMENT TO

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 215. Vol. V.—No. 7.—Part II.] SATURDAY, FEBRUARY 12, 1842. [Price, with Part I., 1s.

YORK AND NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.*

On Tuesday last, at noon, the eleventh general half-yearly meeting of the proprietors of shares in the York and North Midland Railway Company was held in the Board Room at the station, when there was a very numerous attendance; Mr. Hudson, Chairman of the Company, in the chair.

The advertisement having been read,

The Chairman said—Gentlemen, I hope you have all got copies of the printed Report, if not, copies may be obtained at the table. The first vote which we have to come to at this meeting will be filling up the vacancies occurring in the Direction of the Company. You are well aware that when the last Bill connected with the Company was passed, we obtained powers to diminish the number of Directors to eight. It is for you to act upon those powers by determining whether we shall this day elect two Directors instead of the three who go out. Mr. Monk some time ago resigned his office as a Director. I believe it is perfectly well known to every gentleman here present that he was not disqualified at that time, but latterly I believe he has become disqualified for holding the office. Therefore, the first vote I have to propose is, that it is inexpedient to fill up the vacancy occasioned by the retirement of Mr. Monk from the Board of Directors. In adopting this vote we shall only be following a practice which has been adopted by many Companies, and which has been found to work well. Many advantages have been found to flow from the limiting the number of Directors, and thus throwing the responsibility on a few.

The motion was then put from the chair, and carried unanimously.

The Chairman—Then it is my duty to inform you that Mr. Dodsworth and myself are the two who retire from the Board of Direction on this occasion.

Mr. Barstow immediately rose and said—Gentlemen, although it has been adopted as the practice in transacting the affairs of this Company, that the Chairman should propose all the resolutions to be submitted to the meeting, yet the Charirman, being a party in the next resolution, cannot propose it with pleasure—(hear,)—and I have much pleasure in thinking that that duty has devolved upon me. I can bear testimony to the ability with which Mr. Hudson has conducted the office of Chairman of this Company, having had the pleasure of acting with him—(applause)—his conduct has on all occasions being zealous and efficient. (Applause.) The success of this Company is mainly due to him, and is a sufficient proof of his efficiency. (Applause.) And of the estimation in which he is held by the Directors of all other Railway Companies, it is a sufficient proof that he has been elected Chairman of the Newcastle and Darlington Junction Railway Company. And when any difficulties as to railways are experienced, applications are made to Mr. Hudson for his opinion and advice under the circumstances. (Applause.) This, I think, is a proof of the estimation in which he is held by other Railway Companies. Of his efficiency in this Company you are well aware—how lame should we be without him! (Applause.) In reference to Mr. Dodsworth, I can bear my testimony to his efficiency as a Director—(applause)—and he is a gentleman who stands high in the favour of his fellow citizens. (Hear.) I have, therefore, great pleasure in proposing that Mr. Hudson and Mr. Dodsworth be both re-elected Directors of this Company. (Applause.)

The resolution was then put, and carried unanimously.

The Chairman returned thanks.

The seal was then affixed to the share register, after which the following Report was read:—

* We are indebted to the Editor of that spirited and popular journal, the *Yorkshire Gazette*, for an early copy of his paper of this day, from which this Report is abridged.—Ed. R. T.

"REPORT.

"The Directors have again the agreeable duty of presenting to the shareholders a satisfactory Report of the result of their labours.

"The gross receipts on account of passenger and merchandise traffic for six months ending the 31st of December, 1841, amount to the sum of 44,085*l.* 16*s.* 1*d.*, which, being added to the sum of 175*l.* 19*s.* 5*d.*, received for rents and interest, make a total receipt of 44,261*l.* 15*s.* 6*d.*

"The amount paid during the same period, on account of the expenses of working and maintaining the line, is 16,178*l.* 2*s.* 9*d.*, and for interest on debentures 4,120*l.* 6*s.* 1*d.*, making a total expenditure of 20,298*l.* 8*s.* 10*d.*

"Out of the balance of 23,963*l.* 6*s.* 8*d.*, remaining to the credit of the Company on the half-year's account, the Directors recommend that a dividend be declared of 2*l.* 10*s.* per share, and that interest after the same rate be paid on the capital advanced in respect of the half shares. This will leave a surplus of 2,746*l.* 13*s.* 4*d.* to be added to the surplus of 2,409*l.* 12*s.* 4*d.*, remaining at the close of the preceding half-year, forming together a reserve fund of 5,156*l.* 5*s.* 8*d.* to meet future contingencies and depreciation of stock.

"The expenses of working and maintaining the line during the last half-year, so far as regards the rate of per centage upon the receipts, are less than those of the preceding half-year, but the aggregate amount is considerably higher; and it would be want of candour on the part of the Directors did they hesitate to state that owing to the peculiar character of the York and North Midland line, which consists principally of short, cross, and intricate traffic, a much larger quantity of locomotive power must inevitably be required for working it than for working continuous and uninterrupted lines of greater length, and consequently the cost of engine power will always be a very serious item of expenditure. In future, however, a considerable saving in the important article of coke may be fairly calculated upon, from certain mechanical improvements having been applied to all the locomotive engines belonging to the Company, by which a material reduction is effected in the consumption of fuel.

"Various circumstances have contributed to swell the general expenses of the last half-year, The duty paid to Government, and the wear and tear of carriages, as well as engines, and the consequent repairs, must necessarily advance as the quantity of traffic increases; and the expense attending maintenance of way has now wholly devolved upon the Company, which was not previously the case.

"It is extremely satisfactory to the Directors to be able to report that all accounts between the Company and the several contractors employed in the construction of the line, are now fully and finally settled, and that this has been accomplished without a single instance of litigation, or even of dispute.

"For the convenience of the Company's servants, numerous cottages have been built at different points along the line, in which policemen and other persons employed on it reside; and although this has, of course, been attended with considerable outlay, a corresponding benefit arises to the Company from the rents charged to the parties by whom the dwellings are occupied; and, what is of much greater importance, an increase of safety and protection is by this means afforded to the general traffic on the line.

"The subjoined statement of receipts and payments by the York and North Midland Company, as lessees of the Leeds and Selby Railway, shows a balance in favour of the lessees amounting to the sum of 1,024*l.* 11*s.* 2*d.* When in addition to the direct profit thus produced, the great advantages derived by the York and North Midland Company from the diversion of traffic are considered, the Directors feel that their anticipations of a successful result of this undertaking are realized to the fullest extent. It is proposed to place the above-mentioned balance of 1,024*l.* 11*s.* 2*d.* to the credit of the Reserve Fund, making the total amount of that fund 6,180*l.* 16*s.* 10*d.*

"The Directors add to their Report the usual accounts of receipts and payments to the 31st December, 1841; and they have also much pleasure in laying before the shareholders the following details of the traffic during the six months ending that day, viz.:—

	No.
Passengers, First class	38,839

January 31st, 1842; audited by us, JOHN SIMPSON,
GEORGE DODSWORTH,
JAMES RICHARDSON, Jun.

The CHAIRMAN having expressed his readiness to hear any remarks or answer any question,

Mr. ROWNTREE said, I observe under the head "expenditure," the sum of 1,533*l.* 13*s.* 11*d.*, for expenses of engineering department for oil, tallow, waste, &c., and iron. Now this sum is three times the amount of the sum charged for the same articles in the last half-yearly statement of accounts. May I ask how this accounted for?

The CHAIRMAN explained, that it sometimes happened that the bills were not rendered to them at the proper time. What increased the amount of the sum under the head referred to the payment of a bill which was owing to a person in Hull. The number of engines run during the past half-year was nearly double the number run during the previous six months. In the article of coke there has been a great increase of expenditure, and in the mileage duty to Government there was an increase of 1,000*l.* In the item to which Mr. Rowntree referred a charge for iron was included, amounting to 500*l.* or 600*l.*, which some parties would have put into the construction account. Many things, such as iron for the engines, were now wanted which were not required at the commencement of the railway.

Mr. ROWNTREE—Allow me to say that is desirable that under the same heads there should only be included the same particular items of outlay, else it is impossible to compare the expenditure of the one half-year with that of the other. When the heads of expenditure are the same, it is only fair to presume that only the same articles are included.

Mr. LAYCOCK—I think, Mr. Chairman, it would have been better to put a separate item for the iron.

The CHAIRMAN thought that their Report was furnished more in detail than what is generally the case in Railway Reports. For instance, the Report of the Grand Junction Company is given much less in detail than the one now before the meeting. But if there is any feeling as to that—

Mr. ROWNTREE—There is no feeling at all, only the Chairman invited any question to be put.

The CHAIRMAN remarked, that he believed very few Railway Companies had so small a sum to pay under the head of maintenance of way. It only amounted to 75*l.* per mile.

Mr. LAYCOCK—In reference to the charge made under the head of "salaries of Resident Engineers and

RAILWAY TIMES DEPARTMENT HALFPENNY

Digitized by Google

duplicate in the coaching department," he wished those charges had been put separate. Would it make any material difference if these items were put separately into the account, so that thereby the shareholders might know what was the salary of the Resident Engineer?

The CHAIRMAN believed it was well known that the Resident Engineer's salary was not higher than it ought to be; indeed he believed that this item of salaries to the Resident Engineer and clerks in the coaching department, was a very small one compared with what it is in the accounts of other Railway Companies.

Mr ROWNTREE said, it struck him that this item was a very moderate one, but he supposed any shareholder might have recourse to the accounts for the purpose of ascertaining the amount of salaries given to the different officers of the Company.

The CHAIRMAN answered in the affirmative.

Mr. ROWNTREE—I wish to know how the Leeds and Selby Railway account is made out.

The CHAIRMAN said that the receipts were the actual amount of cash received for passengers, goods, and minerals, after deducting the cost of locomotive power.

The CHAIRMAN then rose and said:—Gentlemen, in moving the adoption of the Report which has been read to you, and that the Directors be empowered to pay a dividend of 2*l*. 10*s*. per share on the 22nd instant, I cannot refrain from congratulating you as well as the Directors upon the success which has attended this Company. (Hear, hear.) At the same time I take this opportunity of stating two or three circumstances in connection with the Company, in order that we may set ourselves right with you and the public. And in the first place I must remark, that a great mistake exists in the minds of many as to the length of our line. I see that at different railway meetings the York and North Midland Railway is referred to as the cost of its construction, and the cost is put down at a much larger sum than it ought to be, inasmuch as, in their estimate, they do not give us the benefit of the length of the whole of the line. (Hear.) The length of the main line is 23¾ or 24 miles, and the parties to whom I refer also forget some important branches attached to the line. Now the length of the York and North Midland line, including its branches, is 78 miles, and it has cost, according to the statements in the hands of the proprietors, 1,600,000*l*.—that is, the actual money furnished by the proprietors. This, of course, would make the actual cost per mile something less than 21,500*l*. But again, other gentlemen, in speaking of the York and North Midland Railway, say that we have had no difficulties to contend with, that the line was easy of construction. We have now completed all our contracts, and Mr. Cabrey, the Engineer, has furnished me with a statement of the cost of forming 4¾ miles of the line. The cost of the 4¾ miles to which I refer, crossing the Aire and the Calder, was no less than 163,000*l*. When the cost of forming that portion of the line, in length only 4¾ miles, is taken from the sum which was expended on the formation of the entire line of 28 miles, it would leave a very small sum per mile for the formation of the remaining portion. I should say, that this line has been constructed at a cheaper rate than almost any other railway. (Hear, hear.) If we were to deduct the cost of our stock and stations, the remaining part of the line has been constructed at an expense less than 15,000*l*. per mile, including the cost of land, rails, and every other charge. I hope the amount of the reserved fund will give satisfaction to the shareholders It is large in comparison with other Companies. The stock of the Grand Junction Railway Company cost 250,000*l*. and their reserved fund amounts only to 4,000*l*. But the stock of the York and North Midland Railway Company cost only 55,000*l*., while our reserved fund is near 4,000*l*. for this half-year. (Applause.) This is a sufficient proof that the Directors have not acted upon the principle of forcing dividends at the expense of the reserved fund. We thought it best to recommend the payment of such dividends as we could well afford and maintain to our shareholders. (Hear.) They thought it a bad plan to recommend a dividend on which they should have at some future time to retrograde. (Hear.) But one of the most gratifying duties the Directors had to discharge, was to recommend a recommendation for the payment of an increased dividend. (Hear.)

Mr. ROWNTREE, perhaps the Chairman will just state if the outlay is likely to be much greater?

The CHAIRMAN—Perhaps we may yet require from 10,000*l*. to 15,000*l*. There are two or three engines that we have to pay for, and also some of the buildings. But we have to receive 600*l*. or 700*l*. for land. We have no intention of making a call upon the shareholders before we have the pleasure of meeting you again. (Hear.) I may mention while speaking on this subject that there is one thing which will come upon us as a charge. We have not yet built offices as workshops for the repairs that may be required upon our locomotive engines. The expense of erecting these workshops will not be greater than 3,000*l*. or 4,000*l*. We shall erect them, as we have done the other buildings, on as economical a scale as possible. There is one thing to which I am wishful to draw the attention of the Company, and which will require the vigilance and attention not only of the Directors but also of the shareholders. Gentlemen will have seen from the public prints that to-day Mr. Gladstone introduces a Bill in the House of Commons for the regulation of railways, and it is of importance to us to be well aware of the nature of its provisions. All I can say is, that if the Bill in question be found to contain clauses injurious to the interests of the railway, we shall not hesitate to call you together for the purpose of considering what measures should be adopted in order to prevent its passing into a law. (Hear.) The legislature of this country, I think, throw too many obstructions in the way of Railway Companies, but I won't anticipate that the proposed measure of Mr. Gladstone will be inimical to our interests. I think the last legislative measure passed, having reference to railways, as far as it enabled us to punish servants who have been guilty of improper conduct, and thereby endangering the lives of passengers, was a boon to us, and conferred advantages upon Railway Companies. (Hear, hear.) But I am happy to say that we have never had occasion to carry this Act into operation upon any servant connected with this Company. (Hear, hear.) The ability, vigilance, and attention displayed by the whole staff of this Company are highly gratifying to the Directors, and would doubtless be so to the entire body of the shareholders. (Hear, hear.) Whether we consider Mr. Cabrey, or Mr. Baker, or any other officer connected with the establishment, I do not think that it is possible for a Directory to have found more active, efficient, and attentive men. (Hear, hear.) In the servants of the Company the Directors have the utmost confidence. (Hear.) Although we were unfortunate upon one occasion, we congratulate the shareholders that we have upon this occasion no item of compensation for accidents, as was the case at the last half-yearly meeting. As to the Bill to be introduced by Mr. Gladstone, it may be necessary hereafter to call gentlemen together for the purpose of considering its provisions. (Hear.) I cannot forget that Parliament has not shown itself generally favourable to railways, but that it has introduced and adopted clauses very inimical to the interests of Railway Companies. The legislature of this country, unlike the Government of France, which has adopted a wise and liberal policy in reference to railways, has frequently thrown obstructions in our way. Had the legislature given us that assistance which is due to us, we should not have seen in our accounts the large item of 15,000*l*. for compensation; the parties receiving it not being entitled to a single shilling. Those parties generally belonged to the higher classes: but if they had been in the lower stations of life, and not in the higher circles, they would not have obtained a farthing of that money.

Mr. LAYCOCK—Are all the compensation claims settled?

The CHAIRMAN—Yes, all except that of Lord Howden, who, although we digressed from the property through which it was intended to carry the line, is suing us for a sum of money to which he is not entitled, and which I hope he will never get. (Hear.) There is one Standing Order which causes much annoyance and is a great obstruction, I allude to the March notices. Had the Order existed requiring these notices when the York and North Midland Company was formed, such was the state of the money market that there is little doubt the line would have been abandoned. With reference to the extension of the line to the north, it must be satisfactory to know, that on an early day the Bill will be introduced into Parliament, and I have no doubt that it will be carried out to a successful issue I have talked to many gentlemen on this subject, and I am happy to say that they all bear testimony to the sound policy of this Company, in being the first to project the proposed undertaking. (Hear.) In the Report which was read at the meeting of the Grand Junction Railway Company, held last week, it was expressly stated, that it was the attention of the Directors to submit a proposition to the shareholders, involving the question whether the Company should not take a very strong interest in carrying out the contemplated western line to Scotland. I am quite convinced, as far as I have observed and seen, that the western line will not be carried out. In this opinion I am strengthened from the fact that only the other day a meeting was held at Edinburgh, a large and influential meeting, presided over by the Lord Provost, for the purpose of taking measures to carry a line from the Scottish metropolis to the town of Dunbar, a distance of 28 miles. A meeting has also been held at Dunbar upon the subject, and if that line be made it will be 28 miles of the proposed Great Eastern line from Scotland. I have been attacked by an individual in a most unfair and uncandid manner. An individual occupying a certian position in society, and who by his position ought at least to be a gentleman, has chosen to make some remarks upon what occurred between him and me at this station, and never perhaps were remarks more perverted than those to which I refer. And if the writer had contended himself with merely heaping abuse upon me, I should not have taken notice of him, but have treated him with that contempt due to a person who could act as he has done. But under the circumstances of the case, and at a meeting of the shareholders of the Company, of which I have the honour to be Chairman, I repudiate in the most solemn manner the sentiments which Capt. Watts has thought proper to put into my mouth. I never laughed at principle, but when he talked of principle I might laugh, and perhaps not without reason. I did not think it a matter of principle, whether this Company should promote the line to Scotland by the east coast. I think it was clearly a matter of policy, whether it was right that certain Railway Companies, having a stake and interest in a certain line, should go out of their way in the promotion of a line which would add great benefit to their Companies—it was a matter of policy whether it was wise and prudent to do so. I hold that it is proper for us to consider how we can promote the interests of our Company by fair and legitimate means. (Hear.) But the person of whom I have been speaking has not contented himself with an attack upon me—if he had done so, as I said before, I should have passed him by in comtempt. But when he thinks fit to attack a body of gentlemen with whom I have the honour to associate, I feel it necessary in a meeting like this, and before the assembled shareholders of this Company, to repudiate the statements of the party to whom I have referred, and to state that it was not fair, it was not right, it was not candid, in him to make use of such language. He says, speaking of the Darlington and Newcastle Junction Railway scheme, "For what then is this scheme promoted? By whom concocted? Why, by a party who have hitherto broken faith with the public, and to whose views of selfishness and duplicity we are, at the sacrifice of consistency and propriety, called on to yield our support." [See a letter in the *Railway Times* of December 4, by Captain Watts, Langton Grange, Darlington; addressed to the dissentient shareholders of the North Midland and Midland Counties' Railways.] Now, it is notorious that the scheme originated with myself, and the other Directors of this Company. I am sure that we, as Directors, may appeal to you whether we have either broken faith with you, or exhibited views of selfishness and duplicity. (Hear.) I ask, if we may not appeal to you, whether we have even deviated from our statements, whether they were not usually founded on fact; or, if wrong in any particular, whether that was nor owing to a mistake? (Hear, hear.) I told you, at the last half-yearly meeting, that the income of the Company would, I had no doubt, at this meeting, have reached 1,600*l*. a week. Mr. Laycock said at that time, that I was too sanguine. But you have seen the result; the receipts are now upwards of 1,700*l*. (Hear hear.)

Mr. LAYCOCK—I find you are right.

The CHAIRMAN—I am sure that the shareholders of this Company will find that the scheme was not a selfish one, but that it was got up for the promotion of the benefit of this and other Companies. I am satisfied, that the interests of this Company will be advanced by the scheme; and however much it may suit the purposes of some parties to heap upon us abuse, we shall still persevere, despite their uncandid representations, as long as we possess the confidence of the shareholders of this Company, whose interests it is our wish to promote. (Hear.) With these observations I beg to thank you for the attention with which you have listened to my statement.

Mr. LAYCOCK—Before you dissolve the meeting, Mr. Chairman, allow me to make an observation. I think it would be an advantage to the shareholders if the Report of the Directors, and the accompanying statement of accounts, were issued three days before the half-yearly meeting, so that they might have an opportunity of examining them before they come to the meeting.

The CHAIRMAN—I should have no objection to co-

Digitized by Google

pies of the Report and statement of accouts being ready at the office three days before the meeting. But were copies of the Report to be issued three days before the meeting, it would be difficult to procure a large attendance of shareholders at the meeting, because having obtained all the information which the Report contained, they would take very little interest in attending (Hear.)

Mr. BARSTOW—If shareholders obtain copies of those circulars, they have got all the information they want, and would not attend the meetings.

Mr. LAYCOCK—I make the suggestion I have named, because it is impossible to go through all the items in the Report, when it is received merely at the meeting.

A SHAREHOLDER reminded Mr. Laycock that the Report was ready for inspection at the office, at nine o'clock on the morning of the meeting.

Mr LAYCOCK—That is rather an inconvenient hour to come to examine it.

The CHAIRMAN—The first business to be disposed of is the proposal that the Report be received and adopted, and circulated amongst the proprietors; and that a dividend of 10 per cent. be paid on the 22nd instant.

This resolution was put from the Chair, and was carried unanimously.

Mr. LAYCOCK then moved, that this meeting requests the Directors to publish and circulate that part of any future Report which relates to the accounts three days before the general meeting. That was his motion; it gentlemen did not like it, he was very willing to withdraw it. He did not see that it could do any harm to any one.

Mr. ROWNTREE thought there was a good deal in the hint thrown out by the Chairman, that if the half-yearly statement were circulated two or three days before the meeting that there would be very few parties who would come to the meeting. (Applause.) And he for one thought it very much to the interests of the Company that there should be a large meeting of the shareholders. He should suggest that instead of carrying Mr. Laycock's resolution, it be stated in the advertisement calling the meeting, that the statement of accounts would be ready at the office, for the inspection of shareholders, one day before the meeting. (Hear.)

Mr. LAYCOCK—That will satisfy me.

The CHAIRMAN—The Directors will take care that that is done.

The conversation then dropped.

A long conversation ensued relative to the approaches to the station in York.

Mr. MAKIN moved a vote of thanks to the Chairman and Directors for their valuable services.

Mr. LAYCOCK seconded the motion, which was carried unanimously.

The CHAIRMAN, in acknowledging the compliment said, he and his brother Directors were very much obliged to them, and should endeavour to meet them at the next half-yearly meeting with as large a dividend as had been declared on the present occasion, and if a larger so much greater would be their pleasure. (Applause.) He thanked them for their attendance that day.

Adjourned.

GRAND JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE following is the Report approved of at the late meeting, and of which we gave an abstract last week:—

The accounts which the Directors have now the pleasure to present to the Proprietors exhibit an increase of receipts over those of any former half-year.

The gross income is as follows:—

Coaching, carriages, horses, mails, and parcels	£192,437	0	6
Goods, live stock, and coals	45,770	4	3
Interest and rents	3,608	19	9
Total	£241,816	4	6

The expenses for the same period have been 104,988*l.* 7s. 8d., leaving a net balance of profit of 136,827*l.* 16s. 10d.

The expenditure does not present any marked features of difference from that of preceding half-years. The present balance-sheet however includes the entire working expenses of the Chester and Crewe branch, with two additional trains ordered by the Post-office, while only one quarter's expenditure under this head was incurred in the corresponding half-year, and the maintenance of way over these 21 miles form an entirely new charge in the present accounts. An increase in the cost of locomotive power has also taken place; the necessary result of 32,000 miles of additional duty during the half-year, and in consequence also of 4 new engines, and 11 tenders, having been added to the stock.

With these exceptions, the ratio of expenses to receipts is again less.

The Directors have been accustomed to lay before their proprietors a comparative valuation of the whole stock of the Company in engines, carriages, waggons, and machinery, and they would have followed the same course on the present occasion, had not careful inquiry into the system and further communication with their Engineer satisfied them of its unsoundness. The proprietors will recollect that at their last meeting, Mr Locke objected to the Company's taking credit for some thousand pounds, the supposed improved value of the locomotive power, and showed the impossibility of drawing any correct conclusion from so fallacious a practice, liable as it is to cause great and arbitrary fluctuations in the nominal value of stock, according to the persons or the principles of action employed. The Directors have therefore resolved to abandon the publication of comparative valuations, and recommend instead that a certain sum be periodically laid aside, as a fund for the improvement of the stock, and to meet that insensible but sure decay which is perpetually going on, and which no care or expense can prevent. The sum they would propose to appropriate to this purpose on the present occasion is 5,000*l.*

To the profit of the half-year, viz., 136,827*l.* 16s. 10d., must be added the reserved fund, amounting with interest to 9,001*l.* 19s. 2d., giving a total of 145,829*l.* 16s. From this the Directors recommend that a dividend of six per cent. be paid on the whole capital of the Company, amounting to 132,198*l.* Anticipating the concurrence of the shareholders, the Board have, out of the surplus of 13,631*l.* 16s., set aside 5,000*l.* for the depreciation and renewal of stock, leaving the reserved fund 8,631*l.* 16s. The net receipt from Sunday travelling is 10s. 11d. per share of 100*l.*

The propriety of paying the dividends quarterly, suggested by the late Chairman, has been under the consideration of the Board, and although sensible of the convenience it might afford to some parties, they have been deterred from adopting the plan by the additional expense it would entail, and by a feeling that the time had not arrived when they could so regulate the instalments as to avoid causing considerable fluctuations in the value of the shares.

The proprietors are aware, that when they last assembled, a reduction in the short fares was in contemplation. This experiment has since been tried at various points, with different results, and on the whole with doubtful success.

The period for relinquishing the Manchester portion of the traffic is now fast approaching. The terms of the formal contract with the Manchester and Birmingham Company for the use of the line between Crewe and Birmingham having been finally arranged, the corporate seals of the Companies have been attached to it. The attention of the respective Boards is now directed to the working of this portion of the line, with the view of making arrangements mutually satisfactorily.

The returns on the Chester and Crewe branch have hitherto fallen far short of the expectations held out by its projectors, but the trade is steadily improving, and the Board is not without hopes that it may ultimately be a source of profit to the concern. At the same time, the proprietors will not fail to remember that the purchase of this line was a protective measure, and, as such, has contributed to the safety of the Grand Junction property.

The attempt to carry out a line of railway to connect England and Scotland by the west coast has assumed a more important form since it was last mentioned to the proprietors, and the Directors, sensible of the influence which the completion of such a railway would exercise upon their interests, have, with other railway companies similarly situated, subscribed to procure a parliamentary survey of the line between Lancaster and Carlisle. At the same time, the counties and public bodies north of Carlisle have taken up the subject warmly, and Cumberland, Dumfrieshire, Lanarkshire, Renfrewshire, with Glasgow and Greenock, and other towns, have raised a considerable sum for carrying it on to Edinburgh and Glasgow. Mr. Locke is now actively engaged in preparing the plans and notices for Parliament. The public will thus be enabled to judge of the real merits of the western line, as recommended by the Government Commissioners, and the meeting will be glad to learn that there is no reason to fear any of those formidable difficulties which have been stated to exist, but that the line will be one of less than ordinary expense. At a future day it will be for the proprietors to determine whether the Grand Junction Company should not take a direct interest in the undertaking, as one that cannot fail to benefit their revenues materially.

Intimation has been sent to every proprietor that it is the intention of the Directors to propose the appropriation of a thousand pounds towards the erection of a church at Crewe. The Company's establishments for the repairs of engines and carriages will shortly be removed there, and some hundreds of men with their families will then be deprived of their present opportunities of religious instruction, and settled in a spot possessing provision only for its own very limited population. In these circumstances, the Directors consider they are performing their duty no less to the shareholders than to the workmen who are dependent upon them, in commending to your favourable judgment the motion of which they have given notice.

The amount per 100*l.* share caused by the appropriation of 1,000*l.* for the above purposes, would be about 10¾d., and the Directors are prepared to recommend that any proprietor who may object to this appropriation should have the option of receiving his proportion of the amount.

CHARLES LAWRENCE, Chairman.

Liverpool, 1st February, 1842.

THE ICE RAILWAY.—The first ship has been loaded this week in two days, by the aid of the railway to Fresh Pond. She took about 350 tons. On the trip, the cars left the wharf next the Old Bridge, went to the pond, (nearly six miles), were loaded there, and returned to the ship with 25 tons of ice, all in 55 minutes.—*Bunker Hill Aurora.*

WEARDALE EXTENSION RAILWAY—ADJOURNED MEETING.

AN adjourned meeting of the Provisional Committee and others interested in this work, was held at Wolsingham, on Monday last, the 7th instant; GEORGE H. WILKINSON, Esq., of Harpenley Park, in the chair. The meeting was very fully attended.

Plans and sections of the proposed line were laid on the table by the Engineer, completed for Parliamentary deposit.

The CHAIRMAN stated, that he had received an intimation by letter from the solicitor of Thomas Bowes, Esq., that the line, as laid out through that gentleman's property at Bradley Hall, following the south bank of the river Wear, was deemed by him objectionable; and the Engineer having reported that a shorter and perfectly straight line, and one in all respects better and more economical, might be had along the north bank of that river; the Chairman recommended that instructions should be given to the Engineer to survey such amended line. A resolution to that effect was accordingly passed.

Several of the gentlemen present expressed an opinion that the interests of the public, as well as of the various owners of lime-works in Weardale, would be more effectually promoted if the main-line, instead of stopping short at Broadwood Kilns, were carried forward to the road leading from Frosterley Bridge to Bishopley.

Mr. DOLPHIN stated, on the part of the noble proprietor of the Broadwood estate, that he should offer no opposition to such an extension of the line, there being no disposition whatever in that quarter to act on narrow or monopolizing views.

The CHAIRMAN stated, that he hoped the parties whose interests were thus advocated, would, when the important time arrived for filling up the subscription list, come prepared to enforce their arguments with money in their hands, because the proposition now made on their behalf would involve the construction of nearly three quarters of a mile of additional way, and through some valuable land.

A resolution in favour of the survey of such extended line was then passed unanimously.

The CHAIRMAN said, he had the satisfaction to inform the meeting that, having proposed to Mr. Storey, their Engineer, that he should furnish the Provisional Committee with a detailed estimate of the cost of the entire work, upon which Mr. Storey should himself undertake the work, subject to his own responsibilty, so that the shareholders might know precisely their position. He had received from that gentleman a ready assurance of his willingness to accede to that proposition, and that there seemed to be every reason to hope that the rough estimate given at their first meeting would not be materially, if at all, exceeded; some borings, however, in the line of the small cuttings on the inclined plane, would be necessary preliminaries to an accurate estimate; these were in progress, and would be completed in a few days, when the detailed estimate might be expected.

Saturday, the 19th inst., was fixed for holding a meeting, when the Provisional Committee might at once receive the above-mentioned estimate, and the notices, plans, and sections for Parliamentary purposes, containing the extension and amendment above referred to.

After some discussion, as to the proposed qualification and remuneration of Directors, which the Chairman recommended to be kept within the most reasonable compass, the meeting was adjourned to the 19th inst., at Mr. Thwaites's, Waterloo Hotel, Durham, at noon.

NORTH UNION RAILWAY.

WE have been given to understand that the Directors of this Company have been lately adding to their unenviable notoriety, by practising their extortion upon a rather wholesale scale, under the following circumstances:—Last Monday night, a number of unemployed poor weavers and their families, coming from the distant manufacturing districts to the works of Messrs. Behrens, at Caterall, booked for that purpose at the North Union station at Preston, in ignorance (it is to be presumed) that the Lancaster and Preston Railway Company have now a station of their own there. The money of these poor people, amounting to two guineas, was pocketed by the North Union Company, and they were then wheeled through the tunnel, a distance of about 200 yards, to the Lancaster Company's station at Dock-street. Here they found to their great surprise and mortification, that they still had to pay their passage to Catterall; but having been cleaned out by the North Union Company, they had no resource but to set off to Catterall as they could. And thus 84 poor people, men, women, and children, had to tramp a distance of nearly ten miles in the dirt and wet. Our readers may conceive the misery of such a journey during such weather as prevailed in the early part of last week, and in the dark. The exaction of sixpence by the North Union Company for passing through their tunnel, is no better than an extortion upon any class in society. But when practised in the manner in which it appears to have been done in this instance, upon a number of poor and ignorant people, it deserves no better designation than that of a heartless plunder, of which we are sure many of the shareholders of the North Union Company will be ashamed to participate. We understand there is no doubt whatever of the illegality of this charge; and we trust that Messrs. Behrens and Co., as the natural protectors of these 84 sufferers, will compel the North Union Company to disgorge their ill-gotten gains. — Correspondent of the *Lancaster Guardian*. [We trust the above is not true.—ED. R.T.]

RAILWAY TO SCOTLAND.—We understand that Mr. Locke inspected the ground in this neighbourhood last week, on his return from Scotland, where, as well as on this side the border, he has succeeded in effecting several important improvements in the route, so as very considerably to diminish the amount of work shown on the plans published by Parliament. We also hear that great pains have been taken to avoid all interference with parks or mansions, although interested parties have been endeavouring to stir up opposition, and obstructing the engineers by misrepresenting to influential landowners both the direction of the line and the nature of the work. This is so unfair and underhand a mode of proceeding, that whether these persons have a pecuniary interest in promoting the lines on the east side of the kingdom, or have some private interests of their own to serve nearer home, we recommend them to be more cautious or they will assuredly meet with the exposure they deserve. The importance of this great work to our district is proved only too plainly of late, for we learn that since the railway through York and Darlington was opened we have lost nearly two-thirds of our posting on this route, and in the event of railway communication being extended to Newcastle, and not carried forward on this side to Carlisle, we fear that what is now only a temporary diversion of the traffic will be converted into a permanent loss and deterioration of property along the whole north road. Rival interests are at work, seeking to prejudice the minds of the landowners, and thus gain their own selfish ends without regard to the needless annoyance they inflict, but we recommend our country friends not to commit themselves either for or against any particular route at present. Plans will be shortly deposited in every parish, and they will then see precisely what is really proposed, and have an opportunity of offering objection, and will doubtless obtain any necessary modification, as Parliament have very properly provided that the time from March to November, may be devoted to such arrangements and amended plans lodged in the autumn.—*Lancaster Guardian*, Jan. 22.

THE SHEFFIELD AND GRIMSBY RAILWAY.—A correspondent informs us that it is in contemplation to make a railway from Grimsby to Sheffield, to communicate with the Manchester and Sheffield Railway; this will shorten the route from Liverpool to Grimsby upwards of 30 miles.—*Hull Advertiser.*

THE "RAILWAYS REGULATION BILL."

House of Commons, Feb. 8.—Mr. GLADSTONE rose for the purpose of requesting leave to bring in a Bill for the better regulation of railways. Twelve months ago the Government deemed it necessary that a Bill should be introduced, with considerable discretionary powers, for the purpose of enforcing regulations which were thought essential in consequence of several accidents which happened in the autumn of 1840. The Bill was submitted to a Committee of the House, and the opinion of the Committee was, that the powers which had been given to the Board of Trade had worked well, and that so long as it did, it was better the Executive Government should not be given any extraordinary control over the exertions of the Railway Companies. He (Mr. Gladstone) thought that the experience of last year, notwithstanding a late lamentable occurrence, had shown that the Committee was right in its view. He was aware that his honourable and gallant friend (Colonel Sibthorp) did not agree in that opinion. (Laughter.) But then he believed the gallant gentleman's arguments were directed to prove that the public had received no convenience or advantage from railways. (A laugh.) He (Mr. Gladstone) did not propose to take any discretionary power of a general nature into the hands of the Government. It had been proposed to license engine-drivers, but the Committee had been of opinion that no such provision ought to be contained in the Bill, and it was his opinion that they should look to the action of public opinion upon persons occupying the position of Directors and Managers of Railway Companies as a means of security, and if that should be found ineffectual, it might then be perhaps deemed necessary to enlarge the powers of the Bill. It was apprehended that if such a provision as that which he had alluded to were embodied in an Act of Parliament, it would have the effect of weakening the sense of responsibility on the part of the Directors, and that therefore the best way would be to await the course of events, and to see whether, in point of fact, the class of engine-drivers would be improved or not. The experience of the last year had shown a great improvement in that respect, and a Report on the subject would be laid upon the table of the House, from which it would appear, that amongst the accidents of last year a very small amount could be attributable to any misconduct on the part of the engine-drivers. He hoped that there would be an improvement in that class in future, and he thought that the House would not be of opinion that it would be necessary to introduce into the Bill any new regulations on that portion of the subject; at the same time he should say that the Government was most anxious to hear any further reasons, if such were urged by the House, as to the adoption of measures with a due regard to the prevention of accidents. The Bill which he proposed to lay on the table contained several clauses, enlarging the powers of the Government, but it was only for purposes of a definite character, and which experience had shown were required. It was not to be supposed that there were no provisions for the public safety, but they were only of such a kind as experience had shown to be necessary. The most important clauses were one for the more efficient inspection of new railways before they were opened, and it was intended to give the Board of Trade a power to postpone the opening of any such railway, if it were deemed necessary. (Hear, hear.) On the whole, there was a general disposition upon the part of the Railway Companies to agree with the views of the Government, and the exceptions to this were rare. There was one point, however, where an exception might be taken. They were all aware that one of the essential attributes of security in a railway was the goodness of the soil and ground on which it was laid, and it might be that a disposition to obtain profit might cause a railway to be opened before it was perfectly secure for passengers. It was, therefore, proposed that the Board of Trade should be given a power to postpone the opening of any such railway, and also to give it a power to obtain returns connected with railway accidents of a more general and perfect description than those which they are empowered to obtain under the existing provisions which affect railways. At present there was no power to demand returns respecting accidents on railways, unless they were such as had produced injury to life or limb. He thought it was clear that there ought to be a power of calling for returns of all accidents, whether the consequences of such accidents were formidable or not; for it was evident that in many accidents, which did not terminate in injury to life or limb, there might be circumstances which demanded investigation. There was another provision requiring that gates at level crossings should be closed, and that where any road, such for instance as a turnpike-road, crossed a railway, that the gate should not be across the railway, but across the road. The Acts which were in force at present required that the gates in the latter case should be across the railway, and not across the road; but experience had proved that the gates ought not to be across the railway. There was also a provision, under which it would be required, that all those which were called occupation-gates should be left locked, for there were vast numbers of those gates which opened on railways ior the accommodations of farmers whose ground was crossed by the line, and it was impossible that the Railway Companies could watch all such gates, for the purpose of preventing cattle or horses from coming through them, and straying on the line; and, therefore, it would be necessary that a provision should be agreed to for requiring those gates to be kept locked. It was also proposed to give powers to require that a certain class of disputes should be referred to arbitration, namely, disputes about level crossings, where Railway Companies and Road Trustees could not agree to the conditions as to laying a road over a railway or under it; for it was wrong that if the parties in such a case chose to stickle for their own profit, the lives or safety of persons travelling by the railways should be exposed to risk on that account. (Hear, hear.) It was therefore proposed that in such a case there should be a power to appoint arbitrators or an umpire in any case where it should be found necessary. The same principle would be extended to what were called branch connections, for it was deemed necessary, in certain cases, to give a power of interference with respect to them. There was also a power to be given with reference to the use of engines by private parties, for experience had shown that they ought to be subject to control. He would propose a power over the railways which was not at present possessed, namely, a power of inquiry, and to compel returns; and it would be also necessary to introduce a provision too for cases where it happened that Railway Companies found cuttings too steep, or embankments too narrow, and that it was necessary, in order to effect their improvement, for any such Railway Company to take land. In this case he proposed to give a power to any such Company to take land for the purpose of improving the railway, for it was not right that such an intention should be interrupted by the caprice of individuals. That was a case in which the rights of property would be subject to a modification, but it would be only where such should be found necessary for the public security. Under those circumstances, he proposed to empower Railway Companies to take land for the purpose of improving the railway. The only other provision of any importance to which he should feel it necessary to direct the attention of the House, was a provision for the punishment of misconduct in those employed on railways. The right honourable gentleman concluded by moving, pursuant to notice, for leave to bring in a Bill for the better regulation of railways.

Col. SIBTHORP was glad the subject had fallen into able hands, and it could not have fallen into more able hands than those of the right honourable gentleman below him. He (Colonel Sibthorp) should have been pleased if a Bill had been brought in to annihilate the whole system of railways altogether. (Laughter.) When his right honourable friend had stated to the House that it was not intended to give the Government great discretionary powers, it seemed to him little more than a milk-and-water measure, and he regretted that some means of prevention had not been adopted before the late fatal accident had occurred. It was his intention, if no other honourable member did so, to move for a return of the number of inquests which had been held on the bodies of persons killed on railways, and the remarks of the jury on each accident. Sufficient had been shown in public, by the public press, to convince them that an interference on the part of the Government was necessary, and therefore it was he thought that the railways ought to be under the control of the Government, so that there might be means adopted of making some recompense to the families of the poor sufferers in these railway accidents—such as affording them maintenance, or some similar arrangement. Great injury had also been inflicted by those railways on a most respectable class of persons, namely, the proprietors of stage coaches, and those who kept hotels for the refreshment of travellers by stage coaches, and they had received no compensation for the injury which had been done to their properties. He should be glad to see the Government propose some tax upon those railways, which would be of use to the public revenue. They relinquished the old mode of travelling, and adopted a new system, which constantly placed the lives of the people in jeopardy. He should conclude by stating his intention to express his opposition to the Bill in every stage.

Mr. WAKLEY did not believe that the Bill which the right honourable gentleman had brought before the House would have the effect of accomplishing the purpose for which it was intended. He was of opinion that a far more stringent measure was necessary; but he feared that the influence of the railway proprietors was too great in that House to admit the adoption of such a measure. When, however, three or four lords or members of Parliament, were killed, perhaps something further would be done by the House. (Laughter.) Some of these cases came under his (Mr. Wakley's) personal notice; and, from all the examination that he had been able to give the subject, he had come to the conclusion that railway travelling, under proper regulation, was the safest mode of travelling that existed. He entertained no doubt whatever upon the subject. (Hear.) The Bill now introduced by the right honourable gentleman had been taken from the back shop of the Whig store. (A laugh.) He (Mr. Wakley) would be glad if the right honourable gentleman would take the entire stock of the Whig measures. He (Mr. Wakley) thought the Whig measures the most mischievous, and the most disgraceful that were ever submitted to an intelligent House of Commons. The right honourable gentleman had found this Bill in his office, where it had been left by his predecessor, and he undertook to introduce nearly the same measure, with some very slight modification. There were other Bills, which, no doubt, the right honourable gentleman intended to introduce at the first opportunity, namely, the Bill in relation to the important question of factory slavery, and the Poor Law Bill, which was not to be introduced until after Easter, although the Poor Law Commission would expire in July. He did not like this system of taking up those measures—it did not look well. There was another Bill, namely, that with respect to the West Indies, and on which the right honourable gentleman had complimented the late President of the Board of Trade, whom he had never heard him compliment on any former occasion. It was astonishing how well gentlemen who had gained the victory could afford to pay compliments to their opponents. (A laugh.) With respect to the measure now before the House he certainly was convinced, that the most effectual way to enforce the safety of those who travelled by railways would be to apply stringent restrictions to the great railway proprietors. He (Mr. Wakley) was travelling on the Great Western Railway on Christmas-day, within four hours after the accident which occurred at Sunning Hill. It would be useless and distressing to the House were he to describe the sights he saw on that occasion—it was sufficient to say, that they were of the most painful and agonising character. (Hear, hear.) They were not the less painful because it was known on the spot, and well known to every person connected with the railway, that if the most common precaution had been taken, such an accident could not have occurred. Would it be believed that at night, in darkness, no watchman was placed in the cutting at Sunning Hill? He stated this on the authority of a person on the spot. The evidence given by the policeman, at the inquest, left no noubt whatever on this point. He stated that his duty was to be at the cutting before the arrival of the passenger train, which left London at six o'clock, though the luggage train, and the one to which this accident had occurred, must arrive at the cutting before the time when the policeman must be at his post. He had not the least doubt that, under proper regulations, railway travelling would be productive of great commercial and national advantage. (Hear, hear.) He thought that the public interest required that the management and direction of railways ought to be placed in proper hands, and ought not to be left in the hands of interested parties. He thought, in fact, that the direction and control of them ought to be placed entirely in the hands of the Government. With respect to the accidents that had occurred, he would take a case which had happened on the London and Birmingham Railway, and which had come under his own immediate notice. Now, what were the facts of the case? Perhaps, however, he ought not to detain the House by stating the facts now, and it might be, perhaps, more proper that he should reserve that statement for the second reading of the Bill. (Hear, hear.) If he took any party by surprise, he would rather postpone the statement, as he was not aware whether there was any person connected with that railway present in the House.

Mr. GLADSTONE said, that as the honourable member invited interruption, he thought that he (Mr Gladstone) might have asked leave to introduce the Bill, and that the motion might have been agreed to without much discussion, as the Bill involved no new

Digitized by Google

principle. (Hear, hear.) The Report on which the Bill was founded was not yet on the table of the House, but would be in the course of a few days. He would not undertake to decide whether the discussion that had arisen should terminate now or not; but he did not think that there was any necessity that, in the present stage, it should be protracted to any length. (Hear, hear.)

Mr. WAKLEY said, he would not pursue the discussion further at present. He had spoken of the accident on the Great Western Railway with less hesitation, as he saw the Chairman of that Company in the House; but not seeing anybody connected with the London and Birmingham Railway, he would postpone that case until the second reading of the Bill.

Mr. C. RUSSELL said, that as he would have an opportunity of stating his opinion respecting the present Bill on the second reading, he did not think it necessary to detain the House now with any observation on that subject. However, as the honourable member had particularly alluded to the accident which had occurred on the Great Western Railway, he could not allow what had fallen from the honourable member to pass without some observations from him. He could assure that honourable member that no person in the country more deeply deplored that accident than he did. (Hear, hear.) No person laboured more anxiously and zealously, as far as was in his power, to avert such accidents, and, so far as was in his power, to compensate the unfortunate sufferers. (Hear, hear.) It had been his duty to attend the inquest which was held on the unfortunate sufferers. It was also his duty to review all the regulations which bore upon the case in question. It had been his duty to consider whether any blame could be attached to any officer of the Company with respect to that unfortunate occurrence. Having had this opportunity of forming a correct opinion, he felt bound to say that that occurrence was as much a visitation of God's providence as if the blow had been inflicted by a stroke of thunder. (Hear, hear.) Now, as to the fact that no watchman was stationed in the cutting, was it possible to have watchmen constantly posted on every part of a line of railway which, from one end to the other, extended 118 miles. If there had been the least reason to expect danger at the particular cutting where the accident occurred, no doubt a watchman would have been stationed there. There was no indication whatever that would lead to an apprehension of danger. There had been a superficial slip, but there was no indication that would lead to the apprehension of a deeper slip. He could show the honourable member a section of the cutting, which would satisfy him that the slip had occurred in a deeper stratum, through which water had percolated, and which had no connection whatever with the superficial stratum. (Hear, hear.) With respect to the Bill, he would state his opinion on a future occasion. So far as the right honourable gentleman had explained the details, he had no objection to them. (Hear.)

Mr. EWART said, with respect to the principle of the Bill, he thought the right honourable gentleman had acted wisely in not removing too much responsibility from the Directors of railways. By interfering too much with the responsibility of the Directors they would lessen the safety of the public. Superintendence was a sound principle, but interference was a bad one. (Hear, hear, hear.) It appeared that the elder railways were the safest, for all the recent accidents had occurred upon the new railways. It appeared that the older railways had increased in safety as the experience of their managers had increased; for it appeared by the returns that the amount of accidents upon them had materially diminished. (Hear.) He wished to take this opportunity to notice an anomaly that existed, not only in the law respecting railways, but in the law of England generally, with respect to accidents. If an accident occurred to an individual travelling by a railway, or any other conveyance, and that he survived the accident, the law declared him to be entitled to compensation; but if he did not survive the accident, his surviving relatives were not entitled to any redress. It was true, that by the law of deodand, there was a summary power of punishing the offender, but that did not provide compensation for the sufferer. He was sorry to state that a case had occurred a year and a half ago, in which a French gentleman was killed by an accident that occurred on one of the northern lines of railway. The law of France in such case gives a remedy to the surviving relatives. Under the impression of obtaining compensation, the relatives of this unfortunate gentleman came to England, and applied for a remedy, but they applied in vain. He was sure that accidents would diminish under the operation of a measure which applied a certain degree of control, without any improper interference with the Railway Directors. (Hear.)

Mr. HARDY approved of the provisions of the Bill, but he did not think that they went far enough for the security of the public. He would be glad if his right honourable friend would allow him to engraft on the Bill a few additional provisions which would have that effect. The three late accidents that occurred showed the necessity for some regulations of the kind he proposed. He was a passenger to Brighton by the railway when the late accident occurred. Having described the circumstances attending the accident, the honourable member, stated that out of the long train of carriages travelling on that occasion, only three carriages were injured. He thought that it would be a great security if some provisions were made to enforce a regulation that the passenger carriages should not be placed within a certain distance of the engine, in which case, on the occurrence of accidents from collisions, much danger would be avoided. With these views, he would be glad if his right honourable friend would allow him to add some provisions, which, whilst they would go far to secure the safety of the public, would not be injurious to the Railway Directors. (Hear.)

Sir R. PEEL—I think, considering the nature of such establishments as railways—establishments conducted by large Companies with great capital, and superseding, to some considerable extent, other modes of travelling—if the legislature think right to interfere to see that proper precautions are taken to prevent the occurrence of accidents, they would be perfectly justified in doing so, and I am sure that there is no influence of the railway proprietors in this House which could stand for a moment against the sense and justice of applying a remedy the moment the necessity was proved to exist. (Hear, hear.) Indeed, I have reason to doubt very much whether all the Railway Companies, and railway proprietors in the country, would have the power to prevent Parliament from adopting any effectual regulations they thought fit the moment it was shown that these regulations had a tendency to prevent accidents. (Hear.) But, whilst I admit the power and right of Parliament to interfere, nobody can deprecate more than I do the interference of Parliament carried beyond proper limits. (Hear, hear.) I am sure that such interference would not tend to the security of the public, and that it would be impossible for the Parliament, or the Government, or any department of the Government, to undertake too minute an interference; or that, if they did undertake it, it would be productive of any great increase of security. (Hear, hear.) In the first place, it is the interest of the Railway Companies to do all in their power to prevent accidents. Whenever accidents occur a diminution of railway travelling is the consequence, from the preference consequently given to other modes of travelling. Before any gentleman forms his opinion on this point, I would recommend him to read the evidence given last year upon this subject. (Hear, hear.) That evidence is very interesting in itself, and will show that to undertake an interference of the kind suggested would only lessen the responsibility of the Railway Directors, and would not increase the public security. With respect to the suggestion that a certain interval should exist between the railway carriage and the engine, I think that any interference of the kind would tend rather to increase the risk than to diminish it. The Railway Companies would be glad to shelter themselves under the responsibility of the Government. They would say that these regulations were forced on them by the Government, and they would, in consequence of the Government interference, be released from the responsibility which would otherwise attach to them. It seems to me, that if you interfere by legislation, you take some of the responsibility from the Railway Companies, and assume it yourselves. There are, however, some matters in which the Government can properly interfere, such as the regulation of the crossings, the establishment of proper gates at proper places; but as to determine upon any certain number of watchmen, all the evidence is perfectly conclusive, that any such attempt, or any attempt to regulate the speed at which the train was to travel, or to determine the position of the engine, would be beyond the authority of the Government to effect; you would totally fail in your object, and, so far as the safety of persons travelling by railways is concerned, by such interference it would rather be lessened than increased. (Hear.)

Mr. LABOUCHERE said, the present Bill differed from that which he had proposed, inasmuch as his Bill gave greater powers to the Board of Trade. That Bill was referred to a Committee, and the investigation that had taken place before the Committee had fully convinced him that it would be better to leave the undivided responsibility in the hands of the Railway Companies themselves. He thought, therefore, that the right honourable gentleman had used a sound discretion in excluding that clause from the Bill. (Hear, hear.) Subjects of this kind were much more difficult to manage than at first sight they appeared to be. He thought it better to interfere too little than too much. However, he did not say but that after some more experience it might not be possible for some Government to interfere more than it would be advisable to do at present. He thought that the right honourable gentleman had acted on a sounder principle, by not lessening the responsibility of the Directors, than if he had attempted more directly to interfere with them. (Hear, hear.)

The motion was then agreed to, and leave accordingly given to bring in the Bill.

RAILWAYS IN IRELAND—CORK AND DUBLIN LINE.

[From the *Cork Constitution*, Feb. 3.]

A MEETING of the Committees appointed at the late county and city meetings took place yesterday, at one o'clock, at the Committee of Merchants' Room, Commercial Buildings. Lord Viscount BERNARD was called to the Chair. The other members present were the Right Worshipful the Mayor, Daniel Callaghan, M. P.; Sir Thomas Deane, Lieut.-Colonel Westrop, Major Beamish, Robert Delacour Beamish, High-Sheriff elect; Harris Purcell, William Clear, Michael Roberts, Joseph Hayes, William Fagan, Joseph M'Mullen, Horace Townsend, J. J. Finn, John Dillon Croker, and Richard Dowden (R.), Secretaries to the County and City Committees; and the local agents to the project, the Messrs. Foot and Fitzsimons.

Mr. CROKER read the following letter:—

"Moore Park, January 1, 1842.

"My Dear Sir,—Again I regret to say I must apologise for not attending at the meeting of the Committee to be held to-morrow in Cork. You are already aware of my having been attacked by a severe fit of illness, arising from a cold I caught on my way home after attending the City railway meeting. I was, however, getting well, when I ventured to attend a meeting of the Poor-law Guardians at Fermoy, on Saturday last. There I unfortunately caught a second cold, and have since been for a day confined to my bed. Yesterday I was a little better, but this morning I have got something very like lumbago, with pains in all my joints and bones, and I feel it would be madness to attempt to leave this early to-morrow morning in the state I am; besides it might bring on such a fit of illness as to prevent my going to London about the middle of the month, as is my intention, where my assistance in furtherance of railway communication in Ireland may prove of more consequence than at our Board in Cork, where I feel confident everything will be done that ought to be, with zeal, judgment, and ability. Believe me, this is no invented excuse, as it was my firm intention to have co-operated in every possible way towards the objects of the meeting, and I anxiously cherished the hope up to this day that I might still be strong enough to go to Cork. Be so good as to inform the meeting of the cause of my unavoidable absence, and at the same time assure them, that whether I am in England or Ireland, present or absent, I will on every occasion use my utmost exertions to bring about this great national work, which I consider indispensable towards promoting to any important extent, the wealth, happiness, and prosperity of my native country.

"I remain, my dear Sir, faithfully yours,

"MOUNTCASHEL.

"J. Dillon Croker, Esq."

He also received a letter from Lord Listowell, apologising for not being able to attend, and requesting that his name might be struck off the Committee.

Mr. FAGAN was requested at their last meeting to draw up a copy of a petition to emanate from the city, which he had not time to perfect, but, within the last hour he had put together a few sentences, which he would read:—

"That the construction of a comprehensive system of railways will, in the opinion of the entire nation, have the effect of introducing into Ireland vast social improvement—by developing her natural resources—by increasing her commerce—by adding to her agricultural capabilities—by reviving her manufactures, and by giving a profitable direction to her industry, and permanent employment to her people.

"That no part of Ireland will be more benefited by the introduction of railways than the City of Cork. Its local and geographical advantages point it out as the station for communication between the old and the new world, while a railway between it and Dublin would be a certain mode of communicating those advantages to all parts of the empire.

"That in the proportion that Cork, as well as the rest of the United Kingdom, would be benefitted by such railway communication, in such proportion would it be damaged were any partial lines constructed in Ireland which did not comprehend in their arrangement this great commercial city.

"That your petitioners are apprehensive, unless guarded against by your honourable House, that any plan, based solely upon private enterprise, would shut out Cork from the benefits of railway communication, because your petitioners are induced to think that, if uncontrolled by Parliament, private speculators would prefer running lines to Limerick, Kilkenny, Waterford, than to this city, which is

Digitized by Google

comparatively remote from Dublin, more particularly as the construction of the line between Cork and Mallow presents expensive engineering difficulties which do not exist in other lines.

"That therefore your petitioners would prefer that the railways in Ireland were undertaken as a national work—particularly as they believe that they would be constructed more speedily, at less cost, and would prevent the public lines of communication being, as they are in England, in the hands of monopolists and private Companies. But should your honourable House deem it inexpedient to grant the means, by way of loan, for such undertaking, your petitioners pray that, in permitting them to be constructed by private capitalists, you would so guard the interests of the south of Ireland as to enact, that whatever be the plan which will receive the sanction of your honourable House, it will provide that the City of Cork shall receive the benefit of such plan simultaneously with any other part of Ireland.

"That your petitioners feel the more anxious on this point, because of a Bill which was introduced last session into your honourable House, the object of which was the construction, by private capital, of a line of railway between Dublin and Limerick.

"That your petitioners are convinced, if such Bill had become law, and the line undertaken, the City of Cork would not for many years obtain a railway communication to Dublin, at least through the instrumentality of private enterprise.

"That the said Bill contained a provision for securing the capitalists a certain per centage on their investment, by mortgage on the property adjacent to the line run.

"That your petitioners have reason to think that such provision would cause very extensive opposition to any railway Bill from the landed proprietors in the inland counties, where the benefits of railway communication would not be so immediately felt.

"That, therefore, your petitioners are of opinion that any plan based on private enterprise which does not require such protection, would more certainly meet that general concurrence so necessary to carry out such an extensive undertaking.

That your petitioners have no intention further to express any opinion on the different lines of communication between Dublin and Cork, proposed to be executed, nor upon the commercial plans by which they are to be carried out. The object of your petitioners is simply to obtain as speedily as possible a railway communication between Dublin and Cork: and to ask your honourable House not to sanction any plan that does not embrace the main branch line between both cities, such line, if possible, to be undertaken simultaneously at each end; if not, ample security to be given that the whole be completed within a given period.

"Your petitioners humbly pray, that your honourable House will take the premises into your consideration, and grant the prayer thereof.

"And your petitioners as in duty bound will ever pray."

This (said Mr. F.) was hastily drawn up, but he endeavoured to embrace in it the resolutions passed at the City meeting, though he held a strong impression as to the impracticability of the line commencing simultaneously at both ends. (Hear.)

Major BEAMISH said, that the simultaneous commencement appeared to be a matter that ought not to be lost sight of, as the agent of the Kilkenny Company, Mr. Smith, said that it was neither impossible nor improbable, provided this part of the line was remunerative. If it would return 10 per cent., it could be done without a sacrifice on the part of the shareholders.

The MAYOR said, that Mallow was the only place that could give a return.

Mr. FAGAN said, that he drew the petition in conformity with the resolutions of the public meeting, but as public men, their object was to get a main trunk line.

Mr. FITZSIMONS said, that Mr. Smith was a little mistaken, though he did not exactly say, that it would be possible to have the line commenced simultaneously, nor did he agree to the resolution; what he said was, that if possible it would be done. (Hear, hear.) This subject was taken up by the *Railway Times*, an extract from which he would read. Talking of the Cork meeting, it said in a leading article:—

"The consequence would inevitably be, that were Government to entertain the proposition of the Kilkenny Directors, the line would be carried but a short way from Dublin, and Cork be as far off a line of its own as ever. This appears to have been feared by some of the parties at the meeting, when they insisted upon the commencement of the works at both ends simultaneously—a stipulation which, we venture to predict, will put a complete stop to all further agitation of this Kilkenny proposition. As regards the propriety of public assistance being lent to limited schemes like that now proposed, there could be but one opinion, if it necessarily followed that such aid would prevent or postpone the execution of a more extended system, but we do not see that any danger of such a result would be incurred. A beginning must be made somewhere, and why not a line to Cork in the first instance?"

Mr. HAYES thought, that they ought not throw away the opportunity they had of a connection with the Kilkenny Company, provided the Government had no plan in contemplation, for the Company contemplated the perfecting of the work to this city. He regretted that he was obliged to leave the public meeting, for he did not despair, if he remained there, that he would have convinced the meeting that though it was justifiable, and right, and proper to express a strong opinion in respect to a government plan, it should not control the action of the Kilkenny Company, who were willing to secure a railway to Cork, save the simultaneous beginning. (Hear, hear.) This was not a fitting time to refer to that question, though Mr. Fagan had very properly taken up the subject, it being referred to in a resolution. If they did not find the Government disposed to take up the question, he would deeply deplore that anything was done at a public meeting or by the Committees that would prove an impediment to private enterprise in any part of the country, for he was not so foolish as to say that if they could not get a thing in Cork, they should prevent it in other places. (Hear, hear.)

Sir T. DEANE quite agreed with Mr. Hayes, that a Government plan would be the best for the country, and he did not see why they should abandon the plan of calling on the Government to reconsider the question to prevent the evils which had arisen in England of being created in this country, by not adopting the plan carried out on the Continent, of having the railways under the surveillance of the Government, by which alone the great advantages to be expected by the country of certainty in proper fares and proper speed. (Hear, hear.) So much had been said on the subject before, and the subject had been so well considered at a recent public meeting, that he would not detain them by entering into a detail of the great advantages to be derived by the country at large from railways. He did not think that they would embarrass the Government by pressing on them the necessity of a deliberate inquiry ere any private line should be sanctioned; at the same time that they would not throw over board the plan of private enterprise. The City met some time since, when Lord Bandon presided, because they were alarmed at a Limerick line that was proposed, which, if carried out, would lead to the total annihilation of Cork; but they were now advocating another line through Kilkenny, which excluded Limerick. (Cries of "No.") With respect to beginning simultaneously, he would say that it was the only guarantee they had that the line would be brought to Cork—(hear)—for if without a Government advance it once got to Kilkenny, Waterford would supersede Cork.

Mr. HAYES was ready to argue the question, but he thought the Committee had no power to enter into it. (Hear, hear.)

Major BEAMISH said, that they were merely met to carry out the resolutions passed at the public meetings.

Sir T. DEANE would now come to a practical matter, and having given some consideration to the question, and having put a few reasons for his dissent on paper, he would read them.

Mr. DOWDEN was altogether at sea if this business was in order. (Hear, hear.)

Sir T. DEANE would read his reasons for supporting the Government line:—

"1. That I entirely coincide with the Railroad Report, which states, that the important public objects anticipated from the establishment of railways in Ireland, are not to be accomplished by separate and isolated lines, but by a well combined and judicious system, in which the joint traffic of many places and districts should pass, to a great extent, over one common line.

2. That every day's experience proves the absolute necessity of a general controul over the Railway Companies, for the protection of the public interest.

"3. That the population, traffic, and tonnage, of exports and imports of Dublin, Cork, Belfast, Limerick, and Waterford, establish their claims to be primarily the leading points of the trunk lines, in any system of railway communication to be adopted in Ireland, the particulars under these heads being as follow:—

Places.	Population.	Tonnage of Exports and Imports.	Traffic to and from Dublin.
Dublin.....	265,000	590,000	966,000
Cork.....	110,000	280,000	400,000
Belfast.....	63,000	315,000	364,000
Limerick.....	70,000	121,500	264,000
Waterford	29,000	248,000	236,000

"4. That the main trunk railways to the foregoing cities and towns should run in such directions only as (consistent with the engineering difficulties to be overcome) would afford the greatest quantum of benefit to the county at large, in regard to the statistics of the kingdom, as well as being the line or lines most capable of successive extensions.

"5. That the great national benefit to be expected from railways would be hazarded by the adoption of any isolated line, not pre-considered as a part of a combined and well-digested system, which alone could lead to low fares, and further extensions.

"6. That, departing from the general system, by sanctioning any deviation from the national plan, would be the commencement of all the evils of putting the railways, then the great highways, into the hands of Companies, thereby causing all travellers and traffic to be made subject to their private interests.

"7. That, consenting to private speculation on any part of the trunk lines known as likely to be profitable, would totally defeat the general system, as laid down by the Railroad Report, causing thereby irremediable and positive evil to the country at large—it being 'manifest, that if the best and most productive portions are taken possession of unconditionally, there can be no reasonable hope that the remainder will ever be carried into effect.'

"8. That should the difficulties caused by the magnitude of the plan for the Irish railway, lead to a consideration of the various suggestions put forward, with a view to their being overcome, under any and every circumstance, before any private line should be adopted, that the Government should have a revision and continuation of the information obtained by the Railway Commission, with reference to the new plans to be suggested or submitted, and particularly in reference to hereafter liabilities of the country, by guarantee for the interest on public or private advances of capital, as well as clearly to define its nature, extent, rate, and diffusion over the part or the entire of the kingdom to be benefitted; in a word, that the most searching inquiry should be made, and the utmost deliberation should be given, ere the general plan of trunk rails for this country should be abandoned, or any new or partial project should be sanctioned, or aided by the Government."

Mr. DOWDEN said that they could not now discuss the principle. The Kilkenny people had proposed a line which they resisted, because they prefered the Government plan, as being more comprehensive if followed up; but the Government was resisted by a powerful party in the House of Commons, and when it was found that Irish members had opposed it, the Government of course left it where it was. Then the Limerick Company started, and they held a meeting under the patronage of the Earl of Bandon and resisted the project; and they memorialed the Lord Lieutenant in respect to a Government project, who sent down as direct a "no" as ever they got. (Cries of "No.") The "no" was in the manner of all Government negatives—round about. (No, no.) The Cork meetings were got up at the expense of a private company, when it was found that the Government were going to do nothing, and a resolution was passed to aid private speculation. (No, no.) If any man had any faith in the Government after Lord De Grey's answer, let them go to work accordingly.

Sir T. DEANE had.

Mr. CROKER had also.

Mr. CALLAGHAN attended the meeting as a Committee man to carry out the spirit of the resolutions passed at the public meeting, and it appeared to him, that much that was now said was out of order, while none seemed to apply themselves to the resolutions. The county resolutions applied to any plan for carrying out a railway between Dublin and Cork, while the city resolutions let in the project of the Kilkenny line; but as there was not yet an Act of Parliament, the people of Cork had ample opportunity of opposing any plan that would not be advantageous to them. As a public man, he could say, that when Mr. Drummond and Mr. Griffiths, the Commissioners appointed to consider a line of trunk railway from north to south of Ireland, made their Report, the Government of the day said distinctly, that they were not prepared to act on it; but afterwards, from the great pressure on them, Lord Morpeth, at the instance of Mr. Drummond, laid a plan before Parliament, which departed in a great measure from the plan of Mr. Drummond and Mr. Griffiths—in one particular, that the money was not to be advanced by Government but by Mr. Goldsmid and others, who, Mr. Barrington said, would become lenders. Lord Morpeth was unwilling to take up the plan, as he saw that at the close of the Parliament it could not be acted on, but being a feasible measure he laid it on the table for the next Session, and the new Government of Lord Melbourne repudiated it. Another Company then entered the lists. Mr. Pierce Mahony did not like Mr. Barrington to have all—(laughter)—and he very sedulously applied himself to the subject, and he got the Drogheda people to take it up, and he, with a deputation, repaired in sober seriousness to London, and had an interview with Mr. Goulburn. They offered to supply capital without requiring the security of the counties, and proposed, on getting a monopoly of the line, to advance money. He subsequently heard from the deputation that Mr. Goulburn declined taking up the project. Lord Eliot was not prepared, he believed, to bring forward any plan for railways in Ireland. (Hear, hear.) He did not attend the meetings held in the City, but he read a great deal of assertions made at them that some plan was in the mind of the present Government. His impression was that people were quite in error on that point, and that no Minister of the Crown was prepared to propose a general plan of railways, and therefore they ought to embrace any other plan, and seek to get an Act of Parliament,

Digitized by Google

which was a costly and slow process—a process that would give them abundant time to discuss details. (Hear.) He had not heard of any one thing that convinced him that a Government project was in existence; he heard nothing to prevent their giving every encouragement to the Kilkenny Company, whose line he considered good in itself, and which would be now in full work but for the interference of the Government plan. He believed that the Kilkenny line was intended *bona fide* to be carried out for the good of the country.

Sir T. Deane believed that the Government had not yet had time to give that consideration to the subject that its magnitude demanded. He had private information that there were several plans at present before the Government.

Mr. Callaghan said, that they were all private projects.

Mr. Croker did not care how the line came from Dublin to Cork, but he did not want to have the county pledged in any way that might mar the Government, which had plans under consideration.

After a short discussion,

The Noble Chairman said, he had put into his hands the resolutions passed at the meetings, to which he would call attention, but that some little difficulty arose in respect to them, the powers conferred on the County and City Committees being different. (Hear.) On a former occasion in that room he was entrusted with a resolution, the object of which was to express, in the strongest terms, that the proposal of a line to Limerick, if carried out, would virtually destroy Cork. From that meeting a memorial emanated, and was presented to the Irish Government, and he for one did not draw the inference that that memorial met with a refusal. It was not to be expected that the Lord Lieutenant of Ireland could speak for the plans under the consideration of Government. What could they now do by entering into a discussion of the comparative merits of the Government plan and the comparative merits of the Kilkenny line? He thought nothing [illegible]. (Hear, hear.) Their object, therefore, was to agree to some petition so unexceptionable in [illegible], that it would embrace the views of both county and city, and which would be so numerously signed as to draw the attention of Parliament to the subject at once, and show the Parliament that the county and city were united in their anxiety to have railways. On the other hand, if gentlemen brought forward different plans, the Government would say that as they could not agree amongst themselves, they could not expect to be assisted by Parliament.

After some further discussion, Messrs. Foot and Fitzsimons said, that as to the expenses that had been incurred, they had involved themselves gratuitously, and if the project sought appeared to be a useful one, they would with pleasure give every assistance, pecuniary and personally, in their power.

Mr. Hays spoke at some length, in favour of the Great Leinster and Munster Railway Company's project.

Mr. Fagan proposed the adoption of the petition.

Mr. Fane seconded the motion.

The question was put, and the petition was adopted.

Mr. Croker then proposed and read the county petition, a copy of which appeared in the *Constitution* of Tuesday.

Mr. Townsend seconded its adoption.

The question was put, and the petition adopted.

After some matters of detail were discussed, Lord Bernard was moved from, and the High Sheriff Elect to the chair, when a vote of thanks was presented to his Lordship, on the motion of Colonel Westrop and Sir Thomas Deane.

PROPOSED CONNECTION OF THE DUBLIN AND DROGHEDA AND ULSTER RAILWAYS.

[Abridged from the *Newry Telegraph*, February 8.]

On Friday the 4th inst., a large and respectable meeting was held in the New Court House, for the purpose of considering the best means by which the railway now in progress between Dublin and Drogheda could be connected with the Ulster Railway, so as to secure to Newry the advantage of railway communication.

Mr. John Boyd, Seafield, took the Chair.

Mr. P. Eckersley, the Managing Director of the Dublin and Drogheda Railway Company, addressed the meeting. He said, the Dublin and Drogheda Railway Company are desirous to connect their line with the Ulster Railway Company, and thus, by opening a communication direct from Dublin to Belfast, to develope the resources and increase the traffic on that line of road. The Company have looked on this matter, not only as one of interest to themselves, but as a national work possessing importance, such as, in its accomplishment, ought not to be delayed longer than necessary. With this view they have been lately in communication with the Government, and if their proposals meet with its approbation, a railway will shortly be in course of construction, exceedingly advantageous to this town and the adjacent districts I shall now state to you the propositions which would be so conducive to your interests, and the objects we all have in view. Mr. Eckersley then stated the propositions, which were, in substance:—That the Dublin and Drogheda Company are willing to undertake the construction of the entire line of railway, from Dublin to some point on the Ulster Railway, on condition that the Company would find half the required capital—say 600,000*l.*; and that the Government should guarantee 4 per cent. interest on the other moiety, thus enabling the Company to raise such moiety on such guarantee. The Government to be secured by a first charge on the whole property of the Company, and to have such control over the working of the line as may be found conducive to the public good. Mr. E. then continued:—You will perceive that these propositions are of an extremely simple nature, and I hope will be acceded to by Government; for I contend that, in acceding to them, it will not run any risk, as this 4 per cent. on the moiety is equal to 2 per cent. only on the whole sum. I have no doubt, Sir, that if any line of railway would pay, a line through Drogheda, Dundalk, and Newry, would be more remunerative than many others in this and the sister country. I also contend, Sir, that the Government will run no risk, as they will have the power over a large sum that would be annually accruing to the Company for the conveyance of the mails, which is a greater amount than perhaps we are aware of. The expense to Government of horsing the mails through Ireland is about 40,000*l.*, which would leave the expense, as regards the northern division, not less than from eight to ten thousand pounds. So that, in point of fact, the risk of the guarantee would be reduced to little more than 1 per cent. Perhaps it would be well for me now to state to this meeting the capital and the state of the works of this Company. In round numbers, their capital at present is 400,000*l.*, so that it would be necessary to have it increased 200,000*l.*, and which the Directors have resolved to do, after a full and mature consideration. In respect to the state of the works, I have the pleasure to inform you that three-fourths of the line is in a forward state, and in three months the works on the whole line will be in operation. In 1839, we engaged Mr. Macneill to make a survey of a line from Drogheda to join the Ulster Railway, at Portadown, and we find from his Report, that a very excellent line of road could be made at an expense of about ten or eleven thousand pounds per mile, which is a very moderate estimate. We are at present, on the Drogheda line, contracting for a sum less than his estimate, which, independent of his Reports, will show the accuracy with which we may rely on this calculation. The Ulster Railway was constructed at an expense of eleven thousand per mile, and for the Dublin and Drogheda line the outlay will not exceed fourteen thousand pounds per mile; so that this contemplated line northwards could be completed at an expense of about from ten to eleven thousand pounds per mile. Under such circumstances, if any line of railway would succeed this must. The average cost of all the English railways is about forty thousand pounds per mile. In calling therefore, upon the Government to assist the Company in this safe and indirect way, I again repeat, we do not call upon them to run any risk. I am much obliged, Sir, to you and the gentlemen present, for the attention which they have given to my statements; and, in conclusion have only to say, that I will feel happy in giving any further information that may be required relative to this undertaking.

Mr. Parsons then introduced Mr. Macneill, the Engineer to the Dublin and Drogheda Railway Company, who read a long Report respecting the proposed line, and concluded amid great applause.

The resolutions will be found in our advertising columns.

It is stated in the *Cheltenham Free Press* that the Directors of the Great Western Railway Company have awarded to the various individuals resident in that town, who were injured by the late unfortunate accident near Reading, the sum of 10*l.* each, besides paying the expenses of medical attendance.

RAILWAYS IN FRANCE.

The Paris papers of Tuesday, received on Thursday, are, to the exclusion of all other subjects, occupied with the law presented to the Chamber of Deputies on Monday for establishing several great lines of railway in France. The Minister of Public Works prefaced the project of law with an exposition of the reasons for it, of which the following is the substance, to which we add the text of the law itself. The length of railway which it was proposed to take in hand at the present moment was, he said, 596 kilomètres, or, one-fourth of the whole extent comprehended in the plans of the Government, and in two years' time the remainder would be commenced. The calculation of the cost to the State of its share of the expenditure was, he added, 150,000f. per kilomètre; that of the Companies 125,000f., or 500,000f. per league. The total expense per league is estimated by the Minister at 1,200,000f.

In alluding to the mode of meeting the expenditure, M. Teste said that the deficits of 1840, 1841 and 1842, would not exceed 300,000,000, to which were to be added 500,000,000 for the extraordinary expenditure of public works already ordered by the Chamber, and 400,000,000 for the railways, which it was intended to execute within the next ten years. These would give a total of 1,200,000,000. To meet this expenditure for the next ten years, supposing that the same delay be allowed for the completion of all the other public works as for the whole of the railways, M. Teste calculates upon extraordinary resources from the reserve of the sinking fund, amounting, for the ten years, to 829,000,000, and on the remainder of the loan to be contracted for—viz., 300,000,000, making a total of 1,279,000,000. The Minister then read the following Bill:—

CHAPTER I.

Art. 1. There shall be established a system of railways leaving Paris, and leading to the frontier of Belgium by Lille and Valenciennes, to England, by a point of the coast of the channel which shall be determined hereafter, to the frontier of Germany by Strasburg, to the Mediterranean by Lyons, Marseilles, and Cette, to the ocean by Bourdeaux and Nantes.

Art. 2. The execution of the grand lines of railway, enumerated in the preceding article, shall be performed by the co-operation of the State, of the departments, and communes interested in them, and of private industry in the proportions and forms to be hereafter resolved upon.

Art. 3. Independently of the voluntary grants which may be offered by localities, and accepted by the Government, the indemnity for lands and buildings, the occupation of which may be necessary for the establishment of railways and their dependencies, shall be paid to the amount of two-thirds, by the departments and communes interested in them. In each department through which a railway shall pass, the Council-General shall determine the amount to be chargeable upon the departmental funds; it shall designate the communes to be called upon for payment of the surplus of the two thirds, and fix the contingent of each, according to its interests and its financial resources.

Art. 4. The remaining third of the indemnity, and the excavations and banking, and the works of art, shall be paid by the funds of the State.

Art. 5. The rails, including the sand, the *material*, the expenses of working the line, and the expense of keeping up and repairing the roads, its dependencies and its *material*, shall be at the charge of the Companies, to which the working of the railway shall be let on lease. This lease shall be granted upon a *cahier des charges* (clauses and conditions), which shall fix the duration of the period and the tariff of fares. The *cahiers des charges* must be approved of by royal ordonnance.

Art. 6. At the expiration of the lease, the value of the rails and of *material* (carriages, locomotives, &c.) shall be reimbursed, according to appraisement, to the Company by that which shall succeed it.

Art. 7 For the regulation of the indemnities for lands and buildings, the formalities prescribed by arts 23, 24, 25, 26, 27, and 28 of the law of 3rd May, 1841, shall be dispensed with. The estimation of the lands and buildings, comprised in the judgment of expropriation, shall be immediately referred to a jury. Immediately after the decision of the jury, the Government shall be put into possession of the lands and buildings which are expropriated, on payment of the

Digitized by Google

third of the amount of the indemnity to be borne by the State.

Art. 8. The measures which may be necessary to conciliate the working of the railways with the execution of the laws and regulations of customs, shall be regulated by royal ordonnance.

Art. 9 The measures and arrangements necessary for the good regulation, safety, use, and preservation of the railways and their dependencies, shall be fixed by the Government.

CHAPTER II.

Art. 10. A sum of forty-three millions is appropriated to the establishment of the railway from Paris to Lille and Valenciennes, by Amiens, Arras, and Douai.

Art. 11. A sum of forty-one millions is appropriated to the portions of the railway from Paris to the Mediterranean, comprising one between Dijon and Chalons, the other between Marseilles, Avignon, and Beaucaire.

Art. 12. A sum of seventeen millions is appropriated to the establishment of the portion of the railway from Paris to the ocean, comprised between Orleans and Tours.

Art. 13. A sum of 1,500,000 francs is appropriated to the completion of the plans and surveys of the great lines of railways, defined by Art. 1 of the present law.

Art. 14. On the appropriations mentioned in the preceding articles, amounting together to 102,500,000f. there is opened to the Minister of Public Works, on the estimates of the year 1842, a credit of 11,000,000f. —viz., for the railway from Paris to the Belgian frontier, 4,000,000f.; for the portions of the railway from Paris to the Mediterranean, between Dijon and Chalons, and between Marseilles, Avignon and Beaucaire, 4,000,000.; for the portion of the railway from Paris to the ocean, between Orleans and Tours, 2,000,000f.; for the continuation of the plans and surveys, 1,000,000f. And upon the estimates of 1843, a credit of 22,500,000 francs—viz, Paris to the Belgian frontier, 8,000,000f.; Paris to the Mediterranean, 8,000,000f.; Paris to the ocean, 6,000,000f.; and for the continuation of the surveys and plans, 500,000 francs; total for 1842 and 1843, 22,500,000 francs.

CHAPTER III.—WAYS AND MEANS.

Art. 15. The portion of the expenditure authorised by the present law which is to fall upon the State, shall be provided for provisionally out of the resources of the floating debt: the advances of the treasury shall be definitively covered by the consolidation of the funds of reserve of the sinking fund, which may be disposable after the extinction of the deficits of the budgets of 1840, 1841, and 1842.

CHAPTER IV.

Art. 16. Every year there shall be rendered to the Chamber, by the Minister of Public Works, a special account of the works executed by virtue of the present law.

The Bill, and the *expose de motifs* accompanying it, were ordered to be printed.

All the Paris papers comment on this project of law, which appears upon the whole to be rather favourably received.

The *National* complains that the line of Strasburg has been omitted, and the *Commerce* contends that the enterprises would be better directed if left to the direction of private individuals instead of to the Government.

GLASGOW AND GREENOCK RAILWAY—THE BISHOPTON TUNNEL.

THE following speech was delivered at a meeting held in Bishopton, Mr. GEORGE PENFOLD in the chair, on Friday the 21st ult., in commemoration of the anniversary of the Bishopton Tunnel.

On the health of the workmen being proposed from the chair,

WILLIAM DUTTON rose and said, Mr. Chairman and gentlemen, I most respectfully beg leave to return thanks in the name of the workmen. Although I feel highly favoured in being present at such a large and respectable meeting, yet, I must confess, I feel something of regret in responding, conscious that my habits of life prevent me from doing justice either to the subject or my feelings upon the present occasion. I am highly gratified in being surrounded by persons upon whose peaceful brows so conspicuously sits hilarity, and whose pleasant countenances so evidently bespeak hearts whose every wish is to diffuse happiness around, and propagate harmony, peace, and good will among their fellow men; and what greatly enlivens the scene, is, that the major part of this meeting are a portion of the men whose hands, sinews, and persevering industry achieved the great event and incipient object of this meeting. My friends, it is of paramount importance for all the servants of the Company to be at a right understanding with, and always to manifest a mutual friendship towards, each other. The same suggestion is applicable to all mankind, for what is the whole human race but one continued family of brothers, sisters, and fellow-servants, claiming one general parent, and who must all one day of other render an account to the same master. (Hear, and immense cheers.) There is nothing conduces more to preserve this amity, than for the one to abstain from unduly interfering with the peculiar duties of another. Our motto should be, "A post for every man, and every man at his post." (Cheers.) We are told, that where envyings and strife is, there is confusion and every evil work; and each day's experience certainly justifies the observation. I am happy to observe, that this meeting is composed of almost an equal number of English, Irish, and Scotchmen. Our respective countries are united, and why should not our hearts be united in maintaining the spirit of unity in the bonds of peace. 'Tis but a narrow stream that divides our homes, and nought but narrowness of soul can prevent us from vowing eternal friendship. (Loud cheers.) Man is a social being, gifted with intellectual endowments, which expand and improve by intercourse with society, and a mutual exchange of thought and sentiment with his species. Why, then, should groundless prejudices reverse the order of nature, and of nature's God, my friends? It is meetings like the present that can refine our manners, dispel the mists of ignorance and bigotry, and cause the united streams of brotherly love to flow spontaneously into the broad and universal channel of patriotic philanthropy. (Hear, hear, and cheers.) When man is at peace with man, how much lighter than a feather are the heaviest of metals, the greatest rocks, and the weightiest of enterprises in his hand. Union is power; and if the undaunted valour of Sandy, the bravery and shrewdness of Paddy, and the physical energy of John Bull, were firmly united, the manacles of commerce would soon be untied, monopoly annihilated, and smiling prosperity would again lend her genial ray to bless our land and brighten our present midnight hemisphere. (Loud and continued cheers.) As all present are more or less connected with this railway, I feel proud in congratulating you upon the great safety to passengers which has attended this line, for neither the lives nor the limbs of any have been lost or endangered since the opening. I attribute this to the merciful interposition of that Great Being whose mercy is over all his works, and whose goodness hath averted from our line those awful calamities which have but too frequently visited neighbouring railways; and, secondly, to the efficiency of a zealous police force, faithfully performing their arduous duty in keeping the line free from all obstructions—well disciplined, under the inspection of our active superintendent (Mr. Crolley), whose abilities for that office are too well known to require any eulogium from me. (Cheers.) Lengthy articles have appeared in the public papers, deprecating railway trains as a dangerous mode of travelling, but I care not for the death-howl of self-interest, neither do I regard the envious aspersions of vanquished competition in rival steam-boats. I pronounce railways to be one of the greatest modern improvements, and feel justified in stating, that the Glasgow, Paisley, and Greenock Railway has furnished a striking proof, and ocularly demonstrated, that nothing is required but proper attention, care, and caution, to render railway trains as safe a mode of conveyance as any travelling vehicle of the present day. I humbly apologise for trespassing so long upon your valuable time, and conclude by heartily wishing success to railways and locomotive science. (Cheers.)—*Scotch Reformers' Gazette.*

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—The good of the town of Manchester, the metropolis of the manufacturing districts, and the best interests of the two great counties of York and Lancaster, imperatively demand that the question now agitating the public mind in the North of England, regarding the junction of the railway lines at Manchester, should be dealt with, and decided on, according to its actual merits, and altogether irrespective of the quarrels and squabbles amongst the Directors of the Manchester and Leeds and Manchester and Liverpool lines. For this purpose I call upon the proprietors of these two lines of railway most narrowly to watch the motions of their respective Directors in this important matter, for every one must perceive, from all that has been published, how angry and how irritated the Directors of the two lines are, and it may therefore naturally be expected that neither party will stick at saying or doing anything (witness their plausible statements, say those on both sides), in order to save themselves from defeat, and in order to gain a temporary victory.

The Manchester and Leeds Directors having decided in what almost may be called a *pet*, to complete their line to Hunt's Bank, and having already expended a large sum thereon, will be the last to perceive the least merit in any other line of junction, whilst the Liverpool and Manchester Directors, who from the very first, for reasons not easily to be accounted for, but of rather a suspicious kind, have shown the utmost reluctance to carry out any junction at all, and are now only entertaining the question from the force of circumstances, it is much to be feared, are desirous of throwing the public and the proprietors on A WRONG SCENT, proposing junction lines they never mean to complete, and will actually be blind to any merits the Hunt's Bank junction may have.

The public, however, and the proprietors of the two lines alluded to, have far other duties to perform. They long before now must have perceived, that there cannot exist a doubt of the immense importance of a continuous railway communication from the *great commercial towns of the west coast, through the most populous manufacturing districts of these realms, to the equally great commercial towns of the east coast of the kingdom.* They will perceive, too, that but little stress can be placed on the statement of the Liverpool Company, that not much goods' traffic at present passes between the termini of the two lines at Manchester, for all now know the effect a *hiatus* of two miles has in prohibiting active traffic on a railway line; for instance, what would not be the effect on the goods, and even on the passenger traffic, of the Grand Junction and London and Birmingham lines, if *two miles* of the rails were to-morrow taken up through the town of Birmingham, so that the first (goods) had all to be *carted*, and the second (passengers) had all to be *omnibused*, over the breach! Yet, such is the present state of the communication at Manchester! Lastly—and I am sorry to be obliged to draw public attention to it—all must perceive, with no little suspicion, the flippant and hasty manner in which the Liverpool Directors discard and pronounce illegal the proposed guarantee of the Manchester and Leeds Company, of ample interest on the outlay of the Liverpool and Manchester Company, in completing their part of the junction line to Hunt's Bank, as if the mere opinion of their Law Clerk would pass as decisive in this matter.

I am, Sir, your most obedient servant,
OBSERVATOR.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—It appears to be admitted on all hands that a junction line between the Liverpool and Manchester Railway, and the other lines entering this town, must be effected, as well for the public convenience in the transit of passengers, as for the economical and speedy conveyance of goods by the different Companies, and more especially for the completion of an unbroken line of railway from the west to the east sea. The objections alleged in the Report of the Liverpool Directors to the execution of that scheme, which on their own application has received the sanction of Parliament, are all comprised under the heads of—1st, original expense; 2nd, improbability of adequate traffic for their remuneration; 3rd, incompleteness of such a connection, by the omission of some Companies; 4th, the high terms on which they would have to pass over a portion of the Bolton Railway, according to

Digitized by Google

[redacted] As one deeply interested in the successful prosecution of this project, I may perhaps be excused in expressing my opinion, that they have failed in offering sufficient reasons, either to their proprietors or the public, for the abandonment of their present powers.

1. The estimated expense of their part of the Hunt's Bank junction line is about 240,000*l.*, including the cost of a passenger station—their present one being confessedly insufficient for their business. In order, then, to justify their recommendation to their Company to relinquish their powers, they ought, at least, to have been prepared with, and to have published, their reasons for concluding that they would incur less expense by their proposed southern line. This they have not done—they have not even expressed their belief that such is the case, though they have certainly not studied brevity in their Report; and they are now apparently for the first time adopting the means, by surveys and estimates, of justifying a predetermination in favour of a southern line.

2. The estimates of traffic furnished to them by the Manchester and Leeds Company were founded on actual observation, supported by the argument that their own estimates of traffic, which are already fully realised, were procured by the same person and in the same manner. On what grounds these estimates are stated "not to have been substantiated by subsequent investigation" they do not state, except by expressing their *belief* that the "traffic in road material from Liverpool will not exceed 375,000 tons per annum," and drawing from this opinion a deduction which they call "a proof" of the utter fallaciousness of such estimates. These opinions may be sound and sufficiently well founded, but what I say is, that it does not so appear in their Report.

3. Much stress is laid upon the advantages of a southern junction line as combining the interests of other Companies, viz., of the Manchester and Birmingham and Manchester and Sheffield Companies, who would thus be enabled to communicate directly with Liverpool. Now, I will suppose such a scheme to be perfectly feasible, that no insuperable engineering difficulties exist to a junction of all these lines on the same level without any enormous outlay of capital (though upon all these points I am well aware that much difference of opinion exists); I will even suppose that the Sheffield tunnel will eventually be made, and that a line from the other end of it to Barnesley will, at some future period, be surveyed, subscribed for, sanctioned by Parliament, and made, all of which is requisite before the "extended views" of the Liverpool Company can be realised; and I will then ask, why the Liverpool Company should be so solicitous for the accommodation and welfare of two Companies, who appear to be so ignorant and negligent of their own, that they are now "disposed to adopt prompt and efficient measures for making a junction between their station in Store-street and the Manchester and Leeds Railway at Hunt's Bank." Yet such is the determination of the Manchester and Birmingham Board, as appears by this very Report, which ought at least to show why the Directors of the Liverpool Railway are determined to make better terms for them than they require for themselves. I observe that Hunt's Bank is designated "a remote corner," to which I have only to reply, that it is nearer both to the Exchange and the Post-office, than the Store-street station, even if there were a possibility (which there is not) of joining or finding room for the stations of four railways at that spot.

4. When men object publicly to the terms of an agreement between public bodies, it is usual to publish those terms, especially when they are acting as trustees of the property of others, as well as stewards of their own. Of course I cannot say that they are not not justified in objecting to those terms, because it does not appear what they are, but I only insist the more strongly on this account that they have failed in substantiating their objections to the present plan. But I will ask whether on their own declaration (supposing their proprietors willing to be satisfied with that,) they ought not also to be able to say, that they had endeavoured to negociate for better terms. Surely it is so palpably the interest of the Bolton Company to bring the junction over their line, that they could not refuse to submit to arbitration upon the disputed terms, and to consent to reduce them if declared excessive.

With regard to the details of this important question, it would not become me to express an opinion, or to assume to decide the points in dispute between two Companies, who are both deeply interested, and have full means of obtaining the requisite data for their guidance; but I do say, that this Report does most signally fail in justifying the Liverpool Directors in the indefinite postponement of a scheme matured and sanctioned by Parliament and the public, in a vague expectation of securing (what all admit to be most important) a junction with the West Riding of Yorkshire and the German Ocean, by a southern route, for which the Parliamentary notices have yet to be given, which is dependant upon the completion of the Sheffield for the attainment of its objects, and which is sure to meet with the determined opposition of two at least of the railways sought to be united, as well as of the Bolton and Bury Company, who will be thus left duped and beguiled of the advantages of their agreement, to console themselves in their isolation from all the other Companies, with the reflection that this "unkindest cut of all," has been dealt upon them by the hands of their own fellow-townsmen—for they are Liverpool also. In the hope that you will either insert or notice at length in an early number of your journal this commentary upon that most elaborately flimsy production,

I am, Sir, your obedient servant,

A SHAREHOLDER IN THE MANCHESTER AND LEEDS RAILWAY.

Manchester, February 1, 1842.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—The tenacity with which the Directors of the Liverpool line cling to the project of a *southern* junction line through Manchester is rather surprising, now that the Manchester and Birmingham and Sheffield Companies propose forming a tunnel to join the Leeds at Hunt's Bank. After a careful perusal of their Half-yearly Report, it appears to me that the only good reason given by the Liverpool Board for abandoning the Hunt's Bank project is the stringent terms imposed on them by the Bolton Railway Company. But why are not the particulars of the agreement stated in the Report? Possibly they are by no means so stringent as the Liverpool Directors would lead us to suppose; at any rate, it seems strange that this, their only valid argument in favour of abandoning their Parliamentary line, should be advanced *now for the first time.*

It seems to me that the refusal of the Bridgewater Trust, to join the Leeds Company in forming a quay at Hunt's Bank, coupled with their offer to join in forming a southern junction line, proves the truth of the rumoured preponderance of the Bridgewater interest at the Liverpool and Manchester Board.

The Liverpool people seem to feel rather jealous of the Bolton line; is it their intention to include that line in their southern scheme? They object to the avowed intention of the Leeds Directors to forward their goods traffic from Hunts' Bank by the river or railway to Liverpool, as may seem best to them. This is only fair on the part of the Leeds Board, and is necessary to protect the public. Do the Liverpool Directors hope so to arrange terms in the new scheme, as to shut out the Leeds, Birmingham and Sheffield lines *from the river altogether*? If so, I trust so selfish and ruinous a project, will be at once put down by the other Companies. They assert that Store-street is a better situation for a station, and so it is undoubtedly; but what matters it talking of that, when vacant land there is not to be had of sufficient extent? If the situation at Hunt's Bank is considered objectionable, there is nothing to prevent the Liverpool Company running their passenger trains up the tunnel from Hunt's Bank to Store-street, where they might have their station. Why then not join the other Companies in completing the junction at Hunt's Bank—why encounter the delay, expense, and uncertainty, attending an application to Parliament for a fresh Act?

I feel astonished, Mr. Editor, that the working expenses of the Liverpool line should still absorb 50 per cent. of the receipts. One item, viz., 5,666*l.* 13s. 10d. for maintenance of way," is exorbitant, coupled with another item of 569*l.* 15s. 7d. for "repairs of walls and fences;" it is at the rate of 12,000*l.* (400*l.* per mile) per annum for maintenance of way, on a line only 30 miles in length!! Can any of your readers inform me what is meant by a charge of nearly 200*l.* for "compensation, coaching, and carrying?"

It is to be hoped that the Liverpool Board will now in good faith set about some junction line. Let them beware of playing *too deep a game.* Should the Leeds and Manchester and the Manchester and Birmingham be excluded from the Liverpool line, even after coming down to Hunt's Bank, they may be driven to join the Bolton and Bury and Bolton and Leigh, in the extension of the latter line to Liverpool.

I am Sir, yours respectfully,

ONE INTERESTED IN LANCASHIRE RAILWAYS.

London, 31st January, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I was rather amused on reading the glowing picture your correspondent, "No Shareholder," has drawn regarding the prospects of the Sheffield line. Why, if the facts he states were only true, it would be a perfect Eldorado! and I wonder he does not become a shareholder. The Leeds line, costing double what the Sheffield is (on his showing) to cost, pays 6 per cent.; and as he can buy a Sheffield 100*l.* share at 50*l.* discount, 24 per cent. per annum would be the return on his investment, as the dividend on the Sheffield will of course be double that on the Leeds! Unfortunately, however, there is not word of truth in what he calls "facts." Your correspondent, who evidently is a sad novice in railway matters, must have picked up his information in the bar of an inn or on the top of a coach—at all events, in such places one may any day pick up just such information as "No Shareholder" favours us with.

To parties who know the real merits of the Sheffield, any comment on "No Shareholder's" letter is unnecessary; but for the information of your other readers, permit me to point out the incorrectness of his statements. Many persons, when contemplating making an investment, are no doubt in the practice of consulting your columns; and as great exertions have been made of late *to puff* the Sheffield line into notice, it is of importance to put the public on their guard.

1st. "No Shareholder" asserts that the Sheffield tunnel is only three miles in length, and through the most favourable strata, while the Leeds line has seven miles of tunnelling through the worst strata possible! Now, Sir, the truth is, that the strata through which the Sheffield has to be made is most difficult and expensive, and the entire length of tunnelling on the Leeds line is only about three miles. The exact length is 5,432 yards, as was stated in the Leeds Directors' Report of March, 1841, which "No Shareholder" may see by referring to your columns. He insinuates that the Leeds tunnels pass through strata of sand. He is mistaken in this. Nearly the entire length is through blue shale and mountain limestone, and but trifling expense is incurred in keeping the tunnels in repair.

2nd. He asserts that Manchester is ten miles nearer Leeds by the Sheffield line than by the Manchester and Leeds Railway. Now, Sir, by the

Digitized by Google

latter, it is only 60 miles, while, *via* Sheffield, the distance is 80 miles! Even were the Sheffield Company to obtain an Act to form a branch line from Penistone to the North Midland, 12 miles in length, the distance would be as great (in fact, precisely the same) as by the Leeds line; it would be 60 miles.

The Sheffield shareholders take great pains to represent their line as a rival to the Leeds, and one ignorant of the localities would imagine from their account of the matter, that the two lines ran parallel to each other some mile or two apart for the entire distance; whereas the fact is, that the Sheffield crosses the country from east to west, at a distance of from 15 to 25 miles south of the Leeds line; and while the Leeds runs for 30 miles through the densely peopled and wealthy vale of Todmorden—a vale teeming with manufactories—the Sheffield line traverses a district of country which, with the exception of the first 12 miles out of Manchester, is thinly peopled, and comparatively destitute of manufactories. There are coal works to be sure, but woe to the Sheffield line, if the profits are dependent on the coal traffic! Why, on the Liverpool and Manchester line, the *annual* receipts from coal only amount to 6,000*l.* on a gross traffic of 260,000*l.*!

3rd. "No Shareholder's" third fact, is no fact at all; it is an assertion. He says, that while the Leeds line has cost 60,000*l.* per mile (which is correct), the Sheffield will only cost 25,000*l.* per mile. Now, Mr. Editor, if there be one truth more than another now generally received in the railway world, it is that the opinions of any engineer whatever regarding the cost of a line *are utterly useless*. This conviction has been forced on railway proprietors by the events of the last four or five years; and the completion of each line only furnishes further evidence of its correctness, as witness the late meeting of the Brighton Company. Yet, in the face of all this, "No Shareholder" assumes that the Sheffield line will be completed for 25,000*l.* per mile, *because* the Engineer states so in his last Report. In the spring of 1838. 24 miles, or nearly one-half the length of the Leeds, were under contract, including the long tunnel, for 500,000*l.*; and the Directors stated, that they hoped to let the remaining 26 miles for the same sum of half a million. Yet the ultimate cost, including plant, was three millions! Let "No Shareholder" ponder on this fact, and beware of confiding in Engineers' estimates of cost. As a proof of the usefulness of such Reports, I may remark, that Mr. Vignoles estimated the cost of the Sheffield tunnel at 105,967*l.* Mr. Locke takes it at 207,500*l.*, or just double; and I dare say, were the Directors to change their Engineer once more, Mr. Stephenson would raise the estimate to 300,000*l.*; and Mr. Brunel, if called in after Mr. Stephenson, to 400,000*l.*, which last sum is most likely to turn out the correct one.

Mr. Locke's estimate is manifestly inadequate as regards cost of land, stations, and engines and carriages, as any one may see by comparing his last Report with the actual cost of those items on the neighbouring railways. The Sheffield line, with a branch to the North Midland, would be 50 miles in length, and would, I doubt not, cost 60,000*l.* per mile, or three *millions* of money.

4th. "No Shareholder" states that the Sheffield line will be the only direct communication between the eastern and western coast, and that it will have no canal opposition. There are already two canals connecting Liverpool with Hull, viz., the Leeds and Liverpool, and the Rochdale. There is also a complete railway communication. With all of these the Sheffield line, if constructed, will have to enter into keen competition. In the struggle for the Hull traffic the dense local population on the Leeds line would give that Company great advantages over the Sheffield, as it would enable them to carry the through traffic profitably at much lower rates.

I trust I have now said enough to put the public on their guard against the very partial statement "No Shareholder" gives regarding the Sheffield line. He has been misled by vague rumours which he has picked up at second hand, as is evident from the rambling statement he makes respecting the South-Western being in great difficulties after spending *millions*, and having had to raise one million more. He appears to think that that line has cost some 3 or 4 millions, whereas, as all the world knows, it has (apart from the Portsmouth line) only cost 2 millions altogether. In one respect, however, he shows himself a sensible fellow—he is "No Shareholder" in the Sheffield line; I daresay he never will be, although he seems anxious to induce others to bring a railway to his door. Did I think as well of his *pet* line as he does, I would speedily invest half my fortune in it. But as I cannot believe that it will be a cheaply constructed line, and see no great chance of its paying a good dividend if it prove a 60,000*l.* per mile line, I mean to invest my spare cash elsewhere. Yours,

TIMEO DANAOS ET DONA FERENTES.

February 7, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Your valuable comments, in the *Railway Times* of the 22nd ultimo, on the scheme of paying interest upon calls, led me to hope the Directors would pause ere they followed up the resolutions of the meeting held at Sheffield on the 12th of January; but having heard that it is their intention to bring them into immediate operation, I was induced again to read over the report of the meeting, which confirmed me in the opinion I had previously formed, that our Directors are impelling us forward to ruin. One of the Directors said, the Board "were now under considerable personal liabilities, which, if the amendment were carried, he for one should cancel, and he was not alone in that view." The Chairman of the Directors stated, "No doubt the assent of the proprietors was necessary to the carrying out such resolutions; and a dissenting shareholder, by going into Chancery might raise serious obstructions." Very consolatory, truly, that we unfortunate proprietors are likely to receive, within the next 12 months, 5*l.* per cent. under the head of interest, and pay 17*l.* 10*s.* under the head of calls, to enable the Directors to pay interest, and clear them of the personal liabilities which they have already incurred; for, says a Director, if the amendment is carried we will cancel our liabilities! We may then, without any great stretch of the imagination, read, "if the amendment is carried, we will make calls, pay off our banker's balance, and leave the proprietors to settle for the land we have purchased and not paid for"—I believe a very large amount.

But the Directors say, we want power to borrow, and then we shall not require calls. But the Chairman, in answer to a querist, says, that one single dissentient shareholder might raise serious obstructions. Does any one doubt, then, after the provocation given to a very powerful Company, that such shareholder will be forthcoming—that is, if they think our line worth the opposition? If so, how can the money be raised to pay interest and the personal liabilities of the Directors, as the threat having been made, it may be immediately carried into effect?

As regards the traffic, it is quite questionable whether it pays for the attendant expenses, not having averaged more than 190*l.* per week for the three weeks ending the 24th of January, and out of this is to be paid rental for the Manchester and Birmingham station, toll to that Company, Government tax, and the expense of working seven miles of railway. As the Yankee would say, are we not in a pretty considerable fix. For if we oppose the Directors, they say, "we will cancel our liability;" if we do not oppose them, they carry some of the wildest schemes, which can only be equalled by the gross ignorance in the statement made to the shareholders, which ignorance they are now endeavouring, by a newspaper controversy, to settle, as to whether it is with Director, Law Clerk, or Secretary. Under these circumstances, we must be true to ourselves at the ensuing meeting, and acquit ourselves like men determined not to be deterred by threats of resignation on the part of the Directors, nor appalled by the difficulties of our position; for if the Directors are placed in the wrong box, they have none but themselves to thank for it. They ought to have consulted the shareholders the moment they found their hands were stretched out too far; their not having done their duty must not deter us *now* from doing ours. The Brighton shareholders have set a noble example. If their position demanded investigation, ours does so most imperatively; for, notwithstanding one of our Directors stated he had paid great attention to the subject, it appears he was greatly wrong in his figures, proving implicit reliance cannot be placed on their calculations. We must, then, at this meeting, have shareholders appointed to investigate our affairs, and Directors appointed who are men of business—who will pay attention to the carrying out of the line—"no stop-short men," and whose standing and reputation are such, that confidence will be inspired in the proprietary by their election. To insure this, I trust the Directors will follow the example of other lines in the advertisement convening the meeting, by stating who are the retiring members of their body, and whether they are eligible for re-election.

Your independent advocacy of railway interests is my apology for drawing so largely upon your valuable space. I remain, Sir, yours, &c.,

A POOR SUFFERER.

February 2, 1842.

RAILWAYS IN IRELAND.

To the Editor of the Railway Times.

SIR,—As the subject of the Irish Railways appears to have become a leading topic in your excellent paper, we may naturally conclude, and I am most rejoiced to think that such is the case, that the English public are directing their attention more to this subject than they have done heretofore. I say I am rejoiced to think that they are turning their attention to this subject, not because a railway from Dublin to Cork would put one shilling into my pocket or into the pockets of my tenants in that quarter of the world (my estate being within a convenient distance of Cork,) but because it would be a personal convenience to myself, as I always visit that part of the United Kingdom at least once a year; and I must say, that under existing circumstances, I would rather travel twenty times between Dublin and London than once between Dublin and Cork. But before any Act is passed upon this most important subject, I would have the Irish look well into it, that they may not get into the same scrape as they have done with the Poor Law, which is universally condemned by *all classes* in Ireland.

In the Bill which was brought in by Lord Morpeth last June (a copy of which I have now before me, and which any one can get by sending a *shilling* in a letter to Mr. Hansard, printer to the House of Commons; it will then be forwarded by post for a penny), the 3rd and 4th clauses of the Bill appoint certain Railway Commissioners, and empower the Treasury to appoint others. The 29th clause empowers these Commissioners to adjudicate upon the claims of owners and occupiers of property, and to award value and compensation. Mark; it is not to be valued by a jury, as in England. The 119th clause says, that the Railway Commissioners are to ascertain and certify the deficiency of the interest of the money lent for the making these railways, and allocate and distribute deficiency over cities and counties to be charged with the maintenance of these railways. The 120th clause says, that the Grand Jury are to present the sums certified, and in case they shall neglect or refuse to present such sums, that then the Court is to make an order upon the County Treasurer for the payment of the money without any presentment. The 122d clause says, that the right to raise the deficiency of interest is not to be questioned for informality, or for any error in the accounts of the said Commissioners. Now, even suppose that the Irish approve of the system of forming railways through the country, and making the counties pay for the support of them, I would ask them, are they at all aware of the details of this measure, and

Digitized by Google

do they approve of them? I do not know what chance there would be in England or Scotland of forming a railway, say direct from London to Hull, or from *Lancaster* to *Glasgow*, and getting the counties to submit *quietly* to the payment of any deficiency of interest for the money advanced for making these said railways; and why then, should we English attempt to bring about such a system in Ireland?

The best method of establishing a general system of railways in Ireland, is a subject which has occupied much of my attention. One person may have a plan of taxing the counties through which they pass, for the support of them; another may be favourable to the plan of putting an extra *half-penny* on all Irish letters, as well as a very small duty upon all goods coming from Ireland into England. I must say, that I, for one, should be more favourable to the latter plan of the two. If every donkey that was brought over from Ireland to England paid a duty of *sixpence* (*it ought to be half-a-crown for O'Connell*), a ship with 400 head of cattle would pay a duty of 10*l.*; and I should have no objection to pay 2*d.* for each of the letters I receive from Ireland, for the sake of having a railway to travel by when over there. But, Sir, as an English tax-payer, I should not have the least objection to two millions being voted for this purpose. Parliament can vote twenty millions for the purchase of the blacks in the West Indies, but cannot vote a tenth part of that sum for a purpose which would be a great benefit to *a part* of the mother country. We have all of us a right to look upon Ireland as a diseased limb of Great Britain, respecting which it requires some little reduction of the whole body to assist in removing the distemper from that limb.

With regard to the question of the Cork and Dublin Railway, if you knew all the circumstances of that country, you would not be very much disposed to say, that as a pecuniary speculation, it was likely to pay. The only public conveyances between those two towns are the two mails, and, I believe, there is a car that runs to Kilkenny; this does not give one an idea of a very great amount of traffic. (I would here observe, that it would be well if the Cork people were to exert themselves to get their mail in a little earlier. The mail by Kilkenny could just as well perform the journey in sixteen hours and a half as not; and the Post-master-General, I believe, is not unfavourable to it; but the great difficulty is to obtain contracts, for one man is the sole contractor for all the mails out of Dublin except three). There is one point, however, which I wish to bring before your notice, which was the main object that I had in writing this letter. I presume the great object that these good people at Cork wish to attain, is to facilitate the communication with England. The best way then of doing this, is to get the Great Western Railway continued through Gloucester along the south of South Wales to Milford Haven (which is the best harbour in the kingdom). The passage then from thence to Waterford is not so far as it is from Dublin to the Great Ormes Head; and the passage to Cork would take about ten hours (if they had packets equal to the Liverpool mail packets), as it is not so far by 12 or 15 miles as it is from Dublin to Liverpool; and if there were a railway from Cork down to Passage or Monkstown, the steamers could land their passengers there at all times of the tide. London letters would then reach Cork sooner than they reach Dublin, and passengers from Limerick and Clare, and the West of Ireland, going to England, would prefer embarking at Cork rather than Dublin or Kingstown.

I am, Sir, yours,
AN ENGLISH AND IRISH LANDLORD
AND A RAILWAY PROPRIETOR.

RAILWAYS IN IRELAND.

To the Editor of the Railway Times.

Sir,—Although I differ from the opinions expressed in the *Railway Times* of the 29th ult., I am glad to observe the interest taken by you in the subject of Irish railways, and I trouble you with these observations in the hope that they may call forth a discussion in which, facts being adduced on both sides, the means for arriving at a sound judgment may be supplied.

To this end, and before entering into details, it is essential that the object contemplated by the system laid down by the Irish Railway Commissioners should be distinctly borne in mind.

That object was (see Report, p. 36) simply the connection of Dublin with the cities of Cork, Waterford, Limerick, and Kilkenny, by the readiest and most direct course. To this their system was confined, and they expressly state (p. 45) that "in respect to railway communications from Dublin, westward, they have not thought it necessary to make any special investigation."

Such, therefore, on the authority of the Irish Railway Commissioners, are the conditions which any plan of railways in the south of Ireland is to fulfil, and any plan of railways which effects these practical results, may be assumed as not inconsistent "with a more comprehensive system," or opposed to "the general improvement of the country." The question has hitherto been much perplexed with these vague unmeaning generalities, and a few moments will not have been wasted in recalling the attention of the public to the real question at issue.

Of the resolutions passed at the meetings lately held in Cork, the 2nd and 3rd were of the chief importance,—the one had reference to the line of railway, the other to the means of obtaining it.

In my present letter I shall advert only to the 2nd resolution, which was in these terms:—

"Resolved, that the extension to Cork of the proposed railway from Dublin to Kilkenny, would not only open a direct communication between the metropolis and Cork, along the existing stream of traffic, but would also provide for the cities and towns of Carlow, Kilkenny, Waterford, Wexford, and Ross a more ready means of intercourse than any other line would give, while at the same time such main line would admit of easy extension to Limerick."

This resolution, passed unanimously at the several meetings for the county and city of Cork, and admitted to be "geographically true," by two gentlemen who were unwilling to commit themselves to any particular line, has reference not only to a railway beneficial to Cork alone, but also for the other cities comprised in the system of the Commissioners.

I will now endeavour to show the correctness of this resolution in detail, though a glance at the map of Ireland would best prove its accuracy.

The present mail-coach road to Cork and Waterford passes through Carlow for about 65 miles from Dublin, and then diverges, the road to Cork running through Kilkenny and Clonmel.

As to Kilkenny and Cork, therefore, it must be obvious that a line of railway passing through Kilkenny, along the present stream of traffic to Cork, must be more serviceable to those cities than the line to Cork laid out by the Commissioners *through* a country comparatively thinly populated,—remote from the present stream of traffic, and which would be connected with Kilkenny by a branch 27½ miles in length, through a district now traversed by no public conveyance whatsoever.

As to Waterford, the advantage of the line would appear to be as evident. By the system of the Commissioners, this city, now 95 miles from Dublin, is placed at the distance of 141 miles from it. The proposed line of railway to Cork, through Kilkenny, pursuing for more than 60 miles the turnpike road to Waterford, would therefore afford to that city (*even before a branch was made*) as much convenience of intercourse, both in celerity and cheapness, as it would receive from the entire line of the Commissioners when made.

This fact shows, in the strongest manner, the advantage which will be derived by Waterford from the proposed line of railway to Cork, and such line affords great facility for the construction of a branch, and connects the trade of Waterford not only with Dublin, but also with intermediate commercial districts.

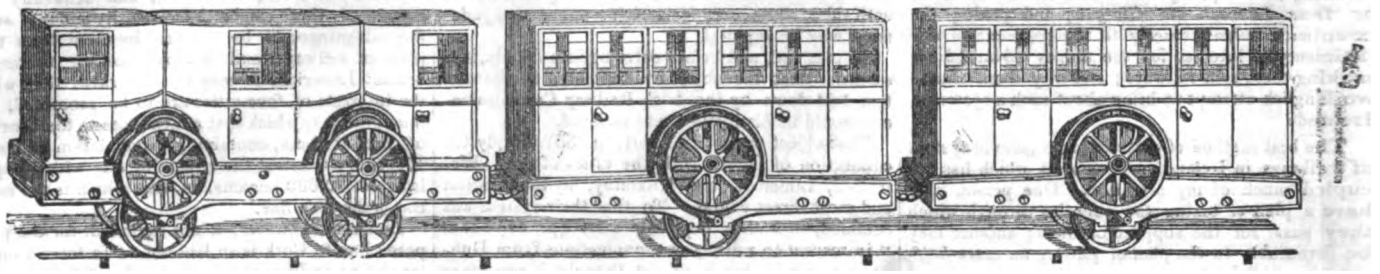
So far as Cork, Waterford, and Kilkenny are concerned, there can be, I believe, little doubt as to the advantages to be derived by them from this plan of railway; and without seeking to argue against Limerick, it may be remarked, that when the interests of four cities are to be promoted, the line of railway which best contributes to the benefits of three of these, containing a population of about 170,000, as against the remaining one with a population of 70,000 persons, is, that which is the most comprehensive line.

Limerick, however, is not excluded, for the proposed line to Cork is so laid out as to form a main trunk line to Limerick for more than 80 miles. By this means the distance of Limerick from Dublin will not be materially increased, and it would gain the advantage of a communication with the valley of the Barrow and with Waterford. The adoption of this branch would place Limerick at the same relative distance from Dublin as it now is, and thus avoid the apparent unfairness of the system of the Railway Commissioners, by which Waterford, now 20 miles nearer to Dublin than Limerick, would be rendered 20 miles more distant from it.

I have thus briefly shown the manner in which (assuming the system of the Railway Commissioners to be proper) the proposed line of railway to Cork carries out the objects of that system in a way more advantageous to its component parts than the line traced by the Commissioners. But if the results proposed by the system laid down in the Railway Report be proper, the mode of attaining them may now fairly be considered impracticable, for it has been repudiated by the Government when offering the public money, and by private capitalists when backed by a county rate. Neither Lord Morpeth, nor Messrs. Goldsmid and Co., offered to carry out the system of the Commissioners in its integrity—and yet private enterprise is still to be impeded, lest it should interfere with a more comprehensive plan which has hitherto been thus repudiated by every one!

The foregoing reasons are, I submit, sufficient to prove that the main trunk line to Cork, whether undertaken by the Government or by private enterprise, ought to pass through Kilkenny, (that city being used to designate a line to the south-east off the Leinster coal district, in preference to the line by Cashell;) but there is another important recommendation to this line which must not be omitted. If the line by Cashell be adopted, the town of Carlow, with about 12,000 inhabitants, and the whole valley of the Barrow, the county of Wexford, with the port of Wexford, and the thriving towns of Enniscorthy and New Ross would be totally excluded from the possibility of railway communication. On the contrary, the proposed line passes through Carlow and the valley of the Barrow, and assists the trade of the county of Wexford and its towns. By the adoption of the line through Kilkenny, with the suggested branch to Limerick, no town, with even 5,000 inhabitants, benefited by the Cashel line, would be excluded, except Roscrea, and this town cannot be compared with any one of those before mentioned.

I have thus laid before you a few facts, under the conviction that your wish to promote all sound and feasible undertakings of this description, will induce you to support whatever plan may appear to be most practical, and to hold out the greatest prospect of advantage.



I postpone to a future occasion any remarks on the 3d resolution, passed at the Cork meetings, relative to the means by which it was proposed to carry out this line of railway, lest I should extend this communication to an inconvenient length; but whether the plan suggested were desirable or not, the points raised by this letter are of equal importance. The first question is the best line, the 2d, the means by which it can be carried out,

I remain, Sir,
Your obedient servant,
A SUBSCRIBER.

London, Feb. 7, 1842.

THE PITH OF COLES ON RAILROADS AND LOCOMOTIVE TRAVELLING.—A Description of COLES'S PATENT ANTI-FRICTION RAILWAY CARRIAGES, and Two distinct Plans of Rails, either of which will qualify the off-wheel to keep pace with the inner one. WM. STRANGE, Paternoster-row, and all Booksellers. Price Twopence. Where also may be had "Coles on Rheumatism," and on "Ruptures."

Side view of the inner rail, the step being lowered at A, when the inner wheel is made to run on its periphery or lesser part, whilst the outer wheel runs entirely on its flange when working a cant. If you work one correctly, you may work more. (Verse 8 and 23; also Fig. 2, end view of Carriage.)

ANTI-FRICTION *versus* FRICTION.

Fifty years since, a great poet left Ottery—
Where a waggon was burnt to the ground;
A hap'orth of oil, applied where it ought to be,
Would save its owner three hundred pounds.

An action was brought, for the loss of some wine;
Why he defended it, he didn't know:
It cost him that money, minus his time,—
So very precarious is Law.

Good prose is more fitting than poetry
To describe the Mechanical Arts;
I was not taught language at Ottery,
To decipher those intricate parts.

What constitutes friction is very well known,
'Tis on Railways as hot as a piper;
Coles's Carriages have clearly shown,
That Friction's reduced to a cipher.

Their axles run level with the horizon,
They point to the centre of a curve,
They do what nothing else ever has done,
Their working wheels scarcely will move.

The off-rail of a curve is always the longest,
But why higher or *not laid level*,
Unless the off-wheel is *larger* or strongest,
Is productive of very great evil.

Don't *axles* run level with the horizon,
When employing two bits of step-rail?
How could they reel, or centrifugal run,
If they ran on a bigger off-wheel?

Supposing both rails had a step on the edge,
The wheels would then run on their flanges;
Lower the step *here* and *there* on *the* ledge,
Fore wheels, vice versa, run changes. (Fig. 2.)

Instead of raising the off-rail above level,
By this plan the rail's a step lower,
The off-wheel *runs faster*, though not bevel,
The inner one's made to *run slower*.

Not so with hind-wheels, because they would lock,
If they also ran on their flanges;
The fore-wheels will run true as a clock—
And be far less subject to changes.

The higher the load the more it will slant,
When the axle is rais'd at one end;
Prevent them from rocking, or reeling, they can't,
If they could it would be a God-send.

Let a socket be turned in the hind axle arm,
Let it pass to the opposite frame,
Let both of their wheels be key'd very firm,
If kept level the rails arn't to blame. (Fig. 1.)

The hind-wheels don't want a step to the rail;
Socket-axles reverses their action;
When they run with a quicker off-wheel,
They must run true to a fraction.

Some would inquire how they are united,
That depends on a rais'd or sunk rail;
Socket axles as rails are now fitted,
Are by far the least likely to fail.

Elliptic spring buffers will yield when you pull,
They'll resist when they come to a stand,
They are protected from breaking as well;—
You must admit this is well plann'd.

Let one ounce stand for a horse or a man—
Let the carriage be twelve pounds weight;
It requires forty ounces with the old plan (*a*)
To draw a hundred-and-forty pounds net.

If thus we remove rubbing surfaces,
And introduce rollers in their stead,
Four ounces will draw it, *just ten times less*,
Which demonstrates the plan to be good.

To say nothing of the strain in their axles
When wheels run unlevel or oblique,
Their bodies are lower, which *greatly excels*
The others when running too quick.

Had we fifty carriages, all in a train,
Forty-eight should have but two wheels
I'm aware their axles would be lib'rating,—
When employed with undulated rails.

You'd think they ran on periphery and flange,
If you look 'twixt the wheel and the rail;
Scarcely would they experience a change,
Neither run centrifugal, nor reel.

Besides Friction, *in those axles of mine*,
We get rid of centrifugal force;
We'll do the work with a fifteen-horse engine,
Whilst they require one seventy-horse!

Our points of contact are not more than *two*;
How should this affect the off-wheel?
Engineers have express'd *their fears* it *won't do*,—
They are far more afraid that *it will*.

You may think there is danger in working a cant,
When 'tis work'd with periphery and rim, (A)
Should they run more correct, won't you grant
'Tis not merely indulging a whim.

A rais'd or sunk rail is invincible,
Nothing's more clearly understood;
'Tis a self-acting unerring principle,
Pray adopt it, if only a rood.

I now am addressing my master, John Bull;
'Tis said he's a very rich man,
Though he is sometimes a very great fool!
Is it so when improving his land?

There's a curve at the Great Western station;
How grievous they must be annoy'd!
Ten men are doing what two might have done,
If my carriages had been employed.*

No carriage will work a curve accurate
With four wheels employed at a time;
Those who contend six are better than that,
Are just as much your friends as mine.

If London and Birmingham issue new shares,
Of course they can pay a good dividend;
Had they alter'd the rails, and lower'd their fares,
Wouldn't that have been best in the end.

All the world go to them for perfection,
Because 'tis supposed that they pay;
They will show how they overcome friction—
Will they tell what it costs them per day?

The public find you won't alter your rail,
'Tis a subject they well understand;
You'll do it at last, though against your will,
First paying a tremendous deodand.

I am sure Opthalmic Infirmaries
Could report many pitiful tales;
So could those who've had blight in their eyes,
From exposure to Railway gales.

Yet no one's asham'd of doing such things,
As drag their species like beasts and hogs;
They have no control over human beings—
Thus prove themselves to be hungry dogs.

Legislators think they've nothing to fear—
They go like lambs to the slaughter;
They will not say put my rail here or there,
To save their own wife, son, or daughter.

Does Baddeley† know how the wheels would run,
If he saw them stand on their flanges?
If the inner wheel ran on a ledge of its own,
Would their axle be subject to changes?

Look first at this Number,† then look at that,‡
Pure science can't flow in that channel;
They're too often straining at a gnat,
As often they swallow a camel.

Trams may be made *for* the common roads too,§
Don't imagine I have just found it out;
Engineers will probably say it won't do;
Try it—you no longer will doubt.

Sharpe, Roberts, ‖ and Co., make two engines a week,
An Anti-Friction carriage they plann'd;
Its rollers ran round, in a collar or break,
Working a curve, it came to a stand.

Had they put *brakes* on the common wheels too,
Anti-Friction wheels would run faster;
In that case common wheels never would go,
Which then would have proved a disaster.

We are not to suppose the invention their own,
Mr. Garnett invented it for them;
He'd remove those impediments, *every one*,
Had he known, *like me*, where to find 'em.

Those axles a very great weight will sustain,
Garnet's were exceedingly small;
Their rollers would turn two hundred times, when
Those rollers would scarce turn at all.

They ran in Manchester, Liverpool, Birmingham,
They've gone thousands of miles *on the Sea*;
They're known in America, Germany, Belgium,
They were sent there by the *Patentee*.

Railway Societies, to serve their own cause,
Keep improvements in the background;
Directors wink at this, every one knows;
Does this show their judgment is sound?

Whoever attempts to teach them a lesson,
Will find it is labour in vain;
'Tis impossible to make an impression,—
The *cause* I beg here to explain.

The greatest improvement lies *in the rail*,
Whether Engineers adopt it or not;
'Tis prejudice prevents it—not their skill!
For by Friction their living is got!

If engine concoctors, or Railway Directors,
Were compelled to drive their own engine,
Old Harry may drive us, and be our protectors,
A new era they sure would begin!

Eighty thousand men, at three-pence per head,
Would only deodand one thousand pound;
If Juries give that sum for one lying dead,
Is their judgemnt in both cases sound?

What must we call it, LUCK, or good management,
That they havn't yet killed eighty-four?
'Twill be time to adopt my improvement,
When they pick up dead men by the score.

You all have discover'd your system is bad,
That the people have got very shy,
Why barter life, when 'tis all that they had?
When they are not ready to die.

You see that your shares are in jeopardy,
That their prices are still going down,
You now may retrieve your lost property,
But by making my system your own.

If you will subscribe to the Company,
Pray how many shares will you take?
Move your stumbling-blocks out of the way,
A fortune you'll certainly make.

W. C.

(*a*) Twenty-eight ounces will propel 152 lbs. up an inclined plane of 1 in 96: we want 64 ounces with common wheels.

Will any person be kind enough to bring a model of a common carriage, made on a scale of one inch to the foot, and test the two together. If they will, the apparatus is at their service.

* Three men can now do the same work on a straight line. † *Mechanics' Magazine*, No. 776. ‡ No. 747.

‡ The Northern Directors doubtless paid very dear for their whistle. If such boxes of rollers were now fitted into two separate frames, and two grind-stones, or two fly wheels of steam-engines were made to run with their axles in these boxes of rollers, one with its collars or brakes, the other not, it would operate upon them like a box of Grimstone's Eye Snuff—it would open their eyes. Mr. Moseley, of New-street, Covent Garden, has a grind-stone fixed on this principle, which will (when set in motion) run almost as long as Mr. Roberts's peg top; a bit of lacquer was removed from it, because it acted as a brake on the top.—See *Mechanics' Magazine*, No. 747 and 776, and they will sufficiently demonstrate that peg tops cannot run too light, nor railway carriages too heavy.

§ A portion of the raised rail, when fastened to sleepers bedded in the common road, would be far preferable to any trams that have hitherto been employed.

‖ Such was the desire of the Directors of Railways to get rid of Friction, that Mr. R. said there was not a principle of Anti-friction Wheels known, which had not been tried on Railways in that quarter—(Coles's Patent excepted). What a pity Railway Directors are not Mechanics!

ILLUSTRATIONS TO COLES'S ADVERTISEMENT.

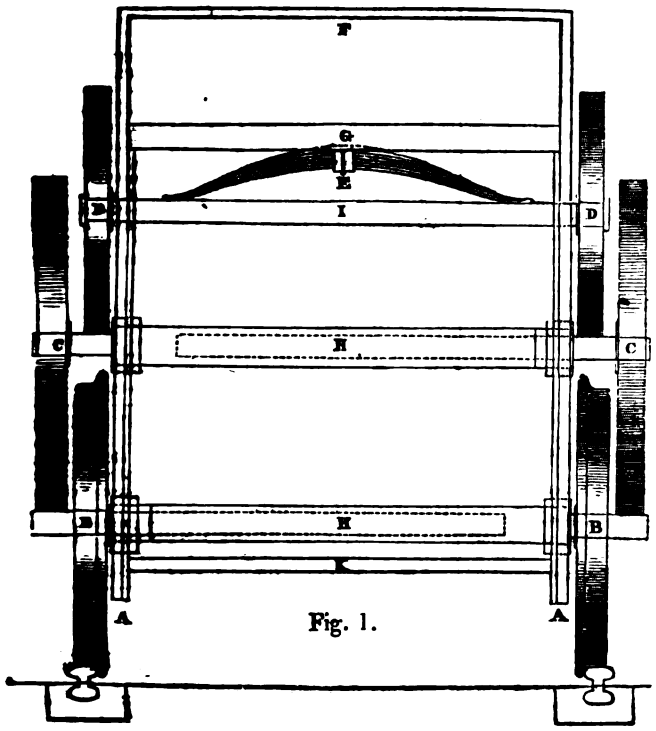

Fig. 1.

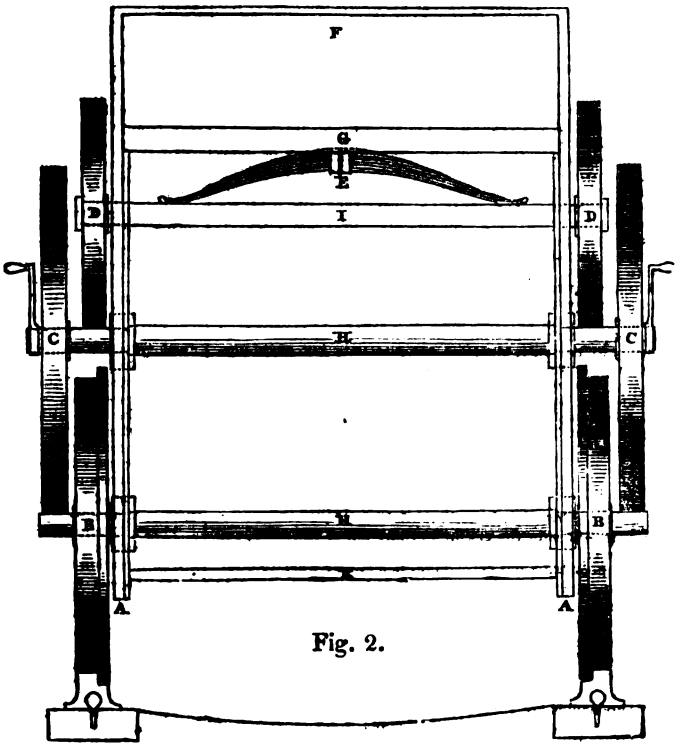

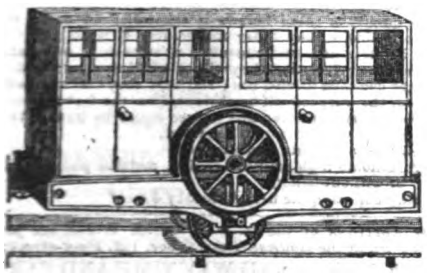

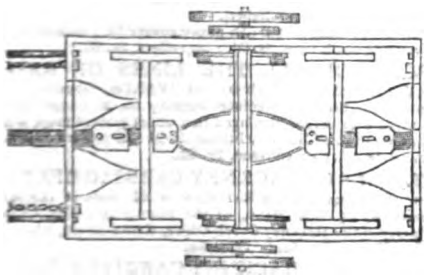

Fig. 2.

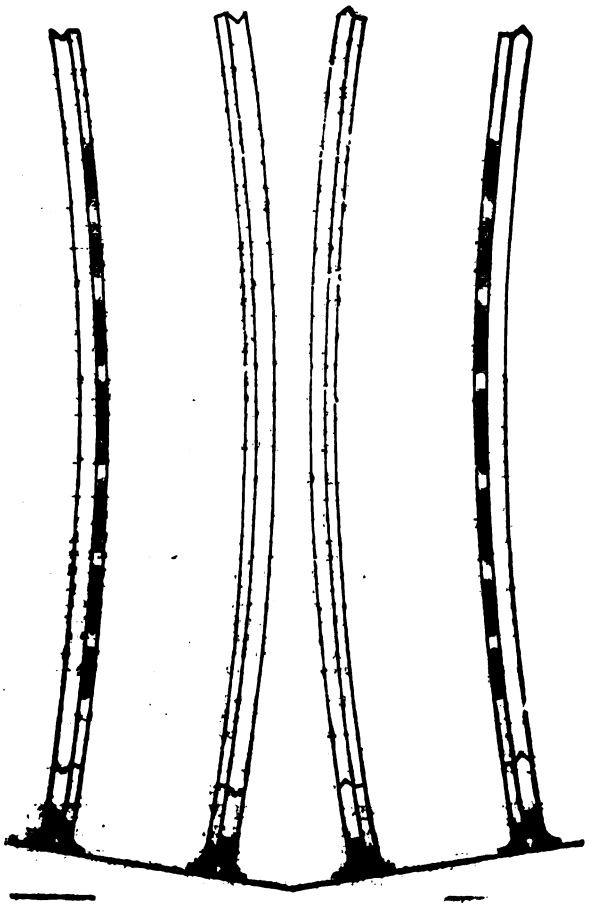
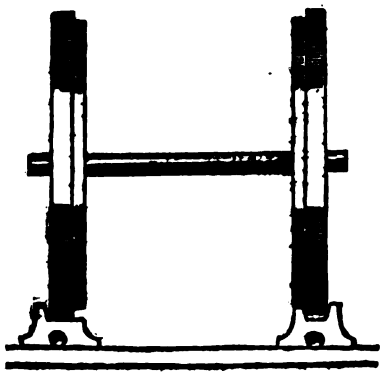
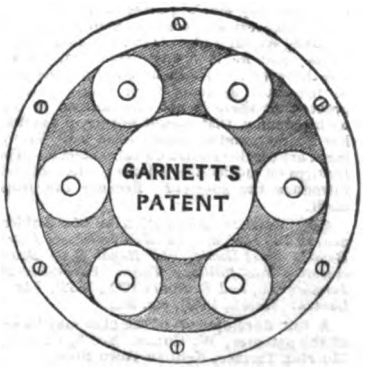


The body of a two wheeled Carriage, having solid axles, may extend to any width; whereas, if socket axles were employed, the ground wheels must extend outside the frame; the body would, in that case, be very contracted, except when employed on rails of seven-feet gauge.

Mr. Mackenzie, Contractor on the Paris and Rouen Railway, said, in the presence of a very eminent Engineer, when inspecting those models, "If one of Coles's Patent Carriages cost six times more than a common Carriage, when a Railway is once laid level, it would be a cheaper carriage." He further declared, that the tire of one of his locomotives was worn to tatters in one month.



Ground Plan. (Vide 15th verse.)



Mr. Scales, late partner with Alderman Thompson and Co., Iron Masters, examined the models of Mr. Coles' carriages and rail; he said they employed 90 horses in their mines, and it was his firm conviction that the same work might be done with nine. He further declared that the principle was applicable to all kinds of machinery.

Undulated Step-rail, by which the outer wheel is made to run on its rim or flange, whilst the inner one will run alternately on its flange and periphery, when working curves to the right or left. (Vide 19th verse.)
(See end view of carriage, Fig. 2.)

Self-acting Rail, to qualify the off-wheels, when working a curve, to run on their largest diameters. (Vide 34th verse.)

Garnett's Rollers are fixed in the nave of a wheel, which revolves round a fixed axle. A nephew of Sir Walter Scott declared the above to be the best principle of Anti-friction Rollers in this country; but he hesitated not to say, that Coles's Patent was worth a million of them. (Vide 35th verse.)

Letter from Geo. Stephenson, Esq., to Mr. Coles, in reference to his Anti-friction-Wheeled Carriages.

Tipton House, October 22, 1839.

My Dear Sir,—On my arrival at home I found your letter of the 12th of October. When I saw you last I did expect that I should have been again in London ere this. As soon as I do come I will take care to call and look at your carriage; and if I can be the means of helping you on, I shall be glad to do so: but I should not be justified in leading you or any other person on to spend money without any chance to get it back again. In making your experiments, you ought to have your axletrees brought down to that thickness that would safely carry the weight. If I mistake not, your common axletree bearings were much too thick for the weight they had to carry; oil ought also to be applied to them. You must be aware that the bearings of an axletree revolving in oil are revolving on friction rollers; for the particles of oil being globular and intervening between two metallic bodies, the weight is carried upon those rollers. Now, your contrivance is to have metallic rollers, but much larger, with a great deal more machinery in the arrangement; and when brought into rough usage will be likely to get out of order. If a railway could be kept in perfect order, I think some benefit may be obtained from your carriage, although complicated; but such perfection of a railway cannot be expected to be obtained. As you seem so anxious to have a trial made, I should have no objection to be one to subscribe to have a carriage made and tried on a railway, on a large scale. As soon as I arrive in London, I shall call and discuss the point farther with you.

I am, Sir, yours, truly,
GEORGE STEPHENSON.

Mr. Coles's Reply, January, 1842.

Dear Sir,—'Tis for the engine to complain of my axles, and not you;
For he, poor lame old gentleman, has all the work to do;
To find him guts and food to feed his over-cramm'd stomach,
Leaves shareholders without a dividend, even a "schronic."
My Western's and Birmingham's fetched three thousand pounds—What?
They never brought me a dividend that would purchase a sprat!

Our names are almost immortal they say,
At least, if the world speak true;
'Twas William Cobbett immortalized me,—
Mr. Pease immortalized you.

Very few can boast, as you and I've done,
Since our earnings were eightpence a day;
Whatever I get, your's is fifty to one,—
So enormous do railways pay!

I saw your son Robert,—oh fie! oh fie!
He look'd upon me with disdain;
His father could see with half of an eye,
Far more than I could explain.

He would'nt allow me to leave him my models,
Or a drawing, nor yet read my rhyme;
For many came to him with crack'd noddles,
Which occupied half of his time.

Were the Engineers' lathes, tools, and chissels,
Imperfect like carriages and rail,
If they could not also turn bevels,
In all their best jobs they would fail.

I know I share the fate of all others,
Who do not belong to your clique;
Account for the apathy of shareholders
I cannot—and therefore I speak.

Mr. Coles has completed a full sized carriage, capable of sustaining three tons burthen. Steam power can be applied to the axles by means of a belt, which would not be at all likely to be deranged; one-eighth or a tenth part of the power would propel the same burthen. The above plan is secured by patents in the United Kingdom, and in France. The inventor, during twenty years, has never drawn a shilling from any man's pocket to aid him in bringing any of his discoveries before the public, though he is proprietor of many useful and valuable patents. His hobby is railroads; and he is firmly persuaded, notwithstanding he has thrown away fifteen hundred pounds on one railroad, * in the short space of three years, which is not worth a groat, that there is not one railroad in ten, if managed with economy, that would not pay a handsome revenue to her Majesty, and to shareholders too. Verily the Government are too lukewarm on this subject. They have their lectures on mechanical science; why not call on them to introduce the subject? Because the people do not ask for it.

☞ Further information on the subject of the Improved Railroad may be seen in *Pope's Journal of Trade, Boyle's Court Guide, The Royal Blue Book, Robson's Directory, The Railway Times* (December 25th, 1841, and January 8th, and February 12th, 1842), *The Mirror of Parliament* (March, 1842), &c. &c.

A full development of the plan may be seen at the office of the patentee, W. COLES, No. 3, Charing Cross; or 13, Moreton Terrace, Kentish Town Road.

* South Durham, alias New South Durham, alias Weardale Junction Railway.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

PROPOSED CONNECTION OF THE DUBLIN AND DROGHEDA AND ULSTER RAILWAYS.—At a Meeting of the Gentry, Merchants, and other Inhabitants of Dundalk and its vicinity, held in the Assembly Room, on Thursday, February 3, 1842,

JOHN STRATTON, Esq., in the Chair,

Being called for the purpose of taking into consideration the best means of supporting a proposition made to Government, on the part of the Directors of the Dublin and Drogheda Railway Company, to connect said Railway with the Ulster Railway, and thus to secure a continuous railway communication from Dublin to Belfast. The following Resolutions were unanimously adopted:—

1st. Moved by George M'Gusty, Esq., J. P.; seconded by John Townley, Esq.—

That a line of railway connecting Dublin with Belfast, and passing through Dundalk, would follow the present stream of traffic, and be a great public convenience to this populous district, and the North of Ireland generally.

2nd. Moved by James Carrol, Esq.; seconded by Alexander Shekleton, Esq.—

That the connection of the line now in progress of construction from Dublin to Drogheda, with the railway recently opened from Belfast to Portadown, would afford the most desirable and direct method of carrying this object into effect.

3d. Moved by Laurence Martin, Esq; seconded by Russel Patterson, Esq.—

That the propositions submitted to this meeting on the part of the Dublin and Drogheda Railway Company, are well adapted to secure this most important object; and this meeting earnestly requests that such propositions may receive the concurrence of Government.

4th. Moved by George Lawson, Esq.; seconded by James Knowles, Esq.—

That a Committee be appointed to take such steps as may appear most advisable to procure the advantages of railway communication to this town and district.

5th. Moved by Edward Geoghehan, Esq.; seconded by Thomas Dewhurst, Esq.—

That the Committee consist of the following Noblemen and Gentlemen, with power to add to their number, viz.:—

Right Hon. Earl Roden; Right Hon. Lord Viscount Jocelyn; N. T. Reddington, Esq, M.P.; Richard M. Bellew, Esq., M.P.; Hon. Vesey Dawson, M.P.; John Stratton; Alex. Shekleton; John Townley; Nicholas Martin; James Knowles; Tobias Purcell; Thomas Coleman; George M'Gusty; Thomas Dewhurst; Samuel I. Turner; James Carroll; James Tallon; George Lawson; Robert Haigh; Jacob C. Murphy; George Shekleton; Robert Godby, Esqrs.,

And that Alexander Shekleton, jun., be appointed Secretary to the Committee.

Signed, JOHN STRATTON, Chairman.

John Stratton, Esq. having been requested to leave the chair, and John Townley, Esq., being called thereto, it was resolved, That the most cordial thanks of the meeting are due and hereby given to Mr. Stratton for his kindness in calling the meeting together, and for his dignified conduct in the chair.

JOHN TOWNLEY, Chairman.
ALEX. SHEKLETON, jun., Secretary.

MIDLAND COUNTIES' RAILWAY.—NOTICE is hereby given, That a General Meeting of the Proprietors of the Midland Counties' Railway Company, convened by the Directors of the said Company, in pursuance of the provisions of their Act of Incorporation, will be held at the station in Derby, on Friday, the 18th day of February instant, at One o'Clock, for the purpose of proceeding in the execution of the said Act.

The Books which are kept at this office for the Registration of the Transfer of Shares in this Company, will be closed from Friday, the 11th, to Friday, the 18th of February instant, both days inclusive.

By order of the Directors,
J. F. BELL, Secretary.

Dated Leicester, 2nd February, 1842.

GREENWICH RAILWAY COMPANY.—NOTICE is hereby given, That a Half-yearly Meeting of the Proprietors of this Company, will be held at the London Tavern, Bishopsgate-street, on Monday, the 14th day of February next, at Twelve for One o'Clock precisely.

*** The following gentlemen will retire from the Direction agreeably to the Act of Parliament, viz., William Shadbolt, Esq.; B. Jeffery, Esq.; and Henry Wheeler, Esq.; but being eligible for re-election offer themselves accordingly.

The Transfer books will re-open on Wednesday, 16th Feb., instant.

By order of the Board,
J. Y. AKERMAN, Secretary.

Offices, 37, Canterbury Square, Southwark,
31st January, 1842.

This day is published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 122, Fleet-street.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Books of this Company, which are kept at this office for the Registration of Shares in the Company, will be Closed, in pursuance of the Act of Incorporation, from Wednesday, the 16th day of February next, until Saturday the 26th day of February next, both days exclusive.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

NORTH MIDLAND RAILWAY.—THIRD SHARES.—FOURTH and LAST CALL of £6 13s. 4d. per SHARE.—NOTICE is hereby given, That in pursuance of a resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to Pay the Fourth and Last Instalment of £6 13s. 4d. on each of their respective Third Shares, on or before the 4th day of March now next ensuing, to any of the undermentioned Bankers. Interest at 5 per cent. per annum will be charged upon all such sums as remain unpaid after the day above appointed.

London—Messrs. Glyn and Co.
Leeds—Beckett and Co.
Derby—Crompton, Newton, and Co.
Liverpool—The Bank of Liverpool.
Manchester—The Union Bank of Manchester.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Eleventh Half-Yearly General Meeting of the Proprietors of the North Midland Railway will be held at Leeds, in pursuance of the Act of Incorporation, at the Railway Station at that place, on Saturday, the 26th day of February.

The Chair to be taken at One o'Clock precisely.

WILLIAM LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of
A 12-horse high-pressure engine, metallic piston with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

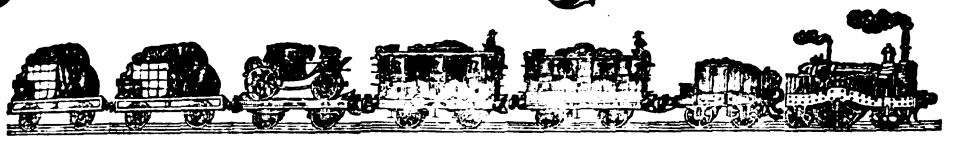
ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.



TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Gurney, Hoare, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, 24, Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the White Lion Hotel, in the City of Bristol, on Thursday, the 31st of March, at Twelve o'Clock, for the Election of Four Directors in the room of those who retire by rotation, and for other affairs.

The Chair will be taken at One o'Clock precisely.

FREDERICK RICKETTS, Chairman.

The retiring Directors may be re-elected.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 21st of February, and not re-opened until after the said General Meeting, on the 3rd of March.

By Order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, February 4, 1842.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

THE ELECTRIC TELEGRAPH ON RAILWAYS.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Ware; Ing Webb, Castle-street; Manchester, Simms and Dirham-Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

MANCHESTER AND LEEDS RAILWAY.—Notice is hereby given, That the Books, which are kept in the Office of the Clerk of this Company for the Registration and Transfer of Shares in the Manchester and Leeds Railway, will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday, the 8th day of March, to Thursday the 17th day of March, both days inclusive. HENRY HOULDSWORTH, Chairman.

Clowes's-buildings, Hunt's Bank, Manchester,
February 14th, 1842.

MANCHESTER AND LEEDS RAILWAY.—Notice is hereby given, That the next Half-yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Clowes's-buildings, Hunt's Bank, in Manchester, on Thursday the 17th day of March next, at Twelve o'Clock at noon precisely.

Dated this 14th day of February, 1842.

HENRY HOULDSWORTH, Chairman.

Clowes's-buildings, Hunt's Bank, Manchester.

This day is published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 122, Fleet-street.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

EASTERN COUNTIES' RAILWAY COMPANY.—Notice is hereby given, That a Special General Meeting of the Shareholders of the Company will be held on Tuesday, the 22nd day of February instant, at One o'Clock, precisely, at the Company's Station, High Street, Shoreditch, London, for the purpose of determining upon raising all or any part of the moneys authorised to be raised by an Act passed in the Fourth Year of the reign of Her Majesty Queen Victoria, entitled, "An Act to amend and enlarge some of the provisions of the Acts relating to the Eastern Counties' Railway, and to authorise the Company to raise a further sum of money for the purposes of the said undertaking," and also for the purpose of determining upon the modes and terms of raising the same by the issue of new shares, and the said meeting is made special for the above purposes, and also for the purpose of declaring forfeited certain shares in the said Company, and for confirming the forfeiture which has been made and declared by the Directors of certain shares in the said Company.

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE, Deputy Chairman.
Office, High Street, Shoreditch,
10th February, 1842.

TAFF VALE RAILWAY—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff; to Messrs. Glyn and Co., Bankers, London; or to Mr. W. Mallard, 27, Small-street, Bristol.

By order,
WILLIAM BURGESS, Secretary.

Railway Office, Cardiff, Feb. 1, 1842.

LONDON AND BLACKWALL RAILWAY COMPANY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company, will be held pursuant to the Act of Incorporation, at the London Tavern, Bishopsgate-street, on Monday, the 28th of February instant, at Eleven for Twelve o'Clock.

Notice is also given, That the Transfer Books of the Company will be closed on Monday, the 21st of February instant, and will not be re-opened until after the said Half-yearly General Meeting on the 28th of February. The declaration of a Dividend payable to holders of Original Shares, who may be registered in the Company's Books when closed, will then be taken into consideration.

W. ROUTH, Chairman.
J. WARMINGTON, Secretary.

Offices, 60, Fenchurch-street, 15th February, 1842.

ANY PERSON in London or Brighton having a good Second-hand SPIRIT LEVEL to dispose of, may hear of a Purchaser, by addressing (post paid) to L. K., Mr. Everett's Newspaper Office, 5, Johnson's-court, Fleet-street, London.

LONDON AND GREENWICH RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and Greenwich Railway Company was held on Monday at the London Tavern, Bishopsgate-street, and was numerously attended; WILLIAM SHADBOLT, Esq., in the chair.

The SECRETARY (I. Y. Akerman, Esq.) having read the advertisement calling the meeting,

The CHAIRMAN explained that in compliance with the wish expressed at the last meeting, the Report and Accounts had been printed, and he hoped were in the hands of all the proprietors present. As the time of the meeting was valuable, he would at once request his friend, the Deputy-Chairman, to read the Report.

The DEPUTY-CHAIRMAN (Josiah Wilson, Esq.) then read the Report of the Directors, as follows:—

DIRECTORS' REPORT.

Since your Directors had last the pleasure of meeting the body of proprietors, their earnest attention has been directed to the execution of the new works contemplated in your recent Acts of Parliament by the period enjoined in those Acts, and they have great satisfaction in re-stating their full conviction that all the works will be performed within the time granted, and at less expense than was originally estimated. (Hear, hear.) Colonel Landmann's Report on these heads will be read; but your Directors cannot resist availing themselves of this opportunity to express their gratification at the prompt and efficient manner in which the several works have been executed under his able superintendence. Great progress has likewise been made in the erection of a suitable station, including coke and engine-house at Deptford, which buildings will very soon be completed.

The Directors beg to state that they have met with considerable obstructions during the progress of the new works from the Commissioners of Pavements of the Eastern Division of Southwark, who, by their adoption of legal proceedings against the Company, have rendered it necessary to renew the application to Parliament for the Bill which passed the House of Commons last year, to enable the Company to purchase property for making certain alterations in the streets, which Bill, but for the opposition of the Commissioners, would have passed into an Act in the last session.

By the Station Act of 1840, the Company were required, before they took possession of any portion of the burial-ground at the entrance of their railway, to provide another piece of ground, in or near the parishes of St. Olave and St. John, for a burial-ground, to be approved of by the Rectors and Churchwardens of such parishes; and a piece of ground having been agreed on, it has become necessary to apply to Parliament for power to purchase the same.

Without interruption to the traffic, great progress has been made in relaying the permanent way, and asphalting the arches. In further liquidation of this imperative outlay, your Directors have appropriated, as heretofore, 1,000*l.* out of last half year's earnings.

The period for which the contract for carriages was made having recently expired, your Directors have not deemed it advisable to renew it, although they fully appreciate the advantage it has afforded up to the present period. It will be recollected, that when this contract was entered into in January, 1838, a very large expense had been incurred in the coaching department from the time of the opening of the railway. At the period referred to, 56 carriages, differing in form and construction, were on the line; these carriages will shortly be replaced by others of far better and uniform construction; as the stock will then be new, or in excellent condition, fewer repairs will be required, and those effected with greater facility at the Company's workshops, where improved machinery has been erected, and is now in readiness for such operations. These considerations, together with the experience that has been acquired in the last three years, have determined your Directors to take the carriage department under their own management. The refusal of the contractor to continue the contract unless much more favourable terms were allowed, confirms your Board in the opinion that, in the first instance, they acted in a manner that was both expedient and highly conducive to your interests.

The casualties which have prevented the development of the auxiliary traffic have rendered it desirable to continue the financial arrangements referred to in the last Report, and to delay, for the present, raising the remaining 50,000*l.* by the issue of new shares or bonds.

To the items of expenditure your Directors refer with satisfaction, as they exhibit a saving, as compared with the corresponding half of the last year, of 1,376*l.* 12s. 8d. (Hear, hear.)

And this satisfaction would have been without alloy, could they present you with an equally favourable result from the traffic department; the profit and loss account, after charging the 1,000*l.* towards relaying the line before alluded to, shows a net balance of only 1,137*l.* 0s. 1d., a sum too small to warrant a dividend amongst the increased number of shareholders. The receipts for passenger traffic, as compared with the same period of last year (always the least productive season), shows a decrease in number of 41,321 passengers, and in amount, of 1,635*l.* (Hear, hear.) The Croydon toll has fallen short by 874*l.* 4s. 5d.; the footpath being necessarily closed, on account of the new works, makes a deficiency of 199*l.* 12s. 9d.; and a portion of our rents have been absorbed by the new works to the amount of 144*l.* 10s. 8d., whilst the only item of increased income appears to the Brighton tolls, of 987*l.* 13s. 3d. The reduction of income may fairly be accounted for by circumstances which prevailed during the last six months; continued wet weather tended much to depress the traffic on this and contributing lines, whilst the repeated interruptions on the Croydon line, by slips which occurred during that period, and other circumstances, have operated to prevent the Brighton traffic from making any approach to that point which it was confidently expected to attain; but, however much regrets may be excited by these circumstances, which it was impossible to foresee or control, yet your Directors look forward with undiminished confidence to the future, when the improved condition of this line, and the anticipated augmentation of traffic and toll from the Croydon, Brighton, and South-Eastern lines are taken into consideration.

In conformity with the intention expressed in their last Report, your Directors have reduced the classes of carriages to two, and fixed the fares at 9d. and 6d.; but it will require some time to elapse before any correct opinion can be formed upon the result of this experiment.

Mr. Entwisle having recently resigned his seat as one of your Directors, the Board has temporarily filled the vacancy by the election of Joshua Field, Esq., a gentleman who has long been a large shareholder in this undertaking, and who they are persuaded will, by his influence and experience, promote the best interests of the Company; they therefore beg to recommend that his election be confirmed by this meeting. Messrs. Shadbolt, Jeffery, and Wheeler, retire from the Direction by rotation, and being eligible for re election, beg to offer themselves accordingly.

WILLIAM SHADBOLT, Chairman.

London, 14th February, 1842.

The DEPUTY-CHAIRMAN, before proceeding to read the accounts, paid a very high compliment to the abilities and zeal of Mr. Adron, the Accountant of the Company. The accounts were put forward in so clear and succinct a manner, that he who ran might read. Whatever opinion the proprietors might form as to the results which the accounts presented, there could be no doubt that they presented the truth, the whole truth, and nothing but the truth. The condition of the books was greatly to Mr. Adron's credit. (Hear, hear, hear.) The honourable gentleman then read as follows:—

Balance Sheet of the London and Greenwich Railway Company, December 31, 1841.

DEBTOR.

To Capital—			
Original shares	400,000 0 0		
Less unpaid calls on 21 shares	575 0 0

THOS. W. PERRY, J. T. BOWER, } Auditors, 11th February, 1842.

H. ADRON, Accountant.

The following Report from Colonel Landmann, the Engineer, was next read:—

ENGINEER'S REPORT.

To the Chairman and Directors of the London and Greenwich Railway Company.

Gentlemen,—I have the honour to report that the whole of the works for widening the London and Greenwich Railway, together with the additional space required to be made to the London station, are so nearly completed that I am enabled to assert that the total cost thereof will fall considerably under the amount of my estimate; and that the same has been accomplished, in regard of time, so as to avoid the heavy penalty of 50*l.* per diem in the event of any failure on that subject.

I cannot refrain from expressing my satisfaction at this result, since it was only on the 17th of March ultimo that the first stone was laid for the new work; which clearly proves that my statement to the Directors, in the year 1838, was justifiable, viz., that two years would be ample for the construction of the whole from London to Greenwich.

In opening the old work for the purpose of making the new work in contact therewith, an opportunity was presented to the public for ascertaining the solidity of the former work, and which I trust cannot fail to have put down that torrent of calumny in which ignorant and evil-disposed persons have so freely indulged in regard to the stability of this work.

It may be satisfactory that I should add, that the precau-

Digitized by Google

time I adopted in forming this additional work have entirely protected it from sustaining any injury whatsoever.

I have the honour to be, Gentlemen,
Your most obedient humble servant,
GEORGE LANDMANN.

42, Fish-street Hill, February 12, 1842.

The Report of the Directors, and that of Colonel Landmann, were received with repeated marks of approbation.

The CHAIRMAN then moved, that the Reports of the Directors and Engineer be received, adopted, and printed for circulation among the proprietors. The adoption of the Report, he explained, did not involve the re-election of Directors.

The motion having been seconded,

Mr. HICHENS said, he had not been present at the last meeting, but since that time the Directors, he found, had reduced the fares.

The CHAIRMAN said, the fares had not been reduced but altered. The Directors had merely carried into effect the wish of the proprietors as expressed at the last meeting.

Mr. HICHENS (of the Stock Exchange) would never have assented to the reduction had he been present. He believed that the reduction had been greatly detrimental to the undertaking. (Hear, hear, hear.) He should have had no objection to see the fares from Deptford to London reduced, so as to contribute to the accommodation of the market gardeners in that district. Such an arrangement would, he thought, have met the justice of the case, but he could not see the propriety or the policy of reducing the fares throughout, and rendering them the same to and from Deptford and Greenwich. Instead of increasing the number of passengers, he found that the number during the last year as compared with the preceding year was less by 41,000. (Hear, hear, hear.) Nor was it merely in the number of passengers but in the amount of receipts that the Company had suffered. He regretted to be obliged to differ in anything from the Directors who had exerted themselves so anxiously for the benefit of the undertaking, but he would repeat that if he had been present at the last meeting, he should have protested strenuously against the reduction. He was very sorry that the shilling carriages had been given up.

The DEPUTY-CHAIRMAN thought his friend Mr. Hichens had forgotten the opening of the Blackwall Railway. (Hear, hear.) The Directors had been compelled by the force of necessity to alter the fares—(hear, hear)—but up to the present moment they could not tell precisely whether the alteration had been beneficial or not. In fact, they said in their Report, "it will require some time to elapse *before* any correct opinion can be formed upon the result of this experiment." Up to last Saturday the result had been a trifle in favour of the alteration of fare as compared with the corresponding period of last year. As it was only on the 1st of January last that the alteration took place, the Directors themselves could not form any conclusive judgment as to its probable effects. They conceived it worth an experiment, but at any rate it could not affect the accounts now submitted. (Applause.)

Mr. HICHENS would only ask—Had they taken a single passenger from the Blackwall Railway? (Hear, hear.) The Blackwall Railway might, in some measure, affect the Woolwich traffic, but it could have no influence on the Greenwich.

Mr. HINTON said, he had seen, not long since, an advertisement stating that the second-class carriages of the Company were without seats—in fact, mere standing places. He decidedly objected to this arrangement. (Hear, hear.) He had travelled in France, Belgium, and Germany, and nowhere but on the Blackwall and Greenwich Railways had he seen these standing carriages adopted. He was of opinion that this mode of treating the public—in thus huddling them together, like so many *other* animals such as pigs and cattle—could not but injuriously affect the railway—more especially when so much competition existed on the water. [A VOICE—The steamers carry for 8d. and 6d.] On the Continent there were four descriptions of carriages, and not even in the lowest of them, where the fare was less than 1d. per mile, were seats wanting. (Hear, hear.) He would entreat the Directors to make the carriages as comfortable as possible for the passengers. (Hear, hear.) The parties using the line—or, at least, many of them—did not so much care about going to Greenwich as about being comfortable, and it was reasonable that they should object to being thrust with so many other persons into these stand-up carriages. [A VOICE—Then let them go into the better class.] He thought the Company would lose a large number of their customers if they did not provide better accommodation. This could be done without adding sensibly to the expenditure of the Company. They would perhaps require a few additional carriages, but the working expenses would be little, if at all, increased. (Hear, hear.)

The DEPUTY-CHAIRMAN—What say you as to the amount of fare?

Mr. HINTON did not object to the fare. He thought it quite reasonable.

The DEPUTY-CHAIRMAN said, if they were to put seats into these 6d. carriages, all the passengers would go by them, to the neglect of the better class.

Mr. HINTON was of a different opinion. (Hear, hear.) He would repeat, that the Company ought to make the passengers comfortable, when it would cost them little or nothing. He had another question to ask. He had seen it stated, that the Company were applying to Parliament for power to raise a further capital. Was it so or not?

The CHAIRMAN—Certainly not; we have no such intention.

Mr. HINTON said, he saw from the accounts that a large sum had been expended in relaying the line and covering the arches with asphalte; he hoped the arches were now strong, solid, and waterproof?

The CHAIRMAN—Unquestionably.

Mr. HINTON hoped the Directors would be able to let them.

The CHAIRMAN had no doubt of it.

Mr. HINTON said, they had been told at the outset of the undertaking that these arches would produce 10,000*l.* a year. (Hear, hear, and laughter.)

The DEPUTY-CHAIRMAN said, he should not be surprised if they ultimately produced more. There were 1,500 of them.

Mr. HINTON said, he had noticed the prices of the Company's shares, quoted in the *Courier*, but in no other newspaper He saw, also, in the railway papers, extracts and traffic returns relative to other lines, but the Greenwich was never mentioned.

Mr. WHEELER (a Director) said, the traffic returns appeared regularly in the *Railway Times*. The Directors were anxious to give the utmost publicity to everything connected with the undertaking.

Mr. HINTON hoped that no cause of offence had been given to other papers (for he saw the advertisements distributed very impartially), to prevent the notice of this Company.

The CHAIRMAN said, nothing of the kind had occurred; in fact, the Directors were anxious to give all parties the fullest information that could be desired. (Hear, hear.)

Mr. CORNEY said, the shares of the Greenwich Company were not held to any great extent by parties speculating in such stock, and therefore there were fewer quotations of bargains than in some other Companies.

Mr. SCRIMGEOUR (of the Stock Exchange) did not think the reason just stated the true one. In fact, the Secretary told him that Mr. George Walter had bribed the *Times* to keep out the quotation of price. (Laughter.) When he found the Blackwall, who did so little business, quoted every day, and the Greenwich never, he thought there must be some cause for so partial a course. He thought it was the duty of the Secretary to see to these things. The Sceretary was a very worthy and very scientific gentleman, but the proprietors would rather that he should be well acquainted with the position and circumstances of the Greenwich Railway, than that he should be familiar with Roman or Spanish antiquities. For example, there had been a standing advertisement to the injury of the railway, of a crack which had been allowed to remain unrepaired for weeks, in one of the arches of the new works near Canterbury-square. It was, in itself, a matter of no great importance, and might have been made right by a little mortar and a few bricks, but there it was suffered to remain, and to lead the public to suppose that all the arches on the line were unsound. He thought the Secretary ought to have looked to it. He might be told that this formed no part of the Secretary's duty—(hear, hear, hear)—but the Secretary ought to have stated the matter to the Engineer. The honourable proprietor again adverted to the (alledged) non-appearance of the price of Greenwich shares in the *Times*, and said, if a fee were necessary to be paid to the *Times*, it ought to be paid. (Loud laughter.) He complained also that the number of new shares was incorrectly stated in the brokers' circulars as 31,000, whereas it ought to be 23,051 only. He thought this error would exert a prejudicial influence on intending buyers, and it was the duty of the Secretary to see that the mistake was corrected. (Cries of "What next?")

Mr. HINTON had been about to put another question, when the honourable proprietor who had last spoken prevented him. They had been told some time ago that the old carriages had been disposed of—(loud cries of "Spoke, spoke,)—in the midst of which the Chairman said, the honourable proprietor could only be heard in explanation." He hoped that the new carriages would be provided with seats.

Mr. M. A. GOLDSMID (a Director) said, the question of fares was a very important one, and as such, had received the most anxious consideration of the Directors. There were many conflicting opinions respecting the point, but the Directors had acted in the matter to the best of their judgment. They had not taken the step of altering the fares without mature reflection. It had occupied many sittings of the Board, and although at first there was some diversity of opinion, the great majority of the Directors had ultimately given their voice for the alteration. With regard to providing seats in the inferior vehicles, if they could make sure that such vehicles would be used solely by those for whose accommodation they were intended, he should be the first—and he was sure every gentleman present would agree with him—to render them as comfortable and commodious as possible. (Hear, hear.) Unfortunately, however, it was found that on increasing the comfort, many had recourse to those vehicles who ought to have travelled by a higher class. (Hear, hear.) It was quite out of the question to contrast the accommodation supplied at a penny per mile on the railways of the Continent with those of this country, more particularly with the London and Greenwich, a line built entirely upon arches at a great expense. For example, Belgium was so flat a country, that there was only one tunnel to boast of in the kingdom. The Directors were merely attempting to make persons act as became their station in society, so that those who could afford to use a superior vehicle might not travel in one provided solely for the accommodation of the humbler classes. The Directors could have no desire to draw invidious distinctions, because such a course would, in the first place, be opposed to good feeling, and, in the second place, be at variance with the interests of the Company. (Hear, hear.) The Blackwall was not the only line upon which these stand-up carriages were used. They were adopted on the Shoreham branch of the Brighton Railway, and he believed on other railways likewise—(hear, hear). Of course they could not be employed on long lines of 40 or 50, or 60 miles, but on short lines there could be no objection to their use. They were used too on the Croydon line. The Directors found that by running three classes of trains, they were acting prejudicially to the interests of their constituents, because they were frequently obliged, in order to suit the taste of one or two passengers, to put on a greater number of carriages than was required, which caused an additional wear and tear of the line and carriages, and an increased consumption of fuel. It had been discussed whether they should abandon the sixpenny carriages,

Digitized by Google

but the majority of the Directors were of opinion, that it would be unwise to do so. They had remarked, that the shilling carriages were almost always empty, so as to render it not worth while to run them, whereas the eight-penny carriages were almost always well filled. Under these circumstances, the Directors were of opinion, that as the sixpence had once been exceeded, the addition of a penny would not be material, while it would secure proper accommodation to those who rode by a better vehicle, and retain the sixpenny carriage for the use of those whose means would not reach higher. The Directors thought they had done what was best for the interests of the proprietors, although they required some little further time for the full developement of the efficiency of the scheme. (Hear, hear.) With respect to the new carriages, he thought the Report stated quite enough to show that the previous arrangement had been for the benefit of the Company, when it was found that the contractor would not renew his engagement on the same terms.

Mr. ADISON thought the Directors were not to be blamed for having reduced the fares, but rather because they had not carried the experiment far enough. (Hear, hear.) One fair experiment of this kind was worth whole hours or days of talk and discussion; and if such experiment were not successful, they might easily retrace their steps. (Hear, hear, and "No, no.") Let them issue day-tickets, for three months; if it were found that the plan did not answer, no great harm would be done. (Hear, hear.) It was a perfect waste of valuable time to talk so much about a reduction of fare; it would be better to act at once. He would contend that no full experiment of low fares had ever yet been made. This could not be called a reduction of fare. He would press upon the Directors the policy of making still further reductions in the approaching spring. He was sure that a trial of this kind could not affect the permanent interests of the proprietors. (Hear, hear, hear.)

Mr. JOHN ENTWISLE (late a Director) would state a few facts which would probably modify the opinion of Mr. Hichens. It had been stated last June, that the sixpenny carriages had been successful, inasmuch as upon those days when they were used there had invariably been found to be an increase of traffic as compared with the corresponding days of the previous year; while on the days when they were not used, the reverse had been the case. (Hear, hear.) Instead of charging as before 1s. for the one class and 8d. for the other, the average of which was 8½d., they now made a charge of 9d. for the better sort of accommodation. It was not correct to say, that other Companies had not adopted these stand-up carriages. He could name half-a-dozen Companies who had. There were the Manchester and Leeds, the Northern and Eastern, the London and Croydon, the London and Blackwall, the London and Brighton (Shoreham branch), the Birmingham and Derby, and he believed others, and—which bore very strongly upon the question—not one of these Companies, having once adopted them, had ever thought of giving them up. (Hear, hear.) So far from persons objecting to ride in these vehicles, the difficulty was to prevent parties from using them who ought to go by a superior carriage. (Hear, hear.) With respect to the traffic, he had been told that it had increased since the new arrangement came into operation. Was it so?

The CHAIRMAN said, the receipts for January of the present year had exceeded those of the previous January.

Mr. ENTWISLE said, a comparison had been drawn between the railway and steam-boats. Could every one on board of a steam-boat be indulged with a seat? (Hear, hear)

Mr. SCRIMGEOUR said, the average between 1s. and 8d. was 10d., and not 8½d., as stated by the last speaker.

Mr. ENTWISLE said, it would undoubtedly be so if the number of passengers by the shilling and eightpenny carriages had been the same, but taking the number carried with the price paid, the average was as he had stated.

The DEPUTY-CHAIRMAN said, it should be borne in mind that the shilling carriage cost much more than the eightpenny one. It would be found on inquiry of Mr. Miller, the Resident Engineer, that the average number of passengers per trip by the shilling carriages was two, and to accommodate these, they were compelled to use carriages to and fro that weighed several tons. Instead of, as before, having five carriages in a train, two composite carriages were, under the new arrangement, amply sufficient for the traffic. (Hear, hear, hear.)

Mr. GEO. WALTER was anxious, lest the calumny should get into the papers, to state most positively that he had never bribed, nor attempted to bribe, the *Times*. (Much laughter.)

Mr. SCRIMGEOUR had understood that it was by the payment of certain fees that the suppression had been effected.

Mr. WALTER said, his means unfortunately did not enable him to offer fees, even if he were so disposed.

The SECRETARY disclaimed having said or imagined anything so utterly ridiculous as that Mr. Walter or any one else could bribe the *Times*.

Mr. HICHENS thought the returns of share transactions and of traffic receipts ought to be supplied to the proper parties.

The CHAIRMAN said, they were now so supplied.

Mr. WALTER said, the possibility of receiving 10,000*l.* for the use of the arches had been alluded to as if jestingly; he would ask if an offer very nearly equal to 10,000*l.* a year had not been made for the arches.

The DEPUTY-CHAIRMAN said, before the new works were well begun, it had been proposed by a party, to lease the arches for 21 years, at first at a sort of peppercorn-rent, it being represented, that ultimately the rental might be equal to 10,000*l.* a year. The Directors, however, could not entertain the proposition at that time; in fact, no regular offer had been made.

Mr. WALTER had no doubt, that after the arches had been properly asphalted, they might, with due exertion, be let for 10,000*l.* They were as dry as any house, especially from Deptford to Greenwich, [DEPUTY-CHAIRMAN—So they are], and might easily be converted into cottages of four or five rooms each. (Hear hear, and laughter.) If this were doubted, let them look at the Railway Tavern, which was established in some of these arches. One room in that establishment was 18 feet in length and 12 in breadth. With regard to the shilling carriages, he would ask, whether 5,000*l.* had not been received from passengers by them during the last year.

The DEPUTY-CHAIRMAN said, the amount derived from these carriages, had been 4,600*l.* out of a total income of more than 55,000*l.* In fact, as had already been stated, the average number of passengers per train, was only two.

Mr. WALTER was well acquainted with the class of passengers using the railway, as he travelled by it every day in his life. He knew that in summer, when persons frequented Greenwich to indulge in white bait, they would not ride in the nine-penny carriages, although they would use those at one shilling, if they had the opportunity of a select party. He thought the abolition of the shilling carriages would be a great loss to the Company. (Hear, hear, and "No, no.")

The DEPUTY CHAIRMAN said, that putting out of consideration the first cost of these shilling carriages, the cost of working them more than absorbed all the receipts which they produced.

Mr. WALTER was of opinion that if more comfort were afforded to the humbler passengers, the number would be doubled or trebled. (Hear, hear.)

The DEPUTY-CHAIRMAN—Yes, out of the eightpenny passengers. (Hear, hear.)

Mr. WALTER happened to know something of the arrangements which were being made for the ensuing season by the Steam-boat Companies; and he was satisfied that if some alteration were not made with respect to these stand-up carriages, the boats would abstract half the traffic. (Hear, hear.) Even at present, the fares from Deptford to London by omnibuses were not more than 6d. The honourable proprietor went on to argue that the new carriages were improperly constructed for such a line, because from their height they caught and retained the wind. (Laughter.) One day, recently, he had been travelling by the line, when there was a strong easterly gale, and the train had been delayed five minutes in consequence.

Mr. WHEELER (a Director) said, the best answer that could be given as to the abolition of the shilling carriages was, that there had been effected a saving of 10 per cent. on coke since their removal. (Hear, hear.)

The DEPUTY-CHAIRMAN would add, that the height of the new carriages enabled the Directors to apply those important requisites—buffer-springs, to all of them, which it was impossible to do to the low carriages. These springs would of course naturally lessen the ill consequences of collision.

Mr. WALTER inquired if the new carriages were to be paid for by the contractor, or by the Company?

The CHAIRMAN—By the Company.

Mr. WALTER believed the whole of the carriages had been sold some years ago to Mr. Wright for 4,600*l.*, to be paid for by three bills in three years. The Company had since been paying 3,000*l.* a year for the use of these carriages, which must have been an extremely good thing for Mr. Wright, as it was well known that he kept only two or three persons employed upon them, and yet the Directors now expressed regret that Mr. Wright would not renew the contract.

The CHAIRMAN would set the honourable proprietor right. No regret was expressed in the Report.

Mr. WALTER thought he had said enough respecting these carriages. (Ironical cries of "hear, hear.") He thought the Company had had a fortunate escape from Mr. Wright. (Laughter.)

The DEPUTY-CHAIRMAN would just mention one fact, which was this, that from the first opening of the railway to the time when the present Board took office, the carriage establishment of the Company cost 6,000*l.* per annum, whereas since they had been in office it had in no one year exceeded 2,000*l.* (Great applause.)

Mr. WALTER begged to state, that up to 1837 many of the carriages had been constructed in the Company's workshops, and were new. He had introduced an alteration into their construction, whereby 8,000,000 of passengers had been conveyed in safety, for although the carriages had occasionally run off the rails, no personal injury had been sustained. He attributed this solely to the alteration referred to. Last session he had presented a petition to Parliament pointing out the danger of building railway carriages on the high principle. (Cries of "Question," and other marks of impatience.) These new carriages were at least two and a half feet higher than the old, or than they ought to be, and would endanger the lives of the passengers. He hoped Parliament would take up this matter and prevent the use of carriages constructed on so dangerous a principle. (Renewed cries of "Question.") When some fatal accident occurred upon the Greenwich line through the use of these high carriages, they would regret that they had cried "question" on the present occasion. (Laughter.)

A PROPRIETOR would be glad to know what other Company had ever used the low carriages. (Hear, hear, hear.) If their superiority were so marked it was not to be believed that other Companies would be so deficient in common sense as not to adopt them. (Hear, hear.)

The DEPUTY-CHAIRMAN said, he had just been informed by Mr. Miller, the Engineer, that six weeks had never elapsed without these low carriages going off the line or breaking their axles. (Hear, hear.) In fact, it was solely attributable to the great care of the engine-drivers upon this line—than whom a more vigilant and competent class of men did not exist—that accidents had not occurred from their use. (Hear, hear.) There were 56 of

Digitized by Google

these old carriages, and the Directors had at last determined to meet the evil boldly by getting rid of them altogether. (Applause.)

Mr. WALTER said, it was the switches that were in fault, and not the construction of the carriages.

Mr. WHEELER said, Mr. Walter must have known that although Mr. Wright kept only four men employed on the line as cleaners, all the carriages were taken to his workshops to be repaired. He had cleaned, new lined, and painted them, and Mr. Wright was ready to prove that he had lost money by the contract. (Hear, hear, hear.)

The CHAIRMAN—Besides paying us 200*l.* for the use of some of the arches.

Mr. WHEELER said, the lowness of the old carriages precluded the possibility of examining them minutely, whereas the new being higher, could readily be inspected. The Blackwall Company used high carriages, and no accident had yet taken place on that line, nor did he apprehend the occurrence of any accident on this line. In fact, the high carriages were the safer, and the best proof of this was, that every Company without exception used them. (Hear, hear.)

Mr. Alderman WILSON said, he saw an item in the accounts of 31,866*l.* as "debts due by the Company;" might he ask, why that amount was not paid?

The CHAIRMAN said, it was due principally to contractors, a portion of whose money was always retained in hand as a guarantee for the proper completion of the works. In other respects, the Company invariably paid ready money, taking discount.

Mr. HAMMOND said, that when he last attended a meeting of the Company, about a year ago, some reflections had been cast upon an individual member of the Board, and the matter had since become notorious in print. The absence from the accounts of any item for the carriage of parcels seemed to give a colour to the imputation, which was neither more nor less than this, that Mr. Wheeler was so deeply interested in the property of the London Parcels Delivery Company, that he had induced his colleagues in the Railway Company not to undertake the carriage of parcels, so as to promote the interests of the Parcels Delivery Company. He alluded to this matter, because it was right that the subject should be fully explained at meetings of this kind, where they were all assembled as partners to inquire into the state of their affairs, and to suggest measures for their improvement. He was for coming to the point at once, in order that they might see what confidence ought to be reposed in their representatives. He would ask, therefore, why the Railway Company did not carry parcels?

Mr. WHEELER was exceedingly obliged to the honourable proprietor for mooting this subject. He had always been anxious that the railway should profit as much as possible by the carriage of parcels, but it had been found, on investigating the matter, that it could not be done profitably. How were the parcels to be brought to the railway, and how distributed afterwards? Putting the cost of these arrangements at the lowest possible figure, it would be found that no profit would remain for the Railway Company. If it could be shown that the Railway Company could carry the Greenwich parcels at a profit, the trade of the Parcels Delivery Company should come upon the line to-morrow. (Hear, hear, hear.) They would have carts and porters to provide, and he could assure the meeting that the total receipts of the Parcels Delivery Company from Greenwich to Deptford did not exceed 7*l.* per week. (Hear, hear, hear.)

The DEPUTY-CHAIRMAN said, the Directors had given much attention to this subject, and two Committees had inquired into it. It should be recollected that great responsibility would attach to them from the conveyance of parcels, and that a number of additional servants would be required. (Hear, hear.) It might by-and by be an object of importance to look to parcels when the Brighton and South-Eastern lines came into full operation, but at present they could gain nothing by it. It was of necessity left to the discretion of the Inspector on duty whether a charge should or should not be made for parcels carried by passengers. When the parcel was very large, double fare was exacted, but in general nothing was charged, and in his opinion, this arrangement was most judicious.

Mr. HAMMOND said, Companies like the Birmingham now derived some considerable revenue from the carriage of parcels.

Mr. WHEELER said, it was ridiculous to compare a long line like the Birmingham with a short line like the Greenwich. The Birmingham Company were now charging twice as much as the coaches did for the carriage of parcels.

Mr. HAMMOND thought they could easily find plenty of persons to collect and distribute the parcels, if it were worth while. If it were worth the while of the Parcels Delivery Company, it must be worth the while of the Railway Company.

Mr. WHEELER would assure the honourable proprietor that it was *not* worth the while of the Parcels Delivery Company; and he should undertake to satisfy him on this point from the books of the Company.

Mr. BARFORD inquired if there was any necessity for a waiting-room at each end of the line, as the carriages started every 15 minutes.

The CHAIRMAN said, these rooms were indispensible in bad weather, and on holidays when large numbers assembled.

After some further conversation, the motion for the adoption of the Report was carried unanimously.

The DEPUTY-CHAIRMAN then proposed the confirmation of the election of Mr. Joshua Field, as alluded to in the Report. The Directors had used great care in the selection of an efficient colleague; and he had no doubt that the character and interest of Mr. Field, and his stake in the undertaking, would tend to the advantage of the Company. Mr. Field had at first declined to serve, but after the second or third application, had consented. The honourable Director passed a high eulogium on Mr. Field.

Mr. CORNEY (a Director) seconded the nomination.

A PROPRIETOR inquired if Mr. Field held any old shares.

The DEPUTY-CHAIRMAN said, he held both old and new.

Mr. SCRIMGEOUR had understood, that up to within the last few days, Mr. Field had held 500 new privileged shares and not a single old share. Now he (Mr. Scrimgeour) was of opinion, that a Director of this Company ought to hold unprivileged shares. He thought those undertakings were best conducted, in which the managers held a large pecuniary interest, and in proof of this, it was well known, that in some of the great Companies, the Directors and their families frequently held one-third part of the entire undertaking. (Hear hear.) How stood the capital of the Greenwich Company? They had issued bonds to the extent of 183,000*l.*, upon which, of course, they had to pay interest at the rate of 5 per cent. per annum. Then there came 11,000 privileged shares, upon which 5*l.* per cent. must be paid before the original proprietors received a single six-pence of dividend. Of these shares 7,500 had been taken up at par, namely, at 20*l.* each, but 3,650 of them had been issued at 16*l.* 10*s.* per share, representing 20*l.*, and accordingly 5*l.* per cent, upon these would be in reality, about 6*l.* per cent. before any dividend could accrue to those who at first embarked their property in the undertaking. The capital thus unprivileged, amounted to 20,000 shares, at 20*l.* each. Of the privileged shares, the last issue of 23,007 had been made at 6*l.* 10*s.* per share, and at the period of that issue, he had asked if the interest was to be paid on the money actually advanced, or on the nominal value of 20*l.*, and he had been told, that it was to be on the nominal value. He did not object to this, but he thought the Directors should have an interest in both kinds of shares, in order that they might feel for the unfortunate holders of the original stock. That the holders of privileged shares were entitled to their 5 per cent. was clear, and they should have it as long as they were fairly entitled to it; he should be the last to dispute it. "Promise to your neighbour, and disappoint him not, though it were to your own cost." He would, however, elucidate their exact position by a quotation:—

> "There's six eggs in the pan, good man,
> There's six eggs in the pan, good man;
> There's one for you, there's two for me,
> And three for our John Highlandman."
> (Great laughter.)

Now John Highlandman should have his three eggs; he was fairly entitled to them, as promised, no doubt, by the good wife; but they would take care that he should depart as soon as he had had them, and should not be invited to sup again upon such unequal terms. (Renewed laughter.) "Once more, Gentlemen (continued the honourable proprietor)—Two good men are travelling together; one comfortably wrapt up in a Taglioni and warm cloak; the other shivering, without either coat or cloak, and begging his companion to hasten on to the next town, for there he may get not only a Taglioni and a cloak, but, says he, both yon and I may get a Macintosh also. Yes, replies his companion, but I am in no hurry, man; for if afterwards you lose your upper coverings I am bound to divide mine with you, and can never after call them exclusively my own. Ever after, says this representative of a privileged shareholder, I must share equally with you, your increase of prosperity or your adversity."—

The DEPUTY-CHAIRMAN begged pardon for the interruption, but he had just learned that Mr. Field did not hold any old shares. (Hear, hear, and "oh, oh.")

The CHAIRMAN added, that Mr. Field held 500 new shares, which he had purchased in 1838, at 20*l.* per share, not in the market but from the Company.

Mr. SCRIMGEOUR resumed—He was right then as regarded the holding of Mr. Field; but it was not with reference to Mr. Field alone that he spoke; there were others in the Direction similarly circumstanced. Now was the time for the holders of old shares to take their stand. (Hear, hear, hear.) The tolls from the Brighton and South-Eastern lines were about to become productive, and it it was their duty to appoint no one to the management of their affairs, unless he went heart and soul with them. (Hear, hear, from the Directors, and applause.) It was not enough that their Directors were men of character; they ought, moreover, to have interests identical with those of the proprietors at large. He meant nothing personally offensive to the Directors, with not one of whom had he the pleasure of more than a bowing acquaintance. He was not of Mr. Walter's party, or any other party; he cared nothing for the buying or selling of carriages, for he was sure that, if Direc- were fit for anything, they could easily manage such matters as these, with satisfaction to all parties. He took his stand upon the broad principle that the holders of privileged shares had interests opposed to those of the holders of old shares. (Hear, hear, and "No, no.") It was as he had said. Such parties knew, that the moment the receipts allowed a division of 5 per cent. dividend upon the whole capital, that moment their privilege ceased to exist, even if the receipts should subsequently decrease; and therefore it might happen, that just as they were about to realise that amount, the Directors, holding only privileged shares, might discover that the arches wanted repair, or something else, which would reduce the available balance. (Hear, hear, and laughter.) The honourable proprietor went at some length into this argument, illustrating it by allusions to the United States' Bank, and then read the following resolution:—

Resolved,—That it is the opinion of this meeting that with a view of securing a due economy and a profitable result to this concern, it is of paramount importance that the Director or Directors now nominated, or hereafter to be nominated, be qualified in such capacity of Director by being the proprietor of at least two hundred shares in the unprivileged capital of this undertaking; for, as no mere bondholder would be admitted as a Director, there is yet a stronger objection to a holder of privileged shares, because, as it was agreed that his privilege of receiving 5 per cent. on his shares should cease the moment that the concern

Digitized by Google

allows of a dividend of 5 per cent. on the whole capital, and he then becomes a shareholder, liable, like all the rest of the shareholders, to the vicissitudes of the Company, to its good or its ill success; he has, therefore, now, whilst he retains his privileges, a direct interest in its maintenance; and, therefore, would be likely to view with apprehension and possibly dismay, however unwarrantably he might so do, any such reduction of expenditure or increase of traffic, as would insure a dividend of 5 per cent. on the whole capital, because the chance of a still larger dividend might not, in his opinion, be equivalent to his new privilege of receiving, as he does, 5 per cent. on his first privilege shares, and (from the price at which they were raised of 16*l.* 10*s.* per share,) nearly 6 per cent. on his second privilege shares.

It would hardly be believed, he said, that the Directors, conjointly, did not hold more than 4,000*l.* of the old capital of the Company. (Hear, hear, and considerable interruption.) He must make one great exception, for there was a Director who held 800 old shares; but this only served to show the small holdings of the others. The proprietors ought to recollect that better days were dawning on them—that they were shortly to receive a toll of 4½d. instead of 3d.,—that they themselves had last year carried 1,500,000 passengers, and that when the Brighton and South-Eastern lines were fully in operation, that number would be greatly increased, so as, he believed, to give them 15 per cent. dividend. (Laughter). Nor did the improvement end there. If the line from Gravesend to Rochester, of which he saw advertisements every day, were made, the traffic must ultimately come upon the Greenwich Railway, and then the dividends would be immense—(renewed laughter)—provided the proprietors looked after their own interests. His motion was, in effect, a recommendation to the Directors to qualify by the purchase of old shares. He should be told, doubtless, that the Act of Parliament fixed the qualification of a Director; but such qualification was of little use, and the proprietors might, if they pleased, insist upon something further. He again protested that he was no party man, and that he imputed no improper conduct to the Directors, although he thought the holding of privileged shares had a soporific tendency in the management of the Company's affairs. Character in Directors was not, as he had already hinted, everything. As Sir Robert Peel said a few nights ago with respect to the averages, the best way to prevent fraud was, to take away the temptation. If this resolution of his were carried, he could see the dawn of prosperity breaking on the undertaking. Personally, he was not much interested, but he was anxious for the welfare of the undertaking. They had had much cause hitherto for doubt, despondency, and despair, but if they passed this resolution, their now brightening prospects would speedily wax still more bright.

The honourable proprietor subsequently stated, that he intended to follow up the above resolution by another, namely:—

Resolved,—That in accordance with the above resolution, it be recommended to the Chairman and Directors of this Company, that in instances where they are not so qualified, they proceed at once to qualify themselves accordingly.

Mr, TYRREL spoke to a point of order, contending that as the motion for the re-election of Mr. Field had been moved and seconded, Mr. Scrimgeour's proposition could only be entertained as an amendment.

Mr. HICHENS agreed in the propriety of Directors holding old shares as well as new, but he doubted whether legally this proposition could be carried without previous notice.

Mr. HUTCHINSON, in seconding the amendment, argued that there was no legal difficulty in the case. He entirely concurred in the remarks of Mr. Scrimgeour.

Mr. M. A. GOLDSMID rose to reply to Mr. Scrimgeour, but was very frequently interrupted during his address, particularly by one person whose name we could not learn, and who, it was clear, from the vehemence of his manner, and the tone and tendency of his remarks, had some personal spite against the honourable Director. This person was more than once called to order. Mr. Goldsmid contended, that purchasers of old shares at the present market price were placed in as favourable a position as the holders of privileged shares. He insisted that it was impossible for the Directors, even if they were holders of new shares alone, to consult their own interests, without at the same time promoting the interests of the original proprietors. Amid a great deal of interruption, the honourable Director proceeded to contend that Mr. Scrimgeour's proposition was tantamount to an imputation upon the Directors of unworthy conduct.

Mr. HUTCHINSON would emphatically disclaim any such imputation, so far as he was concerned. He believed the Directors to be men of the highest character and the strictest integrity; and all that he contended for was, that in addition to these qualifications they should give the further pledge of such a stake in the undertaking as would lead them to enter into the views and feelings of the original proprietors. (Great applause.)

Mr. WHEELER went at some length into the question, stating in the outset that he himself held 300 old shares, which would be registered as soon as the transfer books were re-opened. Had there been the slightest charge of neglect brought home to the present Board?—(loud cries of "No, no,") —had they not observed the strictest economy?—(hear, hear, and "No, no")?—had they not done everything in their power to benefit the undertaking? (Much interruption.) Why, then, should it be argued that they had not a sufficient stake in the concern? For his own part, and he believed he might speak on behalf of his colleagues, he should have no objection, when they were before Parliament, that the holding of old shares should be made an indispensable qualification of a Director. (Hear, hear, hear.) With respect, however, to Mr. Field, from whose case this discussion had arisen, it should be remembered that that gentleman came forward when it was impossible to dispose of the preference shares—that he had embarked 10,000*l.* in the railway, and had thereby materially benefited it. (Hear, hear, hear.) He did not quite agree with the honourable proprietor who thought Directors ought always to hold a large number of shares. The longest purse was not always accompanied by the largest brains. (Hear, hear, hear.) He thought rather that when gentlemen had very long purses they were inclined to take their ease and neglect their duty. He would venture to say that the present Directors of the Greenwich Company had never neglected theirs. (Hear, hear, hear.)

Mr. HICHENS, amid great confusion, stated, that when the shares of the Company were in such a state that no one else would take them, the present Directors and their friends stood forward and relieved the Company from its difficulties. But for them the line could not have continued open. (Hear, hear, hear.) He was favourable to the Directors holding old shares; but justice was justice, and he must state the truth. (Applause and continued interruption.)

Mr. MAUBERT contended, that without the Brighton and South-Eastern tolls, the Greenwich line could not pay more than the 5 per cent. on the preference shares, and that therefore it would be time enough to discuss the point about holding old shares when these lines were in full operation, and more than 5 per cent. on the privileged shares likely to be returned. He would support the election of Mr. Field. (Hear, hear, hear.)

Mr. HAMMOND spoke in favour of the Directors holding old unprivileged shares.

Mr. ENTWISTLE said, he held 200 old shares, and not one new; but he would never consent to have the hands of the Directors tied up by such an amendment as this. (Hear, hear, hear.) He was of opinion, that the Directors ought to hold shares of each class, and he was moreover of opinion, that a large holding was desirable, although, as Mr. Wheeler had very properly observed, it was not always the largest holder who was the best qualified in other respects. (Hear, hear.) Might he ask, how many of the proprietors held 200 old shares?

The DEPUTY-CHAIRMAN said, the number was under 40. (Hear, hear.)

Mr. ENTWISLE protested against confining the election of Directors to a choice from so small a number. The present market value of 200 old shares was about 1,300*l.*; whereas here was a gentleman holding 10,000*l.* stock in the Company, who, if they passed the amendment, could not be elected. (Hear, hear.) When they could find men of ability and integrity to conduct their affairs, it was absurd and mischievous to look at the extent of their holdings. He knew nothing personally of Mr. Field, and therefore could have no bias on the question. When he himself retired from the Direction he held none but old shares; but if he had been asked which of his colleagues exerted themselves most—those who held old shares or those who held new—he really should have been unable to tell. (Applause.)

Mr. CORNEY suggested, that as the amendment would exclude Mr. Field, it should be withdrawn, and notice given for next meeting. The honourable Director explained, that when he took office it was represented to him that the Company were in debt and out of credit, and it was suggested that each Director should take 50 or 100 shares. They did so at 20*l.* per share, when they might have bought them in the market at 17*l.* or 18*l.* He had thus invested 2,000*l.*

The Deputy-Chairman, Mr. Wheeler, and other Directors, spoke to the same effect. They stated, that but for the Directors thus raising from 12,000*l.* to 15,000*l.*, the contractors would not have gone on with the works.

Mr. HUTCHINSON inquired whether any of the preference shares could now be had.

Mr. CORNEY answered in the affirmative. They must however be taken up at *par*, whereas they could be bought in the market for less. He expressed his regret at this the first attempt to divide the proprietors into classes, when it was only by cordiality and unanimity that they could hope to prosper.

The DEPUTY-CHAIRMAN contended, that it would look like distrust of the Directors, should Mr. Field's election not be confirmed. The Directors could not ask Mr. Field to qualify by the purchase of old shares. Out of the thousand proprietors, there were not forty who would be qualified should the amendment be carried, and of these forty, many resided in the country, some were clergymen, some had already been in the councils of the Company, and several had refused to serve. The consequence might be, if another Director were thrust upon the Board in place of Mr. Field, that all of them might resign; and in what position would the Company then be, if the present Directors, through whose unremitting attention the undertaking had been brought to the verge of prosperity, were in a body to throw up their office, or a schism to be created in the Board? (Hear, hear.) For his own part, he had no great desire to continue in the Direction, except that he was naturally anxious to watch the progress of the gleam of sunshine which had at last visited them. He had no hesitation in stating, that out of the 38 qualified proprietors, it would be impossible to select nine competent Directors. It was not correct to say that the present Directors held only 4,000*l.* worth of old shares; they held unprivileged shares to the amount of 28,000*l.* (Hear, hear.) One Director held 700 or 800 of these shares. (Applause.) He entreated the meeting to pause before passing such an amendment. The matter might very easily be arranged by giving notice of such a motion, and he would pledge himself that not one of the Directors would object to it. (Hear, hear.) The amount, however, was outrageous. (Hear, hear.) Supposing a Director to hold 4,000*l.* or 5,000*l.* in new shares, would they force him to invest more money in old shares? The Directors, when they were last before Parliament, had willingly agreed to raise the qualification from 20 shares to 50, and he was sure that they would not oppose this proposition, if brought forward at a proper time.

Mr. WHEELER thought it would promote jobbing if the Directors were compelled to purchase a large number of shares at a low price, and which, should the market improve, they would very naturally be anxious to sell again. He would suggest that the amendment be withdrawn, and the matter left to the honourable feeling of the Directors.

Digitized by Google

(Hear, hear, hear.) Two hundred shares was too large a number.

Mr. HUTCHINSON concurred in this opinion. He thought 100 old shares sufficient.

Mr. WHEELER pledged himself that Mr. Field, if elected, would qualify by the purchase of 100 old shares. (Hear, hear, hear.)

Mr. HUTCHINSON would consent, so far as he was concerned, to withdraw the amendment, if it were distinctly understood that within a reasonable time the Directors should each hold at least 100 old shares. (Applause, and assent by the Directors.) He supported this proposition as to old shares, chiefly to show parties out of doors that the Directors had the same interest in the undertaking as the great body of proprietors, and to put a stop to the remarks that Mr. So-and-so, a Director, could not feel much sympathy with the original proprietors, being himself a holder of preference shares only. (Hear, hear, hear.)

Mr. SCRIMGEOUR disclaimed all offence to the Directors in anything he had said.

The DEPUTY-CHAIRMAN said, there were only two of the Directors who were not already qualified by holding old shares.

The motion was then put and carried unanimously.

Mr. ENTWISLE hoped it was distinctly understood, that this resolution did not at all tie up the proprietors to a particular course at future elections. (Hear hear, hear.) If it had been otherwise, he should decidedly have opposed it.

The DEPUTY-CHAIRMAN then, in eulogistic terms, proposed the re-election of the three gentlemen named in the Report, namely, Messrs. Shadbolt, Jeffery, and Wheeler.

Mr. HAMMOND inquired if any of these gentlemen had been absent for a month at a time from his official duties; if it were so, such person was to blame, as the Directors received 100*l.* a year each. (Laughter, and hisses.)

The DEPUTY-CHAIRMAN was about to reply, when the meeting, almost *una voce*, decided that the question was not deserving of an answer.

It was mentioned by Mr. Hutchinson, that at a previous meeting it had been agreed to propose the names of Directors separately. This was assented to, and the three gentlemen having been nominated one by one, were unanimously re-elected.

The CHAIRMAN returned thanks for this additional mark of confidence. The proprietors might depend upon it that their confidence would be found not to be misplaced. (Applause.)

Mr. CORNER proposed a vote of thanks to the Directors. They had conducted the affairs of the Company with great prudence and economy. In fact, if he had any fault to find with them, it was that they had carried economy somewhat too far. He had much pleasure therefore in moving the cordial thanks of the proprietors to the Directors, for their zealous and efficient services. (Much applause.)

Mr. LEVY seconded the motion, observing that he had formed a good opinion of the Directors, from having on one occasion noticed two of them upon the line weighing coke. (Hear, hear, and laughter.) He had been upon many railways, but had seen nothing of the kind before. (Hear, hear, hear.)

The motion was carried by acclamation, and the Chairman returned thanks.

Mr. ENTWISLE had much pleasure in moving a vote of thanks to Colonel Landmann, the Engineer, for the great spirit and energy with which he had prosecuted the new works. (Hear, hear, hear.) He had great gratification in witnessing what Colonel Landmann could do when he had a sufficient supply of money. The new works were the admiration of all, as compared with the old. (Applause.) He had the greatest respect for the open straightforward manner in which Colonel Landmann had invariably discharged his official duties. (Renewed applause.)

Mr. HINTON seconded the motion, and it was carried unanimously.

Colonel LANDMANN returned thanks.

Vote of thanks to Mr. Akerman, the Secretary; Mr. Miller, the Resident Engineer; Mr. Adron, the Accountant; the Auditors; and the officers of the Company generally, were then severally passed, and duly acknowledged.

The DEPUTY-CHAIRMAN with reference to the compliment paid to Mr. Adron said, nothing could be better deserved. He ventured to assert that in no other Railway Company were the accounts kept in so clear and admirable a manner.

On the motion of Mr. SCRIMGEOUR, seconded by Mr. HUTCHINSON, a vote of thanks to the Chairman for his conduct in the chair, was unanimously passed, and the meeting broke up.

CLARENCE RAILWAY COMPANY—GENERAL MEETING.

THE annual general meeting of the proprietors of the Clarence Railway Company was held on Thursday, at the George and Vulture Tavern, Cornhill; HENRY BLANSHARD, Esq., in the chair.

The advertisement convening the proprietors having been read, and the minutes of the last meeting confirmed,

The SECRETARY (Mr. C. Benson) read the following Report from the Committee of Management:—

REPORT.

Since the last general meeting of the proprietors of the Clarence Railway Company, held at Stockton, on the 1st of June, 1841, your Committee have called several special general meetings on the subject of the financial affairs, &c. of the Company; these special meetings have brought the explanation of the Company's proceedings to so late a date that on the present occasion they have but a short account to render of what has since occurred.

The Chilton branch was opened for traffic, in conjunction with the private branch railway leading to Westerton, in the month of June last; since that period the Westerton coals have been sent down to Port Clarence, but as that colliery has scarcely yet got opened out, the Committee do not expect the large working for which it is laid out to take place, until the regular establishment is engaged, which will be about the middle of next month. The Leasington Winning on this line is in rapid progress, and computed to be within 16 fathoms of the coal, which will most likely be reached within three months of this time. The Committee have reason to believe that the Winning of the intermediate townships of Middlestone and Merrington will shortly be undertaken, though no commencement has as yet been actually made.

The Committee have great satisfaction in stating, that the works of the Byers Green branch have been brought to a close, except the possible erection of a farmer's bridge, and that from its superior construction, they have reason to believe that for many years to come it will be maintained in good working order, at the lightest possible expense.

With respect to the collieries on this branch, the Committee have to regret that the coals sent to market have not as yet proved so hard as could be wished, but, as by the best information which a deputation of your Committee were last week able to gain upon the spot, there requires nothing but a more effectual drainage to effect a great improvement in them. To accomplish this object, and to complete some partnership arrangements previous to the close of the colliery year, two collieries have ceased from working for a few weeks, but your Committee see no reason to doubt the general quality of the large bed of unworked coal opened out by this branch.

In other respects the prospects of the coal field appear equally good, as the Committee have hitherto represented, although occasional cessations from the working of particular collieries will take place to repair pump work, make fresh drifts, or sink to lower seams, which may cause temporary occasional fluctuations.

The Committee have, however, the gratification to state, that on Tuesday, the 15th inst., the judges of the Court of Error affirmed the judgment of the Court of Common Pleas in the action Barrett *v.* the Stockton and Darlington Railway Company, giving an unanimous opinion of the illegality of the charges made by that Company.

The Committee have great reason to believe, that important benefit to the Company will immediately follow the decision; but as there has not yet been time to hear that even the account of the judgment had reached Durham, your Committee deem it prudent not to dwell on the subject, lest the expected intentions of their friends should be prevented. They have further the gratification to state, that on the same day (Tuesday last) the Vice-Chancellor of England confirmed an injunction against the Great North of England, Clarence, and Hartlepool Junction Railway Company, preventing them from trespassing on the property of the Clarence Company; and although an issue at law is open to the parties, yet the deliberate opinion, expressed decisively by so high an authority in favour of the rights of the Clarence, gives the Committee great encouragement to hope that they shall be enabled effectually to ward off the injunction threatened by the said Company.

Your Committee have not been unmindful of the importance of rendering the traffic of the Great North of England communication adjutory to the interests of the Clarence. The line granted by Parliament in 1836 is understood to be abandoned; and not less than four lines are now proposed, by as many different parties, in substitution of the same, which variously appear to affect the Clarence Railway; up to last Saturday the respective surveys were still in progress, but as the notices must be in the Durham papers to-morrow (the 18th February), and the respective plans and books of references lodged with the Clerk of the Peace previous to the end of March, the subject must soon be brought before the Committee, and they offer their best assurances that they will use their utmost exertions to negociate in the most active manner for such terms as they may consider will tend most to the advancement of the Clarence Company's interests.

A deputation has just returned from the county of Durham, whose Report is very favourable on the state of the works, which are now all finished except the bridge over Saltholm Creek, which when completed will connect the works with a considerable tract of valuable land belonging to the Company.

The Committee having received an overture from the Stockton and Darlington Company, for conducting a passenger traffic from Darlington to Durham, by way of Simpasture, Stillington, and Quarrington, by which a considerable portion of the Clarence Railway would have been used until the Great North of England Railway was completed; they considered it expedient to pay every attention to the application, but on mature consideration and much communication with the Stockton and Darlington Company, the Committee did not consider that the advantages likely to be derived from the temporary measure, would be sufficient to warrant the expense and alterations required.

Your Committee have much pleasure in informing the proprietors that the revenue for the year 1841 has realised the largest amount ever produced in one year on the Clarence line, and that it exceeds that of the preceding year by 4,000*l.*; the gross receipts for 1840 having been 19,000*l.*, while the revenue for 1841 amounts to 23,000*l.*

Your Committee, in order to provide for the increased traffic, have been compelled to expend an additional sum of money, over and above the current expenses for 1841, in putting the engine power and works in a state to meet the same. Considerable expense had also to be provided for, in connection with the completion of the Byers Green and Chilton branches.

The foregoing calls upon the Committee and some outstanding and disputed accounts for work performed, which have been settled and discharged, have exhausted the whole amount of revenue for the past year.

Under these circumstances your Committee do not consider it necessary to lay before the meeting, on this occasion, any more detailed statement of account.

Your Committee beg to assure the proprietors that as they do not contemplate being called upon for any extra expenditure of consequence on the works for the future, their attention will be most particularly directed to the reduction of the expenses of the line to as economical a scale as may be consistent with the well and efficient conduct of the traffic, and your Committee confidently look forward to a considerable decrease in the expenditure in the ensuing year.

At a former meeting the necessity was fully shown for the shareholders coming forward with a subscription of 5*l.* per share for the protection of the undertaking, as well as for the relief of your Committee, who where, and are still, liable for the payment of considerable sums incurred on behalf of the Company, and although at the present moment those liabilities have somewhat decreased, the same imperative necessity exists for the shareholders lending their aid to enable the Committee to carry on in a more unfettered manner the business of the Company, as well as to induce Messrs. Williams and Co. (the Company's bankers) to extend the period for the repayment of the loan (the liquidation of which should commence from Lady-day next), which loan the proprietors are already aware was granted to the Company at a time of great difficulty, and when they were called upon suddenly by their former bankers at Stockton to pay off the advance made by them.

The last subscription list has already received the signatures of 64 proprietors amounting to about 5,000*l.*, but several of these signatures are given on condition that the list be made up to 8,000*l.* The Committee would therefore urgently call upon the proprietors to complete the list, which would place them in a position of safety, and give them the means of more advantageously conducting the affairs of the Company.

The letter of Mr. Brickwood contained in the circular of the 8th of January last will have shown the proprietors that the Exchequer Loan Commissioners give a decided preference to the management of the affairs of the Company being continued in London, which conclusion they did not come to without first receiving a Report from their Secretary and Solicitor, who made a personal inspection of the works in November last.

Referring to the remarks made in your Committee's Reports of the 2nd November and 8th January last, respecting the conduct of the members of the Stockton and Hartlepool Railway Committee, they beg to inform the shareholders, that representations have been made to the effect that the tendency of those remarks was indicative of an opinion, that the parties alluded to in those circulars were actuated by feelings hostile to the interests of the Clarence Railway Company; and a mutual explanation having taken place in the country as to the matters in question, by which it appears that a misunderstanding had existed as to the real intentions of the Stockton and Hartlepool Committee; your Committee are happy to inform the shareholders that arrangements have been entered into, which they trust will be the means of promoting good feeling between the two Companies.

Mr. Jackson, having particularly complained of the tendency of the remarks made upon himself in the above Reports, your Committee beg to state, that although they did approve the opinions entertained by this gentleman, or the means he adopted to advance them, yet as Solicitor to the Company, he has always conducted their law business with great ability, and to the entire satisfaction of your Committee.

Digitized by Google

In conclusion your Committee have to inform the proprietors that the Rev. Henry Fowlis, Robert Railston Brown, and John Barrow, Esqrs., have tendered their resignations as members of the Committee of Management, the meeting will therefore have to appoint other gentlemen to fill the vacancies so occasioned.

The Report was well received.

The CHAIRMAN said, he had very little to add to the statements in the Report, but would be happy to give any further information that the proprietors might deem requisite. Since the last meeting they had been going on quietly with an increasing trade, and but for a slight check which the traffic had met with within the last two months, the result would have been more satisfactory. The coalowners and shipowners had thought it better not to encounter the storms of winter at sea, so that the arrivals of coals in London, in January last, amounted only to 86,000 tons, as compared with 224,000 tons in the previous January. It was likely, however, that the difference would be more than made up in the ensuing spring, and of this they had had proofs by increased shipments within the last few days. Nothing had occurred to disparage either the Railway Company's works or the port of Stockton, which he was happy to see was, from various recent improvements, rising in public estimation. (Hear, hear.) The Report stated, that the railway works were finished, with the exception of a bridge which would be completed in two months, namely, within four months of their Parliamentary limit. With respect to the notice in the Report of a late decision in the Court of Error, he might congratulate the proprietors upon it in stronger terms than prudence would dictate, but he would rather leave it to work its own effect on the minds of the proprietors. The hon. gentleman then alluded to the retirement of the Directors named in the Report, upon whose merits he pronounced an encomium, and stated that the Committee had it in their power to propose successors who would be an acquisition to the undertaking. He concluded (amid applause) by adverting to the brightening prospects of the Company, and by reiterating the appeal which had been made to the proprietors to relieve the Committee from the straights into which they had been driven in their anxiety to forward the interests of the railway.

Mr. WILSON moved the adoption of the Report, and after alluding to the importance of the decision in the Court of Error, expressed his gratification at the improved position of the undertaking.

Mr. PELICHET seconded the motion, which was then put and carried unanimously.

Mr. GEORGE BARNES having pronounced a very flattering eulogium on the retiring Director, and the new candidate, proposed the election of William Ambrose Shaw, Esq., as Director, in place of John Barrow, Esq., resigned.

The motion was seconded by Mr. Wilson, and after the Chairman had re-echoed the praise bestowed on Mr. Shaw, it was carried unanimously.

Mr. Blackett and Lieut. Curtis Reid were then nominated respectively by Messrs. Rayson and Morrice, seconded by Messrs. Stubbing and Milton, and unanimously appointed Directors.

Some considerable discussion took place on the nomination of Mr. Blackett, that gentleman having at first declined to serve, in consequence of his increasing age, and the annoyance and trouble and personal liabilities to which the Directors were exposed. Mr. Blackett had been on the Committee for seven years, and had retired he said solely for his own peace and comfort. The Chairman, the Directors, and the meeting generally, seemed extremely anxious to secure the services of Mr. Blackett, upon whose great abilities as a man of business, and influential character, there was but one opinion. Ultimately Mr. Blackett consented to serve, conditionally, that a sufficient sum should be advanced by the proprietors who had not already subscribed to relieve the Company from its difficulties.

Out of this matter arose another with respect to the apathy of the shareholders.

Dr. COBB complained very forcibly that some had not paid up their quota of the further sum required, while others had done so. He inquired whether these defaulters could not be compelled to pay up their proportion. If not, he thought the Directors ought to raise money upon one part of the undertaking to redeem the rest. He was ashamed, he said, to be connected with an undertaking to prosecute which the Committee were compelled to borrow, beg, and almost steal money.

It was answered by the Chairman and some of Directors that there was no law to compel the payment of subscriptions beyond the amount of the Parliamentary shares. They had hopes, however, of being able to arrange some scheme for meeting the liabilities of the Company, and it was probable that a special meeting, with that object, would be called in the ensuing autumn.

The CHAIRMAN spoke most gratefully of the assistance and kindness of the Exchequer Loan Commissioners.

It was explained that the Directors were anxious if possible to avoid going to Parliament, lest clauses should be thrust upon them to their injury. It was stated, that a late Act of Parliament for providing gates, &c., at the crossing of highways, had entailed upon the Clarence Company an expense of 500*l.* a year, and that the Stockton and Darlington Company had on a recent occasion declined going to Parliament, as it was considered that 60,000*l.* would not meet the additional expense which would be forced upon them, if once caught within the purlieus of the House.

Mr. THOMAS STURGE addressed the meeting upon the necessity of devising some scheme for meeting the liabilities of the Company, but after some explanations and conversation, it was thought better that this matter should be deferred till the special meeting already referred to, when the Directors hoped to be able to bring forward some satisfactory plan of adjournment.

On the motion of Mr. KEY, seconded by Mr. MILNE, the present meeting was adjourned to Thursday, February 16, 1843; and a vote of thanks to the Chairman having, on the motion of Mr. Key, seconded by Mr. Sturge, being unanimously passed and suitably responded to, the meeting (the proceedings of which, from the press of other meetings, we have been compelled considerably to condense) then broke up.

NORTH UNION RAILWAY COMPANY—GENERAL MEETING.

THE following is the Report of the Directors approved of at the general meeting held last week. We must reserve a notice of the proceedings:—

REPORT.

The Directors have great satisfaction in bringing before their proprietors the annexed half-yearly statement of their receipts and expenditure up to the 31st of December. The general depression of trade, noticed in their last Report, has been still more severely and universally felt during the six months just terminated; and has, it is well known, sensibly affected, in one way or another, the receipts of almost every railway in the country, but especially of those connecting, as the North Union Railway does, important manufacturing and commercial districts with one another, and with their seaports and bathing-places. The Directors, therefore, cannot but notice with satisfaction, that whilst the receipts in the passenger and merchandise departments this last half-year show a considerable increase, as usual, over those of the preceeding, they are not very materially lower than those of the corresponding half-year of 1840, and that the deficiency in these items is more than made up by the very large increase of receipts from tolls on coals, a branch of traffic from which the Directors have always entertained those confident expectations of steady and increasing income already to so great an extent realised. Attention has also been vigilantly given to securing the utmost economy in every department of the expenditure, consistent with that perfect efficiency and condition of the working stock and the railway itself, which it can only serve a very temporary and dishonest purpose to neglect; and this is now brought within bounds never likely to be exceeded, though some of the items may, from more perfect consolidation of the embankments and other circumstances, very possibly admit hereafter of further reduction.

The result is, that the Directors find themselves warranted in recommending the continuance of their former half-yearly dividend of 2*l.* 10s. on each share in the capital stock of the Company, amounting to 15,822*l.* 10s., and leaving, it will be seen (after setting aside the amount shown to be requisite, by a very careful and accurate valuation of the perishable stock, for the depreciation fund) the sum of 1,918*l.* 0s. 6d. to be carried on to the new profit and loss account; which is a slight increase of this balance on all former occasions.

The Directors have not been unmindful of the remarks made by some of their proprietors on the subject of any depreciation fund, or of the various practices of other Railway Companies in this respect; but they would beg their proprietors to bear in mind that the small sum they have again set aside on this ground, is no arbitrary imaginary amount, for an undefined uncertain purpose, but a part of the receipts actually exhausted and gone, and ere very long to be met from some fund; and which, in their view, they really have no legal right, according to the provisions of the Act, to treat as a net profit for dividend, and to add to that which they propose. If careful valuations, by parties of unquestionable competency, of all engine, carriage, and other similar stock (in making which valuations all idea of relative market value is kept out of view, and the degree of actual efficiency, and wear and tear relatively to such stock in its original state, are alone considered), at any time show the show the stock which should answer to this part of the Company's capital to be in any degree by any given per centage, less in amount than it originally was, then such per centage of such portion of the capital must, your Directors conceive, be reserved as due to the capital account, and at one time or another be expended in its restoration; and the real working expenses of the railway, and the actual existing capital are not truly stated, and can never be accurately known to the proprietors of any particular period, unless this practice is rigidly acted upon whenever dividends are declared. In the course of a few years, several of the carriages, for instance, will be entirely worn out, and must be replaced by a heavy outlay upon new ones; and as the Directors find they can obtain carriages superior in durability and in every other respect, by making gradual provision for replacing this part of the stock, they will at once proceed in gradually expending portions of the depreciation fund with this object, so as bring the new carriages in as wanted for the business. Had they not this fund periodically set aside, as shown to be required by the half-yearly valuation, they must either purchase and pay for carriages before they were were actually wanted, to keep up the original value of the stock at the end of each half-year, and thus, at once, accumulate useless stock, and deprive the Company unnecessarily of interest on their funds or divide a larger sum than the real net income, which would, they conceive, be at once imprudent, unjust, and illegal, and by constantly throwing the expenses of one period upon the proprietors of a succeeding, throw the shares into the hands of speculators and gamblers, instead of steady proprietors, seeking a safe and permanent investment. Several leading Railway Companies are adopting the practice of the North Union; and your Directors are convinced that now public attention has been turned to the subject, it will be impossible to proceed upon any other, and that all Railway Boards will be compelled to show, by indisputable valuations, either that the original value of this part of the capital stock is fully maintained, or, that the difference between its original and present value is reserved and set aside before the declaration of a dividend.

As stated in the Report submitted to the proprietors at the last annual general meeting, notice was given to terminate the arrangement under which this Company undertook to work the locomotive power of the Lancaster line on the 31st of December; and since that period each of these two Companies has provided the power for working its own line of railway. The Directors of this Company renewed their offer, some months since, of continuing to provide the Lancaster Company with power, either on the footing—first, of the recent arrangement, viz., to charge its exact cost according to mileage, agreeing upon a reasonable annual payment as remuneration for the very great extent to which the time and attention of the superior officers of the North Union Company are found to be occupied by their having the heavy charge and responsibility of the power on the Lancaster line, and a sum was named for this service not exceeding what the Lancaster Board have stated that they understood the North Union Company was actually making by the contract; second, of a very moderate addition to the actual cost per mile, with the same object; and third, of a fixed charge or price per mile for each mile run, such charge to be below the price which this Company has all along received from another Company (and which has been paid by them under the advice of their Engineer, Mr. R. Stephenson,) for a similar service, and reduced in the degree in which the work of the Lancaster Company is upon a larger or more extensive scale. The Lancaster Board, however, positively declined to renew the agreement (which terminated on the 31st December) on any one of these three bases, unless the North Union Directors would consent to the last, making the price they were to receive 1s. 6d. per mile run—at which rate parties, it appears, had offered to contract. From several years' experience and knowledge of the real ultimate cost of power, both on the North Union and most of the other leading English railways, your Directors had no hesitation in unanimously rejecting this proposition; and whilst they will, on every account, rejoice if it should prove that locomotive power for passenger trains can be permanently supplied, with due efficiency and regularity, on such terms as these, their opinion that it cannot, and that such a contract will not prove either beneficial or satisfactory to either of the parties to it, is not in the least altered by the short experiment that has been made; and they can at all events assure their proprietors that no disadvantage to their interests will arise, from being relieved from the provision of power for the Lancaster line, on either these or the former terms.

There was, however, another and totally distinct provision in the above agreement, which, on important public grounde the North Union Board were most anxious to have continued; and this was for an arrangement for the joint use of one passenger station in Preston, by the Railway Companies uniting their lines at that place. By this provision it was agreed between the North Union and Lancaster Railway Companies that the commodious and complete station of the former Company, at the original terminus of their line, should be the joint Preston station of the two Companies; and the Lancaster Company sending their passenger traffic

Digitized by Google

to this station—that is, beyond the terminus of their line at Dock-street, over the portion subsequently formed by the North Union Company, to complete the railway connexion with the North—that the Lancaster Company should pay to the North Union Company, for the use of their expensive station accommodation and connexion with Dock-street, as well as porterage, booking clerks, &c., such compensation as should from time to time be fixed by a referee, proposed by themselves—Mr. Booth, of Liverpool. Nothing could be more satisfactory to the public than this arrangement, and the Lancaster Company obtained the very great advantages of it to themselves, on what cannot but be considered, by any competent judge, very reasonable and moderate terms, under Mr. Booth's award. It was of such obvious and important advantage to the public not to have two stations, and, consequently, two delays to the north and south trains, within 240 yards of one another, in Preston, and to the Companies not to have two establishments where one would better answer the purpose, that the North Union Board confined their notice for the termination of the agreement entirely to that part of it for the provision of locomotive power, although both arrangements being included in the same agreement, their notice certainly gave the Lancaster Company the right to terminate both, if so disposed; and as soon as ever they were aware that the Lancaster Board had any doubts about their views and intentions in this respect, they at once transmitted minutes of their Board, distinctly offering to continue the arrangement for joint station accommodation on the former footing, and pointing out the inconveniences inevitably arising from the attempt to form a second station. Their continued efforts to prevent this attempt so long as there appeared any prospect of doing so, having, however, unfortunately proved unsuccessful, and the inconveniences they anticipated having been experienced by the Lancaster and north passengers, your Directors consider it due to themselves to state distinctly that they are, and ever have been, prepared to replace the Lancaster Company on the same footing as previously, leaving the question of their remuneration to any competent referee they can mutually agree upon. They must also distinctly deny the altogether unfounded statements inserted in the Lancaster papers of unwilliagness on their part to make arrangements with that Board to prevent inconvenience and increased charge to the public. So far from there being any foundation for these assertions, they have from time to time suggested to the Lancaster Board whatever appeared to them calculated to reduce the delay and inconvenience arising inevitably from the double station. They can prove that the average detention of their trains in their Preston station has not been seven minutes, although a very considerable proportion of all the passengers are for the North Union station, and nearly one-half of the carriages are there detached from the north trains; they have constantly sent their porters, &c., up to do the work of the Lancaster Company, at Dock-street, in order to prevent delay to the north mails, &c., from the utter inefficiency of the establishment of the Lancaster Company in Preston, without ever receiving similar aid from them in return; they have pushed their engines to the extreme speed warranted by due regard to the public safety, to prevent the Lancaster passengers being left, when the trains of that Company were late, and have offered to be prepared with a special engine to take them on when the North Union trains could not be longer detained without missing the Liverpool, Manchester, and London trains, in communication with theirs at Parkside, but without being able to bring about any arrangement with the Lancaster Board as to how they were to act with regard to their passengers under such circumstances. An addition to the original fares of the North Union Company for the conveyance of passengers between Parkside and the original terminus at their Preston station (which have always been and continue to be precisely the same as fixed at the first opening of the North Union Railway for this distance) has certainly and as a matter of course, been made, since the working and provision of the additional very expensive portion of railway between this original terminus and Dock-street, Preston, has been recently thrown upon the North Union Company, just as was the case when the Liverpool and Manchester Railway was extended further into Liverpool, and ought in fairness always to be the case when a line of railway is, at considerable expense to the proprietors, extended to some further point. But it must be borne in mind by the public, that the arrangement with the Lancaster Company, when their fares were fixed, was, that they should convey their passengers to the North Union station, and undertake to provide the transit between this station and Lancaster, and that having now thrown this part of the expense on the North Union Company, and ceased to remunerate them for any portion, it is the Lancaster Company, and not the North Union, that derive the benefit, and are the real cause of any increased charge to passengers beyond Preston.

It has recently been found necessary, in consequence of the progress of the works of the Bolton and Preston Railway Company in connection with their intended station at Preston, to apply to the Court of Chancery to restrain that Company from violating the terms of the agreement entered into with this Company, and the provisions inserted in the Bolton and Preston Railway Acts for the protection of the North Union Railway Company. After the motion for an injunction had undergone a lengthened discussion before the right honourable the Vice Chancellor Wigram, that learned judge stated that this Company were quite right, upon the then state of facts, in applying to the Court; but that as the Bolton and Preston Company had not actually done, or threatened to do, the acts sought to be restrained, and as their counsel would not then avow an intention of doing them, he ordered the motion to stand over, with an intimation that if the Bolton and Preston Company either did or distinctly threatened to commit those acts, this Company might then renew their application and ask for an injunction. It is impossible to know, and it may not be strictly proper to infer, from anything that fell from the Court, what may be the opinion of the Vice-Chancellor on the merits of the case; but from the manifest indisposition of the adverse parties to make the admissions which his Honor deemed necessary to enable him to come to a decision, or to have his Honor's opinion, which he kindly offered to give, it is reasonable to conclude that they are not sanguine as to the result; and that the important rights of uninterrupted communication between the North Union Railway and the Lancaster Canal, as well as other railways approaching in that direction, will be fully protected from interruption by the traffic of the Lancaster Railway Company being taken into the proposed new station across the lines which connect the canal and railway at Dock-street. These lines of communication are already becoming much occupied with a portion of the valuable coal traffic which has been before referred to.

In conclusion, the Directors have the pleasure of announcing, that arrangements for the survey and immediate deposit of the Parliamentary plans of the line of railway between England and Scotland, recommended by the Government Commission, are at length completed. They have felt it their duty (not doubting the entire concurrence of their proprietors) to contribute, along with other Companies interested, the very small quota of the expense requisite on the part of this Company to provide the sum required by these proceedings as far north as Carlisle, public bodies and individuals further north supplying funds for the remainder of the line; and they will not fail to bring before a special meeting of their proprietors in due time, any scheme for the completion of this important national work, which appears to be entitled to their consideration and co-operation.

THEODORE W. RATHBONE, Chairman.

Preston, February 3, 1842.

JAMES CHAPMAN, Secretary.

Preston, 3rd February, 1841.

GLASGOW, PAISLEY, AND AYR RAILWAY COMPANY—GENERAL MEETING.

THE general meeting of the proprietors of the Glasgow, Paisley, and Ayr Railway Company was held last Wednesday, but we must postpone a notice of the proceedings and the accounts till next week. The following is the Directors' Report:—

DIRECTORS' REPORT.

In presenitng their Report of the proceedings of the last six months, your Directors are happy at being enabled to give a satisfactory account of the steady increase of the revenue of the Company. It will be seen, from the annexed balance-sheet, that the receipts from passengers and goods, including the carriage of the mail, amount to 30,143*l.* 17s. 8d., being an excess of about 7,500*l.* over the returns for the previous half-year. It must, however, be borne in mind, that this increase arises principally from the goods' trade becoming more developed, and, also, from the circumstance that the receipts during the summer and autumn months are larger; and however gratifying this increase may be to your Directors, still, they feel assured that it would have been greater, if every source of their revenue had not experienced the baneful effects of the long-continued depression in trade and manufactures.

In looking, however, at the returns of the goods' traffic, as yet in its infancy, and with many disadvantages to contend against, your Directors see great cause for congratulation.

The following returns, for the last nine months, will show the gradual and steady increase which has taken place. In the month ending—

30th April, the Receipts were	£807	10	8
31st May, do.	838	9	1
30th June, do.	945	5	6
31st July, do.	983	18	5
31st August, do.	1088	9	11
30th September, do.	1051	13	11
30th October, do.	1270	9	6
30th November, do.	1266	18	8
31st December, do.	1337	8	8

One source of revenue, however, on which your Directors fully relied, has not hitherto fulfilled their expectations; they refer to the extensive mineral traffic which was expected from the different iron-works along the line. They confidently anticipate, however, that a revival in trade, and general improvement in mercantile affairs, will soon make a considerable addition to their traffic. They observe, with pleasure, that the opening of the Edinburgh and Glasgow Railway is announced to take place on the 21st instant; and they think that the great facilities for travelling which that line will unquestionably afford, must contribute to the prosperity of this Company.

On looking at the account of expenditure, you will observe, in the joint-line balance-sheet, that the sum of 500*l.* has been carried to suspense account, to meet certain claims for haulage of passengers by the Greenock Railway Company, in consequence of a greater number having been conveyed by their trains than by those of this Company: this claim is at present under arbitration. There is also another unsettled account for maintenance of way, which falls on each Company in proportion to the use which they make of the line, and which has not yet been ascertained. Your Directors, however, consider that the above sum ought to be sufficient to cover these items.

The expenses attendant on the working of the main line, are not materially different from those incurred during the last half-year, notwithstanding the large increase in the receipts. And while your Directors have introduced into every department the most vigilant system of economy, yet they consider it to be of paramount importance that the whole establishment shall ever be maintained in the most efficient working condition.

The mileage duty, you will observe, amounts to 10 per cent. on the receipts for passenger fares. This tax presses with unequal severity on third-class passengers; but your Directors are glad to learn that her Majesty's Government have this subject at present under consideration, and that they will not fail to co-operate with others interested in this question, in endeavouring to obtain an alteration in the mode of its exaction; and they trust that their exertions to obtain a modification of this oppressive tax, will receive the cordial support of the shareholders and the public.

On considering the present condition of the financial affairs of the Company, and the period which has elapsed since the opening of the line, your Directors think that the proper time has now arrived, when it is an imperative duty on them to provide a fund for the purpose of covering the natural depreciation of their stock of engines, carriages, &c., or what is technically described as the "plant" of a railway. The Act of Incorporation contemplates the creation of a fund of this description, and, by its 157th section, especially authorises your Directors "to set aside, out of the said profit, such a sum as they may think proper to meet contingencies." The principal English lines of railway have almost, without exception, made a similar provision, and regularly appropriate a certain portion of their profits to cover the depreciation consequent on the use of their "plant." This depreciation, it is obvious to every one, must be made good, either from the revenue or the capital of the Company; and therefore, it seemed expedient to your Directors to adopt a plan which has so many advantages to recommend it, and which was actually in contemplation when the Act was framed. Your Directors, however, are as yet unable to fix upon a precise per-centage which will be sufficient to meet this exigency; but they have resolved, in the meantime, to lay aside the sum of 3,107*l.* 6s. 3d., to serve as a nucleus for such a fund, and to meet any contingencies that may occur in the next half-year. The balance of 9,375*l.* will allow you to make a dividend of 15s. per share, which your Directors recommend; and they doubt not but that this arrangement will receive the cordial approval of every shareholder, as they feel assured that it will unquestionably increase the confidence of the public in the soundness of the principles on which the affairs of this Company are conducted.

As formerly announced, your Directors have applied

Digitized by Google

for a new Act of Parliament, to authorise an addition to the capital stock, and to carry into effect a few alterations in the constitution of the Company, amongst which may be mentioned a reduction in the number of Directors, as alluded to at last general meeting.

The works of the Kilmarnock branch are proceeding, on all parts of the line, in a satisfactory manner; and your Directors will do all in their power to carry on these works with increased vigour, whenever the passing of their new Act places the requisite capital at their command. They may mention incidentally, that they have lately concluded contracts for the supply of rails and chairs at prices considerably under those given on previous occasions: and they fully expect that this important branch will be ready for traffic early in 1843. Your Directors have already received communications from individuals engaged in the mineral trade on this line, urgently pressing on them the necessity of completing it at an early period; and they confidently rely that an extensive business will be carried on as soon as it can be opened.

The shareholders are probably already aware, that considerable efforts are at present making to procure a Parliamentary survey of what is called the Central or Beattock line of railway, from Carlisle to Glasgow and Edinburgh. Your Directors have not been inattentive observers of these proceedings; but they have not thought it necessary to take any part in them. They are still satisfied, that, so far as Glasgow is concerned, the line by Dumfries and Kilmarnock will be found greatly preferable. The Report of your Engineer, Mr. Miller, proves, that in point of expense, of gradients, and of population, it is superior to the Beattock line. When, therefore, this country is in a state to justify the commencement of such an undertaking, as a railway to connect London and the north of England with Scotland, and the comparative merits of the lines now proposed come to be strictly weighed, your Directors anticipate that the undertaking which is most likely to meet with the support of the public of Glasgow, will be that of which this railway and its branch to Kilmarnock form an integral part.

Your Directors have again sincere satisfaction in noticing, that not a single accident has hitherto occurred to any passenger since the opening of the line, although the number conveyed has been nearly a million and a half.

The following Directors retire by rotation, and it remains with you to supply their places, or re-elect them:—William Campbell, Esq., of Netherplace; Robert Eccles, Esq., Glasgow; William Brooks, Esq., Glasgow; Alexander Fletcher, Esq., Glasgow; Hugh Miller, Esq., Provost of Ayr.

The usual balance-sheets are appended.

JAMES M'CALL, Chairman.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the proprietors of the Birmingham and Gloucester Railway Company was held yesterday, at the Bell Inn, Gloucester, but a report of the proceedings had not reached us at the time of going to press. The following is the Report of the Directors, laid before the meeting. The accounts, which go considerably into detail, we must reserve till next week:—

DIRECTORS' REPORT.

By the statement of accounts it will appear that the receipts for the half-year ended 31st December, were 50,114*l.* 5*s.* 10d.; the expenses, including interest, &c., (but exclusive of depreciation of stock,) 39,381*l.* 0*s.* 8d., leaving a balance of 10,733*l.* 5*s.* 2d.: and that the balance to the 30th June, (also exclusive of depreciation,) was 11,170*l.* 6*s.* 3d.

A careful valuation having been made of the engine stock, it appears that the depreciation amounts to 5,776*l.*, of which 3,544*l.* is chargeable to capital for wear and tear in the execution of the works, and 2,232*l.* is chargeable to the working of the traffic from the first opening of the line. The depreciation of the carriage stock amounts to 2,888*l.* These sums deducted, will leave a total net profit of 16,783*l.* 11*s.* 5*d.*

The final award for the Post-office service was not made till the 5th November: by it the remuneration is fixed at a lower rate than was specified in the award mentioned in the last Report.

An opinion having been expressed at the last general meeting, that the receipts from the tramway should be brought into account with the general revenue, the Committee consider that the most convenient and fairest course will be to deal with these receipts on the same principle as with the interest of borrowed money, and they have accordingly carried them to the credit of revenue from 1st January, 1841.

The payments received on account of scrip, together with the sum remaining to be received on the fourth instalment amount to 240,812*l.* 10*s.* The sums borrowed on loan notes amount to 11,300*l.*, making the whole amount available for the purposes stated to the proprietors in the special Report laid before them on the 4th May last, 152,112*l.* 10*s.*

The surplus scrip (500) and scrip not taken up (823) represent at par 23,152*l.* 10*s.* Those forfeited under resolutions of the 4th of May (less the 2,352*l.* 10*s.* which has been received) represent 11,035*l.*, making together 34,187*l.* 10*s.*

The Committee recommend that they should be empowered to dispose of the surplus scrip, and the scrip not taken up, if such a measure should be found expedient, in order to realise the 175,000*l.* which the Directors were authorised to raise.

By the resolutions under which the scrip was created, it was provided "That in case any instalment shall remain due for the space of one month after the day appointed for its payment, the scrip upon such instalment shall remain unpaid, shall thereupon be absolutely forfeited with all payments previously made." The Committee having received representations from several scrip holders, most of whom are also holders of shares, of the hardship they will suffer by the strict exaction of the penalty, are disposed to recommend that the time should be extended to the 25th March, to pay up the arrears of instalments with the interest, and that failing to do so within that period, the scrip should then be disposed of for the benefit of the Company.

The Committee recommend that a dividend of 1*l.* 10*s.* per share, out of the net profits, be now declared, and made payable on the 25th March.

The arrangements connected with the goods traffic, which the Committee alluded to in their last Report, came into operation in October, and are still occupying, and for some time to come will require the vigilant attention of the Committee.

Although a comparison of the amount of goods conveyed during the last half-year, with that of the former, will not afford accurate materials for estimating the probable future increase, the proprietors will see by the annexed table that this business is gradually increasing.

The Committee draw the particular attention of the proprietors to the subject of the goods business, for the purpose of stating their opinion, that any sudden or rapid increase is not to be anticipated, but that it will progressively augment, as the present opposing difficulties are successively surmounted.

This question of the conveyance of goods was the subject of investigation before the Select Committee of the House of Commons, in the session of 1840, and a valuable body of evidence was collected, and published in their fifth Report.

One object was to ascertain of the several systems in operation on railways, which was the most conducive to the public accommodation; and, at the same time, compatible with fair remuneration to the Railway Companies; and the Committee in their Report of May, 1840, record their conclusion in the following terms:—

"Having thus stated the difficulties in which the question is involved, your Committee may here further observe, that different systems are in operation, not only upon the three lines of railway above mentioned, but also upon many other lines in various parts of the country; whence it must be inferred that those persons who are best informed upon the subject, and most interested in arriving at a correct conclusion, have not yet determined which system will be attended with the greatest permanent advantage."

The further experience of nearly two years since the above Report was made, has not settled the question whether the Company should be sole carriers on their line, or should carry conjointly with others, or should leave the conveyance of goods entirely to carriers.

Your Committee have adopted the middle course, as being on the whole best suited to the circumstances of the line, and they wait for further experience to show whether any, and what, modifications may be expedient.

In connection with the goods traffic, the Committee think it right to mention that some parties have been in communication with them for the purpose of establishing a coal trade between Birmingham and Cheltenham, and a small quantity of coal has been conveyed by way of experiment, at a price which barely reimbursed the cost of conveyance; the result of the experiment seems to show that till a RETURN traffic can be found, the coal trade DOWN the line would not be remunerative to the Company.

A proposition was made for the use of the railway, on payment of a toll for the coal of 2*s.* a ton, the locomotive power and waggons being found by the party, but assistance up the Lickey, and the use of the water, stations, &c. being required without additional charge. The Committee are satisfied that neither the interests of the Company, nor the due accommodation and safety of the public, could be maintained in unison with such a traffic so conducted; and in support of these views, they quote with confidence, the opinion of the Select Committee of the House of Commons, to which they have before referred.

"It appears that even as regards the carriage of goods, a railway company must have certain powers of regulating the trade on their own line. The Company must supply the locomotive power, fix the speed of conveyance, the weight to be conveyed, the hours of arrival and departure, and such other matters of detail as are essential to the due management of their railway."

The maintenance of the way and works has been undertaken on satisfactory terms, by Messrs. Bewick and Lamb, theirs being the lowest of eight tenders. The contract comprises the general repairs of the way and works, and the slips of embankments and excavations. The Company retain in their own hands the replacement of rails, balks, and sleepers, and the making good for a limited period of certain brickwork. These being matters which could not be made the subject of correct estimate, it was therefore not thought expedient to include them in the contract: they have also retained for the present, the maintenance of the line between Camp Hill and the London and Birmingham line.

The letting of the way and works having placed Mr. Wetherall, the Resident Engineer, in a situation to devote sufficient time to the general superintendence of the working of the line, he has been appointed to that office.

In November last the Committee received a paper signed by 124 proprietors, recommending to their favourable consideration, for the office of Superintendent, or Manager, Mr. Humphrey Brown. The particular inquiries which the Committee felt it their duty to make in consequence, led them to the unanimous and decided opinion, that this recommendation ought not to be complied with.

The great expense of the Worcester omnibuses, and the unsatisfactory way in which the public are conveyed between that city and the railway at Spetchley, have led the Committee to give their anxious consideration to the long-agitated question of a branch line. Without reverting to that which it can be of no use to revive, the Committee must express their decided conviction that no other than a direct branch ought to be undertaken by the Company, and which branch they are of opinion might be so made as to be advantageous as well to the Company and the city of Worcester as to the public.

The Committee will not fail to take the necessary steps for protecting the interests of the Company in the application to Parliament, which is now making by the Cheltenham and Great Western Union Company, and the Bristol and Gloucester Company.

Mr. Joseph Gibbins having resigned his seat as a member of the Committee immediately after the last general meeting, the Board of Directors elected Mr. Thomas Beilby to be a Director, and to act on the Committee.

Your Committee having taken a decided part in the opposition to Mr. Labouchere's Bill "for the better regulation of railways," in the spring session of last year, were gratified to find their views confirmed by the result of the inquiry before the Select Committee; their Report recommending that the Board of Trade should not at present have the discretionary power contemplated in the 11th clause of the Bill above quoted, and that the supervision of that department should be exercised in the way of suggestion, rather than of positive regulation. The experience since obtained of the working of railways, confirms the soundness and justice of this view of the case.

The statistical facts which accompany the accounts contain information that may be satisfactory to the proprietors.

RAILWAY ADJUDICATIONS.

THE CLARENCE RAILWAY COMPANY *v.* THE GREAT NORTH OF ENGLAND AND CLARENCE AND HARTLEPOOL JUNCTION RAILWAY COMPANY.

Vice-Chancellors' Court, Feb. 15.—In 1837 an Act of Parliament was obtained for connecting the Great North of England, the Clarence, and the Hartlepool Railways, by a railway to be constructed under what are called permissive powers, authorising the Junction Railway Company to purchase lands from such persons as should be willing to sell them, and giving such persons enlarged powers for the purpose of contracting with the Company. The Act also contained a provision, regulating the mode in which any railway was to be crossed by the new railway. It appeared the Junction Railway Company proposed crossing the Sherbourne branch of the Clarence Railway in a manner to which the Clarence Company refused their assent. In consequence of the dispute which this occasioned, this bill was filed, and an injunction was granted by his Honour, during the last long vacation, after a full discussion, restraining the Junction Railway Company from doing their intended acts, the Clarence Company being put under terms to bring an action forthwith, for the purpose of trying the question which turned on the construction of the Acts of Parliament in a court of law. And special liberty was given to either party, in the mean time, to apply to this Court. Under this permission, the Junction Company now applied to the Court, and represented that the Clarence Company had selected the Court of Queen's Bench for their action, the consequence of which was, that the action could not be tried sooner than Trinity Term next, at the very nearest. This delay the Company alleged was pregnant with mischief to them, if the injunction were still continued; for they had entered into a contract with the Rev. Hopper Williamson, who was the proprietor of land on each side of the Sherborne Branch Railway, at the place where they intended crossing it, one of the terms of which contract was, that if the railway were not completed in five years (a period which would expire this year) the contract should be void; and Mr. Williamson had refused to extend the time. On the ground of this irreparable injury, the Company made the present application for liberty to go on with their works, and offered an undertaking to restore matters to their present position, and to make full compensation, should the judgment of the Court be finally against them.

Mr. Richards, Mr. Geldart, and Mr. Tomlinson, appeared for the defendants; Mr. Stuart and Mr. Giffard appeared for the plaintiffs.

His HONOUR said that when the matter was before him in August last, his opinion, after a pretty full discussion, was that the defendants' Act of Parliament was of a permissive rather than a compulsory character, and such it appeared was the general understanding of all the parties engaged in passing it through Parliament. It gave the Company power to purchase land, and it enlarged the powers of those who might deal with the Company under mutual agreement; but he was of opinion it gave the Company no power, compulsorily, to take an inch of ground, though upon obtaining it might depend whether the Company could complete their railway or not; and in consequence of that opinion he had granted the injunction. Whether that opinion was wrong a court of law would decide; but in the mean time he thought the matter ought to stand as it was. It did not appear to him that it was a case in which irreparable mischief would be sustained; all that was matter of speculation; and, from what appeared in the affidavits, it seemed probable, if the defendants failed at law, that they would apply to Parliament for an extension of their powers. On the whole, he must refuse the motion.

GORDON *v.* THE CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.

Rolls Court, Feb. 16.—The arguments in this cause, which had been argued for several days, were concluded to-day, when his Lordship delivered judgment. The plaintiff, Mr. Gordon, filed a bill against the above Company, who were the defendants in this cause. In that bill, the Act of Parliament under which the Company was constituted, the contract into which, according to the provisions of that Act, they entered with him, and the acts committed by the Company which, the plaintiff alleged, constituted a violation of the Act of Parliament, were set forth, and the plaintiff prayed for an injunction to restrain them from committing those acts. To the motion for an injunction the defendants had put in a demurrer, denying the plaintiff to be in a position which entitled him to the protection of the Court. With regard to the demurrer, the arguments turned upon the construction in the Act of Parliament of the word "public," which was alleged to have a particular meaning that extended to every word in that clause of the Act in which it occurred. The clause was to the effect that it was not lawful for the Company to make or establish any public station, yard, wharf, &c., for loading and unloading goods, or for the convenience of passengers, &c., on the estate of Mr. Gordon, or within fifty yards of his estate or residence, without his previous consent. Upon that part of the line of railway which constituted a portion of the estate of Mr. Gordon, the defendants had erected a wooden building, which they called an engine-house, for depositing engines to be used on the railway. In that building they had erected a forge, so that it was a place for repairing engines. They had also built there a stable and two cottages. Mr. Gordon alleged that their so doing was contrary to the clause referred to. The defendants said otherwise. They said that the word "public" had reference to every word in the clause—that it meant a place to which any person constituting a portion of the public had a right to resort—that the place of deposit for the engines was not for the use of the public, but for the private use of the Company. It was very much to be wished that clauses in Acts of Parliament were expressed with more precision than they commonly were. However, that being the case of the demurrer it ought to be allowed if there was any relief to be had upon the bill. His Lordship would not say there was any relief to be had upon the bill, unless he adopted the construction put upon the word "public" by the defendants. On reading the clauses of the Act, particularly the 17th and 136th, he could not satisfy himself either that the word "public" was to be applied to every part of the sentence, or if it was to be so applied that he could attribute to it the meaning which the defendants did. That it was ambiguous, he thought must be admitted. It was not easy to give clear and demonstrative reasons, one way or the other. However, even if the word "public" did extend to all parts of the sentence, it could not admit of the exclusive meaning attached to it by the defendants. He could not, therefore, see that the plaintiff was not entitled to the protection of the Court on that point, and he should accordingly overrule the demurrer. Then came the question of the motion to restrain the defendants from using the buildings which they had erected, and from building others. At the tenacity with which the arguments on the point of the plaintiff's acquiescence in this respect were urged, his Lordship was much surprised. If there had been acquiescence on the part of the plaintiff, his Lordship would have heard of it in a form very different from that in which it had been mentioned. There was no acquiescence, then, which could deprive the plaintiff of any right to which he was entitled. The next and most important point was the inconvenience that might arise to either party by the granting or withholding of the injunction. On this particular point he thought it best to abstain from granting the injunction till that matter was further investigated. He would, therefore, reserve that point till he consulted the decisions of Lord Cottenham on questions of this nature. He would pronounce his final decision on Monday next.

BIRMINGHAM, BRISTOL AND THAMES RAILWAY COMPANY *v.* HALL.

Court of Queen's Bench, Feb. 17.—Mr. Platt and Mr. Butt appeared for the plaintiffs, and Mr. Cockburn, Mr. Corrie, and Mr. Taffrell, for the defendant.

This was an action for calls, and the question was whether the defendant had been a member of the Company or had ceased to be so, and was thus not liable to the action. That was a great struggle on the question whether the skin of parchment to which the signatures were attached was, or was not attached to the deed under which the Company joined itself. If attached then, the defendant's liability was contended to be established, if separate then the verdict must be in his favour, as the legal proof showing him to be a member of the Company was not complete.

The jury retired to consider this among other questions, and returned, but all of them not agreeing on the point, were sent back again, and after another consultation of half an hour, returned with a verdict for the plaintiffs, finding that the deed and signatures were attached to each other.

GUEST *v.* THE SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY COMPANY.

Court of Common Pleas, (Yesterday.)—This was an action brought by Sir John Guest, Bart., the great iron-master, and owner of the Dowlais Iron-works, Glamorganshire, against the Sheffield and Manchester Railway Company, for the recovery of 548*l.* 16s. 4d., alleged to be due for fifty tons of 50 lb. rails, and the necessary fastenings, supplied by the plaintiff to the defendants.

Mr. Serjeant Wilde appeared for the plaintiff, and Mr. Serjeant Channel for the defendants.

Mr. Serjeant WILDE briefly stated the case to the jury, and read a letter from Mr. Vignoles, late Engineer to the Company, to Sir John Guest, containing the order for the rails, &c., which were the subject of the present action.

The jury returned a verdict for the plaintiff for the amount sought for.

RAILWAY COMMUNICATION WITH SCOTLAND.

WE observe with considerable regret that the preference given by Mr. Locke, in his survey of the projected railway from Lancaster to this city, to the line by the valley of the Lune, has excited already a determined opposition on the part of the landowners of that district, and that at a meeting held at Kirby Lonsdale, on Thursday, the 3rd instant, resolutions were adopted, declaring a decided hostility to the project, if intended to be carried along the Lune. The Report of the Government Commissioners, which declared in favour of the western line, was entirely based upon the assumption that the railway could be advantageously carried by Kendal, along the line surveyed in that direction by Mr. Larmer. Upon this Report all the subsequent proceedings have been taken, and we cannot help feeling that a perseverance in the favourite scheme of Mr. Locke will have the effect of originating insuperable difficulties in the way of the undertaking. Mr. Alderman Thompson has already given in his adhesion to the landowners opposition, and there can be little doubt but the other noblemen and gentlemen having property in the neighbourhood will follow his example. Moreover, all the activity hitherto manifest upon the subject was directed to carrying out the Government Report. The money already subscribed was given for that purpose, and therefore the adoption of another line which threatens to entail a costly landowners opposition must cause everywhere surprise and disappointment, and must long delay, if it does not finally put an end to the enterprise. Complete Parliamentary surveys of the Orton and Kendal lines, recommended by the Government Commissioner, will however be prepared and submitted to Parliament simultaneously with the other project, so that we trust a good understanding may yet be established between the landowners and the projectors.—*Carlisle Patriot, Feb.* 11.

2. Mines toll to London and Birmingham 74*l.* 6s. 10d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

6. Receipts include the Northern and Eastern toll, &c.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 41*l.* 17s. 8d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by Company's Act.

17. Interest at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,681*l.* 12s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies. The

26. The receipts for goods, &c. include carriages, 61*l.* 1s. 0d.; horses, 144*l.* 10s. 6d.; dogs, 1*l.* 19s. 6d.; parcels, 229*l.* 4s. 9½d.; cattle, 38*l.* 17s. 6d.; corn, 37*l.* 14s. 8d.; heavy goods, 53*l.* 11s. 3d.; coal, 124*l.* 17s. 9d.—Total, 1,169*l.* 16s. 11d. The dividend is from the time of opening.

29. The details of the receipts are as follows:—Passengers, 1,756*l.* 11s. 8d.; parcels, carriages, horses, and mails, 465*l.* 3s. 2d.; merchandise, 1,186*l.* 17s. 1d.; minerals, 251*l.* 11s. 10d.; cattle, 38*l.* 1s. 2½d.—Total, 3,698*l.* 4s. 8½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 101*l.* 9s. 5½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

30. The receipts are after deduction of L. and M. toll.

31. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

32. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

33. The returns are inclusive of Man. and Bir. toll.

TO CORRESPONDENTS.

London and Birmingham Railway Dividend.—*In a leading article of last week we showed that the dividend of the London and Birmingham Railway Company for the last half-year, although nominally 9¼ per cent., was to parties who had held their shares from the first, 12¾ per cent. on the money actually paid up. As such we noticed the dividend in our traffic list. We are induced, however, on the suggestion of several correspondents, to state the amount of dividend at 9¼, and for this reason: Parties desirous of investing money in an undertaking of such distinction and solidity, and unacquainted with the details of the traffic, &c., would naturally consult the* Railway Times. *They would there find the market price of Birmingham shares to be (say) 172¼, and the dividend per cent. 12¾., which would lead them to expect from a share, with 90l. paid up, nine tenths of 12l. 15s., that is 11l. 9s. 6d., whereas, in fact, they would receive only nine-tenths of 9l. 10s., that is, 8l. 11s. Our calculations were quite correct, and the dividend is to original investors at the rate of 12¾l.; but to prevent the possibility of mistake, we have made the alteration referred to.*

Cosmopolitan and a Regular Subscriber *have our best thanks. They will see that their suggestions have not been overlooked.*

The Year Book of Facts for 1842.—*A copy of this work (published by Tilt and Bogue, Fleet-street,) has been sent to us. It is a carefully executed compilation and condensation of the scientific discoveries of the past year. There is a good portrait prefixed of the late Dr. Birkbeck.*

Continental Railways.—*A highly respectable* iron-work *firm are desirous of ascertaining from what quarter the promoters of Continental railways are likely to obtain their supply of carriages, trucks, &c., the said firm being anxious to introduce one of their improvements where the duties levied are not prohibitory. Any information upon this subject will oblige the parties referred to and ourselves also.*

E. L.—*We trust our correspondent's anticipations will be realised. We beg, however, to say, that we "insinuated" nothing; we spoke plainly enough, more plainly perhaps than was palatable. We agree, however, with our correspondent, that "to speculate on the matter is an idle employment, as a few days will decide the question," and therefore we may stand excused for not publishing his letter, for which indeed it would sorely puzzle us, under any circumstances, to find room. He may rely upon it that the matter of it will not be overlooked.*

A Subscriber *calls our attention to a recent appointment of a railway Superintendent. He states that the Superintendent referred to married a few months ago a daughter of the Chairman of the Company, and that* the appointment was made by the Chairman without consulting his colleagues. *The whole affair, he says, "smells strongly of a job," the party appointed "knowing (our correspondent adds) as much about railways and their statistics, as you do of gunnery," which is certainly* not *much. We shall be glad to have further information as to this matter.*

A Railway Proprietor *is somewhat too late in the day. More than half of the February meetings are already past. Let him enforce his views before the August meetings come round.*

Foreign Railway Journals.—*Some time since we announced the establishment of a railway journal at Brussels, under the title of* Le Chemin de Fer, *and we have now before us the first two numbers of a similar work issued twice a month in Paris, under the name of* Journal des Chemins de Fer. *Both periodicals are very creditably conducted, if we may judge from the specimens which have come under our notice. Our Paris contemporary has an article of some length on the much-agitated question of four-wheeled and six-wheeled engines. We shall probably hereafter give an extract or two from the Paris journal.*

Maryport and Carlisle Railway.—*The meeting of this Company was held yesterday week, but we have seen no notice of the proceedings in any of the local papers, with the exception of the* Cumberland Pacquet, *and there the report is manifestly so partial and unfair, that we must decline copying it.*

Your Well-Wisher *(Oxford).—We are not in the secret of the Directors, but we do not think it is likely that the scheme referred to by our correspondent will be adopted just yet.*

T. L. S. *(Fulham).—We have not room for articles that have appeared in other journals. If our correspondent will briefly give the substance of the communication, we shall endeavour to find room for it.*

We received yesterday several letters, the writers of which express great anxiety that they should appear in our number of to-day, as they refer to meetings to be held in the ensuing week. A glance at our columns will prove the utter impossibility of complying with these requests in this particularlar instance, but we would state generally, that it is very rarely indeed that letters which reach us on Friday morning can be inserted in the paper of next day.

Northern and Eastern Railway—The case of Mr. Williams. *—We have received a letter on this subject from Mr. Rowcroft, which we regret to be compelled to postpone till next week. It shall then appear without fail.*

Among the letters in type are those signed Investigatoris Investigator; A Sufferer by the Old Shares; Mr. R. Taylor; A Chester Man; J. G.; M.; *&c. &c.*

TRAFFIC OMITTED LAST WEEK.

Brandling Junction Railway.—*Week ending January 29; number of passengers, 8,377; receipt from passengers, 325l. 6s. 3d.; goods, coal, &c., 290l. 0s. 0d.; total, 615l. 6s. 3d.—Week ending the 5th of February, number of passengers, 8,791; receipt from passengers, 335l. 5s. 6d.; goods, coal, &c., 397l. 8s. 3d.; total, 732l. 13s. 9d.*

Grand Junction Railway.—*Week ending February 5; receipt from passengers, 5,553l. 11s. 2d.; merchandise, 1,797l. 2s.; total, 7,350l. 13s. 2d.*

We intend to publish next week another supplementary sheet, WITHOUT EXTRA CHARGE. It will contain a "Plan of the Town of Manchester," showing the relative positions of the proposed junction lines, respecting which so much discussion has recently arisen. We hope in our next to be able to clear off the greater part of our arrears of correspondence.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 19, 1842.

WE give in another column a copy of the new "Railways' Regulation" Bill, the second reading of which stands for Monday evening next. It will be perused with much interest by our readers, though we do not imagine that much diversity of opinion will arise either as to its tone or tendency. Our own opinion respecting it is very decided. If railway legislation is to be entered upon at all—and for many reasons it cannot, we fear, be avoided—it would be difficult to frame a measure more innoxious than this Bill of Mr. GLADSTONE'S. In no respect will it interfere with the rights or privileges of the Companies, while on several not unimportant points it will afford them material assistance in the efficient management of their several undertakings. A brief glance at a few of its leading provisions will, we think, bear out this assertion.

The clause with respect to the inspection of railways previous to their opening might be omitted without any ill consequences to the public safety, in consideration of which it is brought forward, if future inspection is to be of the same character as that which is past. In fact, such inspection has hitherto been merely nominal, nor do we think that premature openings are errors generally chargeable upon Boards of Management. At the same time, if railways are thus to be submitted to the examination of the officers of the Board of Trade, it is but right that these officers should have the power of forbidding the opening when they conceive the condition of a line to be dangerous to the public. Hitherto there have been no means of enforcing the decisions of the Board of Trade, and although the Companies have in general paid the utmost deference to recommendations of whatever character issuing from that body, there is at least one instance on record of a portion of a railway having been opened in the face of an unfavourable report. It may have been this want of the requisite authority to insist upon attention to their decrees which led to the cursory and incomplete examinations to which we have already referred. The want is at last supplied, and the Board of Trade may now order and direct that the opening of a new line, or new portion of a line, be from time to time postponed for any period not exceeding one calendar month, but with this important proviso, "*that no such order shall be binding unless therewith shall be delivered to the Company a copy of the report of the officer or officers on which such order shall be founded.*" This will effectually guard against the display of caprice, while ignorance can scarcely fail of being fully exposed.

The power of the Board of Trade with respect to returns of accidents is extended from those of a fatal nature to all that are "attended with personal injury to the public." There can be no reasonable objection to this further power, since it is clear that there may be equal culpability in cases where injuries have been slight as where they have been of a more serious character. We think, however, that the time within which notice must be given of such occurrences, is much too limited as the Bill now stands, and we trust that *forty-eight hours* (at least) will, in Committee, be substituted for *twenty four*. We have no doubt that this short interval is fixed with a view to enable the Board of Trade, in cases terminating fatally, to be represented at the Coroner's inquest—and this is so far very proper; but it would be better still if there were a special clause, providing that no inquest be held until twenty-four hours (or more) after notice of the occurrence which has rendered such inquest necessary shall have been *received* by the Board of Trade. Even the short space of TWENTY-FOUR hours will not prevent inquests being held without due notice, as the late cases on the Brighton and Great Western Railways prove. In cases not terminating in death, further time should be allowed to the Directors to investigate fully the probable *causes* of the accident.

The 9th and 10th clauses embody some very judicious regulations with respect to level crossings. Clause 9th provides, that gates at such crossings shall constantly be kept closed *across the* HIGHWAY, except during the passing of persons or vehicles, instead of, as in some instances at present, being shut *across the* RAILWAY. This is the common-sense view of the application of such gates, and one which we have repeatedly pressed upon the attention of Directors. Of what possible use, as a means of stoppage, would two or twelve such gates across a railway be on the approach of an engine? With common-road vehicles no greater impediment could of course be desired. The 10th clause compels the owners or occupiers of adjoining lands to *lock* all gates opening upon railways; and when we recollect how many accidents have been occasioned from the neglect of such precaution, in allowing cattle to stray upon the various lines, it will be allowed that the provision is fully required.

The next clause is one of the most important in the Bill. It enacts, "that where two or more Railway Companies, whose railways have a common terminus, or a portion of the same line of rails in common, or which form separate portions of one continued line of railway communication, shall not be able to agree upon arrangements for conducting their joint traffic with safety and convenience to the public, it shall be lawful for the Lords of the said Committee to call upon such Railway Companies to refer the questions in dispute

Digitized by Google

between them, so far as the same relate to such arrangements as are necessary for the safety or convenience of the public, to arbitration." As the Companies themselves have every facility granted them for the appointment of arbitrators, we anticipate that much needless and very expensive litigation, which above almost every thing else is the bane of Railway Companies, will thus be avoided.

The 12th clause empowers the Board of Trade to put a veto upon the use of the powers granted to the owners of land to open branches to the main line, "*if in any case* it shall appear to the Lords of the Committee that such power cannot be exercised without seriously endangering the public safety," the claims for compensation for the loss of such powers being referred to arbitration. We doubt whether, "in *any case*," such powers can be safely or profitably exercised.

The regulation of dangerous level crossings is the subject of the next clause, and is of very considerable consequence. It ordains, "that where any railway crosses, or shall hereafter cross, upon the level of any public or private railway or tramroad, or any turnpike-road or public highway, or any private road in Great Britain, and it shall appear to the Lords of the said Committee that such level crossing seriously endangers the public safety, it shall be lawful for the Lords of the said Committee to call upon the proprietor or proprietors o the said railway or railways, and the trustees, commissioners, or proprietors of such turnpike or other roads, to come to an agreement for removing the danger, either by building a bridge, or by such other arrangement as the nature of the case shall require; and in case the parties shall be unable to come to an agreement, then it shall be lawful for the Lords of the said Committee to order the parties to refer the differences between them to arbitration." We were led to believe that this clause was of a much more stringent character, and as such we alluded to it last week. It will be seen that it is *not* left to parish authorities, nor to the trustees of turnpike-roads, but to the Board of Trade, to determine in the first instance whether "such level crossing *seriously* endangers the public safety," and it is they who are empowered to call for a remedy. Should the Directors and Trustees be unable to come to an agreement, arbitrators are to be appointed. We have too much confidence in the Board of Trade to believe that they will harrass the Companies in this matter or put them to unnecessary expense.

To clause 18th we referred last week, as being likely to prove of considerable advantage to the Companies, in giving them power to enter upon adjoining lands to repair accidents. We regret, however, that the amount of compensation for such land is to be settled, not by a jury, but by "any two justices in petty sessions assembled for the district in which such lands are situate." We know quite enough of justices' justice to make us doubt the expediency of leaving the amount of compensation to *such* arbitrators.

The only other clause to which we need advert is that which facilities the punishment of railway servants guilty of misconduct. It is a pity the clause should not be extended to *other* offenders. It would be well too if the aforesaid "justices" were to have somewhat less discretion left them than they have under Lord SEYMOUR'S Act, in the mitigation of penalties. They are much too ready to lean to the side of ill-judged leniency, in cases where Railway Companies are the complainants. Of this our columns frequently present the most convincing proofs.

It will be seen that certain clauses of Lord SEYMOUR'S Act still remain unrepealed. We regret that the clauses in question were not at once embodied in the new Bill, so as to render reference to two separate Acts unnecessary. We hope it is not yet too late to remedy this oversight.

The Bill, we repeat, is, upon the whole, as unexceptionable as need be, much more so indeed than our fears had led us to look for. We do not suppose that the Companies will offer any material opposition to its progress, although we daresay the practical experience of many Boards may supply suggestions for the improvement of its details; and from the spirit evinced by the Board of Trade in this specimen of legislation, we doubt not that due attention will be given to any hints that may be offered for the amendment of the measure. Even should the Bill be not altogether to the taste of individual Boards, we trust they will not impede its passing into a law. The railway interest cannot reasonably hope to be altogether exempt from legislative interference, and if they would wish to make their voice heard and their power felt, they should reserve themselves for an occasion—though we trust such will not speedily occur—when their rights are really threatened with invasion. To exhibit a disposition to resist every kind and degree of legislative interposition, would but draw down upon them the redoubled force of public opinion and Parliamentary prejudice. By practically proving that they are ready to co-operate in carrying out every measure which may bear even the semblance of contributing to the safety and convenience of the public, the Companies will gain for themselves "troops of friends," and thus be placed in a position to resist unwarrantable aggression, should such ever be attempted.

On Wednesday Mr. HARDY gave notice of his intention in Committee on the Bill, "to move a clause or clauses providing for the greater security of the passengers." The honourable member did not explain the nature of his proposed motion, but we daresay he deems himself fully qualified to act as a railway lawmaker in virtue of having been present at the late fatal occurrence on the Brighton line.

We do not wish to see the Board of Trade intermeddle needlessly with railway arrangements, and should be sorry that legislation should be attempted where there are not pressing reasons for external interference; but, perhaps, it is worthy of consideration whether in a "Railways' Regulation" Bill of this kind, which professes to aim at securing the rights of the public, some provision ought not to be made to set at rest the question of Sunday travelling. Why not at once render it imperative upon all Railway Companies to run at least two trains each way on Sundays? If such a proposition should prove unpalatable to existing Directions, let them resign their seats to successors less squeamish. But we are satisfied that it would be to a very small minority indeed that a proposition of this kind would prove distasteful, however much many members of particular Boards deem themselves bound to give way to the hypocritical cant of the day. Let the matter be once settled by legislative enactment, and we shall hear no more of those pseudo-pious agitations which have of late annoyed the shareholders of a Scotch railway, and in the progress of which not a few self-dubbed saints have exhibited so largely a spirit of intolerance sufficient to excite at once the pity and the contempt of the "ungodly." Of the result, in the instance referred to, we entertain no fears, nor of the result in every other case where common sense and true morality are pitted against bigotry and fanatical fury; but were it possible to conceive the success of the shutting-up clique in any considerable number of Companies, it is quite manifest that legislative interference would be required, and most assuredly would soon be supplied. It would be as well therefore, perhaps, were the question settled at once, for how much animosity—how many heartburnings, and family and party dissentions might, in the case of the Edinburgh and Glasgow Railway, have been avoided, had it been placed beyond the hope or power of the Agnewites to carry their schemes into effect?

THE meeting of the Greenwich Company on Monday was very lengthy and very noisy, although like to be productive of but little practical benefit to the undertaking. A large portion of the time of the meeting was wasted in discussing whether the Directors ought to "qualify" by holding old shares or new, as if the investment of a few hundred pounds in a particular species of stock would take away the temptation, or neutralise the intention, of having recourse to corrupt practices, supposing a Board of Management to be inclined thereto. We give the Directors of the Greenwich Company every credit for singleness of purpose, and anxiety to promote the interests and consult the wishes of their constituents—indeed, the readiness with which they adopted the qualification scheme proves they are not disposed to stand upon points of official punctilio—but had they a mind to sacrifice the advantage of one class of proprietors to that of another, as inferentially argued by the mover of the amendment, fifty such propositions as his would form no efficient check upon them. The circumstances under which the new privileged shares were purchased by some of the Directors, as explained at the meeting, afford, it seems to us, as good a guarantee that the Board have a direct pecuniary interest in the present and future prosperity of the undertaking as if they held the specified number of original shares, now at so low a figure in the market. It is very natural that the holders of original shares should experience much disappointment at the non-remunerative character of their investment; but it must not be forgotten, that but for the assistance of the new proprietors the railway would never have been completed, and consequently would have remained unproductive to all parties. We look forward to the time when *both* classes of shareholders will receive a satisfactory dividend; in the meantime, they will do well to keep a vigilant eye upon everything connected with the conduct of their affairs.

A good deal was said relative to the late reduction, or we ought rather to say the late alteration, of fares; but the toll question was not mooted at all. We have no doubt that considerable light will be thrown upon this latter inquiry by the result of the Eastern Counties' and Northern and Eastern Companies' arrangement to which we alluded last week. The circumstances of the toll-paying Companies are in both cases very much the same. Each has a large population upon and contiguous to their railway, and both equally maintain that the amount of toll exacted by the proprietors of the trunk line prevents them for so arranging their charges as to attract a large, and consequently remunerative, traffic. In cases like these, the toll-receiving bodies are

Digitized by Google

very much inclined to prefer the certain income which they have hitherto received to the prospect of further gains in expectancy. On the other hand, the toll-paying Companies are reasonably desirous of benefiting themselves without much consideration as to how an alteration might affect their neighbours. The matter is fairly worth an experiment, although we think that the greater part of the risk ought in justice to be incurred by the parties anxious for a change, namely, the toll-paying Companies. Thus the Croydon Directors appear satisfied that a reduction of toll would be mutually beneficial to their own Company, and the Greenwich; why not, then, guarantee to the latter Company the *maximum* amount hitherto received under the existing arrangement? It cannot be supposed that the Greenwich Directors or the Greenwich proprietors are so enamoured of the present scale that they would refuse to alter it, provided it could be shown, not by argument or induction but by the practical working of the Croydon Railway during a reasonable period, that a reduction of toll per passenger would produce in the aggregate a greater amount of net receipts.

With respect to the Greenwich fares, we cannot but think that on the whole the late charges are judicious, although, as was very properly observed at the meeting, some time must be allowed fairly to test the merits of the new plan. The competition of the river boats is extremely severe, and nothing but low fares and good accommodation can enable the Railway Company to secure their due share of public patronage. Whether the discarding of the shillings carriages was a wise step on the part of the Management remains to be proved. We think that, under all the circumstances, it was. Indeed we should hail, as an improvement, any change that had got rid of the filthy, unsightly vehicles which have made the arrangements of this Company so unfavourably known to the public.

Mr. GEORGE WALTER, who has taken a vast deal of credit to himself for certain so-called improvements in the construction of the Company's earlier carriages, was, we think, most conclusively answered by the facts which the Deputy-Chairman adduced. Mr. WALTER, by the way, was saved from the threatened interference of his so-called friends, with respect to a memorial or requisition upon which we recently commented. It is far better for Mr. WALTER that it should have been so. Legal claim upon the Company it seems he has none; and an appeal to their kind and generous sympathies will not be promoted by groundless and offensive imputations. Mr. WALTER has more sense, we hope, than to countenance, either directly or indirectly, any such proceedings, although his whole course of conduct with reference to the Company would imply that he is desirous, in season and out of season, to feed fat an ancient grudge.

THE private opening of the Edinburgh and Glasgow Railway was to take place yesterday. It was arranged that a train should leave Glasgow exactly at nine o'clock in the morning, so as to reach Edinburgh about eleven. It would then join a train there, the whole party returning to Glasgow to partake of a cold collation at the Queen-street station. The public opening is to take place on Monday next.

As the day approaches for deciding the Sunday travelling question, the Puritans are exerting themselves with redoubled energy to gain their point. We learn from the *Scotch Reformers' Gazette*, that not satisfied with the memorials and protestations of their Synods and Kirk Sessions against the running of the mail on Sunday, the Glasgow clergy have this week been holding what they term *prayer-meetings* on the same subject, and dooming all those who differ with them to endless woe. They have likewise threatened to *excommunicate* all who thus "desecrate the Sabbath," just as they excommunicated the poor man KEY, for burying his child on that day.

The same journal gives a very edifying anecdote with respect to these Sabbath-observing gentry. The clergyman of a rural parish contiguous to Glasgow, after he had been preaching and praying for some time against the use of the railway on Sundays, got up a petition on the subject, which the little boys and girls of the village were induced, by the tempting offer of oranges and sweetmeats, to sign. Not content with this, the clerical agitator sent an agent to a neighbouring parish, and cajoled the greater part of the servants connected with a gentleman's residence there, to affix their names to the document. The master was a sensible and *consistent* man, and whereas he had theretofore allowed his servants the use of a vehicle to take them to church, he now compels them to trudge a-foot, rightly deeming, that those who are so anxious to prevent others from desecrating the Lord's day, ought not to fall into the self-same *sin* themselves! We wish a similar test could be applied to the document-signing gentry of higher degree. How would Sir ANDREW AGNEW relish a statute against travelling in private carriages on Sunday? How would he, and Messrs. BAIN and LEADBETTER, like to see a law passed against hot Sunday dinners in well-appointed mansions—to say nothing of recreative trips by Sunday steam-boats, and tangible profit from the running of Sunday coaches, and the Sunday sailing of trading packets?

THE most extraordinary reason we have ever seen assigned for the non-production, not of detailed accounts, but of any accounts at all, is contained in the Report of the Clarence Railway Directors, which we publish in another page. They say:—

"Your Committee, in order to provide for the increased traffic, have been compelled to expend an additional sum of money, over and above the current expenses for 1841, in putting the engine power and works in a state to meet the same. Considerable expense had also to be provided for, in connection with the completion of the Buyers Green and Chilton branches.

"The foregoing calls upon the Committee, and some outstanding and disputed accounts for work performed, which have been settled and discharged, have exhausted the whole amount of revenue for the past year.

"*Under these circumstances* your Committee do not consider it necessary to lay before the meeting, on this occasion, any more detailed statement of accounts."

If ever there were "circumstances" which could render "a detailed statement of accounts" necessary, surely it must be the present circumstances of the Clarence Company, as explained in the Report referred to. Is it at all matter of surprise that the proprietors should refuse to subscribe sufficient to extricate the Directors from their difficulties, when they find so shallow a pretence put forth for the non-production of that to which in law and equity they are fairly entitled—namely, a full, true, and particular account of their financial position? We had not deemed it possible that any body of Directors could so coolly have insulted the understanding of their constituents. Are there no men of business in the Clarence proprietary? Surely *they* cannot consent to be thus "put off!"

WE understand that at the approaching meeting of the London and Croydon Railway it will be found necessary to devise means for raising further capital—a necessity which has been caused principally by the recent very expensive slips near New Cross. The line, we are happy to state, is now clear.

THE Reports of the Directors of the North Union, Birmingham and Gloucester, Birmingham and Derby, and Glasgow and Ayr Railway Companies, will be found elsewhere, and will, for several reasons, well repay a careful perusal. Various details respecting these several undertakings must be postponed till next week.

A STEEPLE-CHASE took place at Romford on Thursday last, on which occasion the Eastern Counties' Railway was called into requisition in a somewhat novel manner. A special train was provided to convey the *elite* of the sporting world to witness the exhibition, which we understand was on a very splendid scale. When the horses started from Romford, the train went off at the same moment, keeping parallel with them the whole distance (two miles out and two miles in), thus affording an opportunity never before presented of witnessing a steeple-chase *throughout*. The train was conducted by the Engineer-in-Chief (John Braithwaite, Esq.), and the excellent arrangements of that gentlemen; and of the Manager (Richard Hall, Esq.), appeared to give the utmost satisfaction to a very numerous and fashionable company.

—o—

THE *Bristol Journal* notices another anomaly in the arrangements of the Post-office:—"Before the boasted *acceleration* in travelling made by railways, letters posted early in the morning at Bath were delivered in Bristol at 9 a.m.; but now that mail coaches are voted slow and obsolete, letters so posted are three hours longer in reaching Bristol, though the journey from Bath to Bristol is accomplished in twenty minutes. 'O give us back the spanking steeds,' we care not whether they be Arab or English, or make better use of the railway." Surely an evil so easy of remedy ought not to be allowed to exist for a day longer.

—o—

IT would seem that Post-office anomalies are not confined to this country. The *New York Express* of the 28th ult. (just received) states, that the mail is now 39 hours in its passage from Boston to Albany, whereas by railway it might be carried in 11 hours! This is the result of a disagreement between the Post-office authorities and the Massachusetts Western Railway Company, relative to the amount of compensation. The matter, it is stated, has been taken up by the Massachusetts legislature, who have appointed a Committee to "inquire into the circumstances and regulations by which the Western Railway have failed to make a contract with the Post-office department for the transportation of the mail from Worcester to Albany, and the mail routes connected therewith, with power to send for persons and papers."

—o—

WE adverted last week to the reply of Lord Eliot, the Chief Secretary of the Vice-regal Government in Ireland, to a question put in the House of Commons by Mr. French, relative to the construction of

Digitized by Google

railways in that country. The subject has since been again alluded to in the House, and Lord Eliot's explanation is not unimportant. Mr. Shaw said, he wished to ask the noble Lord a question, in order to remove a misapprehension which he found to prevail in regard to an answer given by the noble Lord on a former evening to the honourable member for Roscommon. That answer had been supposed by some persons to indicate that the Government had come to a determination not to give any public aid in the establishment of a system of railways in Ireland, whereas he (Mr. Shaw) understood his noble friend to have stated the fact to be, that several propositions on the subject were under the consideration of the Government, but they had not as yet come to any determination one way or the other in respect of them. He was not so unreasonable at that early period of the session, and in the present state of the finances of the country, as to ask the Government to commit themselves in favour of any particular plan, or to propose a grant of public money in aid of the general object; all he required was, that his noble friend should inform the House whether he was correct in the conclusion he had drawn from the former statement of the noble Lord, namely, that the Government had not at present come to any decision upon the question, and that they were entirely uncommitted either to adopt, or not to adopt, any one of the plans that had been submitted to them. Lord Eliot said, his right honourable friend was perfectly correct in the construction he had put upon his former answer. He (Lord Eliot) had intimated his own individual opinion that it was not probable a public grant would at present be made for the construction of railways in Ireland; but he repeated what he had before said as regarded any opinion of the Government on the subject—that there were several plans before them for consideration, but that they had not made any decision whatever respecting them. We would fain hope, therefore, that something may yet be done in this matter during the present session.

—o—

On Tuesday, in the House of Commons, returns were ordered on the motion of Mr. John O'Connell, "in detail (so far as the same can be prepared) of all sums of money, from whatever source and under whatever description, voted or applied, either by way of loan or grant, in aid of public works in England and Scotland respectively, since 1800, including the expense of all commissions and surveys, and all sums advanced for roads, and for employment of the poor in fisheries, or otherwise." We should not be surprised if Mr. O'Connell intended to found upon these returns some motion for a grant or loan of money to construct Irish railways. It is generally represented and believed that Ireland has received more than her due share of assistance in the shape of grants and loans; the Irish themselves say it has been just the reverse. Probably these returns will set the matter right.

—o—

The following personages have travelled by the Brighton Railway during the present week:—

Lord Rugby; Earl of Clancarty; Countess of Powlett; Viscountess Jocelyn; Honourable Miss Montague; Sir Isaac Goldsmid; Lady Goldsmid; Sir James Clarke; Sir Jeffery Wyatt; Sir John Key; Captain Hamilton; Lady Freemantle; Mr. Peel; Mr. Pearce; Mr. Henderson; Mr. and Mrs. Strutt; Rev. Mr. Stone; Mr. and Mrs. Erskeine; Mr. and Mrs. Travers; Mr. Preston; Mr. Irby; Dr. Burrows; Miss Bennett; Mr. and Mrs. Palmer; Sir James Cockburn; Honourable Miss Devereux; Mr. Scott; Mr. Sturt, M.P.; Mr. and Mrs. Peake; Mr. Peake; Colonel Loftus; Mr. and Mrs. Calvert; Mr. and Mrs. Barton; Mr. Wigney, M.P.

—o—

It appears from the *Globe*, that "Charles Russell, Esq., M.P., as Chairman of the Great Western Railway, has forwarded 100*l.* to the Berkshire County Hospital, as a testimony of the deep sense which the Company entertain of the humane and important services rendered to the sufferers by the late awful accident at the Sunning Hill station."

—o—

In the House of Commons yesterday week, the following members were appointed the "Committee on Petitions for Private Bills:"—Mr. Strutt, Mr. Robert Clive, Mr. Rice, Mr. Villiers Stuart, Mr. Wrightson, Mr. G. Cavendish, Mr. Compton, Mr. Brotherton, Mr. Pakington, Mr. Forbes, Mr. Beckett, Mr. Bramston, Mr. Walker, Mr. George Philips, Mr. Bell, Mr. Gibson Craig, the O'Connor Don, Mr. Mackenzie, Mr. Horsman, Mr. Eliot Yorke, Mr. Kemble, Mr. Aglionby, Sir John Yarde Buller, Captain Jones, Mr. Thornely, Mr. Barneby, Mr. Chalmers, Mr. Tatter Egerton, Mr. Stansfield, Lord Worsley, Mr. Henry Baillie, Mr. Edward Buller, Sir William Heathcote, Mr. Hope Johnstone, Mr. Morgan John O'Connell, Mr. Packe, Mr. George William Wood, Mr. Evans, Mr. Home Drummond, Mr. Parker, Mr. Marshall, and Sir Charles Douglas.

On Monday, on the motion of Lord Granville Somerset, the following resolutions with respect to private Bills were passed:—

"1. Resolved—That with respect to all petitions for private Bills presented in the present session which proceed from the same parties, or some of them, and which are substantially for the same objects as were sought by any Bills which had passed the second reading in the last session of the last Parliament, and were pending at the dissolution of that Parliament, a compliance with the requisite Standing Orders preparatory to the introduction of such Bills in that session, be deemed a sufficient compliance with the Standing Orders of this House, so as to authorise the introduction of such Bills in the present session, provided it shall be proved that notices of the intended application to introduce such Bills shall have been given in the *London, Edinburgh*, or *Dublin Gazette*, as the case may be, and in some newspaper of the county or districts to which such Bills relate respectively, in the months of October or November last.

"2. Resolved—That with respect to such petitions the minutes of the proceedings of, or the minutes of evidence taken by, the Committee on petitions for private Bills in the last session of the last Parliament, be taken by the Committee on petitions for private Bills in the present session, as evidence of the compliance with the said Standing Orders; but such Committee may call for further evidence, if in any case they may deem it necessary.

"3. Resolved—That the Committee upon any private Bill do examine, in the first place, whether the said Bill be for the same purpose as any Bill which was presented in the last session of the last Parliament, and contain the same clauses and provisions as were contained in such former Bill in the last stage of its proceeding, and whereupon any proceedings were pending on the dissolution of the last Parliament; and in such case, that all minutes of evidence, together with any documents therein referred to, which were taken before the former Committee on such Bill be received in evidence of the allegations therein contained.

"4. Resolved—That, to enable the parties promoting any such Bill to avail themselves of the last-mentioned resolution, they shall, after the introduction of such Bill, and previously to the second reading thereof, give notice once in the *London, Edinburgh*, or *Dublin Gazette*, as the case may be, and once in some newspaper usually circulated in the district or districts to which the Bill specially relates, that it is their intention to proceed with the Bill, and to avail themselves of the above resolution; and that the Committee on the Bill do examine how far such resolution has been complied with, and do report the same to the House on the Report of the Bill."

RAILWAY OFFENCES AND OFFENDERS.

On Tuesday last, James Wenn, a boy aged ten years, was taken before — Ind, Esq., one of the magistrates for the liberty of Havering-Alte-Bower, Romford, and charged with having on the afternoon of the 12th instant, thrown a stone from Gubbins Bridge, on the Eastern Counties' Railway, at a passenger train which was proceeding to Brentwood. It appeared from the evidence, that the missile struck the lever of the safety-valve of the engine, and with such force that the stone was shivered to powder. The engine-driver very narrowly escaped. Had he been struck on the head, it is more than probable that the blow would have proved fatal to him. The charge having been fully made out, and one of the Company's officers having stated that cases of this kind had recently been very frequent on the Eastern Counties' Railway, the magistrate said, that notwithstanding the youth of the prisoner, he felt it his duty to protect the public against practices of so dangerous a character as that of which he had been proved guilty, he should, therefore, inflict upon him a punishment which would be likely to operate as a warning to others. *The prisoner was then ordered to pay a penalty of 5l., and in default, was committed to the gaol, at Ilford, for one month.*

—

A similar case was brought before the magistrates of Union Hall yesterday, by the Directors of the London and Greenwich Railway Company, but was postponed, for the purpose of inquiring into the offender's previous character.

—

On Monday a man named Lewis was brought before Mr. Rawlinson, of Marylebone police-court, at the instance of the Directors of the London and Birmingham, for attempted fraud. It appeared that the man had taken out a second-class ticket at Coventry for Weedon, but had ridden forward to London, where he was detected. In his defence he said he had been asleep when the train reached Weedon, but it was proved that he must have been awake when the train stopped for 10 minutes at Wolverton. When given into custody, he said he had no money, but on being searched there was found a sum of 7s. 6d. carefully concealed in the lining of his coat. He was remanded till next day to give time to consult what the Directors wished done to him. On Tuesday he was again brought up, and the Directors not wishing to press the case, he was discharged on paying the 7s. 6d. on account of the excess of fare, and leaving security for the remainder (namely, 5s.) It was stated that these frauds were becoming of frequent occurrence. We trust that the next offender will not escape so easily. The magistrate intimated to the officer of the Company his opinion, that passengers going to any particular place should be put into a certain carriage together, so that on the arrival of the train at the stations no difficulty could arise as to who should

Digitized by Google

slight. His worship forgets that a vast number of additional carriages might, and probably would, thus be required. Supposing the passengers to a particular station to be twenty one day, and two the next, how could the magistrate's plan be carried out with due regard to economy?

The *Aylesbury News* gives the following case with reference to the same Company:—

"A case of some importance to the public was brought before the bench of magistrates at Ivinghoe, on the 7th instant.

"William Burbage, of Cheddington, was summoned by the London and Birmingham Railway Company, for having crossed the Aylesbury line with his donkey, at Cheddington, and neglected to fasten the gates after him, whereby he had, in pursuance of a clause in the Aylesbury Railway Act, incurred a penalty of 40s.

"The case was proved for the Company (who sent an agent down to conduct the case) by a policeman, who had seen the fact, and who told Burbage to shut the gate after him; this Burbage refused; a summons was the consequence.

"The complainants also called an old man named Stevens, of Cheddington, to prove that the place where the alleged offence was committed was in the parish of Cheddington, and who, upon his cross-examination by Mr. Benson, who attended for the defendant, distinctly proved that he had known the place for 40 years or more, and that it was the common highway between Cheddington and Mentmore, adjacent; that he had himself driven carts and waggons along it, and seen others do the same, without interruption; that it was certainly not in the best of repair at any time, but was never stopped until the Company made its railway, when gates were put up on both sides of the railway.

"The Company being unable to carry their case further, Mr. Benson submitted to the magistrates that, from the testimony of the complainants' own witness, the charge must be dismissed, as it was proved that the place in question was a public highway, and being such, the Company were bound, under a penalty of 5*l.* for each default, to shut the gates, and that the Company's servant was also liable to 40s. for not doing it.

"The magistrates intimated an opinion that the case for the defence was made out, but suggested that, as it was a question of considerable importance to the public, if the defendant had any witnesses, it would be as well to examine them, upon which Mr. Benson called

Mr. William Turner, of Cheddington, who had known the *locus in quo* for 26 years or more; and Mr. James Warner, of Mentmore, who had known the same for 40 years; both of which witnesses proved that it was the only direct highway from Cheddington to Mentmore, and had always been used as such without interruption, until the Aylesbury Railway put up the gates at the sides.

The bench, consisting of the Reverends Mr. Wroth and Mr. Rich, then dismissed the case, giving the defendant his costs.

"*The consequence of this decision will be, that the Company must, at their own expense, station a man at the place, for the purpose of opening and shutting the gates for any person passing along the highway, in the same manner as at the Long Marston crossing.*"

DUKE OF CORNWALL HARBOUR AND RAILWAY.

ROSS *v.* "THE RAILWAY TIMES."

Our readers will recollect that some time ago an action was brought against the proprietors of the *Railway Times* by Mr. George Ross, late *factotum* to the Duke of Cornwall Harbour and Launceston and Victoria Railway Company, for an alleged libel upon his character contained in a report (which was admitted to be strictly accurate) of one of the Company's meetings. The case was tried at Croydon, and the defendants having pleaded a justification, a verdict was recorded in their favour. The plaintiff Ross carried the matter into the Court of Error, and on Wednesday last the case was argued, *and the judgment of the inferior Court affirmed.* Ross therefore has taken nothing by his motion, as he will now have to pay either in purse or person the costs of the suit; but in what a state must the "law of libel" be, when a journalist, in the honest discharge of his duty to the public, is subjected to harassing and protracted proceedings like these?

On Wednesday last George Harrison, Esq., was elected Secretary to the Croydon, Brighton, and Dover Joint Station Committee, in the room of John Whitehead, Esq., whose appointment to the Secretaryship of the South-Eastern Railway Company we recently noticed.

RAILWAY SHARES.

[From the second or unpublished volume of "the Railways of Great Britain and Ireland." By Francis Whishaw, Esq., Civil Engineer, M. Inst. C.E.]

Railway shares and debentures are bought and sold on the Stock Exchange by parties employing a broker, who can generally find dealers or jobbers of shares in the principal Companies without delay; in many of the Companies, however, in which shares do not change hands so frequently, some little time will elapse before a bargain can be arranged; this is also generally the case with debentures. The price having been agreed on (we may suppose for a sale of shares), the jobber, in about a week or a fortnight, furnishes the name of a party to whom they are to be transferred, in fulfilment of some other agreement, to save the unnecessary expense of having them transferred to himself, and by him to a purchaser. The transfer is in the next place prepared according to the following form, the price at which the latter party has agreed to buy them at being inserted in it:—

"I, John Smith, of Birmingham, merchant, in consideration of the sum of four hundred and eighty-three pounds, paid to me by Thomas Brown, of Fitzroy-square, London, Esq., do hereby assign and transfer to the said Thomas Brown three shares numbered 1,017, 1,018, and 1,019, of and in the undertaking called the London and Birmingham Railway, to hold unto the said Thomas Brown, his executors, administrators and assigns (or successors and assigns), subject to the general conditions on which I held the same immediately before the execution hereof; and I, the said Thomas Brown, do hereby agree to accept and take the said shares subject to the conditions aforesaid.

"As witness our hands and seals the sixth day of November, in the year of our Lord, one thousand eight hundred and forty.

"Signed, sealed, and delivered by the above-named John Smith, in the presence of Wm. Tompson, of New-street, Birmingham. JOHN SMITH. L. S.

"Signed, sealed, and delivered by the above-named Thomas Brown, in the presence of James White, of No. 16, Russell-place." THOMAS BROWN. L. S.

Upon all transfers there is a stamp duty as follows:—

£.	s.		£.
0	10	When the purchase money is under	20
1	0		50
1	10		150
2	0		300
3	0		500
6	0		750
8	0		1,000
12	0		2,000
25	0		3,000

Now, if a party be the purchaser of five shares in the Company, the amount of duty, when conveyed in one transfer, would be 9*l.*; but the duty on the foregoing transfer is only 3*l.*, and on two shares 2*l.*; so that by separating the shares a considerable saving is effected.

The London and Birmingham Railway Company make no charge for registration, but an office fee (generally 2s. 6d. per transfer) is charged by some Companies; and this, as well as the duty, is paid by the purchaser, who is entitled to have the shares transferred to him in the least expensive way in which it can be arranged.

The transfer, then, having been duly executed by each party in presence of a witness, is laid at the office of the Company, when the old certificates and new ones are issued, stating that "Thomas Brown, of Fitzroy-square, Esq., is the proprietor of the share number (1,017) of the London and Birmingham Railway Company, subject to the rules, regulations, and orders of the said Company." These are signed by the Secretary, and stamped with the seal of the Company, and delivered to the new proprietor, with an unsealed certificate stating that these shares have been transferred from John Smith, of Birmingham, merchant, to Thomas Brown, of Fitzroy-square, London, Esq.

Instead of issuing new sealed certificates, some Companies merely endorse the old ones with the name of the new proprietor; others, again, issue one sealed certificate for the whole number of shares transferred.

In the above case, Thomas Brown would have bought five shares at 71*l.* premium, 90*l.* per share having been paid, and the entire cost will be—

Five shares, at 161*l.*	£805
Duty	5
Broker's commission	4*
Total	£814

And John Smith having sold the shares probably on some other day, and at a different price—suppose 70*l.* premium—would receive 800*l.*, less his broker's commission 4*l.*

In debenture transactions, the price having been agreed upon, the bonds are delivered to the purchaser with an assignment by the seller, according to the following form:—

"I, ——, of ——, in consideration of the sum of ——, paid to me by ——, of ——, do hereby transfer to the said ——, his executors, administrators, a certain bond numbered ——, under the common seal of the —— Railway Company, bearing date the —— day of ——, in the year of our Lord one thousand eight hundred and ——, for securing the sum of ——, with interest after the rate of — per centum per annum, and all my right, interest, and property therein.

"Dated the —— day of ——, in the year of our Lord one thousand eight hundred and ——.

"Signed, sealed, and delivered by the above-named ————————, In presence of ————————." L. S.

The duty on this assignment (1*l.* 15s.) is paid by the purchaser, who also pays the seller the interest for the previous half-yearly payment to the time of purchase.

Eastern Counties' Railway.—On Friday afternoon, the timber-built viaduct on the Eastern Counties' line, at Springfield, upon which the earth has been carried over the river Chelmer to form the embankment, fell with a tremendous crash, carrying with it five empty earth-waggons, which were upon it at the time. A number of workmen, who we are informed had been several days engaged in removing some of the piles, for the purpose of first letting down one end of it, prior to its total removal, were at work near it, and some of them actually under it, when the fall took place, but providentially they all escaped injury. Much of the timber is damaged, and one or two of the waggons are demolished; but the loss to Messrs. Sherwood, the contractors, is inconsiderable, inasmuch as the expense of taking it down have been in a great measure obviated.—*Essex Herald.*

* The broker's commission is charged as follows:—

		Per share.
When the value of the shares is under £5	..	1s. 0d.
,, ,, £5 and under 20	..	2 6
,, ,, 20 and under 50	..	5 0
		Per cent.
,, ,, 50 and upwards	..	10 0
And upon debentures	..	5 0

BIRMINGHAM AND DERBY RAILWAY COMPANY—GENERAL MEETING.

[From the *Midland Counties' Herald.*]

THE half-yearly general meeting of the proprietors of the Birmingham and Derby Junction Railway was held on Wednesday, at the Waterloo Rooms, Birmingham. HENRY SMITH, Esq., the Chairman of the Board of Directors, presided. The minutes of the last half-yearly meeting having been read, as also the Report of the Committee of Proprietors then appointed to inquire into the position and prospects of the undertaking, the common seal was affixed to the register of proprietors.

The CHAIRMAN then proceeded to read the following Report from the Directors and their Consulting Engineer, Mr. Robert Stephenson :—

REPORT.

Since the last half-yearly meeting the attention of the Directors has been devoted to the completion of the main line of railway from Birmingham to the junction at Nether Whitacre, and the erection of the station at Birmingham; to making those arrangements which appear most likely to conduce to the future improvement of the traffic: and to such alterations in the establishment as may combine economy with efficiency.

Between the 30th of June and the 31st of December, 1841, 90,640 passengers were carried on this railway without accident, making, since the opening of the railway, a total of 411,390.

The amount received for passenger traffic in the last half-year has been 24,920*l.* 3s. 2d., and for merchandise, 8,022*l.* 7s. 8d., making a total of 32,942*l.* 10s. 10d., being an increase on the previous half-year of 4,875*l.* 6s. 2d., (or 17 per cent.) and an increase on the corresponding period of 1840 of 9 per cent.

Pursuing the same mode of comparison as heretofore adopted, it appears that the increase in the local trade in the last half year, beyond that of the same period in 1840, has been 16 per cent.: this arises from the carriage of the mail and an increase of merchandise and minerals.

The addition from the latter items of merchandise and minerals amounts to 17 per cent. over the last half-year, and to this the Directors refer as exhibiting that gradual increase which they have anticipated from improved accommodation. That the passenger traffic has not increased the Directors attribute to the continued inconvenience of the circuitous route by Hampton, and to the disastrous state of the trade of this district and the country generally.

The subsidence of the embankments being now materially lessened, and the other works of the line being more settled, it is believed that the expenditure for the maintenance of way may be reduced, and contracts with that view are about to be entered into.

The accounts will show that the amount of revenue for the last half-year has been 33,095*l.* 9s. 8d., and of expenditure 15,543*l.* 8s. 6d., being at the rate of 597*l.* 16s. 6d. per week. To this must be added 3,930*l.* 13s. 9d. toll to the London and Birmingham Company, and 5,000*l.* interest on debentures, making a total of 24,474*l.* 2s. 3d. This would leave a balance of 8,621*l.* 7s. 5d. to be added to that of 4,681*l.* 2s. 5d. reported at the last half yearly meeting, and with the allowance to be made on the new shares amounts to 14,982*l.* 9s. 10d. applicable to a dividend, but the Directors recommend that the sum of 2,000*l.* be now carried to a depreciation fund, leaving the net balance of 12,982*l.* 9s. 10d.

The Directors report with much satisfaction that the line was opened to the public on Thursday last, having been previously carefully inspected by General Pasley, under the instructions of the Board of Trade. Anxious as the Directors were to effect this object at the commencement of the year, the state of the weather, and other circumstances beyond control, rendered it impossible.

Passenger stations are established at Castle Bromwich, Water Orton, and Forge Mills (for Coleshill), and one at Bromford Forge will shortly be opened. To complete the accommodations at Birmingham, strenuous exertions will be used; and in a few weeks those in the merchandise department, for the convenience of carriers, and of the Company's trade, will also be finished.

In the preparation, also, of that portion of the Birmingham and local stations devoted to the coal and lime trade, no delay will take place.

The arrangements with the Grand Junction Railway Company for making the communication with that line, at the joint expense of the two Companies, are concluded on a satisfactory basis, and in a few weeks the junction will be completed. In addition to this important facility for the transmission of the merchandise trade, a water communication from the Birmingham station with the new branch of the Warwick Canal, affording the most convenient access for coal and corn to the various wharfs in Birmingham, and other places and works in the neighbourhood, will be immediately effected.

In the attempt to establish a railway communication between Liverpool and Derby, your Directors have been met by the Directors of the Grand Junction Railway Company in a spirit of mutual accommodation, and the trade is becoming important. The opening of the Manchester and Birmingham line, in March next, will extend the same operation to the towns on that line, and a considerable accession of trade may be expected from this source. On the completion of the northern railways to Newcastle, of the Birmingaam and Gloucester to Bristol, and of that from Bristol to Exeter, the Directors expect those results the anticipation of which led to the formation of this railway.

The Directors, for their own satisfaction as well as that of the proprietors, have requested Mr. Robert Stephenson, their Consulting Engineer, to examine and Report upon the state of the works, and the amount required to complete them; and to report also upon the state and efficiency of the working establishment of the Company.

A copy of Mr. Stephenson's Report will be subjoined.

With the view of increasing the efficiency of the executive department by a different division of duties without an increase of expense, the Directors intend to appoint a Manager, whose duty it will be to superintend the whole concern; to give his particular attention to the traffic department; and to carry out generally the views of the Directors. For this office there are many applicants, and the election will shortly be made.

Having thus reported the proceedings of the last half-year, as connected with the working of the railway and its completion, the Directors will conclude with a statement of the financial position of the Company.

By the annexed half-yearly account, it will be seen that the total expenditure to Christmas last was 1,043,983*l.* 3s. 8d. To discharge the liabilities of the Company, and complete the undertaking, a power was given to the Directors by the last general meeting (in conformity with the recommendation of the Committee appointed by the proprietors) to apply to Parliament to raise an additional capital of 80,000*l.* The Directors, however, considering the importance of avoiding any further application to Parliament, recommend that power be applied for to raise an additional capital of 100,000*l.*

The Directors refer with satisfaction to the Report of Mr. Robert Stephenson, which is subjoined, for the testimony of that able and experienced Engineer as to the manner in which the works of this line have been completed, and that they have not been attended with any unnecessary expenditure. But the Directors feel it due equally to the proprietors and themselves, to give some explanation of the causes of the expected excess of 225,189*l.*, which appears in the comparative statement forming part of Mr. Stephenson's Report. That excess has been occasioned by works additional to those originally intended, and, in some cases, by under estimates in the first instance.

	£
For the proper accommopation of the coal and lime trade on the whole of the line, including the station at Kettlebrook, (for communication by canal with London,) a large additional expenditure was incurred, of not less than.....	27,000
On the best consideration which could be given to the subject, it was deemed desirable to alter the position of the new station at Birmingham, and to provide further accommodation for the merchandise and mineral traffic at that place. The alterations necessary for this purpose have involved an additional expense of at least	24,000
It has been found essential to increase the carrying establishment of this railway considerably beyond what was originally intended, in consequence of the necessity for extending the operations of the Company over a wider range than was at first contemplated. The Directors estimate the increase of expenditure on this head at about	30,000
In pursuance of measures considered by the Directors and proprietors important to the interests of the Company, the general expenses of the Company have been increased in reference to the Tamworth and Rugby, the Churnet Valley, and other lines of railway, to the extent at least of	10,000
Thus making an additional expenditure on the above items alone, of.....	91,000
Leaving—of the total excess of.....	225,000
—a balance of.....	£134,000

for under estimates of works, land, and other liabilities; and in the carrying out of so large a work, many of those liabilities occur which it is extremely difficult for any caution to foresee. This amount of under-estimates, it will be observed, will be about 13 per cent. on the other portion of the expenditure.

In order to review the operations of the Company since its commencement, the Directors call the attention of the proprietors to the following facts:—

The first Act of Parliament was obtained in May, 1836, the works were commenced in the summer of 1837, and the 38¼ miles of the railway between Derby and Hampton were in public use on the 12th day of August, 1839.

In the course of that year the proprietors decided on adopting the Tame Valley line into Birmingham, and the Act was obtained in June, 1840; the works of that line were commenced in the spring of 1841; and it was completed and opened to the public in February, 1842.

In thus approaching the conclusion of the work entrusted to them, the Directors can only express their continued confidence that the undertaking will gradually realise the expectations held out at the last meeting, in the Report of the Committee of Proprietors.

Since the last half-yearly meeting, W. Crawshay, Esq., of Caversham Park, Berkshire, has been elected a Director, in the room of Sir Oswald Mosley, Bart., retired; and W. C. Alston, Esq., of Elmdon Hall, and Mr. Samuel Smith, of Birmingham, have retired from the Board of Directors.

COPY OF MR. ROBERT STEPHENSON'S REPORT.

To the Directors of the Birmingham and Derby Junction Railway.

Gentlemen,—In compliance with your instructions, that I would examine and report upon the present state of the works of your undertaking, and estimate the probable amount required to complete them, and that I would also report on the proposed permanent establishment for working the entire line, I beg to say I have examined the whole of the works, and investigated the accounts, necessary to enable me to estimate the probable amount required for the works now in progress, or yet to be executed. I have also carefully considered the efficiency of the proposed permanent establishment for carrying on the traffic; I proceed to lay before you the results, and will first consider the probable amount required to complete the undertaking.

The remaining liabilities, under the head of works, including those yet to be executed, and including outstanding accounts for rails and other permanent way materials, the balances due to contractors, and the expense of forming communications with the other railways at Lawley-street, appear to be.....	79,800	0	0
Carrying department, including outstanding accounts and estimated additions to locomotive and carrying stock.....	4,123	0	0
Land, and damages by execution of works, side cuttings, ballast, &c., conveyancing, agents' bills, and general expenses	43,732	0	0
The amount therefore required to complete the undertaking is.....	127,655	0	0
The amount paid up to 31st December, 1841, was	1,043,983	3	8
	1,171,638	3	8
But it appears there are assets, consisting of land and materials to re-sell, and other matters, amounting to.....	15,400	0	0
Thus making the gross total	£1,156,238	3	8

In considering this expenditure, it must be borne in mind that the substitution of the Tame Valley line for the Stitchford line caused an addition of four miles in the length of the railway, and has been attended in other respects with great additional expenses, particularly at the terminus at Birmingham.

The following statement will show generally the mode in which the excess beyond the original estimates has been appropriated:—

PARLIAMENTARY ESTIMATE.

Works, original line.....	£527,290	
Ditto, additional for Tame Valley....	12,000	
		£539,290
Land, and damages by execution of works, original line	102,710	
Ditto, additional for Tame Valley....	34,000	
		136,710
For stations, carrying department, Parliamentary and general expenses, and contingencies, on both lines.....		256,000
Balance (being excess of estimate).....		225,238
Total.....		£1,156,238

ACTUAL COST, AS NOW ESTIMATED.

Works and stations, including Tame Valley line	£718,063
Land, and compensation for damages and execution of works	193,862
Carrying department, engines, carriages, trucks, &c., and parliamentary and general expenses, including excess upon stations and land for stations.....	244,813
	£1,156,238

Having thus explained the mode in which the excess of the outlay has occurred, I beg to state my opinion, after a very careful examination of the works and establishment of the Company, that it would not have been practicable to curtail the expenditure which has been made; the works are well and substantially executed, nor can I discover that there has been in any part an unnecessarily expensive style adopted in the execution of them; and however much an excess of this nature is, under any circumstances, to be regretted, I believe it will be found upon comparison, not greater than has occurred upon other railways of a similar class, while I feel justified by my experience in declaring that the general character and stability of the works on this line are inferior to none.

In considering these deviations from the original estimate, it must be borne in mind that in this, as in the majority of cases, they have not arisen so much from errors in the estimate of the engineering works, properly so called, as from additional works and expenses which were either not calculated upon in the outset, or which no foresight could have previously anticipated, or discretion during their progress controlled.

That a prudent economy has been exercised throughout the execution of the line may, I think, be fairly inferred, when it is stated that the average cost per mile, including two important and expensive terminal stations, together with the entire carrying establishment, locomotive engines, and carriages, will not exceed 24,000*l.* per mile; and out of this amount, fully 1,200*l.* per mile, beyond the original calculation, exists in the item of land and compensation for damages, exclusive of the excess arising from land for station purposes. This view will be found amply justified if the cost, per mile, of other railways be referred to, for it will be found that there is not one which has been so efficiently furnished as this will be which has not very nearly equalled, whilst others have far exceeded, the cost per mile already stated.

I have now to advert to the extent and arrangements of your establishment for working the line, which has had my careful attention throughout every department. Annexed is a detailed list of the persons employed in various capacities in the different departments; their number, I am satisfied, cannot be reduced, having due regard to efficiency and public safety. Indeed, any material increase in the

Digitized by Google

traffic will require an augmentation of the number, more especially in the goods' department.

I have the honour to be, Gentlemen,
Your obedient servant,
ROBERT STEPHENSON.

London, February 14, 1842.

The CHAIRMAN then addressed the meeting, observing that the gradual increase of the traffic must prove a source of much satisfaction to the proprietors, as it had been to the Directors, but more particularly as regarded the increase of the local trade. It was, likewise, satisfactory to them to find, that with an increase in the traffic of the line, they had not increased their expenditure; and, notwithstanding what Mr. Stephenson said in his Report, he believed that a very considerable addition to the traffic would take place without any material increase in their expenditure. With respect to the recommendation of the Directors, that a certain sum should be appropriated as a depreciation fund, the principle was one which had been generally recognised by other railways; and the Directors also felt that public confidence would be increased in any Company which acted on so sound a principle; in other words, that, while making a certain dividend, they were laying by a sum which would enable them to meet future depreciation in the value of the stock. This, however, was a matter which it was for the meeting to determine upon. The Chairman then referred to the opening of the direct line to Birmingham during the last week, which, while it afforded the means of a greatly improved communication, would also avoid the payment of the toll to the London and Birmingham Railway. The whole of this saving must not, however, be considered as profit, inasmuch as some portion of it would be required for the maintenance of the way on the new line. They also anticipated a considerable extension of their trade in merchandise and minerals, from the position of their station, and the direct communication which they would possess by canal conveyance with the different parts of Birmingham, and the neighbouring towns and works. The Chairman, in conclusion, expressed his regret that the undertaking could not be completed within the Parliamentary estimate; but he felt convinced that a minute examination of the various items of expenditure would satisfy the shareholders that no addition to the works had been undertaken, upon which a deliberate judgment had not been exercised, and that in executing such works no undue expenditure had been made.

A long discussion then ensued, in which Colonel Blane, Mr. Crawshay, Mr. Routh, and other gentlemen took part, in reference to various matters connected with the Management, and especially the conduct of certain servants of the Company at Tamworth, whose proceedings had been the subject of recent investigation, and who had been dismissed for inefficiency and other causes. After explanations had been given upon these points, the Report was unanimously adopted.

In reply to a question by Mr. Crawshay,

The CHAIRMAN said, that the Directors had received a great number of applications for the office of Manager, and he had no doubt that the Directors would be able to make a satisfactory appointment.

A resolution was then adopted authorising the Directors to apply to parliament for power to raise an additional capital of 100,000*l.*; and the opinion of the meeting being taken upon the propriety of setting apart at the present a sum for a depreciation fund, it was resolved to defer such an appropriation, and to declare a dividend of 2*l.* 5*s.* on the old shares.

A vote of thanks was then passed to the Chairman and Directors, and the meeting separated.

BRISTOL AND GLOUCESTER RAILWAY—COALPIT HEATH LINE.—The annual general meeting of the proprietors of this railway, was held at the offices of the Company, in the Exchange Building, Bristol, on Thursday last, George Jones, Esq., in the chair. The Report of the Directors was brief, and stated little, except the fact of the income being sufficient to pay a dividend of 5 per cent. to the proprietors. The Chairman stated that the work is in a state of forwardness, and he hoped that the line might be finished to Stonehouse (seven miles from Gloucester) in the year 1843.— *Bristol Journal.*

Committee on Petition fixed for Wednesday, 23rd February.

GREAT NORTH OF ENGLAND RAILWAY.

Feb. 11.—Petition for Bill [presented 4th February] referred to the Select Committee on Petitions for Private Bills.

Feb. 16.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Bowes and Lord Harry Vane.

LONDON AND GREENWICH RAILWAY (No. 1).

Feb. 11.—Petition for Bill [presented 4th February] referred to the Select Committee on Petitions for Private Bills.

Feb. 16.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Barnard and Captain Dundas.

MIDLAND COUNTIES' RAILWAY.

Feb. 11.—Petition for Bill [presented 4th February] referred to the Select Committee on Petitions for Private Bills.

Feb. 16.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Packe, Mr. William Evans, and Mr. Halford.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

Feb. 11.—Petition for Bill; to lie on the table.

Petition for Bill referred to the Select Committee on Petitions for Private Bills.

Committee on Petition fixed for Tuesday, 22nd February.

SOUTH-EASTERN RAILWAY.

Feb. 11.—Petition for Bill [presented 9th February] referred to the Select Committee on Petitions for Private Bills.

Committee on Petition fixed for Monday, 21st February.

STANHOPE AND TYNE RAILWAY.

Feb. 11.—Petition for Bill [presented 7th February] referred to the Select Committee on Petitions for Private Bills.

MIDLAND COUNTIES' AND BIRMINGHAM AND DERBY RAILWAYS.

To the Editor of the Railway Times.

SIR,—I see an advertisement of the Birmingham and Derby Railway in the *Railway Times*, stating "*that the only through trains from London to Darlington which passengers can reach Newcastle in one day, and that passengers can be booked through to the north only by the train of the Birmingham and Derby Company.*" Can you, or any Midland Counties' shareholder, solve the mystery *why* there is no *through* train from London to the north by the Midland Counties'? A reason suggests itself to my mind, which it would be unjust to mention on mere supposition, but I earnestly hope the question may be asked at the next meeting. The shareholders need not to be informed that numbers of passengers prefer the Grand Junction, where the carriages, I believe, are not changed, rather than have to book again at Rugby, or be taken round by Birmingham, thereby lengthening the journey 14 miles.

I am, Sir, yours, &c.,
AN OLD SUBSCRIBER TO THE
"RAILWAY TIMES."

RAILWAY AND OTHER ACCIDENTS.

To the Editor of the Railway Times.

SIR,—I cannot help adding two to my list of (*not railway*) accidents. The *Bristol Gazette* states, that "after the *St. George*, from hence to Calcutta, had left the Cape, the cook, in a fit of insanity, jumped overboard, and in the attempt to save him, *six* others of the crew, including Jones, the second mate, were drowned." The other is a case of some houses falling near Drury-lane, London, by which *three* men lost their lives (one leaving a large family of orphans). John Bull does not, however, take any strong measures for preventing such accidents, by enforcing the use of life preservers at sea, and by having Government officers to prohibit the use of all houses that are not in a safe state, but he is ever on the watch for *railway accidents*, multiplying every *one* by *ten*, and converting a bruise into a fractured skull.

Your obedient servant,
S. R.

14th February, 1842.

LONDON AND BIRMINGHAM AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—The following is a return of the traffic on the London and Birmingham Railway, and the Great Western Railway, in the height of summer and the depth of winter:—

Date.	Birmingham	Gt. Western.	Excess of the Birmingham
SUMMER TRAFFIC. *Week ending—*	£	£	£
July 4, 1841.....	16,773	11,902	4,871
11, ...	17,435	12,827	4,608
18, ...	18,820	13,842	4,996
25, ...	19,170	14,197	4,973
WINTER TRAFFIC. *Week ending—*			
Jan. 9, 1842.....	11,988	8,933	2,055
16, ...	12,407	9,319	3,088
23, ...	13,735	9,846	3,889
30, ...	12,988	10,475	2,513

It must be remembered, that at the dates of these returns the Birmingham line had been opened through between two and three years, and the Great Western just opened throughout.

I am, Sir, yours, &c.,
JUNIUS.

RAILWAY TRAFFIC AND CALLS.

A CIRCULAR issued by Mr. Earle Langton, of Manchester, gives the following comparison of traffic and calls on all the principal lines of railway in Great Britain, during the years 1840 and 1841:—

TRAFFIC.

	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
1841..	£657097..	£985367..	£1176816..	£945235..	£3714515
1810..	405619..	593064..	821749..	660871..	2481303
Incr...	£251478..	£342303..	£355067..	£284364..	£1233212

CALLS.

	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
1841..	£1329837..	£820599..	£956857..	£929448..	£4036741
1840..	2166090..	1638940..	1617970..	2068390..	7491390
Dec. in 1841..	£386253..	£818341..	£661113..	£1138942..	£3454649

The increase of traffic for 1841 is accounted for by the additional number of lines completed and in operation. The same cause will account for the decrease in calls.

MANCHESTER AND LEEDS RAILWAY.

To the Directors of the Manchester and Leeds Railway Company.

GENTLEMEN,—As a large holder in the Leeds line, let me entreat of you to avoid in your next Report the error committed by the Liverpool Company in allowing the question of "a junction line" to engross nearly the whole of the Report. Let that much-vexed question rest for the present, and let your Report contain the fullest information on other equally important points.

1st. Let the accounts be given in the mode followed by the London and Birmingham Company, *with equally minute details;* you will by this means prove that the 6 per cent. dividend is a *legitimate* one—*which I believe it to be*—but which has been doubted by some.

2nd. State candidly whether it is intended to make any further call or calls on the quarter shares before the five years expire, from October, 1841. Also what calls will be made (if any) during the next twelve months on the 100*l.* and 50*l.* shares.

3rd. State the present condition of the works on the Oldham branch, when it will be opened, and at what cost; also, when the Halifax branch will be let, and the probable cost.

4th. State whether it is intended to form a branch to Huddersfield or Bradford, or to assist those towns in forming branches.

5th. State the opinion of your Board regarding the proposed branch from Hebden-bridge *via* Bradford to Leeds, and the distance by that route from Manchester to Leeds. Also, whether you consider the formation of that branch would be favourable to our interests, or the reverse.

6th. State whether you consider it likely that the Sheffield line will be completed, and *to what extent* it would be likely, if completed, to compete with us. Our Liverpool neighbours are anxiously crying up the Sheffield line, *in order to annoy us.* Let us know the real state of the case; no good can result from shutting our eyes to the danger (if danger there be) of losing part of our traffic to Hull by the opening of the Sheffield line.

7th. State whether it is intended, on the alteration of the tax on railway passengers, to carry third-class passengers *by all the trains* as was formerly the case; and whether you expect doing so would increase our receipts from passengers to any great extent.

8th. State what will be the annual charge per mile on our line for "maintenance of way," and how many miles are still upheld by the contractors, and when the whole distance will fall to be upheld by the Company.

Hoping you will give us all the information in your power on the above points, irrespective of the consequences as regards the share market.

I am, Sir, respectfully,

A LEEDS AND MANCHESTER HOLDER.

February 15, 1842.

PROPOSED REDCAR AND MIDDLESBRO' RAILWAY.

ON Monday last, a very respectable and numerously attended meeting was held at the Lobster Inn, Coatham, to take into further consideration the forming of a railway between Redcar and Middlesbro'.

The Rev. J. NEWSAM being called to the chair, he rose and said, he hoped to be able to state several interesting particulars to that meeting. Since they had met together last, letters had been received from several gentlemen, through whose lands the railway would necessarily pass, and none whatever had offered any opposition to the project; but, on the contrary, several had expressed themselves favourable to it. The solicitor had had an interview with the Directors of the Stockton and Darlington, and the Great North of England Railways, also with other gentlemen, the result of which he (the Solicitor) would explain to the meeting. He felt confident the Provisional Committee had done everything in their power to carry out the object of the resolutions passed at a former meeting, and he had no doubt but every one would be satisfied. After a few more remarks from the Chairman,

Mr. NEWSAM, of Yarm, Solicitor, observed, since their last meeting, on the 18th of January, he had used every exertion to comply with the instructions he had received. He had much pleasure in stating, that everywhere he had heard favourable opinions expressed relative to the projected railway. He had had interviews with the Directors of the Great North of England Railway, and had solicited them to subscribe towards defraying the expenses of a survey of the line; but, though they expressed much interest in the undertaking, they did not feel themselves justified in giving an answer in the affirmative, as in one or two instances of their subscribing the shareholders had found fault. However, the subject would be discussed at a future meeting of the last mentioned Company, and an answer would be received in a few days. He had also waited upon the Directors of the Stockton and Darlington Railway, and two of the Middlesbro' owners. They (the Middlesbro' owners) said they could not have consented to anything tending to take the trade from Middlesbro' to another place, and they would have objected to anything detrimental to the interests of the people of Middlesbro'; but as these were not the objects of the projectors of the Redcar line, they (the Middlesbro' owners) viewed the matter in a favourable light. He had been told that the people of Middlesbro' were about to offer a decided opposition to the intended railway. Hand-bills had been circulated, calling a meeting of the inhabitants of that place, on Saturday last, therefore he and his brother had considered it advisable to attend that meeting. They had done so, and many proper questions had been asked them of their intentions, to which satisfactory answers were returned. The gentlemen at that meeting inquired if it was intended to have a harbour at Redcar, or to export coals, or import any other merchandize there? The answer given was of course in the negative. He (Mr. N.) did not doubt, from what had passed, but that the undertaking would receive the cordial support of the inhabitants of Middlesbro', as it was well calculated to promote their interests and improve their town.

Mr. MICHAEL GRAHAM, of Middlesbro', said that the people of that place had kept a look out for themselves, and no one could blame them for being watchful over their own interest; but, as the railway was not likely to interfere with those interests, he did not see why the project should not be supported by them.

Several resolutions were then passed relative to raising subscriptions for defraying the expenses of surveying the line, also for obtaining way-leave through the estates of the several landowners, &c.

The CHAIRMAN congratulated the meeting on the progress already made. He had walked over the line with the Engineer of the Great North of England Railway, and that gentleman remarked that he had no where seen so even a line. The project was becoming more and more popular, and gaining additional strength every day. He recommended unanimity and an open, straightforward mode of proceeding, as the only means of ensuring ultimate success.

The Chairman having left the chair, a vote of thanks was unanimously passed for his able conduct.—*Northern Times. Feb.* 12.

RAILWAY WHEELS.

Mr. PHIPPS, of Deptford Green, engineer, has obtained a patent for improvements in the construction of railway wheels, the object of which is to supersede the process of "shrinking on," which he proposes to do in the following manner:—

A bar of wrought iron is prepared, by rolling in the usual manner, with an outer flange on one edge, and an inner flange in the centre of the bar; this bar is bent into a circular form, and then welded. Sixteen wrought iron spokes are prepared, with an extended end or palm, which may be drawn out by hammering, or welded on; the inner end of each spoke is jagged or perforated, in order that the cast metal may embrace and hold it fast. Eight of these spokes are then laid in a mould, and one portion of the boss or nave of iron cast upon their inner ends; the other eight spokes have the corresponding portion of the boss or nave cast upon them. The two parts of the nave are then brought together, and secured by screw bolts, and the enlarged ends or palms of the spokes strongly secured to the alternate sides of the inner flange by screw bolts, or by rivetting. Another method consists in placing all the spokes in their respective positions around the wheel, and casting the boss or nave in one piece, the palms of the spokes being afterwards rivetted to the inner flange.

Another patent has been granted to William Losh, Esq., of Little Benton, Northumberland, for improvements of railway wheels, by the application of wood, felt, rope, or other such like flexible or yielding material, between the inner tire and the ring or felloe, or bearings produced by the prolongations of the bars of iron employed to make the wrought iron spokes, with or without the intervention of a ring of malleable iron between such bearings and such flexible or yielding material; by which means wrought iron railway wheels will be less liable to be prejudicially acted on by the vibration to which such wheels are liable when in use, than if they were composed of iron alone. The wheels to which these improvements are applicable, are those included in the patentee's former patent of August, 1830.—*Civil Engineer and Architect's Journal.*

NEWCASTLE AND CARLISLE RAILWAY.—Since the alteration made in the trains on New Year's Day, great inconvenience has been experienced by persons going from Carlisle to Newcastle. Previous to this time there were five passenger trains daily—now there are only four, with the exception of a short train from Hexham to Newcastle, which has been put on for the particular accommodation of a few tradesmen. There is now no train from from Carlisle to Newcastle from ten o'clock in the forenoon until half-past two o'clock, which is found to be a great inconvenience, as the latter train does not reach Newcastle until about seven o'clock at night. We would suggest to the proprietors the necessity of changing the time from half-past two o'clock to one o'clock, so that the passengers leaving Carlisle at that time may reach Newcastle about five o'clock, as they formerly did. The fares ought either to be reduced, or third-class carriages put on, as is the case on many other railways.—*Carlisle Patriot.*

It is worthy of remark that her Majesty never travels by railway. Prince Albert almost invariably accompanies the Queen; but patronises the Great Western generally when obliged to come up from Windsor alone. The Prince, however, has been known to say, "not quite so fast next time, Mr. Conductor, if you please."—*Morning Post.*

ACCIDENT ON THE EDINBURGH AND DALKEITH RAILWAY.—On Monday forenoon, one of the inclined-plane ropes of the Dalkeith Railway broke when hauling up a train of loaded waggons; but the self-acting stopper used on this line prevented any bad consequences except the delay of the twelve o'clock passenger train for fifteen minutes, while the waggons were being taken to the bottom of the plane, in order to be drawn up on the opposite side. This contrivance has been used for many years on this railway, and in every instance has proved thoroughly effectual.—*Edinburgh Evening Courant*, February 3rd.

BOLTON AND PRESTON RAILWAY.—At the half-yearly meeting of the proprietors of the above railway, it appeared by the Report that the passenger traffic had gone on satisfactorily during the past half-year, the total number carried having been 47,157, of whom 41,455 were railway passengers, and the amount received for passengers and parcels was 3,632*l.* 17s. 7d. The coal business was gradually getting into existence, for during the last month upwards of 1,000 tons had been sent down to Bolton. Only about two miles of the line remained for completion to the junction with the North Union Railway at Euxton. The receipts had been 264,084*l.* 15s 8d.; and the disbursements 262,227*l.* 18s. 10d., leaving a balance in the banker's hands of 1,156*l.* 16s. 10d.

A BILL FOR THE BETTER REGULATION OF RAILWAYS.

NOTE.—The words printed in SMALL CAPITALS are proposed to be inserted in the Committee.

1. *Preamble.*] Whereas by an Act passed in the 3rd and 4th years of the reign of her present Majesty, intituled, "An Act for Regulating Railways," provision was made for the supervision of railways;

And whereas it is expedient for the safety of the public to make further provision for that purpose;

1. *Commencement of Act.*] Be it enacted, by the Queen's most excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that this Act shall come into operation on the PASSING THEREOF.

2. *Construction.*] And be it enacted, that the provisions of the said recited Act and of this Act shall be construed together as one Act, except so far as the provisions of the said recited Act are hereby repealed, or shall be inconsistent with the provisions of this Act.

3. *Notice before opening railway repealed, 3 & 4 Vict. c. 97, s. 2.*] And whereas by the said recited Act it is enacted, that after two months from the passing of the said recited Act, no railway, or portion of any railway, shall be opened for the public conveyance of passengers or goods until one calendar month after notice in writing of the intention of opening the same shall have been given by the Company to whom such railway shall belong to the Lords of the Committee of her Majesty's Privy Council appointed for trade and foreign plantations. And whereas by the said recited Act it is also enacted, that if any railway, or portion of any railway, shall be opened without due notice as aforesaid, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of 20*l.* for every day during which the same shall continue open, until the expiration of one calendar month after the Company shall have given the like notice as is hereinbefore required before the opening of the railway; and any such penalty may be recovered in any of her Majesty's Courts of Record; be it enacted, that the said recited provisions of the said Act shall be and they are hereby repealed.

4. *Notice of intended opening and of completion.*] And be it enacted, that no railway, or portion of any railway, shall be opened for the public conveyance of passengers until ONE CALENDAR MONTH after notice in writing of the intention of opening the same shall have been given by the Company to whom such railway shall belong, to the Lords of the Committee of her Majesty's Privy Council appointed for trade and foreign plantations, and until TEN days after notice in writing shall have been given by the said Company to the Lords of the said Committee, of the time when the said railway, or portion of railway, will be, in their opinion, sufficiently completed for the safe conveyance of passengers, and ready for inspection.

5. *If railway opened without notice Company to forfeit 20l.*] And be it enacted, that if any railway, or portion of any railway, shall be opened without such notice as aforesaid, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of TWENTY pounds for every day during which the same shall continue open, until the said notices shall have been duly given and shall have expired; and every such penalty may be recovered in any of her Majesty's Courts of Record.

6. *Board of Trade empowered to postpone opening.*] And be it enacted, that if the officer or officers appointed by the Lords of the said Committee to inspect any such railway, or portion of railway, shall, after inspection thereof, report in writing to the Lords of the said Committee that, in his or their opinion, the opening of the same would be attended with danger to the public using the same, together with the grounds of such opinion, it shall be lawful for the Lords of the said Committee, and so from time to time, as often as such officers shall after further inspection thereof so report, to order and direct the Company to whom such railway shall belong, to postpone such opening for any period not exceeding ONE CALENDAR MONTH, at any one time, until it shall appear to the Lords of the said Committee that such opening may take place without danger to the public; and if any such railway, or any portion thereof, shall be opened contrary to any such order and direction of the Lords of the said Committee, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of TWENTY pounds for every day during which the same shall continue open contrary to such order and direction; and any such penalty may be recovered in any of her Majesty's Courts of Record. Provided always, that no such order as aforesaid shall be binding upon any Railway Company, unless therewith shall be delivered to the said Company a copy of the Report of the officer or officers on which such order shall be founded.

7. *Notice of accidents to be given to the Board of Trade.*] And be it enacted, that every Railway Company shall, within TWENTY-FOUR hours after the occurrence upon the railway belonging to such Company of any accident, attended with personal injury to the public using the same, give notice thereof to the Lords of the said Committee, in such form and manner as the Lords of the said Committee shall from time to time direct; and if such notice shall not be given as aforesaid, every such Company shall forfeit to her Majesty the sum of *five* pounds for every day during which such Company shall neglect to give the same; and every such penalty may be recovered in any of her Majesty's Courts of Record.

8. *Board of Trade empowered to direct returns.*] And be it enacted, that the Lords of the said Committee may order and direct any Railway Company to make up and deliver to them such returns of accidents occurring in the course of the public traffic upon the railway belonging to such Company, and also such returns of the arrangements for conducting the public traffic thereon, as the Lords of the said Committee shall deem necessary for their information, with a view to the public safety; and if any returns herein mentioned shall not be so delivered within FOURTEEN days after the same shall have been required, every such Company shall forfeit to her Majesty the sum of TWENTY pounds for every day during which the said Company shall neglect to deliver the same; and every such penalty may be recovered in any of her Majesty's Courts of Record.

9. *Gates at level crossings to be kept closed across the railway.*] And whereas by an Act passed in the 2nd and 3rd year of her present Majesty, and intituled, "An Act to amend an Act of the 5th and 6th years of his late Majesty King William IV., relating to highways," it was enacted, that whenever a railway crosses or shall hereafter cross any turnpike-road, or any other highway or statute-labour road for carts or carriages in Great Britain, the proprietors or Directors of the said railway shall make and maintain good and sufficient gates across each end of such turnpike or other road at each end of the said crossings; and shall employ good and proper persons to open and shut such gates, so that the persons, carts, or carriages passing along such turnpike or other road, shall not be exposed to any danger or damage by the passing of any carriages or engines along the said railway: and whereas by the Acts relating to certain railways, it is provided that such gates shall be kept constantly closed across the railway, except during the time when carriages or engines passing along the railway shall have to cross such turnpike or other road: And whereas experience has shown that it is more conductive to safety that such gates should be kept closed across the turnpike or other road instead of across the railway; be it therefore enacted, that notwithstanding any thing to the contrary contained in any Act of Parliament heretofore passed, such gates shall be kept constantly closed across each end of such turnpike or other roads, except during the time when persons, carts or carriages passing along such turnpike or other road shall have to cross such railway; and such gates shall be of such dimensions and so constructed as when closed across the ends of such turnpike or other roads to fence in the railway, and prevent cattle, horses or persons passing along the road from entering upon the railway while the gates are closed: provided always, that it shall be lawful for the Lords of the said Committee in any case in which they are satisfied that it will be more conducive for the public safety that the gates at any level crossing over any such turnpike or other road should be kept closed across the railway, to order and direct that such gates shall be kept so so closed instead of across the road; and such order of the Lords of the said Committee shall be a sufficient authority for the Directors or proprietors of any Railway Company to whom such order is addressed for keeping such gates closed in the manner directed by the Lords of the said Committee.

10. *Gates opening upon the railways to be locked by owners or occupiers of adjoining land.*] And be it enacted, that the owners or occupiers of lands adjoining any railway, for whose use gates have been or shall hereafter be set up at the side of the railway shall, and they are hereby respectively required to keep such gates locked at all times, unless when they the said owners or occupiers, or their servants, and the carriages, cattle or other animals or things under their care, or which they may accompany on passing through the same; and any owner or occupier neglecting so to do shall forfeit and pay any sum not exceeding FORTY shillings, to be recovered before any TWO or more Justices of the Peace having jurisdiction within the place where such offence shall have been committed.

11. *Disputes between connecting railways to be referred to arbitration.*] And be it enacted, that where two or more Railway Companies whose railways have a common terminus, or a portion of the same line of rails in common, or which form separate portions of one continued line of railway communication, shall not be able to agree upon arrangements for conducting their joint traffic with safety and convenience to the public, it shall be lawful for the Lords of the said Committee to call upon such Railway Companies to refer the questions in dispute between them, so far as the same relate to such arrangements as are necessary for the safety or convenience of the public, to arbitration.

12. *Powers of making branch communication with railways, and of entering upon them with locomotive engines to be regulated by the Board of Trade.*] And whereas powers of laying down branch lines, opening into the ledges or flanches of main lines of railway, and of entering upon and passing along such main lines with carriages and waggons drawn by locomotive engines, have been given by various Acts relative to railways, to the owners or occupiers of lands adjoining the railway, and to other persons with their consent: and whereas experience has shown that the exercise of such powers would in many cases be attended with danger to the public using such railway; be it therefore enacted, that if in any case it shall appear to the Lords of the said Committee that such powers as aforesaid cannot be exercised without seriously endangering the public safety, it shall be lawful for the Lords of the said Committee to order and direct that such powers shall not be exercised, or that such powers shall only be exercised subject to such conditions as the Lords of the said Committee shall direct; and that any dispute that may arise between the Railway Company and the parties exercising such powers, with regard to any compensation claimed from the Railway Company for the loss of such powers, shall be referred to arbitration.

13. *Regulation of dangerous level crossings.*] And be it enacted, that where any railway crosses, or shall hereafter cross, upon the level any public or private railway or tramroad, or any turnpike-road or public highway, or any private road in Great Britain, and it shall appear to the Lords of the said Committee that such level crossing seriously endangers the public safety, it shall be lawful for the

Digitized by Google

Lords of the said Committee to call upon the proprietor or proprietors of the said railway or railways, and the Trustees, Commissioners, or proprietors of such turnpike or other roads, to come to an agreement for removing the danger, either by building a bridge, or by such other arrangement as the nature of the case shall require; and in case the parties shall be unable to come to an agreement, then it shall be lawful for the Lords of the said Committee to order the parties to refer the differences between them to arbitration.

14. *Arbitrators to be appointed within fourteen days.*] And for the purpose of providing as to the determination of any dispute directed by this Act to be settled by arbitration; be it enacted, that within FOURTEEN days after the order from the Lords of the said Committee shall have been received, directing the parties to refer the disputes between them to arbitration, each party shall, in writing, nominate and appoint an arbitrator, to whom such dispute shall be referred; and after such appointments shall have been made, neither party shall have power to revoke any such appointment without the consent of the other; and if, for the space of FOURTEEN days after any such order as aforesaid shall have been received, either party fail to appoint such arbitrator, then, upon such failure, the arbitrator appointed by the other party may proceed to hear and determine the matters in dispute, and in such case the award or determination of such single arbitrator shall be final; and in case both parties shall fail to appoint arbitrators within FOURTEEN days as aforesaid, then it shall be lawful for the Board of Trade to appoint TWO arbitrators.

15. *Vacancy of Arbitrator to be supplied.*] And be it enacted, that if, before the matters so referred shall be determined, any arbitrator appointed by either party die, or become incapable, or refuse or neglect to act as arbitrator, the party by whom such arbitrator was appointed may nominate and appoint, in writing, some other person to act in his place; and if, for the space of SEVEN days after notice in writing from the other party for that purpose, he fail to do so, the remaining or other arbitrator may proceed *ex parte*; and every arbitrator so to be substituted as aforesaid, shall have the same powers and authorities as were vested in the former arbitrator at the time of such death, refusal, or disability, as aforesaid.

16. *Appointment of Umpire.*] And be it enacted, that if, within FOURTEEN days after their appointment, such arbitrators cannot determine the matters referred to them, they shall nominate and appoint an umpire, or if they cannot agree on an umpire, then, at the end of SEVEN days more, the Lords of the said Committee shall appoint an umpire, and the decision of such umpire, in the matter so referred, shall be final.

17. *Power of Arbitrators to call for books, &c.*] And be it enacted, that such arbitrators or umpire may call for the production of any documents in the possession or power of either party which they or he may think necessary for determining the question in dispute, and may examine the parties or their witnesses on oath, and administer the oaths necessary for that purpose.

18. *Power for Railway Companies to enter upon adjoining lands to repair accidents.*] And whereas it is essential for the public safety, and also for the proper maintenance of railways in a state of efficiency for the public service, that Railway Companies should have the power, in case of accidents or slips happening to their cuttings and embankments or other works, to enter upon the lands adjoining their respective railways for the purpose of repairing or renewing the same, and to do such works as may be necessary for the purpose; be it therefore enacted, that it shall be lawful for any Railway Company, in case of any accident or slip happening to any cutting, embankment, or other work belonging to them, to enter upon any lands adjoining their railway, for the purpose of repairing such accident, and to do such works as may be necessary for the purpose: provided always, that such works shall be as little injurious to the said adjoining lands as the nature of the accident will admit of, and shall be executed with all possible dispatch; and full compensation shall be made to the owners and occupiers of such lands for the loss or injury or inconvenience sustained by them respectively by reason of such works, the amount of which compensation, in case of any dispute about the same, shall be settled by any TWO justices in petty sessions assembled for the district in which such lands are situate.

19. *Compulsory powers of taking land for the purposes of railways extended, where thought necessary for safety by the Board of Trade.*] And whereas by various Acts relating to railways compulsory powers are given to Railway Companies of purchasing and taking lands for the purposes of such Acts, and it is provided that such compulsory powers shall not be exercised after the expiration of three years, or some other limited period from the passing of the said Acts: and whereas it is sometimes found necessary for the public safety, that additional land should be taken, after the expiration of such periods, for the purpose of giving increased width to the embankments and inclination to the slopes of railways; be it therefore enacted, that in every case in which the Lords of the said Committee shall certify that additional land is required by any Railway Company for such purposes as aforesaid, the compulsory powers of purchasing and taking land contained in the Act or Acts of such Railway Company, together with all the clauses and provisions relative thereto, shall, as regards such portion or portions of land as are mentioned in the certificate of the Lords of the said Committee, revive and be in full force for such further period as shall be mentioned in such certificate.

20. *Punishment of persons employed on railways guilty of misconduct.*] And whereas by the said recited Act for regulating railways provision is made for the punishment of servants of Railway Companies guilty of misconduct, and it is expedient to extend such provision; be it enacted, that it shall be lawful for any officer or agent of any Railway Company, or for any special constable duly appointed, and all such persons as they may call to their assistance, to seize and detain any engine-driver, waggon-driver, guard, porter, or other servant employed by any other Railway Company, or any other Company or person, in conducting traffic upon the said railway, or in repairing and maintaining the works of the said railway, who shall be found drunk while so employed upon the railway belonging to the said first-mentioned Company, who shall commit any offence against any of the bye-laws, rules or regulations of the said Company, or who shall wilfully, maliciously or negligently do or omit to do any act whereby the life or limb of any person passing along or being upon such railway or the works thereof respectively shall be or might be injured or endangered, or whereby the passage of any engines, carriages, or trains shall be or might be obstructed or impeded, and to convey such engine-driver, guard, porter or other servant so offending, or any person counselling, aiding or assisting in such offence, with all convenient dispatch before some justice of the peace for the place within which such offence shall be committed, without any other warrant or authority than this Act; and such justice shall be entitled to deal with such offender in like manner as justices are enabled by the said recited Act to deal with persons guilty of similar offences.

21. *Sheriffs to have jurisdiction in Scotland.*] And be it enacted, that in all cases in which by the present or the said recited Act for regulating railways, it is provided that offenders shall be taken before one or more justices of the peace for the place within which the offence was committed, it shall be lawful, in case the offence is committed in Scotland, to take such offenders before the Sheriff of the county or other magistrate acting for the district within which such offence shall be committed, without any warrant or authority other than this Act; and such Sheriff or magistrate is hereby empowered and required to proceed in all respects as if the words "Sheriff" or "magistrate" had been substituted for the word "justice" in the said Act.

22. *Penalty on not obeying orders of the Board of Trade.*] And be it enacted, that in all cases in which it is provided by this Act that it shall be lawful for the Lords of the said Committee to issue any order or direction with a view to providing more effectually for the public safety, such order or direction shall be obeyed by the Railway Companies, or other parties to whom it is addressed, under pain of a penalty of pounds for every day during which any such Railway Company or other party shall wilfully refuse or neglect to carry such order or direction into effect; which penalty shall be forfeited to her Majesty, and shall be recoverable in any of her Majesty's Courts of Record.

23. *Communications to the Board of Trade to be left at their office. Communications by the Board how to be authenticated. What shall be deemed good service on Railway Company.*] And be it enacted, that all notices, returns and other documents required by this Act or by the said recited Act, to be given to or laid before the Lords of the said Committee, shall be delivered at or sent by the post to the office of the Lords of the said Committee; and all notices, requisitions, orders, regulations, appointments, certificates, certified copies and other documents in writing, signed by one of the Secretaries of the said Committee, or by some officer appointed for that purpose by the Lords of the said Committee, and purporting to be made by the Lords of the said Committee, shall, for the purposes of this and of the said recited Act, be deemed to have been made by the Lords of the said Committee; and that in the absence of evidence to the contrary, without proof of the authority of the person signing the same, or of the signature thereto, and service of the same, at one of the principal offices of any Railway Company, upon any one or more of the Directors of such Company, or on the Secretary or Clerk of the said Company, or by leaving the same with the clerk or officer at one of the stations belonging to the said Company, shall be deemed good service upon the said Company.

24. *Meaning of the words "Railway" and "Company."*] And be it enacted, that whenever the word "railway" is used in this or in the said recited Act, it shall be construed to apply to all railways used or intended to be used for the conveyance of passengers in or upon carriages drawn or impelled by the power of steam, or by any other mechanical power; and whenever the word "Company" is used in this or in the said recited Act, it shall be construed to extend to and include the proprietors for the time being of any such railway, whether a body corporate or individuals, and their lessees, executors, administrators and assigns, unless the subject or context be repugnant to such construction.

25. *Act may be repealed this session.*] And be it enacted, that this Act may be amended or repealed by any Act to be passed in the present session of Parliament.

THAMES HAVEN DOCK AND RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of the Proprietors will be held on Wednesday, the 23rd instant, at the Offices of the Company, at Twelve for One precisely, to receive the Report of the affairs and prospects of the Company, the forfeiture of certain shares upon which the calls have not been paid, to take into consideration the propriety of paying 5 per cent. interest per annum on all future calls, and advances on calls as they are paid on, until six months after the works are completed, and for such other general purposes as may seem beneficial to the interests of the Company.

By order of the Court of Directors,
HENRY AMSINCK, Secretary.

Three Directors go out by rotation, but are eligible for re-election.

Office, No. 2, St. Mildred's-court, Poultry.

N.B. A copy of the Report, together with the financial statement of the Company, may be had at the Offices on Tuesday Evening.

PARTNERSHIP.—The Partners of an extensive Establishment in the Practical Engineer and Iron-Founding Business wish to receive, as an additional Partner, a Gentleman of small capital, and of respectability and business habits, with a foreign connection, or acquainted on the Continent, who could conduct the mercantile department of the business. Further information can be obtained from Mr. John Hunter, W. S., 13, Hill-street, Edinburgh, who will arrange an interview between the principals.

LONDON, WESTMINSTER, AND METROPOLITAN WATER COMPANY: to be empowered by Act of Parliament.

Capital £400,000, in shares of £50 each. Deposit (in order to comply with the Standing Orders of Parliament) £5 per share.

DIRECTORS.

Major Adair	James Hunt, Esq.
George Ashlin, Esq.	William Robinson, Esq.
Hugh Biers, Esq.	Richard Till, Esq.
John P. Clarke, Esq.	Joseph Workman, Esq.
John Dixon, Esq.	Matthew Wyatt, Esq.
John Howell, Esq.	

(With power to add to their number.)

Bankers—Messrs. Glyn, Hallifax, Mills, and Co.; Sir Claude Scott, Bart., and Co., 1, Cavendish-square.

Engineer—Robert Stephenson, Esq.

Solicitors—Messrs. Swain, Stevens, and Co., 10, Whitehall, and 6, Frederick-place, Old Jewry.

Hon. Secretary—Gustavus William Blanch, Esq.

The object of the promoters of this undertaking is to supply the inhabitants of the metropolis and its vicinity with that most important desideratum—a plentiful supply of water of the purest description.

The plan proposed for attaining this important object is that which was submitted by Mr. Paten to the consideration of the Committee of the House of Lords in the session of 1840. Its practicability has been fully tested by extensive experiments made by Mr. Robert Stephenson, which most satisfactorily set at rest all doubts of the eligibility of the project; it is, therefore, the intention of the promoters to apply to Parliament this session for the necessary powers to enable them to carry into effect an object so important to the public welfare.

The proportion of the western metropolitan district, which it is intended first to supply, comprises 70,000 houses, and it is estimated that within the first two years the occupiers of 25,000 houses will avail themselves of the advantages offered by this undertaking. Taking this very limited number of houses at an average low rental of £2 per house, the income derivable will be £50,000, and after deducting the annual expense attendant on such a supply (which has been carefully estimated at £14,000) will leave an available annual income of £36,000.

The requisite capital, according to the careful estimate of Mr. Stephenson, and which he is satisfied, from his intimate knowledge of the ground, will not be exceeded, is £230,000, and the necessary cost of laying down the mains and services to supply the 25,000 houses before-named is £160,000, making a total outlay of £390,000. Assuming, therefore, the capital to be expended at £400,000, the return to the proprietors will be an interest of £9 per cent. on the capital; and having defrayed the expense of bringing the water to London, every additional supply, both to houses along the line and in the metropolis beyond that estimated above, will add to the interest of the invested capital.

The Vestrymen, Guardians, and Directors of the parishes of the borough of Marylebone, and also those of the parish of St. Pancras, have earnestly recommended the inhabitants "to promote, by every means in their power, this laudable undertaking, so pregnant with the highest advantages to the community."

Applications for shares may be made to Messrs. Swain, Stevens, and Co., 10, Whitehall, and 6, Frederick's-place, Old Jewry, London, where, as well as at the Company's temporary offices, 7, St. Martin's-place, Trafalgar-square, copies of Mr. Stephenson's Reports may be had.

AUSTRALASIAN, COLONIAL, AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY.

Capital £200.000, In 2,000 Shares.

DIRECTORS.

Edward Barnard, Esq., F.R.S.
Henry Buckle, Esq.
John H. Capper, Esq.
Gideon Colquhoun, jun., Esq.
John Edwardes Lyall, Esq.
Charles E. Mangles, Esq.
J. Barrow Montefiore, Esq.
John H. Ravenshaw, Esq.
Sir James Stirling, Captain R. N.
William Walker, Esq.

ASSURANCES may be effected with this Company at unusually favourable rates, affording every variety of accommodation to the assured; participation in profits, ascending and descending scales of premium, permission to retain one-third of the premium, which is charged as a debt against the policy, tables for the assurance of a sum payable, in the event of death, to the executors of the assured, or to himself, upon the attainment of the ages of 45, 50, or 60.

TO EMIGRANTS TO THE AUSTRALASIAN COLONIES in particular, this Company offers the advantages of permission to proceed to, to reside in, and to return from those colonies without extra premium; and to pay their premiums and obtain a settlement of their claims in those colonies.

ANNUITIES.—The plan which has been adopted by this Company of investing a portion of its funds in the Australasian Colonies, at a rate of interest much higher than can be obtained with security in England, enables it to offer more advantageous terms to Annuitants than can be offered with safety by other Companies which invest their funds in English securities.

TABLES OF PREMIUMS for assurances on the lives of officers engaged in civil or in naval or military service in the East Indies may be seen at the offices of the Company, 126, Bishopsgate-street, corner of Cornhill.

By order of the Board.

CHRISTOPHER COUSINS, Accountant.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—At the Half-yearly General Meeting of the Proprietors of the Birmingham and Derby Junction Railway Company, held at the Waterloo Rooms, Waterloo-street, Birmingham, on the 16th of February, 1842, pursuant to public advertisement duly inserted;

HENRY SMITH, Esq., Chairman of the Board of Directors, in the chair—

the proceedings of the last half-yearly meeting were read.

The Common Seal of the Company was affixed to the Register of Proprietors.

The Report and Statements of Account presented by the Directors, were read, and the subjoined Resolutions were unanimously agreed to:—

Resolved—That the Common Seal of the Company be now affixed to the Register of Proprietors.

Resolved—That the Report and Statements of Account now read be received and adopted, and that the proceedings of the Directors be confirmed.

Resolved—That the Directors be authorised to apply to Parliament in the present session for powers to raise an additional capital of 100,000*l.*

Resolved—That a Dividend be declared of 2*l.* 5s. on each original Share, and that a proportionate amount of 15s. per Share be also paid on each new Share.

Resolved—That the thanks of the Proprietors are due to the Chairman and the Board of Directors for their attention to the interests of the Company.

(Signed) HENRY SMITH, Chairman.

LONDON AND BRIGHTON RAILWAY.—NOTICE is hereby given, That the Trains now run throughout to and from London and Brighton:—

FROM LONDON.		FROM BRIGHTON.	
Morning	9 0	Morning	8 0
„	10 45	„	10 45
Afternoon	1 45	Afternoon	1 45
„	3 45	„	3 45

SUNDAY TRAINS.

FROM LONDON.		FROM BRIGHTON.	
Morning	9 0	Morning	10 45
Afternoon	3 45	Afternoon	3 45

Express Trains of First-Class Carriages, will leave London Bridge and Brighton at 5 o'Clock p.m., daily (Sundays excepted), stopping at Croydon and Red Hill only, and will continue to do so during the sojourn of the Court at Brighton.

N.B. For the accommodation of Passengers from the West End, the Trains stop at New Cross, and Horses and Carriages are conveyed from thence by all the Trains except the 5 o'Clock.

Time Tables, containing the Fares, and all necessary information, may be had on application at the Office, at London Bridge; and at all the Stations.

By order of the Board,

CHARLES R. MACKENZIE, Secretary.

Angel-court, Throgmorton-street,
9th February, 1842.

Just published, 7th edition, price 3s., and sent in a sealed free envelope, on receipt of a Post-office order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Bailiere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

OPENING OF THE EDINBURGH AND GLASGOW RAILWAY.—The public are respectfully informed that this Railway will be opened for Passenger Traffic on Monday, the 21st February, current.

The trains will depart at the following hours:—

FROM EDINBURGH TO GLASGOW.

Seven o'Clock, a.m.; calling at the Corstorphine, Ratho, Winchburgh, Linlithgow, Polmont, Falkirk, Castlecarry, Croy, Kirkintilloch, and Bishopbridge stations.

Eleven o'Clock, a.m.; calling at Linlithgow, Falkirk, and Castlecarry stations.

Three o'Clock, p.m.; calling at all the stations, same as Seven o'Clock Train.

Five o'Clock, p.m.; calling at Corstorphine, Ratho, Winchburgh, Linlithgow, Polmont, Falkirk and Castlecarry.

FROM GLASGOW TO EDINBURGH.

Seven o'Clock, a.m.; calling at all the stations, same as Seven o'Clock train from Edinburgh.

Eleven o'Clock, a.m.; calling at Castlecarry, Falkirk, and Linlithgow stations.

Three o'Clock, p.m, calling at all the stations, same as Seven o'Clock Train.

Five o'Clock, p.m.; calling at Bishopbridge, Kirkintilloch, Croy, Castlecarry, Falkirk, and Linlithgow.

All the Trains will carry First and Second Class Passengers, and the Seven o'Clock and Three o'Clock Trains from each end will carry Third Class Passengers in addition.

FARES FOR THE WHOLE DISTANCE.

Passengers.			With Passengers' Trains.	
1st Class 8s.	2nd Class 6s.	3rd Class 4s.	Carriages 85s. each.	Horses 15s. each.

The intermediate Fares will be nearly in proportion to the distance.

The Eleven o'Clock and Five o'Clock Trains are expected to perform the journey in 2¼ hours; and the Seven o'Clock, a.m., and Three o'Clock Trains, in 2½ hours, until further notice.

Parties going in their own Carriages to be charged Second Class Fares.

Children between 10 and 14 to be charged half Fares; Children under 10 years of age, if accompanied by a person paying full fair, to pass free.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the Trains—previous notice to be sent to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their address marked thereon, and to satisfy themselves that the Luggage is deposited on the Carriages.—The *Time* on the Railway will be reckoned by the Railway Clocks.

Parcels will be conveyed by all the Trains, and delivered by the Railway Company.

For intermediate Fares and time at Road Stations, see hand-bills.

By order of the Directors.

H. G. WRIGHT, Secretary.

Glasgow, 15th Feb., 1842.

Note.—It is intended, as the season advances, that additional Trains will run from each end at the hours of Nine o'Clock a.m., and Seven o'Clock p.m.

Arrangements are in the course of being made with Coaches to run in connection with the Railway at different points, of which further notice will be given.

Goods Trains will commence running shortly.

LONDON and CROYDON RAILWAY.—The Passage throughout the line being now uninterrupted, on and after MONDAY, the 21st of February instant, the TRAINS will START from the London Station at the exact time mentioned in the bills, namely,—

Morning, 5 minutes past 9, 10, and 12 o'Clock.
Afternon, 20 minutes past 2, 4, 5, 6, and 8 o'Clock.

SUNDAYS.

Morning, 5 minutes past 8 and 10 o'Clock.
Afternoon, 20 minutes past 2, 4, 6, and 8 o'Clock.

The Trains from Croydon as at present, namely,—

Morning, 5 minutes past 8, 9, 10, and 11 o'Clock.
Afternoon, 20 minutes past 1, 3, 5, 7, and 9 o'Clock.

SUNDAYS.

Morning 5 minutes past 9 o'Clock.
Afternoon, 20 minutes past 1, 3, 5, 7, and 9 o'Clock.

R. S. YOUNG, Secretary.

February 16, 1842.

BITUMEN WORK.—JAMES HARVEY, of Waterloo Saw Mills, Commercial-road, Lambeth, begs to inform the public generally, that, having executed works of considerable extent on the Blackwall Railway, Northern and Eastern Railway, Finch's Granaries, Rotherhithe and Gravesend, is now prepared to give estimates for any quantity of work. The above description of Bitumen has many advantages over any other, particularly for foot pavements, terraces, garden walks, barn floors, stabling, warehouse floors, and the covering of arches, to prevent the percolation of water; and J. H. begs further to add, that flooring of this kind can be laid down at a cheaper rate than any other material, and with fair treatment will last a considerable time longer. Deals, planks, battens, &c. sawn by patent machinery.

A spacious wharf for storing and piling Deal, with capital water frontage, and all goods fetched and delivered free of expense.

YARMOUTH AND NORWICH RAILWAY—VALLEY LINE.

PROVISIONAL COMMITTEE.

NORWICH.	YARMOUTH.
Bolingbroke, H. Esq.	The Right Worshipful the Mayor.
Herring, William, Esq.	Lacon, Sir E. H., Bart.
Longe, John, Esq.	Palmer, W. H., Esq.
Reade, H. W., Esq.	Reynolds, F. R., Esq.

LONDON.

Duff, Adam, Esq.	Laurence, John, Esq.
Stephenson, George, Esq.	Tyndale, Charles, W., Esq.

With power to add to their number.

The Committee have the pleasure to announce, that at the request of the Committee appointed to watch the rival lines of Railway between London and Yarmouth, all opposition on the part of the promoters of the East Anglian line to the passing of an Act for the formation of the Valley line is now withdrawn, and the Bill will proceed, supported by the principal promoters of both lines.

HENRY PATTESON, Secretary.

6, Warneford-court, Throgmorton-street.

GREAT WESTERN RAILWAY.

—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Company's Office, Princes-street, in the city of London, on Thursday, the 24th of February next, at Twelve o'Clock, for the Election of Four Directors, in the place of the same number who will retire in rotation, and for other purposes of business.

The Chair will be taken at One o'Clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy-Chairman.

The Directors retiring are re-eligible, under the provisions of the Act.

The Transfer Books will be closed on and from Monday, the 14th February, and will not be re-opened until after the said Half-yearly General Meeting on the 24th of February; and the dividend for the half-year ending 31st December last will be paid to the Proprietors who may be registered on the Company's books when closed.

(By Order) C. A. SAUNDERS, THOMAS OSLER, } Secretaries.

26th January, 1842.

EDINBURGH AND GLASGOW RAILWAY.

—NOTICE is hereby given, That the Eighth Half-yearly General Meeting of the Shareholders in the Edinburgh and Glasgow Railway Company will be held, pursuant to the Act of Incorporation, in the Company's Office here, on Tuesday the 22nd inst., at Eleven o'Clock, a.m.

Certain shares, in consequence of the non-payment of Calls due thereon, having been declared forfeited, under minute of the Board of Directors, of 19th and 26th October 23rd November, and 7th December, 1841, the Declarations of Forfeiture will be submitted to the meeting for confirmation in terms of the Act.

The Transfer Books will be closed on and after the 15th instant, till after the Meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the meeting (sections 134), otherwise they will not give a right to vote at the meeting. Blank forms of Proxy may be had on application at this office.

In terms of section 137, the Proprietor of any Share on which any Call shall be due will not be entitled to vote in respect of such share.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office, North Queen Street, Glasgow, 7th February, 1842.

EDINBURGH AND GLASGOW RAILWAY.

—NOTICE is hereby given, That a Special General Meeting of the Shareholders of the Edinburgh and Glasgow Railway Company will be held in the Company's office, in Glasgow, on Tuesday the 22nd instant, at One o'Clock, p.m., for the purpose of considering, in terms of a reference by the Board of Directors to the Shareholders, whether the railway shall be entirely closed on Sunday, unless compelled by the Government to use it, or whether it shall be open to the public on that day to a certain limited extent.

Proxies must be transmitted to, and received, by the Secretary, two days, at least, before the holding of the meeting (section 134), otherwise they will not give a right to vote at the meeting. Blank forms of proxy may be had on application at this office.

In terms of section 137, the Proprietor of any Share on which any Call shall be due, will not be entitled to vote in respect of such share.

By order of the Board,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office, North Queen Street, Glasgow, 7th February, 1842.

STEAM ENGINES.

—WANTED a Second-hand Pillar and Beam Portable Engine, of about 14 horse power, calculated for a coalpit winding engine; also, Two Locomotive Engines, calculated for merchant traffic on a Railway of 4 ft. 8 in. gauge. The Engines must be in perfect order and repair.

Letters, stating full particulars and price, addressed to James Green, Engineer, Newport, Monmouthshire, will have prompt attention.

TO RAILWAY DIRECTORS AND ENGINEERS.

—WANTED a Situation as Foreman, to take the Management of the Locomotive Engines on a Railway. The advertiser has had considerable experience in the above line, and can produce most satisfactory Testimonials.

Address, S. H., *Railway Times* Office, 122, Fleet-street, London.

RAILWAYS IN GENERAL.

—R. B. WATSON and Co., of Leeds, beg to intimate to those interested in Railway Property, chiefly in the Northern Counties, that they are enabled to give information, *and an opinion*, as to those lines in which it would be advisable to invest money at this particular period, founded upon a knowledge of the Trade of this district, acquired during a residence of Twenty Years in Hull, and Twelve in Leeds, Ten of which R. B. W. has been a Commercial Broker, and Six a Share Broker; thus giving them an advantage that few possess.

IMPROVEMENT IN THE RAILWAY SHARE MARKET.

—The attention of the Proprietors of Railway Shares is requested, at the ensuing half-yearly meetings, to an important reduction in the expense of working locomotive engines, which, if adopted, must have the effect of improving the dividends, and, of course, the prices of railway property.

The economy above-mentioned is effected by the use of coal (its smoke being consumed agreeably to Act of Parliament) in lieu of the expensive article of coke.

Taking the cost of coal and coke respectively on the Midland Counties' Railway as the data for calculation, £100 worth of coal will evaporate as much water, and propel a train as many miles, as £210 worth of coke. For the correctness of this statement, application may be made to Jos. Kearsley, Esq., Derby, Chief Engineer on the above Railway, and no doubt the Directors would afford all requisite information to any Railway Company.

Further particulars, with drawings, &c., &c., may be obtained of the patentee (of the apparatus), SAMUEL HALL, No. 18, King's Arms-yard, London.

SOUTH-WESTERN, GREAT WESTERN, CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

MAILS AND COACHES,

Parcels forwarded by every train; and if for 8½ p.m. Mail Train, are received at the above Offices until ¼ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

NORMANTON HOTEL AND REFRESHMENT ROOMS,

at the junction of the North Midland, York and North Midland, and Manchester and Leeds Railways, where upwards of thirty trains arrive daily at the station. FRANCIS JOSEZ (for some years Manager of the Burlington Hotel, London, and late Manager of the Palatine Club, Liverpool) begs very respectfully to direct the attention of the Nobility and Gentry of Yorkshire and the surrounding counties, Railway Travellers, and the Public in general, to the above Hotel, which is now open under his management, and to solicit the honour of their patronage.

The House has been built, fitted up, and furnished throughout with an especial view to obtaining every comfort and convenience that can be conbined in a private residence or a public establishment.

That most essential of all requisites to the "way-worn traveller"—a Good Bed, may here be obtained replete with every comfort.

The spacious vaulted cellars (so constructed as to maintain a perfectly uniform temperature in all seasons) are amply stocked with Wines of every description, of the choicest Vintages; and with Spirits and Malt Liquors of the first quality and the finest flavour.

Of the Cuisine Department it will be sufficient to say that it shall be second to none in the kingdom, whether served in the Coffee Room or to Private Parties; while the moderation of the charges (which include attendance of every description) will be such as cannot fail to command universal approbation.

TO RAILWAY DIRECTORS AND CONTRACTORS.

—A Gentleman who has had considerable experience in the Construction of Railways, wishes an engagement as Traffic Manager, or Engineer, on a line of Railway. He has a good knowledge of Masonry, and all kinds of work connected with the construction and upholding of Railways, and would have no objection to engage with any respectable Contractor as Engineer or General Manager.

Ample testimonials of character and ability can be given from the Directors by whom he has been employed. Letters or applications, addressed A.B., at Messrs. Hartnell and Son's, News Agents, Waterloo-place, Edinburgh, will be attended to.

RUPTURE.

COLES'S PATENT TRUSSES

are universally admitted to be the most complete and effective instruments now in use for the relief and cure of HERNIA. The patient will find the pad move imperceptibly with the body when stooping, and to revert to its original seat when they erect themselves—no other truss extant ever possessed that quality. The following opinions are selected, from a list too numerous for insertion, in a single advertisement:—

"This is the only real improvement in the construction of a truss that ever came under my inspection."—George Birkbeck, M.D.

"The pressure upon the ring is not merely equalised, but adjusts itself, without inconvenience to the wearer, to the different attitudes in which the body may be placed."—William Thomas Brande, Royal Institution.

"They make a more uniform pressure on the ring than the ball-and-socket pad can effect."—Sir A. Cooper, Bart., F.R.S., in his Treatise on Hernia.

"The varied positions of the body in stooping and coughing do not alter the position of the pads, nor displace them."—Thomas Callaway, Guy's.

"It is my firm conviction that his trusses will be found more efficacious than any at present employed."—Henry Earle, F.R.S.

"I may add, that this truly scientific discovery justly entitles the inventor of such an instrument to universal confidence."—John Borthwick Gilchrist.

"They are the best trusses that have ever yet been got up."—Aston Key, Guy's.

"I consider these trusses calculated, beyond every other truss I have seen, to cure this disease in its earliest and simplest form."—Gideon Mantell, F.R.S., Crescent, Clapham.

There are two generals who have asserted that they have sent Mr. Coles upwards of three hundred patients, who now wear trusses. Why was not William the Fourth one of the number? Ask Mr. Robert Keate.

Manufactured only by Mr. COLES, Patentee of the Medicated Bands, for the Cure of Rheumatism, 3, Charing-Cross.

See advertisements in *Boyle's Court Guide*, *Royal Blue Book*, *Robson's Directory*, and *Pope's Yearly Journal of Trade*, the *Railway Times*, 8th January and 12th of February, and in the *Mirror of Parliament* for March, for a poetical description of Cole's Railway Carriages.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

ROBINSON'S RAILWAY TIME AND FARE TABLES,

containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY FOR 1842,

containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TUCK'S MAP OF THE RAILWAYS for 1842

throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES,

showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

TABLES OF HACKNEY CARRIAGE FARES

from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

TABLES OF HACKNEY CARRIAGE FARES

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the White Lion Hotel, in the City of Bristol, on Thursday, the 3rd of March, at Twelve o'Clock, for the Election of Four Directors in the room of those who retire by rotation, and for other affairs.

The Chair will be taken at One o'Clock precisely.

FREDERICK RICKETTS, Chairman.

The retiring Directors may be re-elected.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 21st of February, and not re-opened until after the said General Meeting, on the 3rd of March.

By Order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, February 4, 1842.

BRISTOL AND EXETER RAILWAY.—Call of £10 per Share, being the Eleventh Instalment, and making with former Calls, the sum of £70 per share.—The Directors of this Company, under the provisions of the Act of Incorporation, hereby give Notice, That the Proprietors of Shares are required to pay, on or before the 28th day of January instant, at any of the undermentioned Banks, the sum of Ten Pounds on each of their respective shares, viz.:—

London—Messrs. Glyn, Halifax, Mills, and Co.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. Wm. Jones, Loyds, and Co.; the South Lancashire Bank.

Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillies, Ames, and Co.; Messrs. Stuckey and Co.'s Banking Company, or at either of their Branches; the West of England and South Wales District Bank, or at either of its Branches; the National Provincial Bank of England.

Exeter—Messrs. Sanders, Sons, and Co.; Messrs. Cole, Holroyd, and Co.; the Devon and Cornwall Banking Company; Messrs. Milford and Co.; the West of England and South Wales District Bank, or at either of its Branches.

The Bankers are instructed to charge interest at the rate of 5 per cent per annum on all arrears.

FREDERICK RICKETS, Chairman.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, January 7, 1842.

Interest at the rate of 5 per cent. will be allowed on payments in anticipation of calls.

WEST LONDON RAILWAY COMPANY, late BIRMINGHAM, BRISTOL, and THAMES JUNCTION RAILWAY COMPANY.—Notice is hereby given, That the Twelfth Half-yearly General Meeting of the Proprietors of the West London Railway Company, will be held pursuant to the Act of Incorporation, at the Offices of the said Company, No. 11, Abchurch-lane, in the City of London, on Thursday, the 10th day of March next, at One o'Clock precisely, for the Election of three Directors, and for other purposes.

(Signed) WILLIAM MORGAN,
Deputy-Chairman.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

THE ELECTRIC TELEGRAPH ON RAILWAYS.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Ware; ing Webb, Castle street; Manchester, Simms and Dirham-Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

YARMOUTH AND NORWICH RAILWAY—VALLEY LINE.

PROVISIONAL COMMITTEE.

NORWICH.	YARMOUTH.
Bolingbroke, H. Esq.	The Right Worshipful the
Herring, William, Esq.	Mayor.
Longe, John, Esq.	Lacon, Sir E. H., Bart.
Reade, H. W., Esq.	Palmer, W. H., Esq.
	Reynolds, F. R., Esq.

LONDON.

Duff, Adam, Esq.	Laurence, John, Esq.
Stephenson, George, Esq.	Tyndale, Charles, W., Esq.

With power to add to their number.

The Committee have the pleasure to announce, that at the request of the Committee appointed to watch the rival lines of Railway between London and Yarmouth, all opposition on the part of the promoters of the East Anglian line to the passing of an Act for the formation of the Valley line is now withdrawn, and the Bill will proceed, supported by the principal promoters of both lines.

HENRY PATTESON, Secretary.

6, Warneford-court, Throgmorton-street.

STAFFORD and RUGBY RAILWAY COMPANY, and MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY COMPANY.—Company's Offices, 23, Bond-street, Manchester, 21st February, 1842.—The Provisional Directors request, that they may be furnished, within ten days of this date, with the particulars of any outstanding claims, as the respective Accounts of these Companies are about to be Closed, and the residue of the funds distributed.

R. FOSS, Secretary.

NORTH MIDLAND RAILWAY.—Notice is hereby given, That the Books of this Company, which are kept at this office for the Registration of Shares in the Company, will be Closed, in pursuance of the Act of Incorporation, from Wednesday, the 16th day of February next, until Saturday the 26th day of February next, both days exclusive.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

NORTH MIDLAND RAILWAY.—THIRD SHARES.—FOURTH and LAST CALL of £6 13s. 4d. per SHARE.—Notice is hereby given, That in pursuance of a resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to Pay the Fourth and Last Instalment of £6 13s. 4d. on each of their respective Third Shares, on or before the 4th day of March now next ensuing, to any of the undermentioned Bankers. Interest at 5 per cent. per annum will be charged upon all such sums as remain unpaid after the day above appointed.

London—Messrs. Glyn and Co.
Leeds—Beckett and Co.
Derby—Crompton, Newton, and Co.
Liverpool—The Bank of Liverpool.
Manchester—The Union Bank of Manchester.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

LONDON AND CROYDON RAILWAY COMPANY.—Notice is hereby given, That the next Half Yearly General Meeting of the Proprietors of the London and Croydon Railway, will be holden at the London Tavern, Bishopsgate-street, within the City of London, on Thursday, the 10th day of March next ensuing. The Chair to be taken at One o'Clock precisely.

The Directors who go out by rotation, pursuant to the Company's Act of Parliament, are James Whiskin and John Lewis Ricardo, Esqrs., but who are eligible for re-election.

The election of an Auditor will also take place, in lieu of Henry Tudor, Esq., who has resigned, and John Norbury, Esq., has been nominated to fill the vacancy.

WILLIAM ARTHUR WILKINSON, Chairman.

205, Tooley street, February 22, 1842.

The books for entering memorials of the Transfer of Shares will be closed from the 2nd to the 10th of March, both days inclusive.

R. S. YOUNG, Secretary.

MIDLAND COUNTIES' RAILWAY.—At a Special General Meeting of the Proprietors of the Midland Counties' Railway Company, convened by the Directors in pursuance of the provisions of the Company's Act of Incorporation, held at the Railway Station, in Derby, on Friday, the 18th day of February, 1842,

THOMAS EDWARD DICEY, Esq., Chairman of the Board of Directors, in the Chair;

The following Resolutions were agreed to:—

Resolved—That the Report of the Board of Directors now read, with the Statement of Accounts annexed, be received and adopted.

Resolved—That the thanks of this meeting be given to the Chairman and the Board of Directors, for their efficient services during the half-year.

T. E. DICEY, Chairman.

A Dividend of £2 for the past half-year upon each £100 share, and of 10s. upon each £25 share, payable on the 4th of March, was declared.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

GREAT WESTERN RAILWAY COMPANY —GENERAL MEETING.

The half-yearly meeting of the proprietors of the Great Western Railway Company was held on Thursday, at the Company's offices, Princes-street, Bank; Charles Russell, Esq., M.P., in the chair.

There was a very crowded attendance.

The advertisement calling the meeting having been read, it was resolved unanimously, that the common seal of the Company be affixed to the three books of share registery, which was accordingly done in presence of the meeting.

The Chairman then expressed the great pleasure his colleagues and himself had in laying before the meeting their Report of the proceedings during the first six months after the opening of the entire line, as they felt confident that the results realised during that period could not fail to be highly satisfactory to the proprietors. (Hear, hear.) An average traffic per week of 13,000*l.* upon the whole line worked by the Company, or of 11,300*l.* to 11,400*l.* upon that part of it belonging more particularly to the Great Western proprietors, must, he thought, satisfy the most sanguine expectations, and justify a favourable comparison with any similar undertaking in the kingdom. (Hear, hear, hear.) This period, too, included an example not only of their summer but likewise of their winter traffic, and fully demonstrated that the Great Western Railway was not, as it had sometimes been called, a mere summer or holiday line, but a line with a large amount of steady business traffic—a traffic in winter proportionate to the summer traffic, and at least equal to that of the most prosperous of their neighbours. (Hear, hear.) Nor had he any apprehension that such traffic would not continue to increase, as had been the case with all other railways subsequent to their opening. The Bristol and Exeter line, he was happy to state, was advancing by successive strides to Exeter and to Cornwall, and he trusted that some means would be devised to enable their other tributary railway, the Cheltenham and Great Western Union, to go forward in like manner to Cheltenham, to the west of England, and to South Wales. The Directors knew that their present merchandise traffic was susceptible of increase, when they had adequate means of receiving it; and they had little doubt that a profitable trade might be established in the conveyance of coals and stone. They had hopes, too, that the recommendations of the Commissioners appointed by her Majesty's late Government, with respect to the port for the reception of the West India mails, would be acted upon, and that Dartmouth would be the harbour selected. Arrangements were also in contemplation for establishing the means of steam communication between Bristol and the south of Ireland; so that, with these means of increased traffic, and the other sources of increase which experience had shown invariably to result from additional facilities of communication, and the habits of travelling thereby engendered, he thought the proprietors were fully justified in forming very sanguine anticipations of what their traffic would eventually become. (Applause.) If such were the actual condition and flattering prospects of the credit side of their account, he hoped and believed that the debit side would be found equally favourable. (Hear, hear.) During the last six months the Directors had been enabled to reduce the working expenses of the line from 45 to about 37½ per cent. on the gross receipts. (Applause.) He was happy to find that the meeting looked upon that as a considerable reduction, and the Directors hoped to effect a still further saving—proportionately as the traffic of the line increased, and positively as the means now in progress for economising still more the current expenditure came to be matured. (Hear, hear, hear.) He would assure the proprietors that no subject had so occupied the unremitting attention of the Management as the reduction of the expenditure. (Hear, hear, hear.) At the meeting in August last, an estimate had been submitted of the further amount then considered necessary to complete the railway. A Committee of Directors had recently been appointed to compare with these estimates the actual cost up to the 31st of December last, and he was happy to state that the result entirely confirmed their accuracy. (Applause.) He was sure this circumstance must be very satisfactory, when the meeting called to mind the late extraordinary season, which had entailed so much additional expense upon all Railway Companies, especially upon those whose works had been newly formed. The Directors had been extremely anxious to close their capital account by the end of last December, but from the incomplete state of the works at Swindon, and some minor works, it had been found impossible; besides that it would have been extremely unwise to hurry Mr. Brunel in his settlements with the various contractors—with most of whom, however, an understanding had been come to, and their accounts nearly all paid up. (Hear, hear.) The result of all the favourable circumstances to which he had alluded was, that the Directors were in a condition to recommend a dividend at the rate of 6 per cent. per annum from the net profit of the last six months. (Much applause.) The Directors thought this a large dividend for the first six months after the opening throughout, but at the same time they could assure the proprietors, that it was a fair and an honest one. (Hear, hear, hear.) It had not been proposed until the whole interest on the debts contracted from the day at which it commenced had been discharged, and he did not believe that a single item fairly chargeable to the revenue had been carried to the account of capital. (Hear, hear, hear.) He would not trespass longer upon the attention of the meeting, but would request the Secretary to read the Report of the Directors, which he trusted would prove as satisfactory to the proprietors as it certainly was to the Directors, not only as to what was past, but as affording the most gratifying promise of the permanent prosperity of the enterprise. [The honourable gentleman resumed his seat amid loud marks of approbation.]

The Secretary (C. A. Saunders, Esq.) then read the following Reports, which were exceedingly well received :—

DIRECTORS' REPORT.

The Directors have on this occasion, for the first time, the pleasing duty to present to the proprietors the detailed accounts and result of six months' business on the entire line of the Great Western Railway, together with that on a portion of the Bristol and Exeter Railway, between Bristol and Bridgewater, and of the Cheltenham Railway between Swindon and Cirencester, both held under lease.

The gross receipts of that period up to the 31st December, 1841, were 337,352*l.* 4s. 2d., of which sum 295,010*l.* 18s. was earned exclusively on the Great Western Railway. A further amount will have to appear in some subsequent account as the receipt for extra service in conveying mails, no credit having yet been taken for working two mail trains over the Bristol and Exeter line, nor for the day mail service between Bristol and London, in consequence of the Postmaster-General's notice to refer the subject to arbitration. The daily rate agree for, anterior to the performance of that additional duty, is the only sum credited for mails during the half-year and pending such reference.

The number of passengers conveyed on the line between the 1st July and 31st December, 1841, was 882,119, travelling an aggregate number of 27,538,764 miles.

The expenses on the traffic are furnished in detail, and comprehending every office charge of the Company, they amount to 125,910*l.* 6s., being in the ratio of 37,323 per cent. on the receipts.

The Directors cannot doubt that this result will prove highly satisfactory to all who have embarked property in this undertaking, and may be considered a pledge of the future and progressive prosperity of the Company. The expenditure has been watched by your Directors with the most anxious attention to economy on the one hand, and to the requisite efficiency of their establishment, and security of travelling, on the other.

The locomotive expenditure for the half-year has been 40,110*l.* 19s., of which 22,144*l.* 3s. (as may be seen by the printed analysis) was paid for coke. One-half of the whole quantity of coke consumed during last half-year, was, of necessity, procured in London, and of course still at a comparatively higher price.

The arrangements are now so far advanced as to admit of the Company obtaining at Bristol, for the present half-year, all the coke required, over and above the produce of the coke ovens belonging to the Company, at Hillingdon, (which are just adequate to supply the locomotive engines in the Paddington station,) and some reduction may consequently be anticipated in that branch of locomotive expenditure. The repairs of engines, however, in the present half-year, appear likely to be rather heavier in proportion, and may perhaps absorb such contemplated saving in the price of coke.

The number of miles run by the engines during the half-year to 31st December, was 673,398, of which 613,616 miles were travelled by regular engines, with trains of passengers and goods, and 20,654 miles by the assistant engine upon the Box incline.

The period has not yet arrived when any comparative returns of revenue or traffic can be usefully offered to your notice, inasmuch as the recent opening of portions of the line prevent statements being deduced of the same traffic from any former corresponding period. The ratio of expense to receipt is the only exception, and that comparison is therefore stated in the accounts. With reference to the Government duty, it is proper here to mention that the payment of 15,940*l.* 14s. 11d., comprises a portion of that for the month of June last, (during which there had been partial openings of new lines,) as well as the whole sum for the last six months of the year, and the ratio to receipt will, from that circumstance, appear to have been increased. The proprietors will not fail, of course, to perceive that the total expenditure of 125,910*l.* 6s. for the half-year is not for the 118 miles of Great Western Railway alone, but for working 169 miles of railway, including 34 public stations used for the convenience and accommodation of traffic upon the three several lines.

The first charges upon the profits of the half-year's business consist of the interest on the Company's debt, and the rents payable under lease to the Bristol and Exeter Railway and to the Cheltenham and Great Western Union Railway Companies.

The sums respectively paid are as follows:—

Balance of interest on all moneys lent to the Company, after deducting interest received	£73,881 18 5
Bristol and Exeter Railway, one half-year..	10,877 12 6
Cheltenham and Great Western Union Railway, one half-year	8,500 0 0
Total.....	£93,259 10 11

These deductions from 212,446*l.* 16s. (of which 1004*l.* 17s. 10d. was the residue on the 30th June last, and 211,441*l.* 18s. 2d., the profit of the last half-year) would leave a balance of 119,187*l.* 5s. 1d. available to the Company.

Digitized by Google

There are two points, however, which have engaged the attention of the Board, in reference to this balance, and they are desirous of taking the opinion of the proprietors upon both of them.

It will be observed, that in the account for expenditure, which embraces every charge for keeping up and maintaining the plant of the Company in an effective state, no separate provision has been made for a fund to meet the probable depreciation of stock which must accrue with time. While it can be scarcely disputed, that prudence and foresight should dictate a certain provision to meet such an anticipated reduction of value, the Directors do not think any benefit is derived from pretending to ascertain periodically the opinions of parties, however competent, as to the then supposed value of such property. On the contrary, they think injustice may sometimes result from the adoption of any such arbitrary system, and after devoting their best consideration to the subject, they would much prefer that a fixed scale of amount should be determined to be set apart for a period of years, such as may be reasonably estimated to meet the entire depreciation for the time, so that in the interval this accumulating sum may gradually and equally fall over each period, and therefore equitably upon all who may, from time to time, be the holders of the Company's stock.

If this view shall be acquiesced in, the Directors would recommend that 20,000*l.* should be annually appropriated for a period of 10 years, to redeem the depreciated value in the first cost of the locomotive engines, carriages, and other moveable stock of the Company, the whole being in the meantime kept up, renewed, and maintained in an affective state, and paid for in the ordinary disbursements on traffic.

The other subject to be submitted for the consideration of the proprietors relates to the rent which is payable under the lease to the Bristol and Exeter Railway Company. It will probably be remembered, that one of the covenants of that deed rendered this Company liable only to a moiety of the fixed rent of 30,000*l.* per annum, for a portion of the first year, if the line between Bristol and Bridgewater should not be completed, and opened for traffic, on or before the 1st June, 1841.

Notwithstanding every exertion on the part of the Bristol and Exeter Railway Company, the contingency so provided for did actually occur, and it was not until the 14th day of that month that the line to Bridgewater was ready for use. This circumstance accounts for the diminished payment of rent for the half-year, viz;—

Moiety of the fixed rent, say 15,000*l.* per annum	£7,500	0	0
Ascertained tollage on passengers and goods	3,377	12	6
Total	£10,877	12	6

Under the terms of the lease, the same reduced scale of rent would continue payable until the 31st of March, after which the Bristol and Exeter Railway Company will be entitled to receive rent at the full rate of 30,000*l.* per annum, besides the agreed tollage on passengers, merchandise, and coal. The circumstances under which this heavy infliction of a penalty was sustained by that Company became the subject of discussion between the two Boards, during which it was apparent that your Directors could not upon their own responsibility undertake in any way to release them from any portion of the loss, which had been so indisputably incurred.

Your Directors, in the course of several conferences, were however led to entertain the belief that it might be arranged for the mutual interest of both Companies, conditionally to concede the payment of the greater portion of that difference of rent, provided they could thereby secure fixed and advantageous periods for the future openings of the remainder of that railway, to which the Bristol and Exeter Railway Company had not bound themselves by any covenant in the original lease. When it is considered that the main benefits contemplated in working that line were to bring and secure the Devonshire and Cornish traffic, more directly to the Great Western Railway, it must be apparent that the acceleration of the progress and completion of line beyond Bridgewater, must far outweigh any consideration of such saving as could be obtained from the reduced rent, during only a few months of the first year. To accomplish this purpose, a negociation ensued between the two Companies, and it has been reciprocally agreed by them to submit to their respective proprietors an arrangement of which the following is the outline, which your Directors strongly recommend for your sanction and approval:—

The payment of the full rent at the rate of 30,000*l.* per anuum, (after deducting 500*l.* for the estimated loss incurred by this Company,) to be made at the times and subject to the conditions hereinafter mentioned.

The line from Bridgewater to Taunton to be ready for opening in the manner prescribed by the terms of the lease, on or before the 7th July next, two further portions of line on or before the 1st July, 1843, and 1st July, 1844, and the entire line throughout, on or before the 1st July, 1845. The rent for the current half-year, at 30,000*l.* per annum, (deducting the 500*l.* above mentioned,) to be paid them when due, upon a certificate from the Engineer that the railway will be ready for opening to Taunton on the day specified.

The sum of 7,500*l.* for the first half-year's rent, to be reserved and paid over to that Company, on the opening to Taunton, provided it takes place on or before the 7th July, and not otherwise.

In the contingency of failure to open any of the three several portions of line successively on or before the 1st July in each year, one-third of the 7,500*l.*, with interest at 5 per cent. per annum, to be reimbursed by the Bristol and Exeter Railway Company, in respect of any such failure, or to be retained from rent payable to them by the Great Western Railway.

If the line from Bridgewater to Taunton shall not open by the 7th July, which period has been fixed with reference to the British Agricultural meeting to be held this year at Bristol,) one moiety of the extra sum, which may have been previously paid over to the Bristol and Exeter Railway, to be reimbursed by them to this Company, or in like manner to be retained from rent payable by the Great Western Railway.

The arrangement only to be binding in the event of being sanctioned by general meetings of proprietors of both Companies, and not to effect any other terms or covenants contained in the existing lease.

If these two propositions shall receive the consent of the proprietors at this meeting, the profit of the half-year will be subjected to the further deductions as follows:—

Moiety of rent which may become payable to the Bristol and Exeter Railway	£7,500	0	0
Depreciation fund on the Company's stock for the last six months	10,500	0	0
Total	£17,500	0	0

leaving the sum of 101,687*l.* 5s. 1d. at the disposal of the Company.

The Directors recommend that a dividend at the rate of 6*l.* per cent. per annum on the amount called up, should be now declared for the half-year ending on the 31st of December last, payable to the proprietors who were registered at the closing of the books, upon their respective shares.

A dividend of 1*l.* 19s. on the original share; 1*l.* 10s. on the half share; and 2s. 4½d. on the fifth share, for the half-year to the 31st of December, declared payable on the 24th of March, amounting to 90,750*l.*, will leave an undivided balance of 10,937*l.* 5s. 1d. to be carried to the credit of the current half-year, which, it may be proper here to remind the proprietors, is always the least productive in railway traffic.

The Directors look with undiminished confidence to that gradual and certain augmentation of income from passengers which has been found to accrue on every railway after its completion. In merchandise and cattle the increase, although in some cases more slow in its operations, may be regarded as equally certain of attainment on the lines worked by this Company. Already small quantities of coal and stone are brought for conveyance by the Great Western Railway, and as soon as the requisite accommodation is procured, these two articles alone will add considerably to the revenue of the Company.

Negociations are now pending with parties for carrying on a trade both in coal and in stone upon the line, which it may be reasonably inferred will become beneficial to the Company as well as to themselves.

The benefit arising directly and indirectly to the Great Western Railway Company from the Cheltenham and Great Western Union line, although considerable, is of course greatly limited by that railway not yet running into the great line of traffic through Gloucester and Cheltenham. The Cheltenham and Great Western Union Company has now a Bill before Parliament enabling them to treat with other parties, and your Directors will steadily keep in view arrangements which may be mutually beneficial to the two Companies.

The Engineer's Report is appended to this, in order to afford full information to the proprietors on the state and condition of the works, the winding-up of accounts, and the general review of his last estimates, as far as the progress of settlement with contractors enables him to communicate any decided result.

The Directors have given full effect to the resolutions of the last half-yearly meeting of the Company, for altering the constitution of the Board of Management, by a reduction of numbers, with the changes in the periodical retirement of Directors consequent thereon. The numbers were reduced to 18 by the lamented death of Peter Horrocks, Esq., and by the resignation of the undermentioned Directors, viz.—Ralph Fenwick, Esq., Charles Bowles Fripp, Esq., Riversdale William Grenfell, Esq., Thomas Pycroft, Esq., and Robert Scott, Esq.

Under the new arrangement which was ordered to be adopted for the determination of the four Directors to retire at this meeting, the period of service of Robert Frederick Gower, Esq., Thomas Richard Guppy, Esq., Wm. Singer Jacques, Esq., and George Jones, Esq., has expired, but being re-eligible, they severally declare themselves candidates for re-election.

ENGINEER'S REPORT.

18, Duke-street, Westminster, Feb. 22, 1842.

GENTLEMEN,—The whole line having been opened a short time previous to the last half-yearly meeting, my Report upon the state of the works and proceedings of the last six months, might be, I am happy to say, limited to the satisfactory statement that these works, although many of them very new, and exposed so immediately after their construction to the severest trials, have so far withstood these trials as to allow of the uninterrupted working of the railway. But the extraordinary winter which we have just passed through, and the consequent injury which all new works have sustained during this winter, from the long-continued and excessive rains, and the subsequent violent alternations of frost and thaw, must naturally have excited anxiety as to the effects produced upon those parts of our line, and those works which were barely completed before this weather commenced; and these circumstances require that I should give some account of the difficulties we have had to contend with, and of the degree of success attending the means taken to meet those difficulties.

Upon the part of the line thus recently opened occurred all the heaviest works (excepting those between Bristol and Bath), and especially those works which, from the character of the soil, were the most likely to suffer from the weather.

From Wootton Bassett to the Bristol side of Chippenham, and from the Box tunnel to Bath, a total distance of upwards of 20 miles, the natural soil is everywhere clay, and at several points, clay of the worst description. It is almost unnecessary to add, that in cuttings and embankments newly formed, and of such materials—the bursting out of water in the slopes of the former at points where no previous indication of water existed, and the complete washing down and dissolving of the surface of the latter, were the frequent and unavoidable consequences of all the natural drains of the surrounding country being overcharged, and of the almost incessant fall of rain. Slips of various

Digitized by Google

degrees of magnitude occurred in the slopes of the cuttings, one of considerable extent in the Wootton Bassett cutting: in this case, as indeed almost always in slips of cuttings, there was no alternative, the only remedy being the entire removal of the disturbed ground, and the carrying back the slope at that part. About 25,000 cube yards of earth have been removed at this slip. In the Ashley cutting, between Box and Bristol, where the sloping ground beyond the cutting has always given much trouble, the extensive precautions taken, by shafts and headings connecting them, to effect a perfect under-drainage of the hill, proved very efficacious, and has no doubt saved us from very serious slips; the increased quantity of excavation. required here, in consequence of slipping, has been small, and the temporary roads which had been left for removing the materials from the slopes clear of the main line, have now been removed.

In the clay embankments the greatest difficulty has been felt in repairing of the slopes, where the material has been actually washed down in a state of mud; at many of these points no dry materials could be obtainnd, and consequently there was no means of reforming the slopes; faggots have at these places been used extensively, both for protecting and draining the surface, and even when necessary, for making up the embankment; in such cases the safety, and other advantages of the continuous support to the rails, were strikingly manifested; the longitudinal timbers kept their form, and maintained the line sufficiently straight over weak places, when separate sleepers or blocks would have completely dropped out of place, and when the security of the line appeared likely to be increased by it on account of one side of an embankment settling or washing down more than the other, the whole line of rails could be, and frequently has been, shifted bodily several feet sideways, or even lowered considerably and set again with good curves and regular easy gradients, without difficulty or the slightest risk between the passing of the trains; and the line has thus been kept in good working order, and perfectly safe, at times and in cases in which, without this facility, great delays must have occurred from the crossing or stopping of trains.

By constant attention, I am happy to say, we have succeeded in passing through this winter without any extensive injury to the new works, involving either stoppage of the line or any other serious consequences. The late accident at Sunning, disastrous as it may have been in its results, was a very painful instance of serious consequences arising from a very slight and totally unexpected cause. The Sunning cutting had been completed for two years—the slopes had from the first been carefully formed and well drained, and the cutting was considered one of the best on the line; the surface of the slopes had at some point slid down—a common and comparative unimportant occurrence with new slopes; these places had been drained, and left till more favourable weather or complete drainage afforded a good opportunity for repairing them; but unexpectedly a part of the solid slope itself was thrown forward from near the top of the slope, and although not very extensive, formed a slip sufficient to cover a short piece of one line of railway; with the earth were brought down several large pieces of a thin bed of sandstone, which were sufficient to throw the engine and tender violently off the rails, and thus cause the light waggons behind to be broken, whereas without the presence of the stones, the result would most likely have been comparatively trifling; a combination of unforeseen circumstances thus rendered serious a most unexpected, and in itself, an unimportant slip. It has since been found by cutting into the slope, and endeavouring to trace the cause, that a large basin of gravel exists within the clay just at this point, approaching very near to the cutting, and which overcharged with water, the usual drainage being for the first time insufficient, had pushed the top of the slope into the cutting. Against such contingencies, whether on a railway, or in any other work, it is impossible altogether to provide, but as far as unremitting attention, vigilent and constant inspection of the works by myself and my assistants, and the prompt and vigorous application of the most complete remedies that could be applied, I can unhesitatingly declare, that your interests have been taken care of by the maintenance of your works, and the public safety and convenience have been preserved to an extent which the difficulties of the season at one time hardly allowed me to hope could be effected. The weather has, of course, almost completely put a stop to, or materially delayed, those works which were in the course of construction, and involving any building—the Swindon engine-house, stations, goods sheds, and all other minor works. These circumstances having unavoidably delayed the finishing off of many of the works, and winding-up of the contractors' accounts; from this cause more particularly, although, in some degree, also, from the occupation of my time consequent upon the frequent and sudden calls to various parts of the line, I have not been able to complete the general Reports which I had intended to have laid before you at this meeting, when I had expected that all the works would have been completed, and the accounts squared, and in referring to either of which, I could consequently have spoken of any of the details or of the causes of expense freely, and without danger of embarrassing any question of unsettled accounts, which I cannot now do, and I could have referred to the completion of distinct works, completed for specific sums, which I could have named, as to established facts, this neither can I do at the present moment, I must therefore look to a future opportunity for making this Report.

The various occurrences which I have referred to as requiring and receiving such constant and serious attention, have necessarily been attended with some considerable expense, but I am happy to say, that although it is not in my power yet to arrive at a sufficiently safe estimate of this cost, which is so much mixed up with contracts, or with completion of works, as to justify my naming any sum, I do not think it will have been so large as might have been expected, and although for the same reasons I cannot venture to give any positive opinion, yet I say, that having wound up several contracts, and having gone very far towards a settlement of other accounts, I have no reason to fear that any ground of complaint will exist as to the correctness of my last estimates.

I am, Gentlemen, your obedient servant,
I. K. BRUNEL.

General Statement of Receipts and Payments to 31st December, 1841.

Amount received on Account of Capital, viz.:—			
Calls on whole shares		£1,642,970 0 0	
Calls on half shares		1,221,691 3 9	
Calls on fifth shares		144,650 0 0	
			£3,009,311 3 9

The CHAIRMAN having intimated his readiness to listen to any observations on the Report, or answer any questions,

Mr. CROSTHWAITE said, it did not exactly appear from the Report, although he gathered it from the opening remarks of the Chairman, that the money already provided by the proprietors would be sufficient fully to complete the undertaking. Was it so?

The CHAIRMAN—Certainly.

Mr. CROSTHWAITE had at the last meeting at Bristol, hazarded an opinion, that there would during the next six months be an increase of charge under the head of locomotive expenditure, and he was sorry to see, from the accounts, that he was correct. Might he ask if the item of payments from capital, since June last, of 120,604*l.* for "locomotives, engines and carriages," related exclusively to new stock?

The CHAIRMAN said, nothing had been charged to capital, except for new stock.

Mr. CROSTHWAITE—What is your present stock of engines?

Mr. BRUNEL—107.

Mr. CROSTHWAITE—All paid for?

The CHAIRMAN—There may be some small balances unpaid, but not much.

Mr. CROSTHWAITE—What further number of engines, may I ask, are ordered?

Mr. BRUNEL—20, making altogether 127.

Mr. CROSTHWAITE—Do you conceive that this number will suffice to work the whole of the line?

The CHAIRMAN—We believe it will be perfectly adequate.

Mr. BRUNEL said, he had no doubt that 130 engines would be sufficient.

Digitized by Google

Mr. CROSTHWAITE was only anxious to know, if any further expenditure would arise under this head, and therefore he would again ask, if all the engines had been paid for?

The CHAIRMAN said, they had been cast in the Court of Exchequer the other day, respecting the payment for some engines.

Mr. CROSTHWAITE—Was that case the same that was formerly tried at Liverpool?

The CHAIRMAN—It was a consequence of that case.

Mr. CROSTHWAITE inquired, as the subject had been alluded to in the Report, if the Directors were aware when the Cheltenham and Great Western Union line would be completed?

The CHAIRMAN said, the Directors had always been impressed with the importance of getting the Cheltenham line completed, so as to enable them to have the full benefit of the stream of traffic from Cheltenham, Gloucester, and the whole of South Wales. Such aid as the Directors could give had always been given. If, however, the proprietors were desirous that some means should be adopted, on a basis equitable and fair to both Companies, to ensure the completion of the Cheltenham line, it would be for the Directors to take the circumstances into their best consideration, and report the results.

Mr. CROSTHWAITE had a good opinion of the Cheltenham line, as an adjunct to the Great Western. They had a seven years' lease of that line, after which it must stand upon its own merits; and without pledging the Great Western Company, as a Company, he thought that some proposition might properly come from the Cheltenham Company, which might induce individual proprietors to embark in the branch line.

The CHAIRMAN—Then you would not recommend any scheme to be taken up by this Company?

Mr. CROSTHWAITE could not, of course, recommend any such step, without knowing more of the capabilities of the Cheltenham line, *per se*, than was disclosed in the Report. All that he wished was, to convey a hint to the Directors of the Cheltenham line, that rather than stand still, they might find it to their advantage to make some proposal to individual proprietors of the Great Western Company. He would not ask any further questions, but would merely express a hope that the predictions of the Directors would be verified, and that at the next meeting they would be able to declare an increased dividend. (Hear, hear, hear.)

Mr. LAWRENCE HEYWORTH wished to ask a few questions. He saw in the accounts for the last six months, an item of 168,890*l.*, for "permanent way, including labour and materials," as charged to capital, besides an item in the revenue account, of 21,912*l.* for "maintenance of way." He thought this item of 168,890*l.* very large.

Mr. BRUNEL said, it consisted principally of payments made during the last six months, for works previously executed.

Mr. HEYWORTH—Did slips during the half-year occasion any considerable portion of this expenditure?

Mr. BRUNEL—Some portion may refer to the cost of repairing slips, but not to any considerable extent.

Mr. HEYWORTH—Would such expenditure on slips exceed 10,000*l.*?

Mr. BRUNEL did not believe it would, but really he could not pledge himself to the precise amount.

Mr. HEYWORTH—There is an item for "land and compensation" of 11,662*l.* during the half-year. I hope the amount still to be paid under this head is very small?

The CHAIRMAN—Very small.

Mr. HEYWORTH—Not thousands?

The CHAIRMAN—I hope not. Certainly not many thousands.

Mr. HEYWORTH said, he had no distinct knowledge of what the real capital of the Company was. Was it 6,300,000*l.* or more?

The SECRETARY said, the actual and final result of the estimates was 6,300,000*l.*, after reductions upon many items, which were expended for surplus land, plant, &c., which would return to the Company. For instance, there was the plant which the Company had required for carrying on the works, and the sale of surplus lands and premises, which would have to be deducted, which items were calculated in February last as likely to amount, in the aggregate. to 200,000*l.*

Mr. HEYWORTH—You think the 6,300,000*l.* will be sufficient?

The CHAIRMAN—That is our firm impression. (Hear, hear, hear.)

Mr. HEYWORTH said, he had never before been present at a meeting of the Great Western Company where the Report of the Directors had been so satisfactory as on this occasion. (Hear, hear.) It had his entire and unqualified approbation, and he thought the proprietors at large would concur with him. (Applause.) As regarded the Report of the Engineer, though there doubtless were circumstances to prevent it from being so satisfactory, he could not give *it* his unqualified approval, especially when he saw in it such sentences as this,—"The weather has, of course, almost completely put a stop to, or materially delayed, those works which were in the course of construction, * * * and unavoidably delayed the finishing off many of the works, and winding up of the contractors' accounts." He was sorry that anything should have prevented so desirable a consummation, although there might, he would repeat, be reasons for it with which he was unacquainted.

The CHAIRMAN was sure that the hon. proprietor would admit the impolicy of precipitating the settlement of such accounts. (Hear, hear.)

Mr. HEYWORTH—There was another paragraph in the Engineer's Report which he did not like. It was the concluding paragraph—"The various occurrences which I have referred to, as requiring and receiving such constant and serious attention, have necessarily been attended with considerable expense." Why was not that expense stated more explicitly? "But I am happy (the Report proceeded) to say, that although it is not in my power yet to arrive at a sufficiently safe estimate of this cost, which is so mixed up with contracts or with completion of works as to justify my naming any sum,"—a vagueness which was very unsatisfactory —"I do not think it will have been so so large as might have been expected * * and I have no reason to fear that any ground of complaint will exist as to the correctness of my last estimates." He thought something more precise and minute should have been stated.

The CHAIRMAN said, it was impossible to be very definite where accounts were not yet rendered, and where it was doubtful what portion of the expense was to be borne by the Company, and what by the contractors.

Mr. HEYWORTH said, if he was not satisfied with the Report of the Engineer, he was at least perfectly satisfied with the speech of the worthy Chairman in opening the proceedings, because it showed that there was not likely to be any great excess upon the whole cost of the line, as laid before the last meeting. On the whole, therefore, he had great pleasure in moving the adoption of the Report. (Hear, hear, hear.)

Mr. LAMBERT said, mention was made in the Report of the conveyance of stone. He would ask whether such heavy goods would not be more detrimental to the line than profitable to the Company.

Mr. BRUNEL was aware of no property in stone that should render its conveyance more injurious than the conveyance of other materials.

Mr, LAMBERT thought it might strain the rails or the engines.

Mr. BRUNEL said, they would of course only carry adequate loads, and whether it were a ton of stone or a ton of what were called "light goods," mattered nothing.

Mr. LAMBERT said, allusion had been made to the removal of the West India mails to Dartmouth. Were not these mails now landed at Falmouth or Southampton?

The CHAIRMAN said, the mail packets referred to started from Southampton, and at present called at Falmouth for the mails and passengers. The present state of the matter was this:—In the time of the late Government, a Commission had been appointed, consisting of a Brother of the Trinity House, an Admiral, and one of the officers of the Post-office, to inquire into the best port for the despatch and arrival of the West India mails. More competent judges could not have been chosen, and they gave their opinion in favour of Dartmouth. Subsequently, some doubts had been raised, in certain quarters, as to the propriety of this decision, and a Committee of the House of Commons was appointed to investigate the subject. A great deal of evidence was taken, but although the Committee rather leaned to Falmouth or Southampton, nothing final was determined on, and thus the matter now rested with the present Government, either to decide upon one of these ports, or to appoint a new Committee or Commission.

Mr. LAMBERT inquired, what was meant by the reference in the Report to the removal of the mails from Wales.

The CHAIRMAN said, it was thought likely to be beneficial if the main packet-station for Ireland were removed from Milford to Bristol. They were in communication with the authorities on the subject, but nothing definite had yet been determined on, so that the Directors could only express a hope that the removal would take place.

Mr. LAMBERT inquired if a larger amount of interest would not have to be paid in the current six months than had been paid in the last half-year.

The SECRETARY—Certainly.

Mr. LAMBERT—To what extent?

The SECRETARY—About 8,000*l.* The excess would be merely the interest on the loan notes which had been issued in the last half-year.

Mr. LAMBERT said, there was an allusion in the Report to a claim on the Post-office for the conveyance of the mails. Was the amount large?

The CHAIRMAN—The matter is subject to arbitration, and, therefore, of course we cannot tell whether it will be large or small.

Mr. LAMBERT—What amount of toll is paid to the Bristol and Exeter Company, over and above the rent?

The SECRETARY—One farthing per passenger per mile, and the same sum per ton per mile for goods.

Mr. LAMBERT felt obliged for these answers, and had much pleasure in seconding the motion for the adoption of the Report.

Mr. ALSTON, before the motion was put, felt it due to his own consistency and character to bring forward some facts which had came within his knowledge during the last few days. When the last meeting of this Company was held he was not present. In fact, he was attending the meeting of the North Midland Company at Derby, and there he had proposed that two Auditors should be appointed from the body of proprietors to examine the accounts before they were submitted at the periodical meetings. (Hear, hear, hear.) Upon that occasion it gave him great gratification to find—and if his word were doubted, he held in his hand the report in a newspaper (the *Railway Times*) which would confirm his statement — that Mr. Glyn, then the Chairman of the North Midland Company, had intimated the pleasure he should have in seconding the motion for the appointment of Auditors. Last Tuesday he had called upon his friend Mr. Russell, the Chairman of this Company, and had been receeived with that gentleman's accustomed courtesy, when he (Mr. Alston) had mentioned his anxiety that two respectable and responsible individuals should be appointed to audit the accounts of the Great Western Company; for could anything be more absurd—he must use strong language—than to suppose that proprietors who met together only twice a-year, and then for only two or three hours at a time, should be able to comprehend or check a voluminous mass of accounts? At the time referred to, he had received no answer from Mr. Russell, but subsequently he had been told that the Directors could not accede to the ap-

Digitized by Google

pointment of Auditors. (Hear, hear.) So far from wishing to go against the Directors, he (Mr. Alston) had been anxious that the proposition should emanate from them, as he was satisfied it would elevate their position. (Hear, hear.) As the Directors, however, had refused to entertain the proposition, he must now appeal to the proprietors, and it would be for the Chairman to state the reasons which had led to the refusal. The Chairman had hinted to him that the appointment of Auditors would be casting a doubt upon the integrity of the Directors. Did they think that he (Mr. Alston) doubted, or that any one could doubt, the honesty and sincerity of purpose of the Directors. (Hear, hear.) But if he should say that he did not at times doubt their prudence, he should say what he did not think, for he thought their expenditure had occasionally been greater than it ought to have been; and looking at it retrospectively, he was of opinion that it would be a very good thing to have a check upon them in prospect. (Hear, hear, and a laugh.) With respect to the Report, it had his full approbation. He had particular pleasure in noticing the reduction which had taken place in the item for maintenance of way, for he had looked upon the Great Western plan of construction with considerable suspicion in that respect. Last half-year the charge alluded to was 9¼ per cent. on the gross receipts, while now it had been reduced to 6¼. (Hear, hear, hear.) He thought this was a pretty good proof that the road was laid on a sound principle. Might he ask what was paid for coke?

The Chairman—In London 36s. per ton, in Bristol 25s.; but the Directors hope still further to reduce the item.

Mr. Alston said, there seemed to be a special reason why Auditors should be chosen in this Company, because the mode of appointing the Directors was a wrong one. In the Grand Junction Company, in which he held some interest, the Directors were the largest proprietors; whereas, one of the gentlemen put forward for re-election today held no more than 10 old shares—he did not know how many new shares he might be possessed of. When he knew, however, that there were gentlemen in that room holding 800 or 1,000 shares, who not only were not put forward by the Directors, but whose election to office was opposed by them, he was bound to say that the system was a wrong one. (Hear, hear.)

The Chairman said, as an appeal had been made to him, he would state to the meeting what he had previously stated to the honourable proprietor who had brought this subject forward. The mode in which the accounts of the Company were now audited was by two Directors of the London section of the Board, and two of the Bristol section, who devoted several days every month to the duty. (Hear, hear.) He believed that this mode was perfectly effectual, and that they thereby arrived at an accurate knowledge of the state of the Company's accounts. (Hear, hear, hear.) Did the honourable proprietor think or expect that two Auditors appointed on his plan would devote so much time and attention to the subject? If he did he would find himself greatly deceived and disappointed. Most gentlemen present were connected with public bodies where the mode of auditing proposed by the honourable proprietor was adopted, and he would appeal to them whether such auditing was not usually a mere matter of form. (Hear, hear, hear.) He was satisfied that the plan of the honourable proprietor would not be sufficient to ensure correctness, but it would be amply sufficient to give rise to litigation and dispute. (Hear, hear.) Superficial it needs must be, but at the same time prolific of trivial disputes at these half-yearly meetings. (Hear, hear, hear.) He doubted, moreover, whether they had the legal power to appoint such Auditors. The Act of Incorporation defined very minutely the duties of the executive officers of the Company, and in it no mention was made of Auditors, but provision was made that if the accounts laid before a general meeting should not prove satisfactory to such meeting, then in such case the meeting might appoint a Committee of five proprietors to investigate the matter. He did not think it was straining the Act to say that the appointment of Auditors, such as were recommended by the honourable proprietor, was not contemplated in it; but he thought the Act justified the allusion to which the honourable proprietor had referred as having been made to him—namely, that such an appointment would cast a doubt upon that perfect confidence which had subsisted, and he trusted would always continue to subsist, between the proprietors and the Directors. (Applause.) For these reasons the Directors were unanimously of opinion that it was not desirable to recommend the appointment of Auditors. (Hear, hear, hear.) They thought such auditing would be utterly insufficient, would lead to endless disputes, and would cast the shadow of an imputation on the Management. (Applause.)

Mr. Vousley congratulated the meeting on the unanimity which had marked the proceedings of that day. He was particularly glad to see the honourable proprietor who had moved the adoption of the Report lending his great influence and approbation to the course adopted by the Directors, more especially as that gentleman had on previous occasions deemed it his duty somewhat to oppose them. (Hear, hear.) He trusted, that by the time the next meeting was held, the Engineer would likewise receive, as he was sure he merited, the "unqualified approval" of the honourable proprietor. (Hear, hear.) He himself was much gratified with the result of the exertions of the Directors and Engineer. They had a very excellent property, well worth the outlay. The honourable proprietor on his right (Mr. Alston) had thrown out some suggestions as to the appointment of Auditors, but after hearing the explanations of the Chairman, he (Mr. Vousley) did not think the meeting would adopt these suggestions. When proprietors subscribed for shares, they did it with a knowledge of the provisions of the Act—(laughter)—and although they might with the consent of the Directors make bye-laws and regulations, he did not think that the present proposition was necessary. (Hear, hear, and renewed laughter.) As the Report was satisfactory, and that it was so was on all hands admitted, he should be sorry, he would repeat, to interfere with those who had achieved their present prosperity, unless it could be shown to be absolutely necessary, which he did not think was the case. The Directors had reduced the number of the Board, and the cost of working the line; and he hoped that at the next meeting the undertaking would be in a still better condition.

Mr. E. Mozeley was not prepared to place implicit confidence in any body of Directors, but he differed, in some respects, from his friend, Mr. Alston. If he (Mr. M.) understood the duty of an Auditor, it was merely to check accounts, so as to ascertain that certain sums of money had actually been disbursed. Auditors, in his opinion, had no power to examine into the propriety of incurring such and such items of expenditure, otherwise they would speedily become dictators, and Directors would become subject to the views or caprices of two individuals. A time might arrive when all the money required to be expended on a particular railway having been expended, it would be desirable to take some means of ascertaining whether greater economy in working it could not be adopted, but he thought that at present Mr. Alston's proposal was premature; and as a bad practice introduced upon one line might form a precedent to others, he trusted that Mr. Alston would not press his views, but allow the proceedings of the day to be entirely unanimous, now that a good feeling was re-established between the proprietors and the Board. (Applause.) The Report was extremely creditable to the Directors. (Hear, hear.) It was an honest, an open, and a fair-written document, setting forth the real state of the undertaking, and his satisfaction with its contents was increased by the remarks of the Chairman, which showed that 6,300,000*l.* would suffice to complete the line; and whether an excess arose on this item, or that, was in such a case of little importance, so that the sum total was not increased. (Hear, hear, hear.) It was true, as their talented Engineer observed, that it was difficult to bring every item within a previous estimate; but he would suggest, that as soon as possible indefinite expressions should be dropped, and he trusted the time was not far distant when they might congratulate each other on having a good road and a good dividend. (Hear, hear.) He begged to inquire if the Directors had raised the whole sum they were empowered to borrow.

The Chairman—Not the whole.

Mr. Mozeley—What amount remains?

The Chairman could not tell without reference to the books.

Mr. Mozeley said, it was of no importance. He hoped it would not affect the general arrangements of the Company.

The Chairman—Certainly not.

Mr. Mozeley quite concurred in the principle of a depreciation fund, which was the only fair and honest mode of enabling the present proprietors to maintain their working stock in a proper position, and to hand it over to their successors in a thoroughly effective state. He need not go over the argument now so generally understood, of the ceaseless decay to which such stock was liable, but he rather differed from the Report as to the non-value of periodical valuations. Although they might not thus be able to ascertain the precise extent of depreciation, they could approximate to it very nearly. He thought such valuation more necessary in this case, as he observed a paragraph in the Report to the effect, that the repairs of engines in the present half-year appeared likely to be rather heavier than before, and might, perhaps, absorb the contemplated saving in the price of coke. As the locomotive stock was now all but new, and must of course become more and more depreciated as it got older, he thought it desirable that the extent of such depreciation should be ascertained. Although such periodical valuations might not be of great importance to the proprietors in determining what amount ought to be set aside looking at each half-year by itself, they would serve, when spread over a series of years, to show whether the per-centage agreed to be appropriated for depreciation was sufficient. If he properly understood the plan proposed in the Report, it was, that the Directors intended to keep the stock in thorough repair for ten years out of the receipts, the 20,000*l.* a year being allowed to accumulate with interest during that period. He would suggest that a yearly valuation should be made of the locomotive stock, in something of the same way as lives were valued, so that data might be obtained for forming an accurate judgment as to whether the per-centage was sufficient; and if at any future time it should appear not sufficient, he trusted the Directors would follow the example set them by the Directors of the London and Birmingham Company, and openly say so. It might be said that he was arguing against the dividend, but it was right that the depreciation principle should be fairly and fully carried out; and as the railway world were now in the habit of making calculations for themselves, they would soon be enabled to ascertain whether a sufficient allowance was made for the decay to which the locomotive stock was liable, and the shares of the Company, would in the end reach the exact position to which they were justly entitled. The honourable proprietor (whose position in the room prevented us from distinctly catching all that he said) sat down amid applause, after expressing his cordial concurrence in what had been stated as to the satisfactory character of the Report.

Mr. George Carr Glyn entirely agreed in what had fallen from his friend who had just sat down. (Hear, hear.) He was happy to find that the principle of a depreciation fund was now becoming of general adoption. There were two or three modes by which that principle might be carried out, but after the considerable experience of years, and no little attention to the subject in all its bearings, he was satisfied that the plan adverted to in the Report was the best—he meant the plan of an annual per

Digitized by Google

centage. (Hear, hear.) He agreed, however, with his friend, Mr. Mozeley, that not any per centage would carry conviction of its sufficiency to the minds of proprietors, if not tested by periodical valuations of the moveable stock. He was not one of those who thought that such valuations could not now be rendered pretty correct. Such was the present state of scientific knowledge, that with due care and experience there could, he thought, be no difficulty in approximating sufficiently near, for all practical purposes, to the exact value of the stock at different periods, although to act upon such valuations from half-year to half-year must prove extremely allacious. He had not risen, however, to confirm the statements of his friend—which, indeed, from the eloquence and precision with which they had been expressed, stood in need of no confirmation—but, because an allusion had been made to himself personally, by another friend, and he was anxious to explain the circumstances under which he had adopted the course which had been very correctly explained by the gentleman referred to. He would recall to the mind of that honourable proprietor the peculiar circumstances under which the meeting of the North Midland Company at Derby, over which he (Mr.Glyn) had the honour to preside, had taken place—he would recall to his recollection the gross personal attacks which, previous to that meeting, had been made from certain quarters upon the Directors—attacks which it became his (Mr.Glyn's) duty instantly to repel. Connected as he was at that time with the Board whose integrity had thus falsely and wantonly been assailed, he had stepped forward most willingly to second Mr. Alston's motion for the appointment of Auditors; and he should have failed in his duty to his colleagues and himself if he had, under such circumstances, hesitated to take *any* course which had a tendency to demonstrate that the charges brought against the Directors were false and unfounded—charges which, it was but right to say, Mr. Alston had never brought forward, he was too honourable a man to do so—but, on the contrary, had at once, and unequivocally disclaimed. (Great applause.) With reference, however, to the general question of Auditors, one of the arguments urged at Derby, in favour of their appointment, was in reference to the practice of the Grand Junction Company. He (Mr. Glyn), looking as he always did with great respect to the experience and conduct of so eminent a body as the Directors of that Company, had allowed the argument to have much influence, but on subsequent inquiry, he had found that the Auditors in the Grand Junction Company were—what did the meet-meeting suppose?—why, no other than the two Directors going out of office by rotation! If he were correct in that statement, and he spoke in the presence of gentlemen well acquainted with the facts—(cries of "quite correct")—what was this boasted appointment of Auditors in the Grand Junction Company, but an appeal from those Directors who were *in*, to those who were coming in? (Hear, hear.) Could anything be more unsatisfactory, supposing Mr. Alston's principle to be correct? For his own part he would much rather leave the responsibility with the whole of the gentlemen behind the table. (Hear, hear.) If the proprietors questioned the correctness of the accounts, let them do as the Act directed, namely, appoint a Committee of five to investigate them, and the consequence would of course be, that the Directors would surrender their office, and very properly so, into the hands of such Committee. Although he (Mr. Glyn) had been quoted as agreeing in the appointment of Auditors, he begged to repeat, that it was solely under the peculiar circumstances of the case, and that he altogether dissented from the principle. (Hear, hear.) Mr. Alston, as one of the North Midland Railway Auditors, had executed his duty very laboriously, and the result of his investigations remained to be seen. (Applause.)

Nr. NICHOLSON, after premising that he had travelled 100 miles for the sole purpose of being present at this meeting, begged to ask Mr. Brunel whether the indefinite expressions in his Report were meant to pave the way for a call for further capital at the next meeting, or whether he still adhered to the opinion which he had expressed at Bristol in August last, that 50,000*l.* would be a large excess on the capital of 6,300,000*l.*?

Mr. BRUNEL had not meant his remarks to be in the smallest degree a prelude to asking for a further amount. He still held the same opinion as at the last meeting. (Hear, hear.)

Mr. NICHOLSON said, he observed from the accounts that there were arrears of calls upon some of the shares. He presumed the dividend would not be paid in respect of such shares?

The CHAIRMAN—Certainly not.

Mr. NICHOLSON inquired how much money had been raised under the resolutions passed at the meeting in February last?

The SECRETARY said, it had been stated in August last that 300,000*l.* had been raised under these resolutions. No more had been raised since, and no more would be raised.

Mr. NICHOLSON asked if this 300,000*l.* would be covered by the re-sale of surplus land?

The SECRETARY had no doubt of it.

Mr. NICHOLSON was sorry to see that the lawyers had received so large an amount of money. (Hear, hear, and a laugh.) He found that the cost of purchasing land during the last half-year had only been about double the cost of conveying it. The item for "land and compensation" was 11,662*l.*, and for "law charges, conveyancing, and costs of title," 5,856*l.* (Hear, hear.)

The SECRETARY said, the whole of the latter item had not been incurred, although it had been paid, during the last six months.

Mr. NICHOLSON said, it was much the same the previous half-year. He had no doubt the charges were correct, but he was sorry they were so heavy. He thought, too, that for a finished line 7,700*l.* was a very large amount to be paid in six months for engineering and surveying.

The SECRETARY begged to repeat, that part of that item also referred to services performed anterior to the last six months.

Mr. NICHOLSON inquired if any steps had been taken to carry out the branch lines to Oxford and Newbury, to which reference had been made at a previous meeting.

The CHAIRMAN said, nothing decisive had yet been done.

Mr. NICHOLSON said, there were in the Report expressions of regret that the Cheltenham line was not so productive as was expected. Might it not in some measure be ascribed to the exorbitant charges made by the coaches, namely, 6s. and 4s. from Cirencester to Cheltenham—a distance of 14 miles?

The SECRETARY said, the distance was 16 miles, and with regard to the charges, the turnpike tolls in that district were excessively heavy, and the roads bad and up-hill. The Directors, in fact, had had great difficulty in coming to an arrangement with the coachmasters to "cover" every train—for that was an essential point of the arrangement. He would assure the meeting that the fare by the coaches from Cirencester to Cheltenham was at present less in proportion than when they ran throughout to London. He (the Secretary) had been sent down by the Directors in September last to negociate with the coachmasters for a reduction in the fares, and they had been prevailed on to make an experiment of 5s. and 3s. fares for three months. At the end of that term they showed him the whole of their accounts, which he went through carefully and minutely, and he would assure the meeting that the result satisfied his own mind, against his will, that the coach proprietors could not conduct the business at less charges than 6s. and 4s. (Hear, hear.)

Mr. NICHOLSON knew that road coaches throughout carried for less than the railway and coaches together.

The SECRETARY said, it was indispensable that the coaches should not be confined to particular trains nor to particular seasons of the year, for in that case the public might find themselves on a wintry night at Cirencester without the means of going forward to Cheltenham. (Hear, hear.) Although they were glad of course to see as many coaches at the terminus as possible, he was quite satisfied that nothing but an arrangement like that now in force would meet the circumstances of the case.

Mr. NICHOLSON thought the depreciation fund should be taken from traffic and not from capital.

The SECRETARY said, it *was* taken from the traffic.

Mr. NICHOLSON thought it ought, therefore, to be put down in the revenue account.

The SECRETARY said, this could not be done, as they had only just determined upon establishing such a fund.

Mr. NICHOLSON said, the expenditure would considerably exceed 40 per cent., if the 10,000*l.* for depreciation were taken into account.

The SECRETARY said, it would even then exceed 40 per cent. only a very little. There was really no desire to conceal anything.

Mr. NICHOLSON—It was stated by the Secretary at the last meeting, that the running of more trains upon the Great Western Railway then upon other lines was an experiment to create traffic. Was the Secretary still of opinion that it was desirable to run so many trains?

The SECRETARY was still of the same opinion The number of trains had since been slightly diminished, but any further diminution would, he was satisfied, be detrimental. It would be seen from the Report, that in the last six months they had carried 882,000 passengers, so that a large number must have been "short" passengers. The trains from Bath to Bristol, from London to Slough, and from Bridgewater to Bristol, might be called three trains, but they constituted, in point of fact, only one train, timed so as to suit the requirements of the several localities. There was, he would repeat, no doubt on his own mind, and he believed, no doubt on the minds of the Directors, that it was necessary to keep up at least the present number of trains, and probably increase the number in summer. (Hear, hear, hear.)

Mr. NICHOLSON was of a different opinion, as he frequently travelled by the line, and sometimes saw trains nearly empty.

Mr. MOZELEY would be glad to know, if the dividend could not be paid at an earlier period than the 24th of March, as named in the Report. The Birmingham Directors had set a good example in this respect. (Hear, hear, hear.)

The CHAIRMAN said, it took two or three weeks to prepare the dividend warrants. Perhaps another year the meeting could be called rather earlier.

Mr. MOZELEY thought an earlier payment might be effected by "getting the steam up." The matter was of some consequence to many proprietors.

The CHAIRMAN said, no time should be lost.

Mr. HEYWORTH, as the mover of the resolution for the adoption of the Report, wished to know if it were intended that the 20,000*l.* a-year for depreciation, should accumulate until it reached 200,000*l.*

The CHAIRMAN—Yes; that is the intention.

Mr. HEYWORTH—If the stock is kept up as you seem to propose, I cannot see what is to be done with this 200,000*l.* and its interest.

The SECRETARY said, he had been desired by the Chairman to notice briefly one or two observations that had fallen from honourable proprietors on this point. The intention of the Directors, with respect to the 20,000*l.* a year was this. They found that their locomotive stock had already cost them 500,000*l.*, and would cost more, say 550,000*l.* altogether. They meant, during the ten years, to keep the stock in efficient repair, but there were many items besides wear and tear which might be incurred during that period, and which the Directors, at the termination of such period, would not be justified in placing on the debit side of the current account. If, at the end of the ten years, the 200,000*l.* were not required, it would reduce the locomotive capital of 550,000*l.* to 350,000*l.* With respect to the passage in the Report

Digitized by Google

which might be supposed to admit the inutility of periodical valuations of stock, the Directors were of opinion, as so ably expressed by Mr. Glyn, that if adopted from half-year to half-year, so as to regulate the amount of dividend, such a plan could not fail to mislead, but if from valuations at the end of one year, or two, or three years, it should be found that the 20,000*l.* a year was insufficient, then 25,000*l.* or 30,000*l.* might be set aside. This however was very different from the half-yearly valuations, which, if the depreciation were taken at a low rate would capriciously increase the dividend for that half-year, or if at a high rate, unjustly diminish it. (Hear, hear). The plan now proposed by the Directors of this Company, was sanctioned by the high and distinguished authority already referred to—the Grand Junction Company. The Directors of that Company had formerly taken half-yearly valuations, and regulated their dividend accordingly, but in their last Report, they discarded this plan as fallacious, and set aside 5,000*l.* for depreciation; and taking *their* locomotive stock in comparison with the stock of the Great Western, if 5,000*l.* was not more than enough for them for the half-year, 10,000*l.* was not extravagant for this Company. (Hear, hear). An honourable proprietor had referred to the paragraph in the Report which intimated that the expected saving in coke would probably be absorbed in increased expenditure for repairs of engines. That paragraph had been inserted, because it had been found that during the short period of the present year that had already elapsed, the item for repairs had been rather heavier than before. The increase of stock would, in some measure, account for this, and also other circumstances which had occurred. The Directors did not know that the expenditure for repairs of engines *would be* increased during the current half-year, but *it might be* a little heavier, and to guard against the possibility of future disappointment in respect of the expected saving of coke, they had put forth the passage referred to. (Hear, hear, hear.)

Mr. HEYWORTH felt much obliged to Mr. Saunders for the candid explanation which that gentleman had given. Even now, however, he could not comprehend of what use the 200,000*l.* fund would be. (A laugh.) If they regularly renewed their stock, as they might probably do twice or three times over before the expiration of the ten years, they would then have the 200,000*l.* in hand. He had, nevertheless, every confidence in the discretion of the Directors, and there might be other reasons with which he was not acquainted, for establishing this fund. He supposed that if at the end of the ten years the money were not required, it would be divided among the proprietors. (Hear, hear, and laughter.)

Mr. TIMOTHY TYRRELL saw no mention made in the Report or accounts of any liabilities which the Company had incurred. Now, he considered it his duty to inform the meeting that he was present as the solicitor of Mr. Mackintosh, the contractor who had a claim of 250,000*l.* against the Company. He had not made particular inquiry with respect to the claims of other contractors, but he sincerely believed that they amounted to as much more, making liabilities altogether under this head to the amount of 500,000*l.* (Cries of "Oh, oh," and "Nonsense.") He thought these claims ought to be brought before the meeting. There was one account—

The CHAIRMAN really thought this matter ought not to be entered into at a public meeting, by the solicitor of one of the contractors. (Hear, hear.) The Directors were perfectly aware of the claims made, but he thought there was no occasion to discuss them in that place, when the question was now pending in a court of law. (Loud cries of "Hear, hear.")

Mr. MOZELEY thought it right to remind the proprietors, lest the discussion of such matters should do mischief out of doors, that they had the assurance of the Chairman that the total cost would not exceed 6,300,000*l.*, on whatever items excess might arise. (Hear, hear, hear.)

The CHAIRMAN said, the statement just made was to be taken as the *ex parte* statement of a solicitor on behalf of his client. The claims referred to were included in the 6,300,000*l.* (Hear, hear, hear.)

Mr. LAMBERT made some strong remarks on the presence of a solicitor in such a case.

Mr. TYRRELL said, he had bowed to the chair, but if he were thus to be attacked he must be permitted to defend himself. He trusted his motives in coming there would not be misunderstood.

The CHAIRMAN did not know what the learned gentleman's motives might be, but the effect of his remarks was most mischievous. He begged to state that the learned gentleman was the proprietor of just one share. (Hear, hear, hear.)

Mr. CROSTHWAITE—And I, as one of the largest shareholders, beg to state, that nothing that he has said to-day has operated in the smallest degree to disturb me. (Applause.)

Mr. HEYWORTH—Nor me, notwithstanding the very voluminous documents [holding up a huge MS.] which he has been kind enough to transmit to me. (Renewed applause.)

Mr. ALSTON begged to say a very few words in reply. The Chairman had told them that the appointment as Auditors of two honourable men, as honourable as himself, would lead to litigation and dispute. That he would deny. When Mr. Glyn represented that the principle adopted in the Grand Junction Company was not so efficient as that on the North Midland, in fact, was no check at all, and Mr. Russell maintained that auditing by Directors was the better plan, he would leave the two Chairmen to settle the matter between themselves. (Cries of "No, no," "Mr. Glyn did not say so,") As some allusion had been made to his own conduct at Derby, he begged to say that he had previously to that time heard many absurd rumours to the disparagement of the Directors, which he then, and still, believed to be as baseless as the fabric of a vision, and if he were spared to be present at the North Midland next Saturday, he should not fail to say so. With respect to the appointment of Auditors, as the proposal seemed distasteful to the Directors, and as the meeting seemed to go along with them, he should not now press it. (Hear, hear, hear.)

Mr. FRIPP was somewhat surprised that no notice had been taken in the Report of the Directors of the new Railways' Regulation Bill, introduced by Mr. Gladstone. He had seen in the newspapers some remarks of their worthy Chairman in his place in Parliament, giving a general approval to the measure; and he (Mr. Fripp) believed that most gentlemen present would agree that the provisions of the Bill were for the most part just. There was one clause, however—namely, that with respect to level crossings—which he thought would be injurious to the Companies. It was proposed that in cases where such crossings should appear to the Board of Trade to be dangerous to the public, they should have the power of compelling the Directors of the railway and the trustees of the road to come to some arrangement by arbitration, for constructing a bridge or tunnel, leaving the expense out of the question. He thought it was an act of gross injustice thus, by an *ex-post-facto* law, to upset the decisions of one tribunal which the legislature had recently established, and to which the Companies had submitted, and to set up a new one in its stead. It was unfair, he thought, that the Companies should in such a case be compelled to bear the whole or even half the expense of building a bridge; and he hoped the matter would be pressed upon the Government, so that the Companies should be held harmless. (Hear.) Another subject to which he wished to refer was, the accommodation given on the Great Western Railway to the third-class passengers. When he had the honour of a seat at the Board, he had frequently brought this matter forward. The meeting were aware that there were only two third-class trains daily, and he deemed it extremely hard that this class alone should be compelled to travel at such unseasonable hours as were appointed for the departure and arrival of these trains. (Hear, hear, hear.) He would put it to the proprietors as a question of equity and humanity, whether somewhat more regard should not be paid to a class of persons who it was represented on the first introduction of railways would be so especially benefitted by the new mode of locomotion, and he would also put it on the footing of profit to the Company, for he was satisfied that the third-class traffic upon the Great Western Railway was not nearly developed to its legitimate extent; and when he knew that one common-road coach at least was still running between London and Bristol, he thought this opinion was confirmed. He did not intend to propose any resolution, but threw out these hints for the consideration of the Directors, as he was satisfied that justice and sound policy alike recommended the granting of some further facilities. (Hear, hear, hear.)

The CHAIRMAN said, that when he made the few observations in the House of Commons, to which reference had been made, he had only heard a very brief summary of the provisions of the Bill from the Vice-President of the Board of Trade, and from that summary, he thought the measure not objectionable. He had since seen the Bill itself, and he was very happy to find that the present Government had excluded from it those clauses which were inserted in the Bill of last session, giving an unlimited control to the Board of Trade—clauses which the Directors of this Company had strenuously and successfully opposed. (Hear, hear.) He was glad to find too, that the clause as to the licensing of engine-drivers, which was calculated to prove hurtful, had been omitted. At the same time he would state frankly, that there were objectionable details even in the present Bill. A Committee had been appointed by the various Railway Companies to consider the probable effect of the various clauses. That Committee would communicate with the Board of Trade, who, he was sure, would listen to any reasonable representation. (Hear, hear.) The sole object of the Board of Trade was to consult the safety of the public, and if the Committee could convince them that any of the proposed enactments would not conduce to that end, he had no doubt such clause would be amended. (Hear, hear.) With regard to the other matter touched upon by the honourable proprietor, it had received the most anxious consideration of the Directors, but they could not acquiesce in the views of the honourable proprietor. If these third-class passengers were whirled through the air at a speed of about 40 miles an hour in open carriages, he thought they would suffer much more than at the present comparatively leisurely pace; and if these passengers were to be taken in the day time, the proprietors would have to provide a considerable further capital, so as to construct a vast number of additional sidings, for as the other trains were constantly traversing the line at the rate of 40 miles an hour, a large number of places of refuge must be provided for these slow trains. (Hear, hear, hear.) The Directors were very desirous to promote the comfort of this as of all other classes of passengers, and he begged to state that a stronger and better kind of third-class carriage, which indeed had been determined on previous to the late unfortunate occurrence at Sunning, was now in operation. He thought this improvement would add to the safety of the passengers, while their comfort appeared to be as much secured now as under any other plan. (Applause.)

Mr. FRIPP referred to the lines in the north of England, to show that no inconvenience was felt from travelling in open carriages at the rate of 30 or 40 miles an hour. He had travelled at that speed on the York and North Midland, which was almost a level line. To show how extensively the third-class carriages were used upon the railway referred to he mentioned that, according to the Company's last Report, the third-class passengers were to the second-class as 122,546 to 72,000, and to the first-class as 122,546 to 38,000.

The CHAIRMAN thought the length of the York and North Midland line might in some degree account for the plan adopted.

Digitized by Google

Mr. FRIPP said, it was 28 miles in length.

Mr. T. H. ENGLAND inquired when the Bristol station would be completed.

Mr. BRUNEL—In about eight weeks.

Mr. ENGLAND had seen in the *Railway Times* advertisements respecting the carriage of parcels to Dublin *via* Liverpool, but he had noticed nothing of the kind *via* Bristol. As these parcels cost by Liverpool 12s. and by Bristol only 6s., he thought the matter should be more prominently brought before the public.

The SECRETARY said, the greatest attention had been given to the subject, and certainly the low price of the Great Western Railway rate ought to attract such traffic. At the same time he begged to state, without any disparagement to the means of communication between Bristol and Dublin, that it was not nearly so perfect nor so frequent as that between Liverpool and Dublin, and this consideration had of course great weight with the parties sending these parcels.

Mr. ENGLAND said, he was much gratified with the Report. He certainly had been somewhat surprised to hear of a claim of half a million made on the Company by the representative of a contractor, but he was somewhat experienced in these matters, and if the Company would allow him 5,000*l.* he would take the whole burden on himself. (Hear, hear, and laughter.)

After some further conversation, the Report was unanimously adopted.

Mr. HEYWORTH proposed a resolution approving and confirming the arrangement with the Bristol and Exeter Company, on the terms mentioned in the Report.

Mr. VOUSLEY seconded the motion, which was put and carried unanimously.

Mr. Mozeley then moved, and Mr. Alston seconded, the declaration of the dividend specified in the Report, which, with all the others resolutions, was carried unanimously.

Mr. Lawrence moved, and Mr. Fripp seconded, the re-election of the retiring Directors. Carried unanimously.

Mr. MOZELEY highly eulogised the general conduct of the Chairman, and especially the courtesy, kindness, and efficiency which he had that day displayed; and moved, that the cordial thanks of the meeting be offered to him.

Mr. HEYWORTH seconded the motion, which was carried by acclamation.

A vote of thanks to the Directors generally, was subsequently passed in a similar way.

The CHAIRMAN returned thanks for his colleagues and himself, expressing the pleasure which they received from this mark of continued confidence, and pledging himself and them that they would strive to deserve it.

Mr. CLEASBY, after speaking of the great talents of Mr. Brunel, moved, that the grateful thanks of the proprietors be given to that gentleman, in testimony of his high professional ability, and his zealous devotion to the service of the Company, from the first commencement of the undertaking to its present completion.

Mr. ROSKELL, amid loud applause, seconded the motion.

Mr. HEYWORTH said, he would gladly have concurred in this motion, if it had been deferred till next meeting. He held himself, he said, in reserve to do justice to Mr. Brunel; but were he in Mr. Brunel's position, he should wish the vote to be postponed till next meeting. (Cries of "No, no.")

The CHAIRMAN said, it was impossible that any resolution could have been put into his hands which would have afforded him more gratification than this vote of thanks to Mr. Brunel, and he was sure he expressed the sentiments of his colleagues also. (Applause.) The Directors had had daily opportunities of becoming acquainted with Mr. Brunel's high scientific attainments, and of witnessing the admirable dexterity and readiness with which he applied those acquirements to the every-day business of his profession. (Applause renewed.) They were familiar with his unceasing activity, his ungiring energy in what he conscientiously believed to be a right course—they were well acquainted with the straightforward manliness and uncompromising integrity of his personal character—and knowing these things, it would have given them the greatest pleasure to move this vote of thanks; but they thought it would be more gratifying to Mr. Brunel, and more gratifying to the numerous friends who took a deep interest in his good name, that this well-deserved mark of approbation should proceed from the body of proprietors. (Reiterated applause.) If the Directors had brought forward the resolution, it would not, he could assure the meeting, have been a mere formal proposition, but a cordial expression of the conviction of their own judgment—an expression of their sincere respect and esteem. On an occasion like the present, when now for the first time they were witnessing the prosperous results of that stupendous enterprise which Mr. Brunel's energies had called into birth, he had hoped that not one individual would have been found in the meeting who would not have cordially responded to the resolution. (Great applause.) He was sure that he was speaking in conformity with the sentiments of the great body of proprietors, and he had only to add that Mr. Brunel had previously been entirely ignorant that such a motion was to be proposed.

Mr. VOUSLEY, amid the most unequivocal signs of impatience on the part of the meeting, made a few remarks in reference to the observations of Mr. Heyworth, and strongly lauded the talent and zeal of Mr. Brunel, and the merits of the broad gauge.

The motion was then passed by acclamation.

Mr. BRUNEL returned thanks. If he were unable to respond at all, much more so in a proper manner, to the compliment which had been paid him, it must be attributed to the unexpected honour which had been conferred on him. He had literally been taken by surprise, for until the resolution was read he had not the most distant idea that it referred to himself. He would not refer to what had fallen from his friend Mr. Heyworth, although he must say that it had damped the pleasure which this vote would otherwise have afforded. (Cries of "No, no.") He could only account for Mr. Heyworth's remarks on the supposition that that gentleman valued such a vote less highly than he did, otherwise he could not have spoken of refusing or deferring it, notwithstanding that he (Mr. B.) might think with his friend that it would have been as well to postpone it. Nevertheless, he accepted it most gratefully, and whether his services had been of great value to the Company or not, he would assure the meeting that he had entered upon and carried on those services with a perfect, entire yielding up, of the energies of his mind to their proper discharge. It was now some seven or eight years since he had the honour of first becoming connected with the Company, and he would repeat, that during that period he had devoted his whole mind, and his whole body, to the work. He looked back upon the past with satisfaction, and if there did lurk in the breast of any one a doubt whether they had been properly served, he had the gratification of knowing that these doubts were being rapidly removed. He believed from his heart that the line was a good line, and that the money of the proprietors had been well and economically expended. He knew that the thoughts of no proprietor had been more directed than his own towards a strict economy, and the Directors knew this, and it was probably to that knowledge that he was indebted for the flattering terms in which, he feared undeservedly, he had been spoken of by his friend, the Chairman. If at any time there had appeared in the progress of the works, an expenditure of means which to any of the proprietors might have appeared unnecessary, he would assure them that no one could have endeavoured more than himself to avoid it, for the money was drawn from him like his own blood.

The honourable gentleman, who had been repeatedly interrupted by the loud plaudits of the meeting, then sat down.

Mr. HEYWORTH expressed his regret that he should in any way have damped the gratification of Mr. Brunel. He had only suggested that the pleasure of such a vote would have been greatly enhanced at the next meeting, but he trusted they would have no cause to regret having awarded it now. The honourable gentleman then went on to say, that he had always been favourable to the wide gauge, although he had entertained doubts as to the desirableness of having gradients so fine. One proof, however, that these gradients were useful was to found in the diminished per centage of expenditure for working. No one would rejoice more than he if Mr. Brunel should prove amply deserving of the compliment that had been paid him. (Hear, hear, hear.)

The CHAIRMAN having declared the business of the day at an end, said he had now to address the gentlemen present not as proprietors of the Great Western Railway Company. They had given their testimony to the high merits of Mr. Brunel; and he had now to state, that some of that gentleman's personal friends had it in contemplation to present him with a suitable memorial of their respect and esteem, which he might be able to transmit to his children. He held in his hand a paper which he would lay upon the table, and which any gentleman disposed to forward the object referred to might sign. [The honourable gentleman was much affected in making this statement.]

The paper was then read. It stated that a subscription not to exceed 10 guineas from any one subscriber, was to be opened for the purpose of presenting a service of plate to Mr. Brunel, and that a Provisional Committee would be appointed to carry the object into effect, by any member of which Committee, and by Messrs. Glyn and Co., bankers, subscriptions would be received, and it was requested that the names of subscribers should be transmitted without delay.

Mr. ROSKELL immediately signified his intention of putting down his name for the maximum sum. Several other gentlemen followed his example, and many more for smaller amounts.

The meeting then separated.

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the shareholders in this Company took place on Thursday last, at the York Hotel, King-street, Manchester. There was rather a numerous attendance, about 100 gentlemen being present; THOMAS ASHTON, Esq., of Hyde, the Chairman of the Board of Directors, presided.

Mr. SLATER, (the Law-clerk) having read the advertisement by which the meeting was convened, it was resolved, on the motion of Mr. T. Ogden, seconded by Mr. John Bradshaw, that the seal of the Company should be affixed to the register of proprietors. This being done—

Capt. CLEATHER read the Report of the Directors.

Mr. G. W. BUCK, the Engineer, then read his Report.

[These documents we must defer.]

Mr. DAKIN asked if it was the intention of the Directors to make a station on the Stockport side of the river Mersey? There had been various reports that they did, and that they did not, intend to do so. He understood that recently a very favourable offer had been made to the Directors, of a piece of ground on the Stockport side of the river, by the Relief Committee of that place.

Mr. N. NEWBERY (a Director) said, that an application had been made, some time ago, in reference to a station on the Stockport side; and the Board had taken it into their very serious consideration. Subsequently, a stronger application had been made for the station to be retained where it was now, and the Stockport people were quite divided in sentiment on the subject; they could not agree whether it should be on this side of the river, or the other. The Directors had done the best they could do under the circumstances; and if the Stockport people would agree on which side they wished the station to be built, the Directors were quite ready and willing to accommodate them to the utmost possible extent. Until they did that, it was quite impossible that the Directors should go to the expense of

Digitized by Google

erecting a station on the other side of the river, having already one on this side. (Applause.)

Mr. D. PRICE suggested that, as the stand-up carriages were such a favourite mode of conveyance, the passengers by those ought to go in and out at a different place from the first and second-class passengers.

Capt. CLEASBY said, that a new arrangement for the Stockport station was at present under consideration, and he believed the Directors would authorise a different door for the ingress and egress of the third-class passengers. The offices would have to be altered to make arrangements for the long traffic; and he believed that suggestion would be carried out.

Mr. PRICE said he knew that a magistrate of Rochdale was in the habit of going backwards and forwards by the stand-ups on the Leeds line. (Laughter.)

No further questions being asked, Mr. R. H. Wilson moved, and Mr. R. Pershouse seconded, "That the Report of the Directors be adopted, and that the same, with the Report of the Engineer, and the statement of accounts, be printed for circulation among the proprietors." The motion was agreed to.

Mr. GEORGE BARLOW said, that at the last meeting some inquiry was made as to the branch to Macclesfield. He did not, in the Directors' Report, find any allusion to that branch; he thought it would be as well if the Directors would state to the meeting whether it was intended to make that branch. He had no interest in the matter himself, but he thought it would be better if the Directors would state their intentions for the information of the shareholders.

Mr. N. NEWBERY said, it had been stated at the last meeting that the Directors would go into the consideration of that question as soon as they had completed the main line; but in the meantime, they thought it far better to push on the main works, to open the whole line, to see what was the amount of traffic, and to develope it in the best possible manner, and then to go into the Macclesfield question after that had taken place. (Applause.) And that appeared to be the unanimous feeling of the meeting alluded to; for he remembered very well that various expressions were made use of, which convinced the Directors that they had adopted that mode which was acceptable to the shareholders at large. (Applause.) The Directors had determined to make a very excellent station at Chelford, in order to accommodate the Macclesfield people, and they had also entered into an arrangement with one of the first coach proprietors in this neighbourhood, in order to work that traffic upon as good a plan as could be done, both with a view to the interest of the public, and to accommodate the people of Macclesfield. He was quite sure the people of Macclesfield would have no reason to complain of what the Directors had done with respect to their traffic. The distance from Macclesfield to Chelford was 6½ or 7 miles.

Mr. GREENWOOD moved,—"that the half-yearly accounts up to the 30th of January last, having been produced, as required by the Act of Parliament, and being deemed satisfactory, be, and the same are hereby allowed and passed"

Mr. Taylor seconded the motion, which was unanimously passed.

The CHAIRMAN inquired if any gentleman had any further remarks to make.

Mr. JOHN BROOK, of Armitage-bridge, near Huddersfield, said, may I be allowed to ask a few questions with respect to this proposed junction with the Leeds Railway, which is alluded to in the Report. What expense will the Company be put to before it can be decided whether it is necessary to join the Leeds line or not?

Mr. J. P. WESTHEAD (a Director)—It is almost impossible to say what will be the expense.

Mr. SLATER (the Law-clerk)—There will be merely the plans and sections, the books of reference, and the notices.

Mr. BROOK—This cannot be carried into effect, of course, without a special meeting, and the shareholders approving of it?

Mr. WESTHEAD—Certainly not.

Mr. SLATER—The Directors state that they have determined to call a special meeting before it is done.

Mr. BROOK—Then with regard to the junction with the Liverpool and Manchester line: do the Directors mean to say that they have abandoned the idea of anything like a junction with the Liverpool and Manchester line?

The CHAIRMAN—I do not see that we can answer that question here at all.

Mr. N. NEWBERY—I beg to state to the worthy proprietor, that we are at present in very important negociations with various Companies and various interests, and that those Companies and those interests are opposed in a great measure to each other, and that therefore any discussion on the subject, at the present meeting, would, I am perfectly sure, be detrimental to our own interest. The Directors pledge themselves most distinctly, not to go to any expense in anything of this sort, without coming to you, laying the question before you, and taking your decision upon it. (Hear, hear.). When that time comes, the Directors will be quite prepared to answer any question which may be put; in the mean time, they must ask the meeting, as a matter of favour, not to put any question while we are engaged in these important negociations. If I could but tell half the anxiety which rests upon the shoulders of various Directors, the meeting would see at once the situation we are in; having no other desire nor wish, but to take care of the interests which are placed in our keeping. (Hear, hear.)

Mr. BROOK.—Your answer is quite satisfactory to me; only, as no allusion was made in the Report to a junction with any other railway than the Leeds, I thought it must go to the public, that the other was entirely abandoned; and I merely wished to ascertain from you, whether you had entirely abandoned that project.

The CHAIRMAN—Which do you allude to?

Mr. BROOK—The junction with the Liverpool line.

The CHAIRMAN—Oh! the southern line of junction?

Mr. BROOK—Yes, the southern line. I do not wish the Directors to enter into any discussion on the point; but I wish them to say that they have not entirely abandoned any idea of the kind, and not to say more.

Mr. NEWBERY—That is exactly forcing on us the very thing which we do not wish to be forced on us in this meeting. The gentleman puts his question in such a way, as to require an answer which it would be very impolitic in us to give at present. If I were to state my own individual opinion, I would say at once, that a junction with the Liverpool and Manchester line, on the south side of Manchester, would be most detrimental to our interests, and I can prove it; but I do not wish to be forced into this at present. I say, all that the Liverpool and Manchester line can give us, is a traffic of six miles, whilst the Leeds Company can give us a traffic of 85 miles. (Hear, hear.) When, I said that I believed the south junction would be detrimental to the interests of the shareholders, I meant to say, that it would be so in comparison with a junction with the Leeds line. Suppose that we could not get a junction with the Leeds line, then it is quite clear that it would be for our own interests to have a junction with the other; but what I say is, that it would be more for our own interests, to have a junction with the Leeds than with the Liverpool and Manchester line; if we must have a junction with one, and not with the other, I say it is preferable to have it with the Leeds.

Mr. BROOK—You have still gone further than I wished you.

Mr. D. WADDINGTON—I think if we were to take the Report of the Directors as it stands, it would be satisfactory to us all. They say they "consider that a communication with the Manchester and Leeds Railway would materially promote the interests of both Companies," without alluding specifically to any other. As Mr. Newbery states, the Directors have great and important interests to consider; and if we have confidence in them—and I know of no reason why we should not—I think the least we can do is to extend that confidence to them, until they have ascertained what are the interests of the various Companies, and then no doubt they will call us together to decide upon the matter.

Mr. BROOK—That will do certainly; I have not the least objection to that.

Mr. G. SANDARS—I think that the remarks which Mr. Newbery has made, are remarks which must merely be taken as an expression of his individual opinion as a proprietor, not as a Director, and not as pledging the Board at all.

Mr. NEWBERY—I stated so, most decidedly.

Mr. BROOK—Allow me to state that I have confidence in the Directors; and if they consider that a junction with the Leeds line is preferable to a junction with the Liverpool and Manchester, no doubt they will adopt it. I merely say, that as no allusion is made in the Report to a junction with the latter line, had that gone abroad so, it would have been injurious. It would have been to say positively, that, under any circumstances at all—as Mr. Newbery has almost said—you will not join the Liverpool and Manchester line.

Mr. NEWBERY—No, no; you must take my explanation along with it.

Mr. BROOK—But still the opinion of the Directors is, that it will be more favourable to join the Leeds line.

Mr. G. R. CHAPPELL—Let it be explicitly understood, that it is not the opinion of the Directors; Mr. Newbery was speaking as a shareholder, not as a Director, nor for the Directors. It is the interest of the Directors, and of this Company, to draw all the traffic from every source which they possibly can, and by that means to increase their profits. And, depend upon it, the Directors will not lose sight of the interests of the Company, after wading through difficulties for nearly five years; and, as Mr. Newbery has stated, the anxiety which rests upon many of us is a great deal more than anybody could possibly conceive of. The conflicting interests are such, that it requires the utmost attention of some of your most talented Directors—and we have many such—to weigh matters, day by day, and to come to such conclusions that your interests and those of the public generally, may be brought, to such an issue, that you may meet us with a smiling face at every half-yearly meeting.

Mr. BROOK—I assure you my interest in the matter is measured entirely by the extent of the dividend I shall receive; that is all I look at. (Applause.)

The CHAIRMAN then left the chair, and it was taken by Mr. Ogden. Mr. J Brook moved, and Mr. Henry Chadwick seconded, a vote of thanks to the Chairman, which was unanimously carried, and the proceedings terminated.

MANCHESTER AND LEEDS RAILWAY—THE SUMMIT TUNNEL.

To the Editor of the Railway Times.

SIR,—Knowing you are a lover of fair play, I should feel obliged if you would publish the following remarks, in reference to the Summit tunnel, in your excellent paper:—

At the opening of the Shildon tunnel, near Bishop Auckland (reported in the *Durham Chronicle* of 14th of January), a Mr. Booth, in responding to the toast given by Mr. Storey to the contractors, said, "Before he came to the Shildon tunnel, he was engaged with a tunnel on the Manchester and Leeds Railway; and upon it, he was sorry to say, that *more than forty* individuals lost their lives."

I do remember a person of the name of Booth obtaining employment (as a banksman or timekeeper) from one of the contractors of the Summit tunnel, but the statement he has made is grossly exaggerated.

I am sorry to say there were eight lives lost *in* the tunnel, by shots going off prematurely, and falling materials; and in the *shafts*, eleven lives by negligence and carelessness; five by failure of machinery; and four at the bottom of the shafts, from falling materials; in all, 28 individuals lost their lives in this great undertaking, and two men died in the hospital from natural causes.

I am, Sir, your obedient servant,
RICHARD TAYLOR.

Summit, February 14, 1842.

2. *Minus* toll to London and Birmingham 00*l.* 0s. 0d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 43*l.* 18s. 6d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of ——bury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and it is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,959*l.* 10s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 44*l.* 10s. 0d.; horses, 71*l.* 11s. 0d.; dogs, 3*l.* 10s. 6d.; parcels, 157*l.* 19s. 11d.; cattle, 44*l.* 11s. 0d.; corn, 19*l.* 17s. 9½d.; heavy goods, 47*l.* 17s. 4d.; coal, 165*l.* 10s. 9d.—Total, 987*l.* 8s. 3½d. The dividend is from the time of opening.

29. The details of the receipts are as follows:—Passengers, 1,749*l.* 13s. 2½d.; parcels, carriages, horses, and mails, 301*l.* 15s. 2d.; merchandise, 1,353*l.* 2s. 3d.; minerals, 243*l.* 13s. 7d.; cattle, 40*l.* 7s. 8d.—Total, 3,688*l.* 11s. 10½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 96*l.* 3s. 1½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

30. The receipts are after deduction of L. and M. toll.

31. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

32. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

33. The returns are inclusive of Man. and Bir. toll.

35. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

We feel much obliged for the communication from Maryport, and shall be glad in any way to promote the views of the writer.

Four-wheeled and Six wheeled Engines—*We have received another letter on this question from Mr. Gray. It shall appear at the earliest possible opportunity.*

Nunquam Dormio.—*We are sorry to reject a communication from so old and so valued a correspondent; but is he not pressing too hard on the fallen?*

Argus.—*If our correspondent had attended the late meetings, he would have received as much information as might satisfy the most craving appetite. Let him profit by his own text, and not "trespass upon a Board of Management pressed (almost hot pressed) with complicated difficulties."*

Hull and Selby Railway.—*We have to acknowledge the receipt of a copy of the Directors' Report, to be laid before the general meeting, held this day. We regret that we must defer its publication. We are glad to find that the Directors are able to recommend the payment of an increased dividend, namely 15s. per share.*

North Union and Lancaster and Preston Railways.—*We have received from more quarters than one, copies of the correspondence between the Directors of these railways, but cannot possibly publish so voluminous an affair. We trust there will be no occasion to revert to it, but that the parties will settle the matter amicably.*

The correspondent who wishes to ascertain the average power of the London and Birmingham engines, should apply to the officers of the Company.

London and Greenwich Railway.—*We have received a lengthy letter from Mr. George Walter, with reference to the few remarks which we offered on the proceedings of the late meeting. We do not think it is much to the purpose, but as Mr. Walter wishes it to be given, it shall appear at the earliest possible opportunity, with (perhaps) some comments of our own.*

A Railway Shareholder *(Gerrard's Hall).*—*We are not aware that there is any coffee house or tavern in the City where our correspondent can "find a complete file of the Railway Times," but if he will call at the office in Fleet-street, we have no doubt our publisher will afford him every facility.*

The letter from Wapping Wall shall appear as soon possible. "Inelegance of composition" shall "be no bar."

Cheltenham and Great Western Railway.—*A correspondent wishes for some information as to the present position of this Company. He seems to think there is something very mysterious in the proceedings of the Directors. He will see that the present position of the Company was alluded to at the meeting of the Great Western Company on Thursday last. If the Directors are wise, they will act upon the hint then thrown out by one of the most influential Lancashire proprietors in the Great Western line.*

Inquirer.—*The number of passengers carried during the period specified, was at least twice as great as our correspondent seems to suppose. If he will look at the Report of the Directors laid before the late meeting, he will find data to bring him pretty near the mark.*

Birmingham and Derby Railway.—*The accounts must again stand over till next week.*

We are obliged to leave over our Law and Parliamentary notices.

Notwithstanding that we publish to-day a Supplementary Sheet, we are still largely in arrear. Many of the country meetings we have been compelled greatly to abridge, by omitting for the present Reports and balance-sheets; and others, such as the Garnkirk and Glasgow, wholly to omit. Our Correspondence is also much behind. Next week, therefore, we shall publish two large sheets (each of the same size as that in which this notice appears), the price for the two being One Shilliing. The Map issued by the Manchester and Leeds Railway Directors, and alluded to elsewhere, will be given in one of them. Our correspondents must excuse us for one week more. We hope in our next to be able to insert their favours.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 26, 1842.

THE "Report of the officers of the Railway Department of the Board of Trade," upon which the new Bill of Mr. GLADSTONE is professedly based, has just made its appearance. We shall take an early opportunity of laying it in full before our readers, and hope to be able to extract much interesting and valuable matter from its voluminous appendices. For the present, however, we must rest satisfied with indicating the principal points in the Report, which is itself mainly an abstract, and one very carefully prepared, of the returns furnished by the various Companies.

The Report commences with several tables, showing the number and nature of accidents upon railways, *attended with personal injury* (for to such only does the existing law extend), as reported to the Board of Trade under Lord SEYMOUR'S Act. These accidents are divided into three classes. Class the first relates to accidents arising "from causes beyond the control of passengers," and from the table it appears that during the year 1841, 29 such accidents occurred, causing the death of 24 persons, and the injury of 72 others. The 4 killed on the Brighton, and the 9 on the Great Western, of course make up more than half the total number. The table in class 2 refers to accidents occasioned by the negligence or misconduct of the sufferers themselves, and shows for the past year 36 such occurrences, which were fatal to 17 persons, besides 20 injured. Class 3 shows the number of railway servants killed or injured "under circumstances not involving danger to the public." The total number of such accidents in 1841 was 60, killing 28 and injuring 36 individuals. Besides these returns, there is a statement also of similar casualties during the last five months of the year 1840, from which, as mentioned in the Report, it appears that the number of accidents of a public nature has considerably diminished—the last *five* months of the year 1840 showing 28 accidents, 22 deaths, and 131 cases of injury, while the *twelve* months of 1841, give only 29 accidents, 24 deaths, and 71 cases of injury; and this notwithstanding the late unfavourable weather, but for which, according to the Report, the accidents on the Brighton and Great Western already alluded to "would in all probability not have occurred."

The Report proceeds to notice the gratifying diminution in the class of accidents, such as collisions, arising chiefly from mismanagement or defective arrangements. In the *eight* months from August 1840, to April 1841, no fewer than 17 accidents took place from collisions by succeeding trains, whereas in the *nine* months immediately following only 9 such cases occurred, and these, with but one exception, unattended with fatal consequences. This diminution is attributed partly to the precautions suggested by the Inspector-General, and partly to the enforcement by the Companies of greater attention to signals and time-tables. The "marked diminution in the number of serious accidents occasioned by the misconduct of engine-drivers" is ascribed, partly to the beneficial results of more experience, and the measures taken by the Companies to raise the character of this important class of men, and partly to the salutary operation of the punishment awarded to offenders under Lord SEYMOUR'S Act.

The Report then refers to various details of accidents, and states that the most important results which appear to be deducible therefrom are, the impropriety of running tender foremost; the danger of an insufficient number of breaks; the propriety of using buffer-springs, and of putting higher sides to open carriages; the necessity for extreme vigilance in watching expected slips, especially in unfavourable weather; the propriety of proper signal-posts, and tail lamps; and the dangers of level crossings. These several points are illustrated by reference to one or more recent accidents.

With respect to level crossings it appears, from returns to the official circular which we published some months since, that there are no fewer than 312 turnpikes and highways thus crossed by 53 different railways. In 42 of these cases, gates have been erected or altered, and gate-keepers stationed, in consequence of representations from the Board of Trade, "and it is believed, that with the exception of a few railways where horse-power only is used, or where the low rate of speed or other local circumstances render it unnecessary, the provisions of the Act in question [the General Highway Act] are now generally complied with, and the public protected, as far as possible, from the danger which is always, to a certain extent, incurred by crossings on a level." The Report, nevertheless, states that it would be "very desirable that some power should exist to compel the parties interested to come to some arrangement for getting rid of level crossings by a bridge or tunnel, where experience has shown that they occasion a considerable degree of risk to the public." A correspondence with the Croydon Company is referred to, as showing that an admitted source of danger is continued in consequence of the inability of the Directors and the trustees of the highway to come to an agreement for removing it. The absurdity of placing gates across railways instead of the common roads which they cross, is adverted to.

The Report next proceeds to the subject of the circular, which some time ago appeared in our columns, arising out of the Brighton accident, and having reference to four and six-wheeled engines. From the returns, it appears that on 33 lines there are used 605 six-wheeled engines; and on 17 lines 224 four-wheeled engines. Some Companies, such as the Glasgow and Ayr, and Edinburgh and Glasgow, seem to use about an equal number of each. Among the 224 four-wheeled are included 35 of the Midland Counties', and 90 of the London and Birmingham, Company. Three accidents, attended with personal injury, are enumerated as having occurred from the 1st August, 1840, to the 1st January, 1841, "occasioned by engines running off the rails without meeting with any obstruction or other specific cause." The whole of these occurred with four-wheeled engines, namely, on the Eastern

Digitized by Google

Counties' line (19th August, 1840), killing 4 persons and injuring 6, the "speed being excessive;" on the Brighton (2nd October, 1841), killing 4 and injuring 2, "attributed to excessive speed on a new line;" and on the Midland Counties' (8th November, 1840), injuring 8, the "line being in a bad state." The Report then proceeds:—

"From the returns made by the different Railway Companies, it will appear that a very general opinion is entertained that four-wheeled engines are rather more unsteady and subject to oscillatory movements, and especially to vertical movements, which in extreme cases may lead to jumping off the rails, while on the other hand six-wheeled engines are thought to be less adapted for going round sharp curves; and if constructed with outside bearings, which are generally used with this description of engine, to be more liable to fracture their axles than four-wheeled engines with inside bearings. A reference to the above table will show that experience does to a small extent bear out the opinion that four-wheeled engines are more liable to run off the rails, but, at the same time, it shows conclusively that no description of engine at present in use upon railways can be pronounced dangerous, not a single accident having occurred in the course of 17 months which can be attributed *solely to the construction of the engine*, and only three in which the construction of the engine can be thought to have contributed even remotely to the accident.

"The fact that the two railways, which, in proportion to their amount of passenger traffic, have been perhaps most free from serious accidents, viz., the London and Birmingham and the Grand Junction, use in the one case four-wheeled and in the other six-wheeled engines exclusively, appears quite sufficient to show that any attempt at legislative interference to enforce the adoption of any peculiar construction would be in the present state of experience upon the subject altogether misplaced."

It is also stated to be the general opinion, that running tender foremost and propelling from behind are dangerous; and moreover that in the case of heavy trains, it is better to employ an extra engine a-head, than to divide the train; but this last opinion the framers of the Report think "may be fairly questioned."

The Reporters then advert to the accommodation supplied to third-class passengers, and give the circular which has already appeared in our pages. A table follows, from which it seems that upon the Great Western and South-Western lines alone are third-class passengers conveyed by heavy luggage trains; and on the latter the practice is about to be discontinued, accommodation being substituted in the regular passenger trains. On the Birmingham line, this class of passengers is taken along with cattle, horses, and empty return waggons, but not with heavy luggage waggons. The recommendations of the Board of Trade, as to buffer-springs and an increased height of outside pannelling in third-class carriages, were at once acceded to by the Birmingham, Great Western, South-Western, and other Companies. The Managers of the following Companies think that where luggage waggons are sent with passenger trains, the *waggons* should be next the tender:—Arbroath and Forfar, Birmingham and Derby, Birmingham and Gloucester, Brandling Junction, Edinburgh and Glasgow, St. Helen's and Runcorn Gap, Midland Counties', Newcastle and Carlisle, North Midland, and Stockton and Darlington. On the Manchester and Bolton, Bolton and Preston, and (previous to the late accident) the Great Western, the whole of the luggage waggons are placed behind. On the Great Western, the passenger carriages are now placed in a central position. On the Great North of England, London and South-Western, Manchester and Leeds, and Sheffield and Rotherham, there is no settled rule. No heavy waggons are sent with passenger trains on the Glasgow and Ayr, Grand Junction, London and Birmingham, Liverpool and Manchester, Lancaster and Preston, North Union, Preston and Wyre, or Sheffield and Manchester. The Reporters are of opinion, that until buffer-springs, axles of the best materials, &c., are used in every part of such trains, there must be danger to passengers wherever placed, and they appear to think that where these conditions are not complied with, passengers ought not to be sent along with heavy goods. An interesting notice is then given of the third-class traffic on the Manchester and Leeds line. It is stated, that the whole number of third-class passengers carried on the London and Birmingham and Grand Junction Railways is less than the number carried on the short line between Arbroath and Forfar, and not a seventh part of that taken on the Newcastle and North Shields. It is satisfactory (says the Report) to find that there is a growing disposition, even among such Railway Companies as cannot hope to profit much by third-class traffic, to afford every accommodation possible to the humbler classes of the community. It is suggested as very desirable, that long stoppages should not occur to third-class trains at the junctions of connected lines, such as the London and Birmingham, Grand Junction, &c., as these stoppages almost neutralise the greater speed of railway communication.

The next topic touched upon is the number of lines wholly or partially opened since the passing of Lord SEYMOUR'S Act. From a table given, it appears that 179¾ miles of double rail, and 46 miles of single rail, have thus been brought into operation, after having been inspected by the officers of the Board of Trade. This is exclusive of the Edinburgh and Glasgow, opened the other day. It is stated, that the Gosport branch was in the first instance opened notwithstanding the recommendation of Sir F. SMITH and the Board of Trade that the opening should be delayed. "In less than a week's time it was found necessary to close the line again."

"It will be seen that, in a great number of cases too early a period for opening has been fixed; and it has consequently been found necessary to postpone it from time to time, and finally to appoint a time for inspection before the line was thoroughly completed, and so near to the time of opening as to make it a matter of the greatest difficulty for the inspector to discharge his duty, and frequently to place the Board of Trade under the necessity of accepting a certificate from the Engineer or Directors of the Company of the completion of works which ought have been finished before the line was reported to be ready for inspection.

"In order to enable the Board of Trade to discharge the duty of ascertaining that no railway is opened until it is thoroughly completed, and in such a state as to warrant the belief that the public traffic may be conducted upon it with the ordinary degree of safety, it appears essential that some more definite power should be given, first, of requiring a sufficient period for inspection to elapse between the actual completion and the opening; secondly, of postponing the opening in case the Report of the Inspector should be unfavourable."

The Reporters then enter upon a consideration of the multifarious bye-laws of the Companies, and a Report is embodied from Mr. LAING, suggesting some very judicious amendments, or, as they are called, "standard regulations," which have already been adopted by some of the Companies. Upon this part of the document we cannot, however, from want of space, at present enlarge.

Then follows a statement of the cases in which the Board of Trade have been called upon to prevent deviations, under the provisions of Lord SEYMOUR'S Act. In no instance has it been necessary to institute any prosecution.

In conclusion, the Reporters deem it "better that the Government should not at present ask for the power of enforcing regulations for the prevention of accidents, *and that such a power should not be resorted to hereafter, unless experience should clearly show the existence of general and culpable negligence and mismanagement under the present system.*" They also recommend, that the examining and licensing of engine-drivers should, for the present, be postponed. The other suggestions of the Report have reference to the power of deferring openings—of calling for returns—level crossings—gates, &c., all of which are embodied in Mr. GLADSTONE'S Bill, which we gave last week.

The Report is drawn up with great ability, and is signed by "G. R. PORTER," "FREDERIC SMITH," and "S. LAING." From the sketch of it which we have now given, its general character and tone will readily be conjectured.

WE are sorry to find, from what transpired at the special meeting of the Eastern Counties' Railway Company, held last Tuesday, and reported in another page, that the Chairman of the Northern and Eastern Company was somewhat premature in congratulating his constituents, at their recent half-yearly meeting, upon the modification of the short-traffic toll payable by the one Company to the other. Mr. CRAWSHAY, it will be remembered, stated most distinctly that the Directors of the Eastern Counties' line had consented to reduce the toll of 4d., now paid indiscriminately for every Northern and Eastern passenger carried over their line from Stratford to London, to 3½d., 2½d, and 2d., for such first, second, and third-class passengers respectively as might come from Ponder's End and the intermediate short stages; and hopes were held out, that from the result of this arrangement, the Northern and Eastern Company would be enabled so to settle their fares as to compete successfully with the common-road vehicles, which have at present the double advantage of equally low fares, and from the extraordinary laying out of the Northern and Eastern junction line (which appears as if designed purposely to tantalize the inhabitants of the populous villages in its vicinity) far greater accommodation. It now appears, however, that so far from any definitive arrangement having been entered into between the two Companies in reference to this matter, the negociations for its adjustment are for the present broken off, the reason, as explained by the Chairman of the Eastern Counties' Company, being, that their neighbours have declined to accede to certain contingent conditions which the toll-receiving body deemed essential. What these conditions are, the worthy Chairman did not disclose, but we understand that they have reference principally to the payment of the Government duty—which, it will be borne in mind, was adverted

Digitized by Google

to at the Northern and Eastern meeting, as likely to terminate in an appeal to a court of law. Our readers are aware, that by agreement between the two Companies the Northern and Eastern pay to the Eastern Counties' Company an annual sum of 7,000*l.*, for accommodation at the Shoreditch terminus, besides a toll of 4*d.* per passenger in respect of all traffic brought over the Eastern Counties' line. In the agreement it is not specified which Company shall pay the Government tax of one-eighth of a penny per passenger per mile; and hence the dispute between them, each insisting that the charge should be borne by the other. We believe that the terms required by the Directors of the Eastern Counties' Company, before they would consent to a reduction of the short-traffic toll were, that the Northern and Eastern Company should reduce their fares to what they originally were, and distinctly admit their liability to the passenger tax, and consent to pay it without further contention—terms to which the representatives of the latter Company would not in any shape accede; and thus the matter rests for the present, and thus it will for some time continue to rest, if we may judge from the statements made by the Chairman of the Northern and Eastern line at the recent meeting, that *he* (and in *this* Company the Chairman appears to possess something like autocratic sway) would never consent even to refer the tax question to arbitration. Whether the new Railways' Regulation Bill may not overrule Mr. CRAWSHAY'S determination, and compel a reference to arbitration—to the loss of the lawyers certainly, but to the great benefit of the proprietors, who have to pay them—remains to be seen. In the meantime, we deeply regret that anything should have transpired to prevent the carrying out of an arrangement which we are convinced would be mutually beneficial; and we more especially regret that it should have occurred at this particular period of the year, when a large and profitable traffic might reasonably be expected, were the lower-class fares of the Northern and Eastern line materially reduced. We trust it is even yet not too late to arrange the matter at issue.

As regards the more immediate business for which the Eastern Counties' proprietors were convened, it will be seen that a scheme for the distribution of new shares at a discount equivalent to that at which the debentures of 1840 were issued, was unanimously agreed to. A conversation took place in consequence of a remonstrance on the part of Mr. HAMILTON, of Liverpool, a very large proprietor we believe, with respect to an alleged leaning towards the shareholders as distinguished from the holders of debentures, in the principle of the Directors' plan. Mr. HAMILTON contended that as the whole of the 8*l.* 6*s.* 8*d.*, the price at which the debentures were issued, had been paid up, and there wanted the call of the remaining 2*l.*, due in respect of the old shares, to bring such shares up *to the value at which they were estimated when the debentures were issued*, the holders of such shares ought not to be admitted to equal privileges with the holders of debentures, in respect of the new issue now determined on. The meeting, however, were of a different opinion, and, as we think, very properly so. If the Directors are blameable at all, it is in having consulted the interest of the debenture-holders so much as they have done. It seems to us that if any advantage is likely to be derived from the new issue, (and this can hardly fail to be the case,) such advantage ought to have been confined exclusively to the *share*holders. The holders of debentures have already received THEIR *bonus* in the heavy discount at which they have the option of becoming holders of shares, and have no right to look for anything beyond; whereas such shareholders as were unable at that time to take up the debentures, ought now to have an opportunity of placing themselves upon something like the same footing as their more fortunate co-proprietors. It is very well for Mr. HAMILTON to talk of the value of the shares having been fixed at 8*l.* 6*s.* 8*d.*, keeping out of sight that to every original holder such shares have cost 23*l.* a-piece. It is true, that the value was fixed as stated by Mr. HAMILTON, but this was done solely on account of the pressing necessity of raising money at a particular juncture, and the impossibility of so raising it by the issue of debentures convertible into shares at a higher rate than the market price of the day. In holding the balance fairly between different classes of proprietors, Directors ought to have nothing to do with the fluctuations of the share-market, and certainly the original proprietors of the Eastern Counties' Company would have had much, and just, cause of complaint, if having already paid up 23*l.* per share, they had been compelled to pay an additional amount of 2*l.* before they could be placed upon an equality with those who have paid but 8*l.* 6*s.* 8*d.* in all, more especially as they, the shareholders, have in no instance yet received 2 per cent. per annum on their investments after years of patient waiting, and the risk of no return at all, while the debenture-holders have from the first moment of their connection with the undertaking, had 5 per cent. amply guarranteed and regularly paid on *theirs*. We are perfectly aware that as the debentures were originally distributed *pro rata* among the then holders of shares, the original proprietor who took up his proportion of the former has received his due measure of whatever benefit has accrued or may hereafter accrue, from such source; but may there not have been—were there not indeed—original proprietors who, having paid up their instalments as they became due, were reluctantly compelled, from want of immediate means, to forego their legitimate proportion of the debentures? If there were *not*, why should an attempt now be made to effect a so-called equalization of the market value of the shares and debentures? If shares and debentures have proceeded *pari passu*, what matters it whether it be upon the one or the other that the benefit in respect of the new issue is secured? We know nothing as to the relative number of shares and debentures held by Mr. HAMILTON, but the whole of his case rests upon the ground that the shareholders and debenture-holders are in (at least) many instances different parties having (for the present, if not permanently), distinct, if not opposite, interests. We repeat, that so far from being open to censure for having paid *too much* regard to the proprietors of old shares,—that is, of shares upon each of which it is to be *presumed* that the holder has actually advanced 23*l.*, besides being liable to a further call of 2*l.*—the Directors might with some show of reason be charged with having paid *too little*. They had a difficult and delicate duty to perform, and that their scheme is likely to meet with the concurrence of the vast majority of those with the management of whose affairs they are entrusted, is pretty clearly shown by the marked approval of the numerous and influential meeting of Tuesday.

Mr. HAMILTON spoke of the debenture-holders as parties who rushed to the rescue of the undertaking in its hour of need. Their gallantry may have been very great, but as they were certain of receiving 5 per cent. interest with important contingent benefits, the issue was at least not very hazardous.

THE two principal accidents which have recently occurred upon railways are those on the London and Brighton and Great Western lines. The Appendix to the Report of the Board of Trade, noticed elsewhere, furnishes us with copies of the official Reports made upon those occasions; and we regret that we cannot, at the present busy season, make room for them in our columns.

Professor BARLOW was the officer selected to investigate the Brighton accident; and a gentleman more qualified in every respect for the duty could scarcely have been chosen. Mr. BARLOW describes the soil at the scene of the catastrophe as "of a very absorbant and treacherous character, becoming in its wet state nearly semi-fluid," although when dry and well drained it appears perfectly sound. Coupling this fact with the "great quantities of rain that had fallen—the admission that a caution signal was made, and had been made for some days before," Mr. BARLOW feels "no doubt that the unsound bearing of some one or more of the sleepers, at the time, was *one* cause of the accident." The only other cause assigned by the Professor is over-speed, and he enters at some length into this matter, showing very completely the little trust that ought to be placed on the evidence of the policeman HINGE, who was one of the principal witnesses at the inquest. Mr. BARLOW is of opinion, that as the average speed on the whole line was then 25 miles an hour, including stoppages, it could not, under ordinary circumstances, have been less than 28 miles per hour when travelling, and from the character of the gradients not less than 32 miles at the place where the accident occurred. As it was admitted that the train on the occasion referred to was "behind time," Mr. BARLOW says, it is impossible not to conclude, from all the circumstances, that "the speed down the plane was excessive, and inconsistent with the then state of the road, or perhaps with common prudence under any circumstances." Mr. BARLOW, while wishing it to be distinctly understood that he is "not advocating, or giving a preference to four-wheeled engines," does not seem to think that the construction of the four-wheeled Brighton engine, although differing in some respects from those used on the Birmingham line, had anything to do in causing the accident, and is of opinion "that the withdrawing of those engines from the line in compliance with the recommendation of the jury, has a tendency to give a false confidence to the Brighton passengers, while it is calculated to give unfounded alarm to those travelling on the Birmingham and some other lines." It appears from a communication made to the Professor by Mr. BURY, that since the opening of the Birmingham Railway in 1837, no other than four-wheeled engines have been used on that line—that up to October last they had travelled more than three million miles, which is nearly equivalent to making thirty thousand complete journeys between London and Birmingham, *and that "they have in no instance met with a single accident that can be said to have been occasioned by the particular construction of the engine."* The Professor concludes his Report by stating, that

Digitized by Google

if he "might venture to give a practical opinion relative to the construction and present state of the Brighton line" [Oct. 1841], he "should say that the Engineer has done, and well done, everything that could be affected," although he "has had to deal in some parts with very treacherous materials," which it will require time to consolidate.

Sir FREDERIC SMITH concurs with Professor BARLOW in attributing the occurrence partly to excessive speed and partly to the defective state to which the road had been reduced by the long continuance of heavy rain, but is nevertheless "most decidedly of opinion that the accident would not have happened but for the improper use of two engines a-head on a long gradient, or rather severe inclination, falling in the direction in which the train was going."

Suggestions in accordance with these Reports, for diminishing the speed, and discontinuing the use of two engines down an incline, were made by the Board of Trade, and at once attended to by the Directors of the Company.

The officer who inspected the scene of the Great Western accident was Sir FREDERIC SMITH. He does not think there was any error in the construction of the Sunning cutting as to slopes, but says, it is a question whether the superincumbent spoil bank "did not mainly cause, or at least greatly contribute, to increase the extent of this extensive slip," especially after so much rain. Sir FREDERIC says, the accident "could only have been prevented *by the line having been more closely watched*," for which, however, "there did not seem to have been any urgent necessity." Its effects, he affirms, might have been greatly lessened by the use of spring-buffers, and carriages more enclosed. Sir FREDERIC thinks, that the use of spring-buffers on all carriages forming part of a passenger train, should be pressed on the Companies, and repeats a recommendation which he had previously given, "that all engines should carry a reflector white lamp on the buffer-beam." In conclusion, he is of opinion that passengers should not be carried with heavy luggage trains. The suggestions as to buffer-springs and buffer-sided carriages were, it appears, in the course of being carried out *previous* to the accident, and these improvements are now, we believe, in full operation.

THE opening of the Edinburgh and Glasgow Railway, of which we elsewhere give some details, is an event of more than merely local importance. It tells of triumphs over difficulties various in kind and vast in extent, and will speedily, we trust, speak with equal force, in its results, of enterprise rewarded. The long continued opposition which the promoters of this important undertaking had to encounter before an Act of Parliament could be secured, might have frightened less determined parties from the field, but the Directors persevered, and the demonstration of yesterday week is, we hope and believe, but the first and least tangible recompense of their many toils. They have conferred a boon on Edinburgh and Glasgow, nay, on the whole of Scotland, for which they deserve the thanks of their countrymen at large. The spirit with which the works have been prosecuted, reflects the highest credit on the Managers, and the officers employed under them; and although we differ on some points from certain members of the Board—though we have felt bound to speak sharply of their internal contentions, now happily at an end—to all and each of them, collectively and individually, do we offer our tribute of unqualified commendation for the energy which they have displayed in this matter. The line, we are informed by a friend who has recently had an opportunity of inspecting it, is exceedingly well executed, and at a cost which, considering the character of the country through which a portion of it runs, cannot be considered extravagant.

That a large traffic must at once come upon this railway is certain. Connecting, as it does, two cities so eminent, each in its way, as Glasgow and Edinburgh, and passing through a populous and thriving district, we entertain no doubt that it will soon take a high place among the remunerative speculations of the day. To this grand object, the very politic course taken by the Directors in fixing the fares at such a rate as to set coach competition at defiance, will greatly contribute. The charges for the whole distance of 46 miles are only 8s. for the first-class, 6s. for the second-class, and 4s. for the third-class, this last being somewhat less than 1d. per mile. We would fain hope that a modification of the passenger-tax may enable this and other Companies in Scotland to continue to hold forth to the public the advantages of good and cheap accommodation; and there is every reason to believe that such a modification would be achieved, did the Railway Companies in the south show equal zeal with their brethren in the north in agitating the question. Seldom does a railway meeting in Scotland pass over without reference, more or less marked, to the operation of the existing law, whereas in England we scarcely ever hear the impost in any way alluded to. The Scotch Companies, it is true, from the comparative poverty of the great bulk of their passengers, feel the grievance more acutely than the Companies in this part of the island, and consequently have more cause to complain and remonstrate; but even in England—aye, and on those lines too where the charges are the highest—the removal, or if that cannot be done with safety to the public revenue, the modification of the tax, as affecting the humbler classes of their customers, would be attended with no inconsiderable advantage. But into the consideration of this subject we need not at present digress.

We have said that the construction of the Edinburgh and Glasgow Railway will be productive of important benefits to the whole Scottish nation; and if it did nothing more than stir up a spirit of enterprise among that not very speculative people, the work would be a general boon. We cannot believe that with such examples before them as the Glasgow and Ayr and Glasgow and Greenock lines, and now the newly-opened Edinburgh and Glasgow, the inhabitants of other parts of the country, yet unblessed with the improved means of internal communication, will rest satisfied without at least an effort to place themselves in a similar position. It is true, unfortunately, that the Ayr line and its neighbour have not as yet come up to the anticipations which were entertained of their success, but both of them promise well; and we trust that the results of the Edinburgh and Glasgow may amply make up for the temporary deficiencies of the others. Every day affords fresh proof that towns and districts are benefiting largely by the establishment of railways, albeit they may not have hitherto proved very enriching to their promoters as individuals; and such being the case, it becomes the duty, as it unquestionably is the interest, of all who desire to see their several localities prosper, to promote, by every means in their power, the extension of the system. We have reason to think that the practical operation of the Edinburgh and Glasgow line will in this respect speak eloquently throughout the length and breadth of Scotland. If many districts cannot venture to look for a line so well appointed in all respects as that which we have just named, there are few that may not by patience, perseverance, and a uniform exercise of that economy for which the country is famed, secure for themselves channels of communication sufficient largely and profitably to develop their resources.

The opening of the Edinburgh line will of course exert considerable effect on the very important question of railway communication with England. On this point we shall speak more fully next week, and therefore shall only remark in this place, that by whichever route the great international railway may ultimately be carried, the Edinburgh and Glasgow cannot fail to reap considerable advantage—directly, from the traffic which will come upon it from the south; and indirectly, and to a very great extent, by the impetus which will thus be given to the commercial enterprise of the two kingdoms.

IT will be seen from the sketch which we elsewhere give of the half-yearly meeting of proprietors, that an attempt is being made to resuscitate the Thames Haven Dock and Railway project; but if any omen may be drawn from the smallness of the assemblage which so unanimously approved of the Directors' plans, there does not appear any very bright prospect of success. With shares available only to the amount of about one-sixth of the Parliamentary capital, and some of these, doubtless, paid up through dread of the process of the law, as directed upon the holders by Sir GEORGE STEPHEN, Solicitor—whose "unpaid labour," by the way, is highly eulogized in the Report of the Directors, although we dare say he gets his costs—with *such* a share list we do not anticipate that the world will, at an early day, be "startled" by the execution of a scheme, "*of which* (as set forth in the Report) *the annual gross receipts equal the capital to be expended in forming it!*"

Seriously, such absurd representations as this scarce deserve even a passing notice. The Report may well describe such a result as "*unusual*." Many would term it *untrue*, but *we* content ourselves with saying, that it is very *unlikely*. If the Directors really entertain such an opinion, or an opinion lending a semblance to such a statement, why do they not at once have it certified under the hand of some professional man, whose judgment the public will rely upon? We venture to assert, that if they can show a reasonable probability that the scheme will return, not 100, but 50 or 30, or 20 per cent. upon the capital invested, their stock will not be in the market a week, before, instead of having to issue it at a discount, it will be at 50 or 60 premium. Will any man, in his senses, believe, for a moment, that the long-headed speculators of Manchester would embrace the earliest opportunity, after having paid up 7*l.* 10s. per share, of retiring from a concern likely to return them, in the course of two years or so, at least *cent. per cent.*! *Credat* HENRY AMSINCK, *non nos!* Might we venture to suggest, having mentioned Mr. AMSINCK'S name, that it would be in quite as good taste, to omit, in future official Reports, all reference to the extraordinary merits of Secretary and Solicitor (and we dare say they are, although we know it not, *very* extraordinary), the rather, as we see, that the one has a balance of some 1,620*l.* against the

Digitized by Google

Company for "salary," and the other, it would seem from what transpired at the meeting, has encountered labour not altogether "unpaid."

THERE is scarcely a subject of any interest to Railway proprietors that was not discussed, or in some way or other alluded to, at the meeting of the Great Western Company on Thursday. The depreciation fund—the appointment of Auditors—the accommodation of third-class passengers—the new Government measure for the regulation of railways—these, and various other matters, were more or less agitated. The multiplicity of the topics, and the large space which we have devoted to a report of the proceedings—and for many reasons we were unwilling to curtail them—render it impossible for us at present to go at length into any one of them. All of these subjects have, however, at various times been brought prominently forward in our columns, and we shall no doubt have frequent occasion to recur to them.

The meeting, it will be seen, was very harmonious—a harmony which was probably the result of the increased dividend, and the repeated assurances given by the honourable Chairman that no further capital will be required. We sincerely hope that these assurances may be realised.

We confess we are in the same position as Mr. HEYWORTH, with respect to the Directors' scheme of a depreciation fund. We cannot discover the utility of allowing an annual amount of 20,000*l.* to accumulate for ten years, the stock being kept up in the interim, out of the current receipts. At the end of the ten years, what is to be done with the amount? It was stated by the Secretary, that it would be applied to the reduction of the locomotive capital account; but is not *that* equivalent to giving it as bonus to the then proprietors? Besides, by the end of ten years, the whole borrowed money of the Company will doubtless have been converted into shares, and how, in that case, is the accumulated fund to be disposed of? So far as the present proprietors—the proprietors for the next ten years'—are concerned, the plan of the Directors is, in effect, applying just *twice as much* of the half-year's receipts as is necessary, to the repair and renovation of their moveable stock; for, allowing the 20,000*l.* to be neither more nor less than is required, *another* 20,000*l.* a-year must be taken from the receipts before the periodical dividends are declared! Boards of Management are sometimes chargeable with too great a leaning to the present holders at the expense of those who are to come after them, but in this case it would appear as if the existing race are to be mulcted for the benefit of posterity.

IN our Supplement to-day will be found a "Plan of Manchester," showing the relative positions of the proposed junction lines, respecting which so much discussion has recently taken place in our pages. The "plan" is an exact fac-simile of one issued by the Liverpool and Manchester Board.

We give likewise a fuller and more accurate report than has yet appeared in any public journal of the proceedings at the recent Liverpool meeting, as we are anxious that the fullest data should be supplied to enable all who take an interest in the question to form a right judgment respecting it. This Report, and the correspondence which follows it, establish, we think, two important points; first, that so long as Captain LAWS persisted in his grave charges against the *character and integrity* of the Directors, the Chairman and Deputy-Chairman demanded the fullest and strictest investigation into their conduct, and it was only when these charges were abandoned, and Captain LAWS stated that his object was to investigate the *policy* and *expediency* of certain arrangements, that the meeting declined to invest him with any such functions; and, secondly, that Mr. HOULDSWORTH, the Chairman of the Manchester and Leeds Company, disclaims all participation in the publication or circulation of Captain LAWS's pamphlet. We have reason to believe that the course adopted by Captain LAWS has done no good to the cause which he wishes to serve.

It is right to state, that the Leeds Directors have put forth a statement in reply to the Liverpool Board, with *another* map of Manchester. We shall give a fac-simile of this second map next week, with as much of the reply as we can find room for. The public will then have the question fully before them, and will be able to draw their own conclusions.

For ourselves, we have only to add, that *our* object has been attained, should this discussion lead to the formation of EITHER of the junction lines. We care little for the personal or party feelings on either side, being mainly anxious that between the disputants, the convenience and accommodation of the PUBLIC be not sacrificed.

THE anti-Sunday travelling agitation in Scotland has ended just as we anticipated, the AGNEWITES having been beaten at the meeting of the Edinburgh and Glasgow Railway Company, held on Tuesday last, by a majority of nearly 2 to 1. It cannot be expected that we should give, in the present crowded state of our columns, a longer sketch than appears elsewere of proceedings which lasted *upwards of six hours*. Next week, however, we propose to extract from the displays at this, and a similar meeting lately held in Dundee, a few *notabilia* which may perhaps amuse our readers (if amusement can be extracted from such pitiful exhibitions of poor humanity), but which at any rate will be of use, as showing most clearly the biggoted notions of our modern Puritans, who want nothing but the power, to revive the palmy days of persecution.

We take some credit to ourselves for having helped to bring about the decision of the Edinburgh and Glasgow proprietary. All honour be to them for the example which they have thus set! We doubt not it will be generally followed.

The defeated Saints are talking of indicting the Railway Company as "Sabbath-breakers" under an antiquated statute. So be it. In the mean time we should be glad if the parties were watched who signed the document pledging themselves not to use the railway, if Sun-travelling should be allowed; so that we may see whether their consistency is of the kind which does *sin* by stealth, but denounces it in public.

It was shown at the meeting that a vast number of the signatures to the half-threatening, half-canting, memorials with which the Directors have of late been pestered, were glaring forgeries! Do these good men hold the doctrine that "the end sanctifies the means?"

THOSE of our readers who paid particular attention to the Report of the Directors of the North Union Railway Company which we printed last week, and who will look at the further details which we this day supply, cannot but feel extreme regret, that any misunderstanding should have arisen between the Directors of that Company and those of an adjoining line. The case is now pretty fully before the public, and without expressing any opinion as to which Board is chargeable with blame,—for really we have not had time to go fully into the matter, else, probably, we should have found that, as usual, there are faults on both sides—we cannot help lamenting, that the public should, in the meantime, be the sufferers, while the differences between the two bodies remain unadjusted. The scandal which is thus brought upon the whole railway system is by no means to be overlooked, and if the new Railways' Regulation Bill were in no other respects valuable, we should hail it as a boon, since it will put an end to such unseemly disputes as these.

WE are appealed to by a proprietor of the Sheffield and Manchester Railway (see the report of the proceedings of the half-yearly meeting, which we give elsewhere) for the cause of our (alleged) "hostility" to that undertaking. Now, we beg to repeat what we stated a few weeks ago, that we entertain *no* hostile feelings towards either that line or its promoters. We certainly have felt it our duty to raise our voice against some of the proceedings of the Directors, but we should have said just as much of the Directors of any other line who had acted in a similar manner. The two principal matters which have elicited our strictures, are, first the treatment of the parties—principally friends of the late Engineer—who were induced nominally to take up shares, solely for the purpose of preventing the dissolution of the Company, but who were afterwards dragged into courts of law and fixed with the permanent liability—and secondly, the plan for the paymnt of interest out of capital. With respect to the latter, we have both argument and experience on our side as to the utter inefficiency of any such scheme for bolstering up a concern, and as regards the former we need only say, that the conduct which caused the late Chairman, Lord WHARNCLIFFE—than whom a more high-minded nobleman does not exist—to retire from the Direction, may well justify any animadversions of ours. We say, once more, that we are *not* hostile to the Sheffield and Manchester Railway, and we challenge each and every person connected with the Company to prove that we have ever refused prompt insertion to any article in their favour, although we can show that we have rejected dozens of communications reflecting upon various details of the Company's management. We *now* that we are regarded with no good feeling by *some* of the Directors of the Sheffield Company, and we know, too, that they have ready tools in some of the Company's underlings, but with the daily increasing support which our independent advocacy of the true interests of the railway system is securing, we can afford to feel indifferent as to the giving or withholding of the patronage of the Sheffield and Manchester Board. If we can secure it honourably, we shall feel glad; if we do not, we shall not grieve.

THE second reading of Mr. GLADSTONE's new "Railways' Regulation Bill," which stood for Monday last, has been deferred to Monday next. In the meantime, Mr. HODGSON HINDE has given notice, that he will move in Committee the insertion of a clause requiring Railway Companies to fix, in a conspicuous situation in every station-house, a printed table of rates and fares charged for the conveyance of merchandize and passengers, and to repeal the existing clauses in Railway Acts which.

Digitized by Google

require lists of rates, tolls and duties, to be painted on boards, and fixed in conspicuous places outside every wharf, stop-gate or toll-house. Such a clause would, doubtless, be very acceptable to the Companies.

We mentioned some time since, that Captain W. S. Moorsom, the able Engineer-in-Chief of the Birmingham and Gloucester Railway, had been instructed by the Directors of the Hayle Railway, to undertake a survey of the country from Hayle to Penzance, with a view to the extension of that line.

That survey, we learn, has just been completed, and shows that the extension may be carried into effect at a very trifling cost per mile. The existing line from Redruth to Hayle, cost only, we understand, about 6,000*l.* per mile, and it is believed, that the new works can be executed for less, while the estimated traffic gives a return of about 12 per cent. on the outlay, after a liberal margin for working.

The importance of this extension to the town of Penzance, will be very considerable. We wish it every success.

Yesterday week a petition was presented to the House of Commons, from the Newcastle and Carlisle Railway Company, praying for "alteration of the present mode of charging the duty on passengers." It was ordered to lie on the table. A similar petition has since been presented from the Brandling Junction Company.

—o—

In the House of Commons, yesterday week, the following members were nominated as the Committee on Standing Orders:—Mr. Estcourt, Mr. Wilson Patten, Mr. Pendarves, Mr. William Miles, Sir Matthew Wood, Mr. Robert Palmer, Sir George Strickland, Mr. Cumming Bruce, Sir Robert Ferguson, Mr. Ord, Mr. Trotter, Mr. Octavius Morgan, Mr. Childers, and Mr. Acland.

—o—

A correspondent states, that the necessary measures having been taken for complying with the Standing Orders of the House of Commons, the Petition for the Yarmouth and Norwich Railway Bill was presented on the 24th instant by Mr. E. Woodhouse, the member for the Eastern Division of the county of Norfolk.

—o—

We are requested to state, that the Mr. John Robertson who has been engaged in a correspondence with Mr. Borthwick, M.P., is not the gentleman of that name a Director of the Blackwall Railway.

—o—

Mr. French has given notice that he will, on an early day, bring the question of Railways in Ireland before a Committee of the whole House of Commons.

—o—

An advertisement in another column points out the fate of the once famous Manchester and Birmingham Railway Extension scheme, and its successor, the Stafford and Rugby.

—o—

London and Birmingham Railway.—The Directors have issued, along with their half-yearly Report, a very curious and interesting diagram, showing their gross traffic receipt weekly since the line was opened throughout.

EASTERN COUNTIES' RAILWAY COMPANY—SPECIAL MEETING.

A special general meeting of the proprietors of the Eastern Counties' Railway Company was held on Tuesday, at the Company's offices, High-street, Shoreditch, "for the purpose of determining upon raising all or any part of the monies authorised to be raised by an Act passed in the 4th year of the reign of her Majesty Queen Victoria, entitled, 'An Act to amend and enlarge some of the provisions of the Acts relating to the Eastern Counties' Railway, and to authorise the Company to raise a further sum of money for the purposes of the said undertaking;' and also for the purpose of determining upon the modes and terms of raising the same by the issue of new shares." The meeting was "made special for the above purposes, and also for the purpose of declaring forfeited certain shares of the said Company, and for confirming the forfeiture, which had been made and declared by the Directors, of certain shares in the Company." Henry Bosanquet, Esq., presided.

There was a large attendance of proprietors, comprising many gentlemen of Essex, among whom, it was explained by the Chairman (in apologising for a few minutes' delay in the commencement of the proceedings, from a wish to await the arrival of an in-coming train, by which some of them were expected) the stock of the Company is now held to a very considerable extent.

The Secretary (A. Bulkeley, Esq.) having read the advertisement convening the meeting,

The Chairman said, the proprietors had been called together at the earliest possible period which the notices required by law would allow, subsequent to the recent general meeting, at which the Directors had the pleasure of seeing before them so numerous and so harmonious a body of their constituents. The object of the present meeting was, as explained in the notice which had just been read, to consider the details of a financial plan which had been submitted in general terms at the late meeting, to enable them to raise the remainder of the funds necessary to carry the railway to Colchester. To the principle of that plan the proprietors had, on the occasion referred to, fully given their assent, so that it only remained to-day to discuss and determine on the details which for the convenience of the proprietors had, after mature deliberation and with the assistance of the Company's legal advisers, been prepared by the Directors, and which he trusted would be found applicable to the circumstances of the case, and satisfactory to all parties. The meeting would bear in mind that this was not a plan for raising further capital beyond that which had already been laid before them as requisite. The same amount, namely, 2,300,000*l.* would suffice, and it was only because they were unable to raise by loan as much as had been anticipated that the present scheme was brought forward, as likely to prove most conducive to the benefit of the proprietors. The Manager of the Company would now, with the permission of the meeting, read the resolutions which the Directors had drawn up, after which his colleagues and himself would feel great pleasure in giving any further explanation that might be required, and then leave the plan to be dealt with as the meeting might see fit.

The Manager of the Company (R. Hall, Esq.) then read the resolutions, for which see advertisement.

Mr. E. Heseltine had great pleasure in moving the adoption of these resolutions, but would avail himself of the Chairman's kind permission to ask one or two questions. Supposing the whole amount of the new shares to be paid up immediately, would discount be allowed?

The Chairman said, if the amount were at once paid up in full, interest would be allowed on the calls from the present time up to the periods at which, as stated in the resolutions, these calls would become payable.

Mr. Heseltine—If paid up immediately, would the holder of such new shares become entitled to any portion of the dividend which may in the mean time be declared?

The Chairman—No; there is, you will observe in the resolutions, a special proviso to the contrary. Such a course would be unjust to the old shareholders.

Mr. Heseltine—Then these new shares, if paid up in full to-day, would not entitle the holder to any dividend in respect of them in July next?

The Chairman—Certainly not.

Mr. Esdaile seconded the motion.

Mr. Hamilton, of Liverpool, thought the Directors were not acting in this matter with their accustomed fairness. The total sum paid upon the debentures was 8*l.* 6s. 8d., while the value of the shares, as settled at the period when the debentures were first issued, was only 6*l.* 6s. 8d., so long as the further instalment of 2*l.* per share due in respect of them was unpaid. In other words, the holder of a debenture had advanced 8*l.* 6s. 8s.; the holder of a share at the value put upon them, only 6*l.* 6s. 8d.—and yet these two parties were to be placed in precisely the same position with respect to the distribution of these new shares; so that, in fact, they were giving to property upon which 30 per cent. less had been paid, precisely the same privileges as were to be conferred upon the full amount. He thought, therefore, the last call of 2*l.* per share ought to be made upon the old shares, previous to this new issue, so that the debenture-holders and shareholders might be placed on an equal footing. He was of opinion that such a course as he was recommending would be not only just but politic, since the whole they could expect to raise by the new shares, previous to April, could not exceed 80,000*l.* or 90,000*l.*, whereas by making the call of 2*l.* on the old shares they might by that time realise 150,000*l.* or 200,000*l.* They should recollect, that sometime since the market value of the debentures and shares was inversely to their relative value at present. The debentures were *then* at the greatest premium, but *now* the shares were highest, and all through the unequal mode of distribution which was now proposed. He trusted that some fairer plan would be adopted.

Mr. Kennedy reminded the honourable proprietor that the call of 2*l.* might at any time be made.

Mr. Hamilton was aware the 2*l.* might be called up, but what he was looking at was, the present value of the stock. Supposing A. to hold three debentures at 8*l.* 6s. 8d. each, the cost of the three to him would be 25*l.*; whereas, B. holding three shares at 6*l.* 6s. 8d., would only have disbursed 19*l.*, and yet from that 19*l.* he was to receive just as much benefit, so far as the issue of new shares was concerned, as A. upon his 25*l.* He might, it was true, be told that 23*l.* had been paid up upon the shares, but such was not the right view of the question, for when the debentures were created, at 8*l.* 6s. 8d. each, the value of the shares, when paid up in full, was fixed at the same amount, so that with 2*l.* still unpaid on each, the present value could not be estimated at more than 6*l.* 8s. 6d. per share. The honourable proprietor here read the resolutions creating the debentures (see *Railway Times*, October 3, 1840,) and concluded by again questioning the equity of treating a payment of 8*l.* no better than one of 6*l.*

Mr. Gibbs (a Director) said, he if understood aright the representation of the honourable proprietor, it was in effect a complaint that the shareholder and the debentureholder had been placed upon precisely the same footing. [Mr. Hamilton assented.] Now it should not be lost sight of, as already hinted, that it

Digitized by Google

was in the power of the Directors to call when they pleased for the remaining instalment of 2*l.* on the old shares, so that even upon the honourable proprietor's own terms, the two parties, the shareholders and the debentureholders, might at any time be placed on an equality. This matter had been discussed over and over again by the Directors, prior to the late general meeting, and it had then been considered, whether it would be most desirable to call up the remaining 2*l.* upon the old shares, or to issue new shares as now proposed. After due deliberation, the Directors had resolved—he believed he might say unanimously resolved—to propose the present plan, keeping in reserve the 2*l.* upon the old shares to meet any contingencies that might arise after the line had been opened to Colchester. (Hear, hear.) If any distinction were drawn between the shareholder and the debenture-holder, it would lead to an apparent separation of interests, and to much practical confusion in the Company's books.

Mr. HAMILTON had no wish to create diversity of interests, but he was anxious that, as the debenture-holder had paid the full amount of his obligations, the shareholder should be compelled in like manner to pay *his*, before being admitted to an equality of privilege. He would repeat, that he did not look to the future call that might be made, but to the present position of the two classes of holders.

Mr. KENNEDY thought the honourable proprietor would do well to recollect that the debenture-holder was at present receiving interest upon the full amount of his investment.

Mr. HAMILTON was quite aware of that; but the question of taking of these new shares was perfectly distinct from the amount of interest received upon previous capital, whether of shares or debentures.

The CHAIRMAN said this matter had occupied the attention of the Board for three or four days, and he need scarcely say that it was the anxious wish and constant aim of the Directors, to act with the utmost justice and equity towards all. (Hear, hear.) For his own part, and he had given the subject the best consideration in his power, it seemed to him that the debenture-holder had no reason whatever to feel dissatisfied, for the present arrangement was extremely favourable to him. (Hear, hear, hear.) It seemed, in fact, but fair that if new shares were to be issued, they should be confined exclusively to the holder of old shares, who for seven long years had borne the brunt of the numerous and almost overwhelming difficulties with which the Company had been encompassed. (Great applause.) The Directors had certainly at first thought it would be desirable that the remaining 2*l.* should be called upon the old shares before any new distribution should take place, but when they took into consideration how severely the original proprietors had been pressed,—so severely that they could scarcely bear it—the Board came to the unanimous conclusion, that the fairest and justest course to all would be to let the old holders rest for a time, and to endeavour to raise the sum required from the larger surface of shares and debentures. (Renewed applause.) Besides, if they called up the 2*l.* on the old shares, they could scarcely expect to receive for some time more than 30,000*l.*, 40,000*l.*, or 50,000*l.*, out of the 90,000*l.* or 100,000*l.* due; and to expedite the works as they wished, much more than that amount was at once required. When the honourable proprietor reflected that the debenture-holder had regularly received his interest, as already more than once alluded to, and that he had the option of converting his debenture of 8*l.* 6*s.* 8*d.* into a share of 25*l.*, with all the rights and privileges thereto appertaining—when he considered that the debenture-holder was in truth to be regarded more as a lender of money than a holder of shares—when the honourable proprietor looked at these facts—and facts were stubborn things—he trusted that he would not press his point, but allow the resolutions to pass unanimously. (Much applause.)

Mr. HAMILTON contended, that if the resolutions under which the debentures were created were good for anything, they gave the holders full right to participate in any future issue of new stock. They had been told of those who had borne the brunt of the Company's difficulties; but was nothing due to the debenture-holders, as those who had rushed to the rescue of the undertaking in its hour of peril? The dividend would be declared upon the full amount of the new shares received in consideration of old shares, upon which 30 per cent. still remained unpaid. It was true that the debenture-holder had received interest on his investment, but then the shareholder had received an equal interest, for the Report adopted the other day stated that the *dividend* was equal to 5 per cent.—

A DIRECTOR—But observe, that the 5 per cent. is *on the present market value of the shares.* (Hear, hear.)

Mr. ESDAILE—And, moreover, the interest to the debenture-holder was certain, while the interest to the shareholder, that is, the dividend, depended entirely upon the amount of traffic. (Hear, hear, hear.)

Mr. HAMILTON said, it happened, however, that both were placed in the same position as regarded the actual result. He knew that in mooting this matter, he was performing a task not very agreeable to the meeting, but as a large shareholder and debenture-holder, he felt that he should have failed in his duty to the absent, if he had not remonstrated against the present scheme. They had, as a Company, been subjected to much obloquy, but it had not arisen from any conduct of their own, and he hoped they would not now give occasion for it by acting unfairly towards one class of their proprietors. (Hear, hear.)

The CHAIRMAN, after expressing the obligations the Directors were under to the honourable proprietor for mooting this matter—as their sole object was to discover the best mode of proceeding under the circumstances—said, he believed the great majority of the proprietors were favourable to the present scheme. (Hear, hear, hear.) Let them once get to Colchester, and he had no doubt that the holders of debentures would, with the option they possessed of converting them into shares, speedily find that their interests had not been overlooked. With respect to not calling up the remaining 2*l.* on the old shares, it would be found that the London and Birmingham Company had not made their last call of 10*l.* on the original shares, while the Great Western Directors had only called up 65*l.* out of 100*l.*, and yet both of these great Companies had been borrowing money and issuing new stock. (Hear, hear, hear.) The great wish of the Directors had been to benefit the original proprietors, and at the same time to keep faith with the debenture-holders, and after much deliberation they could not discover any more equitable scheme than the present. (Hear, hear, hear.)

Mr. KENNEDY inquired when the dividend would accrue upon the new shares, supposing them to be paid up at once in full.

The MANAGER said, they would participate in the dividends arising from the working of the line from the 4th of July to the 4th of January next. July had been fixed upon as a medium, since one of the calls upon these new shares was to be made three months before, and another three months after, that date. The dividend would be declared just the same upon shares immediately paid up in full, as upon those of which the instalments set down in the resolutions were made good, only that the holders of the former, namely, those at once paid up, would receive discount.

Mr. MARRIAGE inquired what the proportion of new shares to old would be.

The MANAGER said, it would be impossible to state this with precision until the time for making the option had expired. If all the proprietors took their due quota, the proportion would be nine new shares to twenty-eight old shares or debentures; but if some should decline, the proportion would probably be as one to three. They could not tell exactly till March.

Mr. MARRIAGE inquired whether the holding of debentures alone, or of debentures and shares together, would entitle to these proportions.

The MANAGER replied in the affirmative. For example, if a party held nine old shares and nine debentures, he would (on the supposition above stated of one to three) be entitled to six new shares; or if he held eight old shares and ten debentures, he would still be entitled to the six new shares, the old shares and debentures making together eighteen.

Mr. HERBERT inquired whether it was the intention of the Directors to call up the 2*l.* on the old shares, during the progress of the calls upon the new.

The CHAIRMAN begged to be excused answering the question. The Directors could not pledge themselves to any particular course in this matter, as they could not look into futuity, but from what he had already said, he thought enough might be gleaned to indicate their present intention.

Mr. HERBERT did not wish to press the question, and had put it merely that those, who like himself, were old shareholders, might know how to apportion their means either to the taking up of the new shares, or the payment of the call on the old.

After some further conversation, the motion for the adoption of the resolutions was carried unanimously.

Mr. HESELTINE did not know whether he was in order or not, but he should be glad to learn whether a statement which he had seen in the *Railway Times*—a publication which he presumed most of the gentlemen present were in the habit of reading—with respect to an alleged reduction of toll from fourpence to twopence upon certain passengers by the Northern and Eastern line, were correct?

The CHAIRMAN said, the present meeting had been called for a special purpose, but as the question of the honourable proprietor related to a matter bearing upon their financial position, he had no hesitation in answering it. Negociations, then, had for some time been going on between this Company and their friends of the Northern and Eastern, with reference to three distinct matters. The first was with respect to the toll on heavy goods, and that point, he was happy to say, had been amicably arranged. (Hear, hear.) The next had reference to the convenience of certain rooms, and was still under consideration. The third—and the one, he presumed, to which the honourable proprietor alluded—was the modification of the toll upon short passengers, and upon short passengers only. The Directors of this Company were ready to consent to a modification upon certain conditions, which they deemed necessary for their own protection, but as these conditions had not been responded to by the Northern and Eastern Company, the negociation was, for the present, broken off. (Hear, hear, hear.) With that exception, he could state, that a good feeling was reciprocated by the two bodies. (Hear, hear.)

Mr. HESELTINE—Then the statement referred to is not correct?

The MANAGER—The negociation for a reduction, although not to the extent mentioned in the statement referred to, was broken off in consequence of the Northern and Eastern Company declining to comply with certain conditions which were deemed indispensable. The proposed reduction had reference solely to the short traffic.

Mr. HESELTINE—Then I understand that a toll of 4d. per passenger is still charged upon the whole of the Northern and Eastern traffic?

The CHAIRMAN—Precisely so. (Applause.)

Here the matter dropped.

Mr. BAXTER then brought forward a motion confirming the forfeiture of 257 shares previously declared by the Directors, and authorising their disposal.

Mr. MARRIAGE seconded the motion, which was carried unanimously.

The CHAIRMAN then declared the business of the day at an end, and the meeting separated.

MIDLAND COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

A GENERAL meeting of the proprietors of the Midland Counties' Railway Company was held at the Station, in Derby, on Friday last. The attendance was numerous.

THOMAS EDWARD DICEY, Esq., Chairman of the Company, presided.

Mr. BELL read the notice calling the meeting, and Mr. MACAULEY the Report of the Board of Directors.

[The accounts we must for the present defer.]

DIRECTORS' REPORT.

In compliance with the wish expressed by many of the proprietors at the last annual meeting that the general meetings of the Company should be held half-yearly, and in furtherance of their own intention to that effect, mentioned in their last Report, the Directors have thought it right to convene this meeting. The Directors have, however, but little to communicate with reference to the financial affairs of the Company beyond the information comprised in the printed statement of accounts up to the 31st December, 1841, which has been already sent to every proprietor, and a copy of which is annexed to this Report. By that statement it will be seen that the gross receipts for traffic for the half-year ending on the 31st of December, are 73,456*l.* 11s. 11d., exceeding those of the previous half-year by 16,554*l.* 17s. 10d. The whole expense of working the line (being the total expenditure of the Company for the half-year, exclusive of parish rates, Government duty, and interest on loans) has been 33,423*l.* 15s. 11d., but when from this are deducted several items, which, though paid for in the last half-year, had been previously incurred, and which amount to about 3,900*l.*, it will appear that there has been a reduction of about 12*l.* per cent. in the working expenses compared with those of the preceeding half-year.

The balance in favour of the Company on the revenue account is 30,084*l.* 18s. 7d., which enables the Directors to declare a dividend out of the clear profits of the undertaking of 2*l.* for every 100*l.* stock for the half-year. After payment of the dividend there will be a residue not only amply sufficient for the payment of the two unsettled accounts referred to in the statement, but to leave an ample surplus of upwards of 2,600*l.*, which will be carried to the next half-year's account.

The Directors are happy to be able to state, that notwithstanding the adverse nature of the season, especially in the early part of the winter, the works of the railway have fully borne out the statement as to their stability which the Directors expressed at the annual meeting in August last. This, however, has not been accomplished without great and most praiseworthy exertion on the part of the Company's Engineers, and a considerable increase of expense on the portions of the Rugby line where the earth work is heavy, and on which the contractor for the maintenance of way, being unable to fulfil the requirements essential for the safe and convenient working of the line, the Directors found it necessary to take the work into their own hands. But the Directors have every reason for the most confident hope that extra expense under this head will not again occur, at all events in anything like a similar degree.

It will be remembered that at the last annual meeting the proprietors coincided with the views of the Directors in the expediency of applying to Parliament for a further increase of the capital of the Company. A petition for a Bill to effect this purpose has been presented to the House of Commons, which has passed the Committee on petitions, and it is hoped that the Bill will be carried through Parliament during an early period of the session. It was stated at the annual meeting that an addition of 110,000*l.* would be required to meet the extra demands on the Company, but in accordance with the suggestions then thrown out by many of the proprietors, the Directors think it best that the powers of the Act should not be limited to such sum as can now be estimated, but that ample provision should be made for preventing the necessity of another application to Parliament on any future occasion. It is therefore proposed by the Bill to obtain power for raising an additional sum of 250,000*l.* by the creation of new shares, and the further sum of one-third of that amount by loans. The extent to which this power is to be exercised will, according to the provisions of the intended Act, rest with a general, or special general meeting of the proprietors.

Clauses are also introduced in the Bill for affecting a gradual reduction in the present number of the Board of Directors, for explaining and altering the clauses in the original Act relating to the Weir across the river Trent, according to an arrangement lately made with the Trent Navigation Company, by which the protracted litigation with that Company has been put an end to, and the opposition which would otherwise have arisen on their part to the Bill has been prevented, and for several other* amendments of the former Acts which were found to be desirable.

Subsequently to the last annual meeting, namely, on the 5th of November last, a special general meeting of proprietors was held for considering the expediency of authorising the Directors, in conjunction with the other Railway Companies interested in the completion of the line of railway between London and Newcastle, to adopt measures for forwarding an application to Parliament for an Act to make a junction railway between the great North of England Railway at Darlington and the Durham Junction Railway, either by guaranteeing to the subscribers a certain amount of profit, or by such other means as might be considered the best calculated to effect the desired object.

In accordance with the resolution of that meeting, the Midland Counties' Company have agreed to unite with the other Railway Companies in taking a lease of the intended new railway for connecting Darlington with Newcastle at such a rent as will pay the shareholders in the undertaking, 6*l.* per cent. for ten years from the opening of the line. The proportion of rent to be guaranteed by this Company is one-tenth part of the whole, which it is hoped will not exceed 3000*l.*, a year. The other Companies interested have all agreed to join in the lease, guaranteeing their respective proportions of the rent, and the Directors have reason to believe that the Parliamentary capital has been subscribed, and that the Bill will be introduced in the present session. The Directors are strongly impressed with the belief, that the arrangement will prove to be one of great and lasting benefit to this Company.

Dr. HEYGATE moved the adoption of the Report, which he did with much satisfaction. This being seconded—

Mr. JESSOP complained that the expenses of working the line were excessive, and contrasted the various payments with those of the London and Birmingham Railway, particularly the maintenance of way, locomotive power, the coaching department, the general charges, and the coke. The comparative per-centage of these lines showed that a much larger sum was expended on the Midland Counties than on the other. Before the Report was approved he wished for explanations.

Considerable desultory conversation then ensued. It appeared, that, to compare the per-centage on these items with those of the London and Birmingham, was a very erroneous mode of ascertaining whether due economy had been observed; inasmuch as the traffic on the lines could not bear comparison. The expenses of the Midland Counties would not be increased—or very slightly so, and certainly not at all as regards the maintenance of way—were the traffic three times as great as it now is. When the London and Birmingham first opened throughout, their expenses per cent. on the traffic were very much more than they are at the present time; and, in proportion as the traffic on the Midland Counties increases, so will this per-centage, of course, lessen. But this was not the fair test. Had Mr. Jessop looked at the expenses per mile, he would have found that the Midland Counties was quite as cheaply worked as the other line. In a new line like the Midland Counties, the cost of maintenance of way was sure to be higher than on old lines, from slips and other repairs. But the fact was, that the contract price of this line was 200*l.* a mile, while the London and Birmingham was 300*l.* The Midland Counties had only 21 engine-drivers, with 19 trains daily.

Mr. JESSOP complained that the Company paid their drivers too much. He was employing similar men at 28s. a week, and the Midland Counties gave 42s.

In answer to this, it was stated by the Chairman and other Directors, and admitted cordially by the meeting at large, that Railway Companies were obliged to select a better class of men, and that the public would not be satisfied, and ought not to be satisfied, unless they did. Besides, the Midland Counties paid no more in this respect than other Companies. As to the charge for coke with which Mr. Jessop had found fault, it was stated that the London and Birmingham were paying 24s., and the Midland Counties 20s. per ton.

After some discussion on unimportant questions, the Report was adopted unanimously.

Mr. MACAULAY then read to the meeting a Bill to Parliament, which was about to be presented, for borrowing the sum of money agreed to be applied for by the proprietors at their last meeting.

Mr. ELLIS moved, that a clause should be inserted to the effect, that, after the passing of the Act, all the present Directors should retire at the next annual meeting, and that there then should be 12 Directors elected by the proprietors, with power to increase the number to 16, and that one-fourth should go out of office every year. He prefaced this motion by disclaiming to the fullest extent any reflection upon the present Directors, whose conduct he eulogised, but said, he was of opinion such was the better plan. He was a friend to popular election.

The clause in the new Bill was framed as such clauses usually were, that Directors vacated office in rotation.

Mr. S. EVANS and Mr. MATHER moved and seconded an amendment on the motion, that the clause, as now framed—on the rotation principle—stand part of the Bill.

The amendment was carried by a majority of 22 to 19.

Mr. JESSOP moved, that a clause be inserted in the proposed Bill, compelling the railway clerks to exhibit, under a penalty of 5*l.*, in proper office hours, to any proprietor who might desire it, the accounts of the Company, giving the proprietors the same privilege in this respect as the loan creditors.

To this much objection was made. There were 12,500 proprietors, and the greatest trouble and vexation might ensue if such a provision were enacted. In fact it would virtually be creating 12,500 Directors.

An amendment, negativing the motion, was carried by a majority of 27 to 11.

A resolution was then put and carried unanimously, that, in the Bill, power should be had to appointed paid Auditor or Auditors, to be apointed at a general meeting of proprietors.

Mr. JESSOP proposed that a clause be inserted in the Bill, defining the eligibility of a contractor to become a Director. At present, a Director vacated his office by taking a contract, but was eligible to be re-elected; although a different course had been pursued formerly. Mr. Oakes was now a Director and contractor, while he (Mr. Jessop) had been deemed ineligible to be on the Direction some time ago in consequence of taking a contract.

It was stated, in reply, that Mr. Oakes was not a contractor; the contractor with the Company was Mr. Silverwood; but the opinion seemed to be, that any Director might be re-elected after his resignation, in consequence of contracting with the Company for the supply of goods, &c.

The CHAIRMAN paid a most handsome compliment to Mr. Oakes, and said, if it had not been for the indefatigable exertions of that gentleman, and for the great ability he had always shown in his character of Director, the Company would have been in a very different condition to that it was now in.

Mr. JESSOP said, it was a mere evasion to say that Mr. Oakes was not a contractor.

Mr. MATHER—Mr. Oakes is in the Direction, and Mr. Jessop is not. *Hinc illæ lachrymæ.*

Further discussion ensued of no public interest, and

Mr. ELLIS moved, as an amendment, that as the power now rests with a general meeting to appoint a Director in the place of one who may be disqualified, though eligible for re-election, there was no necessity for interference.

This amendment was carried unanimously.

Mr. HEYWORTH moved, that a clause be added to the proposed Bill, giving the proprietors the power to make a dividend on the amount of profit being stated by the Directors at their half-yearly meetings. Most of the large Companies adopted this plan. The Directors stated the sum to be divided gave their opinion as to what the dividend should be, but the assembled proprietors declared the amount. He did this on the principle that, as the profits were the property of the proprietors, they ought to do what they choose with them.

A division followed, but the motion was carried by a majority of 37 to 4.

Mr. HEYWORTH then moved that the proposed Act should give the Directors power to pay an instalment of the dividend quarterly, at their discretion, to proprietors who might wish to have it.

Mr. MATHER seconded the motion.

After some discussion it was not pressed to a division, as the feeling of the meeting was against it; it

* In compliance with the wishes of the proprietors assembled at the present meeting, the Directors propose to introduce clauses for holding the general meetings of the Company half-yearly, for giving power to the proprietors to appoint Auditors, and for placing the declaration of the dividends in the hands of the general meeting of proprietors, instead of the Board of Directors.

Digitized by Google

being considered inconsistent with the motion previously carried.

After thanks were voted to the Chairman, the meeting broke up.—*Derby Mercury*, Feb. 23.

EDINBURGH AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

The eighth half-yearly meeting of the shareholders of this railway was held on Tuesday at 11 o'clock, in the Board Room, at the Queen-street station, Glasgow; John Leadbetter, Esq., Chairman of the Board of Directors, in the chair.

The advertisement calling the meeting having been read over, the Chairman, after congratulating the meeting on the auspicious opening of the railway, requested Mr. Bannatyne to read the Report. [We shall give this document in our next. The following are two or three paragraphs]:—

"The greater part of the Report which your Directors made to the last half-yearly meeting of shareholders, was occupied with a detail of the differences which then subsisted between the majority of the Board and the Directors who reside in Edinburgh. They have now peculiar satisfaction in being able to commence the present Report with an assurance that these differences are at an end, and that all the members of the Board are united in the support of a plan whereby the future administration of the affairs of this great undertaking will be placed on a footing calculated to secure a united and efficient management.

"It is proposed in the Bill, which must be introduced into Parliament in this Session, to insert clauses whereby the following important changes will be made in the constitution of the Company.

"1. The Edinburgh and Glasgow Committees are abolished, and all the powers formerly vested in them, are hereafter to be exercised by the Board, with power, from time to time, to appoint such Committees as the Directors may see fit.

"2. The number of Directors are to be reduced to fifteen, of whom four are to be resident in or near Edinburgh, and six in or near Glasgow.

"3. The right of shareholders to vote at general meetings, is in future to be regulated as follows:—For every 4 shares up to 20 shares, 1 vote; for every 10 shares above 20 and up to 100, 1 vote; for every 20 shares above 100 and up to 200, 1 vote; for every 40 shares above 200 1 vote.

"Your Directors trust, that these provisions will appear to you calculated to place the conduct of the business of this Company on an improved footing, and will meet with your entire approbation.

"The following gentlemen retire, by rotation, from the Direction at this time, in terms of the Act of Incorporation, but are re-eligible to office, viz.:—

"Messrs. Learmonth, Zoller, Rathbone, M'Kenzie, Forbes, Caddell, and J. G. Hamilton."

The Rev. Mr. Dempster, of Denny, complained of the recommendation in the Report, by which shareholders with fewer than four shares would be deprived of a right, on the faith of which they had purchased their shares. This he characterised as little short of robbery.

This gave rise to a very long discussion, in which the Chairman, Sir Andrew Agnew, Mr. M. Macgill Crichton, Colonel Graham, Mr. Bridges, W. S., Mr. A. M'Neil, advocate, Mr. Learmonth, Mr. J. G. Hamilton, Mr. Phillips, and others, took part. Ultimately, the Report was approved of, with the exception of that portion referred to by Mr. Dempster, which was sent back to the Directors for reconsideration.

A number of shares on which the calls had not been paid, were then declared forfeited, and

Mr. Brough moved a vote of thanks to the Directors for their exertions in bringing the undertaking to such a satisfactory conclusion.

Mr. Phillips could not agree to the motion without making an exception relative to the opinion expressed by a majority of the Directors on the subject of running trains on Sabbath.

This view being supported by Mr. M. M. Crichton, another long discussion ensued, which ended by Mr. C. and Mr. Phillips being allowed to enter their dissent.

Mr. Gilbert Kennedy moved the re-appointment of the retiring Directors, substituting the name of Mr. Nicol, of Liverpool, in place of Mr. Rathbone, who declined being a Director.

Mr. James Watson seconded the motion.

Mr. M. M. Crichton objected to the re-election. Besides being a system of self re-election, there were certain of them who had voted for running trains on Sabbath. He therefore proposed that the new Directors should be Messrs. Caddell, Learmonth, H. M. Gibb, Charles Cowan, Lieut.-Colonel Caddell, Mr. Dalmahoy, and himself. This being seconded,

Mr. James Edmond moved the following list:—Messrs. Leamonth, Zoller, Nicol, M'Kenzie, Russell, Hamilton, and H. D. Hill. This being also seconded, Mr. Kennedy withdrew his list.

Another long discussion took place, the result of which was, that Mr. Kennedy's list was agreed to without a vote, the amendments being entered on the minutes.

The list of shareholders having been duly stamped, a vote of thanks was given to Mr. Leadbetter for his conduct in the chair—and the meeting resolved themselves into a special meeting, for the purpose of considering the resolution of the Directors recommending the running of a morning and evening train on Sundays. A great number of deputations from Synods, Presbyteries, and parishes were admitted, and presented memorials and remonstrances; after which a motion to run a morning and evening train on Sunday was made by Mr. A. M'Neil, advocate, seconded by Mr. Eagle Henderson. An amendment was moved by Mr. Caddell, and seconded by Mr. Archd. Smith. A long discussion, which lasted for nearly six hours—then took place, and after a vote was taken, the motion for running the trains morning and evening was carried by about 1200 votes to 600.

RAILWAY GRANTS FOR RELIGIOUS PURPOSES.—STOCKTON AND DARLINGTON RAILWAY.

To the Editor of the Railway Times.

Sir,—While waiting for a coach in a railway office the other day, my attention was directed to a paragraph in your paper of the 29th of January, in which you seem disposed to animadvert upon the Stockton and Darlington Railway Company, for granting the sum of 10*l.* "in aid of the fund for building a parsonage at Shildon."

From the conclusion of that paragraph I am, however, led to believe that you have been misled. After admitting "that many of the objections urged against the votes of money by Railway Companies, even for the religious and moral instruction of their own sects, are of little weight," you proceed to state, "but what possible connection there can be between a commercial Company like the Stockton and Darlington Railway Company, and a parsonage at Shildon we have yet to learn."

Now Sir, I beg to inform you, that the connection between Shildon and the Darlington Railway Company is a very intimate one. Before their Railway was laid, Shildon contained almost 250 inhabitants; it numbers at the present time about 3,000. A considerable number of those persons, more especially at New Shildon, are the *tenants of the Company*. And I do sincerely trust, that, under the blessing of Almighty God, results may prove that the presence of a clergyman residing among them, is by no means unconnected with their "moral and religious instruction."

I feel happy in being able to add, that the Company have recently testified their anxiety to promote this great object by *another grant*, and a very handsome one—of land for the site of a British school-room at New Shildon—and moreover, that many of the Directors have contributed most liberally towards the building, which is now completed.

I have the honour to be Sir,
Your very obedient servant,
JAMES MANISTY,
Incumbent of Shildon.

Shilden Parsonage, Darlington, Feb. 22, 1842.

[We have much pleasure in giving this explanation, which of course shows the case to be analagou to those of the Birmingham and Grand Junction Companies.—Ed. R. T.]

LONDON AND GREENWICH RAILWAY.

To the Editor of the Railway Times.

Sir,—The hopes held out by our Directors in their Report of August last as to the increase in the Croydon toll to be obtained by means of the *superior arrangements of the Brighton Company*, seem sadly blighted by the results of the last half year.

It appears that the toll paid by the Croydon Company has amounted to upwards of 2,000*l.*, while the toll paid by the Brighton Company, including "the increase and diversion of the Croydon traffic" through the vaunted "superior arrangements of the Brighton Company," is only 987*l.* 13s. 3d.

I wonder how any body of men bent on securing their own interest could have ventured an opinion so absurd as that then trumpeted forth both in the Report and speeches of the Directors. What could be more insane than the exultation that the Brighton Company could take the Croydon passengers—for if they did so, this Company would not get one farthing more—or what can be more absurd than to expect that the few trains which the Brighton Company run could at all be compared in point of convenience with the facilities afforded by the numerous and punctual trains of the Croydon Company? Surely nothing less than a determination of the Greenwich Company to ruin, if possible, the Croydon proprietors could have suggested such an idea, or have prompted them to instigate the Brighton Company to placard the streets of London with their thousands of handbills, "*Brighton Railway—Croydon Trains.*"

In all this "the wish was father to the thought," and the anxiety to deprive the Croydon Company of its just position among the other Companies—a position, as regards the long lines, of vastly greater importance than our own mile and three quarters of railway, has led our Directors into the unseemly prediction of the prospective downfall of their neighbour—though that neighbour was the natural ally and best friend of the Greenwich Railway. Surely, now that they have for six months seen the hollowness of their dependence on the Brighton Company to do more for them than the Croydon Company can do, they will repent of their folly, and try by concession to conciliate this latter Company, which from the multitude of passengers its line can accommodate, might under proper arrangements, even at a greatly reduced toll *per passenger*, contribute threefold the amount which can possibly be contributed by either of the long lines.

I am sorry to perceive, however, that not one spark of remorse for the insult given and the injury inflicted, shines forth in the Report; on the contrary, the reason assigned why the Brighton toll is so small, is, not the *frightful accident in October*, and the subsequent falling in, first, of the Patcham tunnel, and then, of the Merstham cutting, "but the repeated interruption on the Croydon line by slips."

Now, the only hope held out in the Report for a return for all the outlay we have been at is, the augmentation of traffic *and toll* from the Croydon, Brighton, and South-Eastern lines. But I should like to know how these, as respects the Croydon passengers, are to be realised—these hopes are as delusive as the absurdities set forth at last "on the diversion and increase of the Croydon traffic by the Brighton superior arrangements."

Do the Directors think the Croydon traffic will be augmented in *numbers* by an increase of the fares; do they think high fares will attract the public? If not, will they be augmented at the present fares, which fares have been found greatly to reduce the number of passpngers; now these fares are the very minimum of charge which can be made at a three-penny toll; what then will be the result of a four-pence halfpenny* toll but a further rise in

* The Eastern Counties' Railway are at this time abating the charge for double the distance to less than one-half the sum.

Digitized by Google

the fares; a further diminution in the numbers, and a corresponding deficiency, and not augmentation, in the amount received for the toll?

I do seriously hope the cramped policy which has so long been adhered to will at length yield to a more enlarged view of our true interests.

A SUFFERER BY THE OLD SHARES.

February 17, 1842.

LONDON AND GREENWICH RAILWAY.

To the Proprietors of the London and Greenwich Railway.

GENTLEMEN,—I am grieviously disappointed in the result of your meeting on the 14th instant. I did hope, spite of past experience, that in matters in which self-interest was alone concerned you would have shown more worldly wisdom; but, alas, instead of commending your Directors for their sound judgment in reducing, I beg pardon, in *altering* the fares, some wiseacres were actually disposed to quarrel with them for so doing, although, as I told you in my letter of last week, the policy of that act was daily evinced by the *increased* receipts, in proof of which I need only refer you to the receipts for the seven weeks immediately *preceding* the *alteration*, as compared with the seven corresponding weeks of the previous year, and the seven weeks immediately *succeeding* the *alteration*, as compared with the corresponding weeks of their previous year, which you will find to be as follows:—

Total Receipts of the last 7 weeks of 1840. £5,630 0 0	Total Receipts of the last 7 weeks of 1841. £5,395 0 0	*Increase* in the 7 weeks immediately *before* alteration. £235 0 0
Total Receipts of the first 7 weeks of 1841. £5,451 0 0	Total Receipts of the first 7 weeks of 1842. £5,487 0 0	*Increase* in the 7 weeks immediately *after* alteration. £36 0 0

But for this alteration, therefore, it is fair to presume that the receipts would have continued to decrease, and the result of the first seven weeks of this year would then have shown a minus quantity of some 230*l.* or 240*l.*, instead of a gain of 36*l.*, making an increase in fact upon those seven weeks, by the alteration, of 270*l.* or 280*l.* Yours is indeed an unfortunate concern, and with a body of proprietors who apparently take so little trouble to inform themselves of facts so immediately affecting their interests, I fear there is little hope of amendment; the good which your Directors would, you are inclined to prevent. You insult them by propositions which insinuate a distrust of their integrity, and you cavil at their wisest acts. No wonder if you hesitated to santion an *alteration* in the *fares*, which had actually obtained for you an *increased* receipt, that they had no heart to propose an alteration (*not reduction*) in the toll, however convinced they might be that it would equally obtain for you an *increased* toll receipt. Gentlemen, your Deputy-Chairman says, he "is anxious to watch the gleam of sunshine which has at last visited you." I do not know the worthy gentleman, but he has the countenance of a sanguine man, and none, I think, but a singularly sanguine man could have caught a glimpse of that cheering gleam in such company, unless indeed he had regarded only the Directors, and a vision of the future had crossed his mind's eye, that as they had stemmed the torrent of ignorance and prejudice in one instance, and altered, for the better the fares, so they would, in another, prove equally regardless of those amiable qualities and alter, for the better, the tolls. If they do so speedily, the gleam will brighten into the full sunshine of prosperity; if they delay until the stream of traffic be dispersed, or makes for itself another channel, then will the gleam be lost in a gloom as dense and comfortless as a genuine London November fog.

Yours, &c.,

MENTOR.

London, February 19, 1842.

GRAND JUNCTION AND CHESTER AND BIRKENHEAD RAILWAYS.

To the Editor of the Railway Times.

SIR,—I was much gratified by the perusal of a letter in your publication of the 5th instant, signed "A Manchester Man," and with a view of following up the suggestions of your correspondent, I hope you will afford room to the present communication.

It is much to be apprehended that the arrangements between the Grand Junction and Manchester and Birmingham Railways, will prevent the latter Company from affording the Birkenhead people any assistance in working their traffic between Chester and Birmingham. As an inhabitant of the "ancient city," permit me therefore to remind the Directors of the Birkenhead Company that they have a right to insist on working the traffic between Chester and Birmingham on terms in every respect as advatageous as those which the Manchester and Birmingham Company are about to enjoy, as respects their trade between Crewe and Birmingham, viz., a toll of seven-eights of a penny per passenger per mile, with a reasonable compensation for the use of the stations on the Grand Junction line. This point was, I conceive, settled in 1840, when the North Midland Company were compelled to admit the traffic of the Birmingham and Derby on similar terms with that of the Midland Counties' Company. Indeed, any arrangement involving a preference of one Company over another, when conducting their trade over a line common to both, is so manifestly unjust, that I can hardly suppose such a system could find supporters.

Under the mode I now point out, the toll which the Birkenhead Company would have to pay the Grand Junction and the passenger duty to Government, would jointly amount to 1d. per passenger, or 6s. 3d. for the 75 miles between Chester and Birmingham, leaving the Birkenhead people a handsome margin for working two or three trains daily, at rates 15 or 20 per cent. under those now charged by the Grand Junction Company. The difference of distance does not exceed 8 miles; but the saving of time by this route would probably amount to one hour, by avoiding the tunnel at Liverpool, the tiresome stoppage at Warrington, and the inclined planes between Liverpool and Crewe. Your Manchester correspondent is quite correct as to the beautiful level between Crewe and Chester, and I may venture to make a similar assertion with regard to the 14 miles between Birkenhead and Chester, which I have frequently gone over in 23 minutes. Indeed, I doubt not, that the entire distance between Birkenhead and Birmingham, 90 miles, might be equally accomplished in little more than three hours.

This arrangement appears to me to involve so little risk, and to present so fair a prospect of success, that I can hardly think the Birkenhead Directors will hesitate to adopt it this spring.

They must, however, not be niggardly in taking every possible means to give publicity to their scheme, as a thousand pounds would be well laid out in advertising their trains. I beg to subscribe myself, Sir, your obedient servant,

A CHESTER MAN.

February 12, 1842.

Just published, 7th edition, price 3s., and sent in a sealed free envelope, on receipt of a Post-office order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.; By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which, is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

GARNKIRK AND GLASGOW RAILWAY—At the Annual General Meeting of the Company of Proprietors of the Garnkirk and Glasgow Railway, held at Glasgow, in the George Hotel, on Wednesday the 16th of February current,

ROBERT STEUART, Esq., of Carfin, in the Chair.

The Report for the year 1841, by the Committee of Management, as previously circulated among the Shareholders, having been read, the relative accounts and other documents having been produced and signed by the Chairman, and certain questions put by shareholders having been satisfactorily answered, the following Resolutions were respectively moved and seconded, and unanimously agreed to by the meeting:—

I.—That the Report be received and adopted by the Shareholders; and that the dividend of eight per cent. as proposed in the Report, shall be payable as formerly, viz:—one-half at Whitsunday, and the other half at Martinmas next.

II.—That the Bye-laws and Regulations submitted to the meeting, containing alterations on, and additions to, the former regulations of the Company, conform to the Act of Parliament for regulating Railways, the Company's own Acts, and the directions of the Board of Trade be approved of and confirmed by the meeting.

III.—That the present Directors, or Committee of Management, be re-elected, and that Alexander Allan, Esq., Advocate, Edinburgh, and Alexander Baird, Esq., Gartsherrie Iron-works, Glasgow, be added to their number. The list of Directors for the current year being accordingly as follows:—

Mark Sprot, Esq. of Garnkirk.
Dr. Jeffray, of Cardowan, Glasgow College.
John Tennant, Esq. of Saint Rollox.
Thomas Sprot, Esq. W.S.
William Baird, Esq. M.P.
Robert Steuart, Esq. of Carfin.
John Jeffray, Esq. Writer, Glasgow.
John Hamilton Colt, Esq., of Gartsherrie and Inveresk
Alexander Allan, Esq., Advocate, Edinburgh.
Alexander Baird, Esq., Ironmaster, Glasgow.

The said Committee to complete the issue of New Shares of the Stock, under such arrangements as to the number of instalments and periods of payment as they shall consider expedient, and to proceed with the other matters referred to in the Report, and to have the usual powers for managing and promoting the affairs and interests of the Company.

IV.—That the thanks of the Meeting are especially due, and that they be cordially given, to the Directors, and to Mr. King, the Secretary, for their management of the business of the Company during the past year.

ROBERT STEUART, Chairman.

Thereafter, the thanks of the Meeting was given by acclamation to the Chairman

CHAS. ALEX. KING, Sec.

Garnkirk and Glasgow Railway Office,
Glasgow, February 19, 1842.

Sir,—In terms of the Resolutions of the Company of Proprietors of the Garnkirk and Glasgow Railway, a copy which is prefixed, the Dividend due to you will be paid to you or your Mandatory at the ensuing terms of *Whitsunday* and *Martinmas*

The shareholders in Glasgow and neighbourhood will receive payment at this Office; and those resident in Edinburgh and its vicinity, at the Office of Thomas Sprot, Esq. W.S. Shareholders, residing in other places, may have their Dividends remitted by Letters of Credit, on sending written instructions to that effect.

Due notice will be given of the time and mode of issuing the new shares.

I am, Sir, your most obedient servant,

CHAS. ALEX. KING, Sec. and Manager.

TO ENGINEERS' FOREMEN.—From FIVE to TEN POUNDS will be given to any party who would procure for the Advertiser employment on a Railway. For particulars, address, pre-paid, to A. B., 27, Wormwood-street, Bishopsgate-street, City.

This Joint Stock Company, established by Act of Parliament, without limited responsibility, affords the most perfect security in an ample paid-up capital, and in the great success which has attended it, since its commencement in 1834, and the large accumulation of Premiums which has taken place

On the 1st of July 1841, the Company, at their General Meeting, declared an addition of one half to the sums paid by the stockholders, and appropriated to those holding Assurances at the participating rate £2 per cent. per annum, from the dates of their policies, so that the addition to a policy for £1000, in force for the previous 5 years, has been £100 making it in all £1,100. The Premiums payable to the Company are nevertheless very moderate, and only one half of them, when an Insurance is for life, need be paid for the first 5 years after the date of the policy; the other half, subject to the payment of interest at 5 per cent. annually, to be deducted at death, or paid off at convenience. By this arrangement, it becomes easy for a person of moderate income to secure a provision for his family; and the policy may be relinquished on the acquisition of a fortune, within the 5 years, the assured having paid only one-half of the Premiums, instead of the whole, according to the usual practice.

Thus a person of 25 years old may, by an annual payment of £28 16s. 3d., for the first 5 years, and afterwards of the full premium, £57 12s. 6d., secure to his widow and children at his death payment of no less than £3,000, subject only to the deduction of £144 13s. 3d., being the amount of premiums unpaid. A person requiring a temporary advance of money may also, in terms of this arrangement, should he within 5 years relinquish the policy of Assurance by means of which he has obtained the advance, give it up on payment merely of one-half of the Premiums instead of the whole, according to the usage of most other offices.

The great facilities afforded by the Company, in these and other respects, are such that it really appears to be a moral duty in every parent who is not possessed of a fortune, but of an income, however moderate, to Insure his life for a sum which may yield a comfortable provision for his family.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.

—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of SLATER and HEELIS, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

SHEFFIELD AND ROTHERHAM RAILWAY.—HALF-YEARLY GENERAL MEETING.

—Notice is hereby given, That the Half yearly General Meeting of the Sheffield and Rotherham Railway Company will be held at the Sheffield Station, on Monday, March 7th, 1842, at Twelve o'Clock at noon, for the general purposes of the Acts of Parliament, and that the Transfer Books will be closed from the 3rd to the 10th of March, both inclusive.

Dated the 25th day of February, 1842.

THOS. BADGER. } Law Clerks.
HENRY VICKERS. }

N.B. An Abstract of the Half-yearly Accounts, ending 31st December last, may be had by Proprietors on application at the Secretary's Office, on or after the 3rd of March.

EASTERN COUNTIES' RAILWAY COMPANY.

—Notice is hereby given, That the undermentioned Resolutions were passed at a Special General Meeting of the Shareholders of the said Company, held the 22nd day of February, 1842; and the attention of the proprietors of shares and debentures of the said Company is requested thereto.

By order of the Board,
A. BULKELEY, Secretary.

Offices, High-street, Shoreditch, Feb. 23, 1842.

RESOLUTIONS.

1. That this Special General Meeting of the Shareholders of the Eastern Counties' Railway Company, called and summoned in pursuance of the provisions of the Company's Act of Incorporation, doth hereby, by way of augmentation of the capital stock of the said Company, create 36,000 new shares of 25*l.* each, and doth hereby order that the Directors of the said Company shall issue the same new shares in such form and manner, and with such scrip or scrip receipts, or otherwise, in the first instance, as they shall think fit, and that upon such new shares the sum of 8*l.* 6s. 8d. per share only, and no more, shall be paid at the following times, and in the following proportions, viz.:—

£2 6 8 on 5th April next.
£2 0 0 on 4th June next.
£2 0 0 on 5th August next.
£2 0 0 on 5th October next.

2. And this meeting doth further order, that the Directors shall give notice of the creation of such new shares in one or more newspapers published in the counties of Middlesex, Essex, Suffolk, and Norfolk; and that such new shares shall, in the proportions after mentioned, be divided amongst all such persons as shall be, on the 5th day of March next, the registered proprietors in the Company's books of original shares of this Company, and as shall on the 5th day of March next be the registered proprietors in the Company's books of the convertible debentures of 8*l.* 6s. 8d., which were issued by this Company in pursuance of the resolutions passed at the Special General Meeting of this Company, held on the 29th of September, 1840.

3. And this meeting doth further order that the said 36,000 new shares shall be appropriated and issued by the Directors amongst the said several proprietors of original shares and debentures, in such proportion and manner as shall in the opinion of the said Directors be fair and equitable to the said proprietors respectively, yielding, as nearly as practicable, one of such new shares for every three of such original shares, and for every three of such convertible debentures; or, as the case may be, for every three of such shares and debentures jointly.

4. And this meeting doth further order, that by such notice in the said newspapers, each registered proprietor of shares and of debentures shall be required to give notice in writing to the Directors of his intention to take or become the purchaser of the shares so to be appropriated to him, and that the same new shares, or so many of them as shall be required, shall be appropriated in the proportions before mentioned, to such of the said proprietors as shall, on or before the 25th day of March next, give notice in writing to the Directors of their intention to take up such new shares.

5. That any Proprietor not duly paying on or before the 5th of April next, such first deposit of 2*l.* 6s. 8d., on each new share to be appropriated to him, shall be deemed and taken to have rejected his proportion of such new shares, or of so many of them upon which he shall have refused or neglected to pay such deposit punctually; and the Directors are required and directed by this Meeting thereupon to hold, for the purposes next meuttoned, such of the said shares upon which the said deposit shall not have been duly paid.

6. That as to all new Shares as shall not be appropriated, distributed, or disposed of, under or by virtue of the foregoing Resolutions, or upon which the first deposit aforesaid of £2 6s. 8d. each, or any of the future instalments shall not be duly paid, it shall be lawful for the Directors of this Company to dispose thereof to any Corporations or persons who may be willing to become and shall become Purchasers and Proprietors.

7. That the new shares so created, when issued under the Common Seal of the Company, and after the sum of 8*l.* 6s. 8d. for each share shall have been duly and punctually paid to the Company, by the instalments aforesaid, shall on the 4th of January next (in respect of the Traffic of the previous half year) and from and after that date, be considered as to dividends, and for all other purposes, and rank the same as, and equally with the now existing shares of 25*l.* each, and as if 25*l.* had been paid up thereon.

8. That it shall be imperative on all the holders of the said scrip or scrip receipts, to pay the said several instalments punctually, and in default thereof, from whatever cause arising, the scrip held by them shall be subject to such forfeiture as next hereinafter mentioned.

9. That in the event of any of the said instalments on any such new shares, or on the scrip or scrip receipts to be issued in respect thereof, not being punctually paid on or before the respective days or times fixed as aforesaid for the payment, it shall be lawful for the Board of Directors of the said Company to resolve and declare that new shares under the Company's Seal shall not be issued in respect of the scrip or sums of 8*l.* 6s. 8d., as to which such default shall have arisen: and in case of such declaration by the Board of Directors, the holder of the scrip on which such default shall have arisen, shall absolutely forfeit his right to receive a share of 25*l.* in respect thereof, and the money paid on, or in respect of each new share or scrip aforesaid, upon which such default shall have taken place, shall and may, from and after such default, be retained and held by this Company as a deposit, and shall be payable to the parties entitled thereto, in exchange for the scrip or scrip receipts upon which such default shall have taken place.

10. That none of the new shares issued under or by virtue of the foregoing resolutions, nor the scrip in respect of the same, shall be deliverable to any of the proprietors of original shares, who shall be in arrears for calls on such original shares, until such arrears of calls, and all interest due thereon, shall have been fully paid up to the Company.

BIRMINGHAM AND GLOUCESTER RAILWAY.—FOURTH INSTALMENT UPON SCRIP,

£5, due February 25, 1842.—The Fourth and last Instalment, amounting to £5 upon the Scrip issued by the Company, is required to be PAID to the Birmingham Banking Company, at Birmingham, on or before the 25th instant, after which day interest will be charged at the rate of 5 per cent. per annum; and if the same "shall remain unpaid for one calendar month after the day above mentioned for its payment, the Scrip will be absolutely forfeited, with all moneys previously paid thereon."

Each holder of Scrip is requested, so soon as he shall have paid his Instalment, to bring or send his Scrip to this Office, together with the Bankers' Receipt, in order that the payment may be duly registered on the Scrip and in the Company's Books.

By Order,
GEORGE KING, Secretary.

Waterloo-street, Birmingham, Feb. 8, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—UNPAID INSTALMENTS UPON SCRIP:

Second Instalment.....£5, due 25th August, 1841.
Third Instalment .....£5, due 25th November, 1841.
Fourth and last Instalment £5, due 25th February, 1842.

By a Resolution of the Proprietors, at the Half-yearly General Meeting held at Gloucester, on the 18th of February, 1842, the period of payment of the Second or Third Instalments, which remained unpaid upon the Scrip issued by this Company, was extended to the 25th March next. Any person, therefore, holding Scrip upon which either of these Instalments are not paid, is required to pay the same on or before that date, together with Interest at the rate of 5 per cent. per annum, from the day at which such Instalment was originally due, to the Birmingham Banking Company, at Birmingham; as if the same shall not be paid by the said 25th of March, the Scrip will be absolutely forfeited, with the sums paid upon them, and will be sold, at the discretion of the Directors, for the benefit of the Company.

The Fourth and last Instalment is due on the 25th instant, from which day, if unpaid, Interest will be charged at the rate of 5 per cent. per annum; and if the same shall remain unpaid for one calendar month after the day above-mentioned for its payment, the Scrip will be absolutely forfeited, with all moneys previously paid thereon.

Each holder of Scrip is requested, so soon as he shall have paid his Instalment, to bring or send his Scrip to this Office, together with the Banker's receipt, in order that the payment may be duly registered on the Scrip and in the Company's books.

By Order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham,
February 22, 1842.

LANCASTER AND PRESTON JUNCTION RAILWAY.

—At a Special General Meeting of the Lancaster and Preston Junction Railway Company, held at Lancaster, on the 24th February, 1482,

JONATHAN DUNN, Esq., in the Chair,

It was resolved unanimously—

1st. That the Report and Statement then read be received and adopted.

2nd. That a dividend of 12s. per Share on the whole Shares, and of 8s. 6d. per Share on the three-quarter Shares, be paid to the then registered Proprietor of each Share. Such dividends to be payable on the 2nd day of March next.

3rd. That the Rules, Regulations, and Bye-laws recommended by the Directors be adopted.

4th. That the thanks of the Proprietors be given to the Directors for their services.

(Signed) JONATHAN DUNN, Chairman.

Resolved—That the thanks of this meeting be given to the Chairman, for his conduct in the chair.

CRANES, ROPE BLOCKS AND SCREW JACKS,

Manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs and Warehouses, to lift from 5 cwt, to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description on the most improved principle.

Drawings of the above may be seen, and particulars obtained at the Works in Manchester, and at the office of C F. Cheffins, 9, Southampton buildings, Holborn, London.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.

—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B.—Castings, Slide Lathes, and Planing Machines, on sale.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of Loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

OPENING OF THE EDINBURGH AND GLASGOW RAILWAY.—The public are respectfully informed that this Railway is now Opened for Passenger Traffic.

The Trains will depart at the following hours:—

FROM EDINBURGH TO GLASGOW.

Seven o'Clock, a.m.; calling at the Corstorphine, Ratho, Winchburgh, Linlithgow, Polmont, Falkirk, Castlecarry, Croy, Kirkintilloch, and Bishopbridge stations.

Eleven o'Clock, a.m.; calling at Linlithgow, Falkirk, and Castlecarry stations.

Three o'Clock, p.m.; calling at all the stations, same as Seven o'Clock Train.

Five o'Clock, p.m.; calling at Corstorphine, Ratho, Winchburgh, Linlithgow, Polmont, Falkirk and Castlecarry.

FROM GLASGOW TO EDINBURGH.

Seven o'Clock, a.m.; calling at all the stations, same as Seven o'Clock train from Edinburgh.

Eleven o'Clock, a.m.; calling at Castlecarry, Falkirk, and Linlithgow stations.

Three o'Clock, p.m, calling at all the stations, same as Seven o'Clock Train.

Five o'Clock, p.m.; calling at Bishopbridge, Kirkintilloch, Croy, Castlecarry, Falkirk, and Linlithgow.

All the Trains will carry First and Second Class Passengers, and the Seven o'Clock and Three o'Clock Trains from each end will carry Third Class Passengers in addition.

FARES FOR THE WHOLE DISTANCE.

Passengers.			With Passengers' Trains.	
1st Class 8s.	2nd Class 6s.	3rd Class 4s.	Carriages 35s. each.	Horses 15s. each.

The intermediate Fares will be nearly in proportion to the distance.

The Eleven o'Clock and Five o'Clock Trains are expected to perform the journey in 2½ hours; and the Seven o'Clock, a.m., and Three o'Clock Trains, in 2½ hours, until further notice.

Parties going in their own Carriages to be charged Second Class Fares.

Children between 10 and 14 to be charged half Fares; Children under 10 years of age, if accompanied by a person paying full fare, to pass free.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the Trains—previous notice to be sent to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their address marked thereon, and to satisfy themselves that the Luggage is deposited on the Carriages.—The *Time* on the Railway will be reckoned by the Railway Clocks.

Parcels will be conveyed by all the Trains, and delivered by the Railway Company.

For intermediate Fares and time at Road Stations, see hand-bills. By order of the Directors.

H. G. WRIGHT, Secretary.

Glasgow, 15th Feb., 1842.

Note.—It is intended, as the season advances, that additional Trains will run from each end at the hours of Nine o'Clock a.m., and Seven o'Clock p.m.

Arrangements are in the course of being made with Coaches to run in connection with the Railway at different points, of which further notice will be given.

Goods Trains will commence running shortly.

BITUMEN WORK.—JAMES HARVEY, of Waterloo Saw Mills, Commercial-road, Lambeth, begs to inform the public generally, that, having executed works of considerable extent on the Blackwall Railway, Northern and Eastern Railway, Finch's Granaries, Rotherhithe and Gravesend, is now prepared to give estimates for any quantity of work. The above description of Bitumen has many advantages over any other, particularly for foot pavements, terraces, garden walks, barn floors, stabling, warehouse floors, and the covering of arches, to prevent the percolation of water; and J. H. begs further to add, that flooring of this kind can be laid down at a cheaper rate than any other material, and with fair treatment will last a considerable time longer. Deals, planks, battens, &c. sawn by patent machinery.

A spacious wharf for storing and piling Deal, with capital water frontage, and all goods fetched and delivered free of expense.

TO ENGINEERS.—An Old-Established Foundry and Engine Manufactory in Birmingham, is desirous to engage with some Engineer in town for the Sale of Castings, Engines, &c., or to form a partnership by making a Branch in London.

Address, by letter, No. 9, Box, Post-office, Birmingham.

EDINBURGH AND DUNBAR RAILWAY.—At a Meeting of the Inhabitants and Proprietors of Property, in the Burgh of Haddington, held in the Assembly Rooms, there, on Friday, the 18th February, 1842,

On the motion of Mr. James Deans, painter, Provost LEA was unanimously called to the Chair, and Mr. Ferme appointed Clerk to the Meeting.

The Provost stated that he had taken the earliest possible opportunity of calling the Inhabitants together, to lay before them the prospects of the Town in regard to the proposed Railway through the county; considering the subject of paramount importance to every one interested in the welfare of Haddington.

Thereafter, the Provost and Mr. Davidson, who formed part of the Deputation appointed by the Inhabitants' Committee, to confer with the Provisional Committee of the Edinburgh and Dunbar Railway Company, and induce them to bring the line to the South of the Garleton Hills, detailed to the meeting the proceedings that took place on that occasion, and the unsuccessful issue of that Conference.

Whereupon, and after considering and discussing the subject, the following Resolutions were moved by Mr. Alex. Cunningham, merchant, and being seconded by Mr. James Dorward, builder, were unanimously agreed to by the meeting:—

1st. That the meeting regret to learn from the Committee appointed to confer with the Provisional Committee of Subscribers for executing a Railway between Edinburgh and Dunbar, that the projectors of the scheme have definitely and determinedly resolved on carrying the line to the north of the Garleton Hills, and abandoned all intention of making the Railway as recommended by Mr. George Stephenson in 1836, immediately adjacent to the town of Haddington.

2nd. That it is understood, notwithstanding the opinion of the above named eminent Engineer, to the effect that not "the slightest engineering difficulty" occurred in bringing the railway by Haddington, that the promoters of the present measure have given up this plan, on the score of expense, although they have altered the line contemplated in 1839, by the Great North British Railway Company, at the terminus at Edinburgh, adding an immense sum to the cost of the railway, so as to bring it to a terminus under the North Bridge, instead of at Leith Walk, opposite Greenside-place.

3rd. That a suggested branch from Haddington, to join the railway near Red House Castle (the expense of which would go far towards bringing the main line by the burgh) would be comparatively useless; and the destruction, which the inhabitants are satisfied must arise to the markets and revenue of the burgh, and also to its trade and property, would be counterbalanced by almost no advantage were such branch executed.

4th. That the meeting resolve to oppose by every legitimate means, and with the utmost energy in their power, the passing of any Bill which may be introduced into Parliament for the execution of a railway through East Lothian, in accordance with the notices which have been or are about to be issued; and with that view, agree to enter into a subscription to defray all necessary expenses.

5th. That the Committee formerly appointed be continued, with power to organise the opposition—to communicate with the numerous and influential body of proprietors in the county of Haddington opposed to the north line—with all members of both Houses of Parliament, who may be unfavourable to the measure, and with such public bodies in the west district of England and Scotland, as may be also opposed thereto, with a request that these parties would co-operate with the inhabitants of Haddington against the passing thereof.

Moved by Mr. Stoble, Town Clerk, and seconded by Mr. Henry Shiells, tobacconist, and unanimously agreed to:—

6th. That the thanks of this meeting be respectfully tendered to the Most Noble the Marquis of Tweeddale for the attention and support he gave the deputation in Edinburgh, as well as for the powerful and determined opposition he made to the plan of the north line of railway, at the meeting with the Provisional Committee of the Edinburgh and Dunbar Railway, on Wednesday last.

Moved by Mr. D. Wilkie, writer, and seconded by Mr. D. Roughead, merchant, and unanimously agreed to:—

7th. That the above resolutions be published in the *Courant*, *Scotsman*, *North British Advertiser*, *Glasgow Courier*, *Berwick Warder*, and *Berwick Advertiser* Newspapers, and also in a *Carlisle Newspaper*, and the *Railway Times*.

Moved by Mr. John Richardson, writer, and seconded by Mr. Deans, and unanimously agreed to:—

8th. That the thanks of this meeting be tendered to the Provost, Mr. Davidson, and Mr Dods, the deputation who met the Provisional Committee of the Railway Company, at Edinburgh, for the zealous and judicious manner in which they advocated the interests of the Burgh, and for the trouble they have taken in the matter.

(Signed) THOMAS LEA, P.

The Provost having left the chair, on the motion of Mr. James Banks, merchant, the thanks of the meeting were unanimously voted to the Provost for calling this meeting, and for his conduct in the chair.

(Signed) JOHN FERME, Clerk to the Meeting.

THAMES HAVEN DOCK AND RAILWAY COMPANY.—The remainder of the unappropriated £5 Shares which represent £7 10s. paid, may be applied for at the Office, under the terms of security offered by the Prospectus, and will be allotted when the whole number are taken.

HENRY AMSINCK, Secretary.

Offices, 2, St. Mildred's Court,
February 18th, 1842.

THE JUNCTION OF THE MANCHESTER RAILWAYS.—At a special meeting of the Committee of Management of the Manchester, Bolton, and Bury Canal Navigation and Railway, held in Salford, the 19th February, 1842,

JOHN CROSTHWAITE, Esq., in the Chair;

Read—The Report of the Directors of the Liverpool and Manchester Railway to the Proprietors, dated 26th January, 1842.

Read—The notice of an intended application to Parliament in the next session, by the Liverpool and Manchester Railway Company, for a Junction Railway on the south side of Manchester, (dated 10th February, 1842.)

Resolved—That it appears to this Committee, that while the Directors of the Liverpool and Manchester Railway profess in their Report, as it respects the junction of the various railways entering into Manchester, to take enlarged views of the public convenience and accommodation, they show, by their recent notice of application to Parliament, that they are chiefly governed by particular and special interests, which are largely represented at their own Board, for on no other principle can it be explained why, in proposing a scheme which admits of an union of four of the Railways into Manchester, they should be careful in the said notice to exclude from all participation in the proposed scheme the Manchester and Bolton Railway, which forms the most direct communication with the north.

Resolved—That a copy of these proceedings be sent to the Directors of the Liverpool and Manchester Railway, and that they also be inserted in some of the principal newspapers.

JOHN CROSTHWAITE, Chairman.

Committee Room, Salford, 19th February, 1842.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an Extensive and Valuable MANUFACTORY for the Construction of Steam-Engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-Engines, Sugar-Mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the meantime, the work will continue to be carried on in all its branches, and orders executed as usual.

A Plan and Specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh, or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title-deeds of the property are.

TO BRIDGE BUILDERS.—THE BISHOP AUCKLAND AND WEARDALE RAILWAY COMPANY will receive TENDERS for the Erection of a Wood Viaduct, of about 2,400 feet in length, over the Wear Valley, on the Crook Branch of their Railway. Tenders are to be delivered to the Secretary, at the Bishop Auckland and Weardale Railway Office, in Darlington, not later than Thursday, the 17th day of March next.

Also, to be LET, the Building of a Bridge, partly Wood and partly Stone, to carry the Public Highway leading from Bishop Auckland to Etherley, over the Railway. Tenders to be delivered to the Secretary, as above, on or before Friday, the 4th day of March.

Plans and specifications for the Viaduct and the Bridge are now ready, and may be seen at the Engineer's Office, St. Helen's Auckland, and at the Railway Office, Bishop Auckland.

Printed forms of Tenders will be provided by the Company, and may be obtained on application at the Office.

The Directors will not consider themselves bound to accept the lowest Tenders, and they reserve the right of letting the work in one or more contracts.

Railway Office, Darlington, February 18, 1842.

SUPPLEMENT TO

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 217. Vol. V.—No. 9.] SATURDAY, FEBRUARY 26, 1842. [GRATIS.

THAMES HAVEN DOCK AND RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the Thames Haven Dock and Railway Company was held on Wednesday, at the Company's offices, Mildred-court, City; JAMES ESDAILE, Esq., in the chair.

The meeting was called "at twelve for one o'clock precisely," but it was half-past one before a dozen proprietors had assembled. At no time did the attendance exceed twenty persons.

The CHAIRMAN thought it desirable to proceed to business, although the legal number of proprietors was not yet present. He then referred to the Report and accounts, which he hoped would be found satisfactory; and stated the readiness of the Directors to give any further information that might be required, as they had nothing to conceal.

The SECRETARY (Henry Amsinck, Esq.) then read the advertisement calling the meeting, and next the following

DIRECTORS' REPORT.

The Directors would have been glad if the proprietors had attended, so as to form a general court, at the last half-yearly meeting, as they were desirous of stating the grounds for their then making a call upon the shares in the Company, to the extent of 2*l.* 10s. per share. The proprietors are aware, that from the unexpected circumstance of an individual shareholder, at whose special instigation the works at the docks were commenced, refusing to meet the calls in respect of his extensive interest, a considerable amount of claim existed against the Company for those works, and the expenses incidental to them.

The Directors, desirous, if possible, not to burthen the other shareholders with the payment of these debts, have used every exertion to extend the share list, and so continue the works; which would have saved the cost of the buildings, and the necessity for the last call. Finding, however, that some of the proprietors were releasing themselves from their shares by transfer to the hands of incompetent persons, the Directors resolved to stop such unfair proceedings, by an immediate call, so that the burthen might fall on all alike; they regret, however, to state that 270 shares had been transferred, before it was in their power to prevent it.

The Directors have declared forfeited all those shares which stand in the names of parties who are dead, not to be found, bankrupt, or who are unable to pay; and proceedings have been taken against some of those parties, more with a view of determining the proprietorship of the shares for their future sale, than under the hope of receiving pay ment of the arrears.

The Directors have given this undertaking their most cool, calm, and deliberate consideration, apart altogether from the enthusiastic feelings in its favour, which have been exhibited by their Secretary; but as he has had extensive, and most valuable opportunities of enlarging his acquaintance with these matters, as Secretary to the Railway Commission, travelling and minutely examining all the different lines of railway, whether executed or projected, with Sir Frederic Smith, and Professor Barlow, they cannot but pay some attention to his representations; and the result is, that they are of opinion, that no line of railway can be executed at a lower price, as it does not interfere with inhabited property; has no rivers to cross—no turnpike roads to divert; the land throughout is a sound gravelly soil, and no large and expensive stations requisite. From official and easily ascertained data, it is proved that the traffic which may be fairly expected, must be most extensive; and the dock is so selected, that not only has nature given every facility for its construction, but no other tide dock can ever be established below it. The Directors are thus assured, that no line of railway will return a larger profit: and they are equally confident that the capital they are at present empowered to raise, will complete all the works authorised by the Act, viz., the tide-dock at Thames Haven, and the railway from thence to the junction with the Eastern Counties' at Romford. The Directors then feel that it is their bounden duty to maintain, as far as lies in their power, their Act of Incorporation; and with this feeling they have presented a petition to Parliament to extend the term of its powers. They have used, and are still using, every exertion to allot the shares and fill the list, so as to commence and continue the works to an early completion.

The Directors, having experienced the impossibility of disposing of the shares in the office, while a portion of the proprietors, from disappointment at the long delay in commencing the works, evinced a desire to dissolve the Company, and to check its progressive advance in the public confidence, have permitted all such as were desirous of doing so, to transfer their shares to the Company, first paying the calls due; and as they have also declared forfeited that large and unprofitable interest of an individual, which, while it produced nothing to the Company, was a dead weight, swamping the exertions of others, and deterring many from remaining in, or connecting themselves with, the Company; two great impediments to filling the share-list are now removed.

Those shares which by re-purchase, transfer, or forfeiture, have returned into the office, and upon which the deposits were paid, will be sold at 5*l.* per share; the remainder which have never been disposed of will be sold at the par price of 7*l.* 10s. per share. As an inducement to parties to become investors in the Company, they propose to give 5*l.* per cent. per annum, on all calls as they are paid in; and to charge interest on all calls not paid on the day fixed. By this means they hope, when they once commence the works, many persons may be induced to pay their calls in advance, whereby the works will be much earlier finished and brought into profit; this, in a line of only 15 miles to make, might be done in one year.

On the question of giving 5*l.* per cent. interest on all calls on the shares as the may be paid in, whether in advance or otherwise, to which the Directors require your concurrence, and sanction, it may be necessary to offer some observations. There are many persons who object to such a course, as a reduction of the capital without adequate advantage to the shareholders; but if in long lines, where the works may delay the opening for many years, and the return is very large for interest, it has been found advantageous, how much more so must it be where the length of the line is so short as that of your railway, where the formation is uniform, the character of the works being alike simple from end to end; and, moreover, where the railway may thus brought into work a year previously to the possibility of the dock, the plan seems to the Directors to hold out a just and proper inducement to parties to advance on their calls, if not the whole amount subscribed for, yet such a portion as may be convenient to themselves, and which would greatly facilitate the works in execution, and reduce their expense. The Act of Incorporation authorises the Directors to pay interest on all shares fully paid up in advance; but it requires the authority of the shareholders at large to pay an interest on calls, or part advances on calls. In a Company on so moderate a scale as this, it is a very great object to have as many permanent investors among the proprietors as possible; and the Directors, after due deliberation, and weighing the subject in all its bearings, believe that the best method to secure such a class of shareholders, is to place them in a position where they will derive immediate benefit, by laying out their money in the shares of this Company, instead of losing their interest until the works are finished; experience has also shown that the class of shareholders who are mere speculators have already drained their resources in other Companies, and hence much injury has arisen to those undertakings. By the plan on which the Directors are now endeavouring to fill the share-list, they give assurance that no loss can be sustained; and that when the shares are taken, the money will be required for the works only, as every preparation is made for immediate operations. Should the dock be commenced at the same time as the railway, cottages on the spot are built and ready for the immediate reception of 300 men, which will save much time and inconvenience.

Upon 5,000 shares, a bonus of 2*l.* 10s. per share is offered, being equal to 5 per cent. on the whole capital to be paid; thus, a subscriber for these shares, to the extent of 1,000*l.*, will have only 950*l.* to pay, and yet receive 50*l.* per annum interest, and in the same proportion for any greater or less amount than 1,000*l.*, until six months after the works are completed, when the Directors believe the profits will not be less than is shown in the prospectus.

On this plan they have allotted the shares, where they trust the influence of the parties in charge of them, will induce that class of shareholders, who in addition to the positive advantages now offered, will look to still greater profit hereafter, from the large traffic which the Directors are daily more assured must come to this dock and railway. The Directors cannot but express their confident hope that the course they are now adopting will fill the share-list; the financial state of the country, although improving, is still not such as to give expectation of active speculation; but as the capital is not large, as the assurance is positive that that capital is amply sufficient, and that no new shares will have to be created, and as above all, the undertaking is acknowledged, on all hands, to be of the greatest possible promise, they do sincerely trust the shares will now be taken, and that they will be enabled to give, this spring, some employment to the labouring poor; and at the same time take advantage of the present low price of all materials necessary for the works; and that within two years the dock will be open, to the relief of the crowded pool, and to the extension and facility of the trade of the country, as well as to the convenience and comfort of the people.

With respect to the estimated revenue to be derived from the anticipated traffic, the Directors feel that it is necessary to offer some observations. That stated as local, is the actual traffic at different points of the line in 1836, and given in evidence before Parliament; and, being taken at a highly unfavourable period of the year, has been adopted without deduction for such as might not use the railway, and without increase for railway convenience. The 1,000,000 passengers is the existing steam-vessel traffic, past the entrance of the dock, without addition consequent on the dock, or diminution for vessels passing by; but which traffic will, in all probability, be considerably more than the amount named; the number of tons of goods was the amount imported and exported by steam-vessels in 1838 from accurate and indisputable data. The 500,000 tons of coals is the probable quantity which the railway will be able to carry for local and other purposes, and is that portion only of the 2,800,000 tons which is imported into London in a year. The residue of the traffic must depend largely on the use made of your dock, and may extend very considerably beyond the items named. The Directors are aware that the aggregate forms a sum equal in amount to the entire cost of constructing the railway; or in other words, the annual gross receipts to be derived from the railway equal the capital to be expended in forming it; a statement in itself so startling, and so unusual, that the Directors are aware it requires some knowledge of the facts and details to be assured of its accuracy, but which, when inquired into, will be borne entirely out, and the Directors believe that the construction of a tide dock giving such facility and convenience, will bring to it a traffic equal to the ability of the railway to accommodate; and they ground this belief on the large population of the metropolis and its environs, on the large moving population on the river, on the great advantages your dock and railway will give, and also, and very much in consequence of the low fares, which, it will be observed, they have named for the conveyance of both passengers and goods, the whole distance of 27 miles, from Thames Haven to London; and they would draw attention to the fact, that in Belgium in 10 months of 1838, from the very low fares, upwards of 2,000,000 persons travelled on the railways, the whole population of the kingdom not exceeding 4,000,000.

The Directors have brought these circumstances in minute detail, under the notice of Mr. R. B. Watson, the respectable and intelligent share broker of Leeds, who has gone down the line of railway and seen the dock site, as well as entered into all the statistics of the Company, with a view to a more extended knowledge of the undertaking.

The Directors have pleasure in referring the proprietors to the Report of the Directors of the Eastern Counties' Railway, as evidence of that good feeling existing between the two Companies, which is so essential to the interests of both; and they are happy to find that the long and serious financial difficulties, which have clouded and delayed the operations of that Company, are now fast clearing away; so that the eastern portion of the kingdom may derive some of the advantages which railways have brought to all those localities where they exist.

A statement, under the various heads of receipt and expenditure, from the commencement of the Company to the end of the last year, is laid before you, together with the liabilities, assets, and state of the share-list at the present time, and you will thus perceive that however much the expenses have been kept down, still much too large a sum has been laid out to be wantonly or lightly sacrificed.

The Directors cannot close this Report, without alluding to the obligations they are under to Sir George Stephen, for the advice and assistance he has rendered them from his

Digitized by Google

first introduction to the Company; and, they believe, in no undertaking has so much unpaid labour been bestowed as upon this.

Messrs. Ernest Vaux, James Esdaile, and Richard Baker Wingfield, go out of the Direction by rotation; but, being eligible, offer themselves for re-election.

HENRY AMSINCK, Secretary.

HENRY AMSINCK, Secretary.

Mr. Scott moved, and Mr. Smiley seconded, the adoption of the Report.

In answer to a question by Mr. Gregory, it was explained by the Secretary that the item in the accounts of 9,482*l.* as "bad debts" arose from the inability of many of the original proprietors to pay up their calls. The cases of defaulters had been put into the hands of Sir George Stephen, the Company's Solicitor, but where it was not likely the arrears could be recovered the shares had been declared forfeited; although, as the forfeiture had not been confirmed, the Directors could proceed against the parties, should it subsequently be deemed fit, or they themselves could redeem their interest. The fact of there being so many defaulters accounted for the non-prosecution of the works.

The Report was unanimously adopted.

Mr. Lewis then moved, and Mr. Bigg seconded, the re-election of the three Directors named in the Report, and they were accordingly appointed unanimously.

Sir George Stephen entered into a detail of an interview which he had had with a friend of his, whom he described as a large shareholder in the Eastern Counties' Railway, and who, up to that time, had been unacquainted with the merits of the Thames Haven scheme, but who, on having them explained, had written to the Chairman of the Eastern Counties' Company to ascertain why the project had hitherto been unnoticed by that Board. He (Sir George Stephen) wished to know whether the letter of his friend had been alluded to at the Eastern Counties' meeting held on the previous day.

The Secretary said, it had not been noticed, probably because the meeting had been called for a special purpose. He then expressed his regret that he had hitherto been unable to convince the Directors, Manager, or Secretary of the Eastern Counties' Company of the benefits which would accrue to them from the carrying out of the Thames Haven project, so as to induce them to take the matter up, and complained that the Thames Haven Company should have participated in the odium which had lately attached to the Eastern Counties', without receiving any benefit from the connection, or even any notice from the Directors, except a general paragraph in their last Report, which meant in effect that the Eastern Counties' Directors would be glad to receive the Thames Haven traffic when it came to them, but would lend no assistance towards accomplishing the works. He then referred to the great exertions which he said he had made personally in favour of the Eastern Counties' line in its earlier stages, and in securing the Act of Incorporation, stating that he had been the means of making an arrangement with a rival project, and thus saved the Company thousands of pounds. He affirmed that the lowest toll which the Thames Haven Company could pay the Eastern Counties' would, in the aggregate, produce 2¼ per cent. upon the whole of the latter Company's capital to Romford, which was, in fact, *the* capital, the works eastward of that point being of a comparatively light character. He had been told by the Chairman of the Eastern Counties' Company, that his colleagues and himself wished well to the Thames Haven scheme, but that they could not take it up, without in like manner assisting the promoters of the Harwich project—a project which had as yet secured no Act of Parliament, and with respect to which the Eastern Counties' Directors were under no agreement. The honourable gentleman expressed his conviction of the good feeling of the Eastern Counties' Board individually towards the scheme, and stated that there was, and would be, no difficulty with respect to the traffic or toll upon the Thames Haven line.

After a good deal of desultory talk,

The Secretary proposed a resolution approving of the course which the Directors had taken in allowing shares to be transferred to the office after the calls had been paid up. He explained that he moved the resolution not in his official capacity, but as the largest, he believed, of the original proprietors, and the holder of several proxies. He then adverted at some length to the difficulties against which the Directors had had to contend in consequence of the wish of certain Manchester shareholders to dissolve the Company. The honourable gentleman attributed this wish not to any doubt as to the probable results of the undertaking, but to the state of trade in that locality, and to the evil results of undue speculation, and said he had assurances from many of these parties that they would again join the concern if it were once fairly set a-going.

Mr. Coventry seconded the motion, and ultimately it was carried unanimously.

Mr. Gregory inquired what number of shares could be relied on to pay up future calls.

The Secretary said, the total number of *good* shares on the books was 1,571, and explained, that a number of shares had been distributed in different parts of the country for allotment, upon the terms referred to in the Report; but, that not even the deposit would be paid upon these shares until 5,000 of them had been subscribed for, making, in that case, the available number of shares between 6,000 and 7,000. He enlarged upon the advantages of this arrangement, and read a resolution to the effect, that the proprietors approved of the plan of allotment adopted by the Directors. He wished Mr. Bigg to propose the resolution, but that gentleman declined, although, when appealed to, he said he did not disapprove of the plan. Ultimately it was moved by Mr. Smiley, seconded by the Secretary, and carried unanimously. After it had been passed, one of the Directors thought it would "look better in print," if it were not seconded by the Secretary, although that gentleman was a large shareholder. The name of Mr. Lewis was therefore substituted.

Before the resolution was passed, the Secretary read a printed circular which had been issued by Messrs. Watson, share-brokers, of Leeds, recommending in *very* strong terms, the Thames Haven project to investors. It appeared from the circular and from the explanations of the Secretary, that one of the firm had personally visited the site of the proposed docks and railway. We have not room for the circular, and if we had, could scarcely expect; if we printed it, to escape the Stamp-office charge for an advertisement, for a more palpable specimen of the "puff direct" was never penned.

The Secretary explained, that the Messrs. Watson were totally independent of the Company, except as agents for the sale of shares; that Mr. Watson, who visited the line, had been 30 years a resident at Hull, and that that gentleman had told him that at one time the Hull Docks had been opposed, as likely to prove ruinous to the port, and yet the 100*l.* shares were now worth about 800*l.* The Secretary said he could name several canals now equally flourishing, which at one time were in as low a condition as the Thames Haven Railway.

Two gentlemen attended the meeting to inquire whether a projected Company, with which they were connected for the manufacture of "Grant's Patent Fuel" for steam navigation, could obtain land near the proposed docks for the erection of suitable buildings. The Directors promised to take the matter into consideration.

On the motion of Mr. Gregory, who spoke of their perseverance in highly eulogistic terms, a vote of thanks was unanimously passed to the Directors, and suitably acknowledged by the Chairman; after which the meeting broke up.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

Last Saturday, we were enabled to lay before our readers, the Report submitted on the previous day to the proprietors of the Birmingham and Gloucester Railway Company, at their meeting held at Gloucester. The *Gloucester Chronicle* furnishes the following sketch of the proceedings, and we subjoin the balance-sheet, &c.:—

The half-yearly meeting of this Company was held yesterday at the Bell Hotel, in this city, Captain Moorsom, the Chairman of the Directors, presiding. The proceedings occupied nearly five hours, but the results may be compressed within short compass.

The case of Mr. Joseph Gibbins.—It will be recollected that at the previous general meeting a resolution, embodying want of confidence in Mr. Gibbins,

Digitized by Google

one of the members of Committee, was passed. This arose out of an impression that that gentleman had trafficed in shares to the injury of the Company's stock, he making use of the knowledge he possessed as a member of the Committee to advance his own interest. Mr. Bowly brought the matter under the notice of the meeting, and stated that he had made a thorough investigation into all the transactions in which Mr. Gibbins had been engaged, and found that, so far from having depreciated the value of the Company's stock, he had materially assisted in keeping up its value. Mr. Gibbins had a larger stake in the concern than almost any other shareholder, and his own interest was consequently involved in preventing whatever tended to depreciate the value of the stock from unfair causes. He (Mr. Bowly) knew that when parties, whose object it was to lower the stock, threw their shares into the market, Mr. Gibbins took them up; and when they had done so a second time at a still lower rate, and a third time at a lower rate still, Mr. Gibbins counteracted their design by taking up the stock thus thrown into the market. These parties having found that their movement had been seen through, were so dishonourable as not to fulfil their transactions, and to turn round at the same time and blame Mr. Gibbins. He (Mr. Bowly) considered that the shareholders were much indebted to Mr. Gibbins for holding so large an amount of property as he did, during a most important and critical period in the Company's existence—(applause),—and he knew also that many persons who held large stakes would have sold out had it not been from the confidence they felt in the circumstance of Mr. Gibbins retaining so large an interest as he did. (Applause.) The resolution in question had never been passed had the necessary explanation been given. Mr. Bowly concluded by moving that the minutes of the previous general meeting be approved, with the exception of the resolution which referred to want of confidence in Mr. Gibbins, and that it be rescinded. This was seconded by Mr. Bassett; and after explanation from the parties who had moved and supported the resolution in question, Mr. Bowly's motion was carried amidst loud applause.

The Goods' Traffic.—The Chairman, in reply to questions from Mr. Joseph Sturge, gave various explanations as to the revenue derived from this department. It appeared also that the Committee, in consequence of the want of a sufficient number of waggons for the conveyance of goods for short distances, and the small return afforded, had encouraged the traffic for longer distances in preference, and the tables produced showed that the distance had increased, and the revenue, as a necessary consequence, was larger. In the course of the discussion which followed, various complaints were made as to the inadequate accommodation afforded to the public in the conveyance of goods, and various suggestions were made for improving it. The Chairman stated that every effort was making to afford additional facilities. The goods' department had been put under the charge of a most efficient and experienced officer, and it was hoped that the grounds of complaint would be removed. In finding fault, however, with limited accommodation, the shareholders were too apt to forget that it was the want of funds which was the main cause of all that was complained of. The Directors had no funds to lay out upon the purchase of waggons, erection of stations, or construction of engines. Every sixpence they could command was laid out in defraying expenses which could not be avoided. If the Directors had plenty of money there would be no want of accommodation. Still, so far as their means allowed, they should do everything to increase the traffic.

Conveyance of Coal to Cheltenham.—In reference to this subject, the Report stated, "A proposition was made for the use of the railway, on payment of a toll for the coal of 2*s.* a ton, the locomotive power and waggons being found by the party, but assistance up the Lickey, and the use of the water stations, &c., being required without additional charge. The Committee are satisfied that neither the interests of the Company, nor the due accommodation and safety of the public, could be maintained in unison with such a traffic so conducted; and in support of these views, they quote with confidence, the opinion of the select Committee of the House of Commons, to which they have before referred." Much discussion followed upon this point. It appeared, however, from what fell from the Chairman, that the Directors did not consider the offer made a *bona fide* one, and that there was reason to believe that the object was to beat down by indirect means the charges of the Canal Company. If the party offering, were to come down with a good guarantee, the Directors would again consider the proposal. Mr. Little said that he was a party to the proposal made, and was ready to make an allowance for assistance up the Lickey and the use of the water stations, and was ready to put down 1,000*l.* as a guarantee for the fulfilment of such a bargain as might be entered into. After reference to various points, the discussion dropped, the understanding being that the Directors would keep the subject in view.

Mr. HUMPHERY BROWNE was heard at great length, on the best means of improving the traffic; but he mixed up so much of personal matter with his remark, that nothing of a practical nature could be extracted out of what he said. He spoke of the incompetency of a person who was employed as a breaksman on the line, and the Chairman stated that a full inquiry into the case would be made.

Mr. JOSEPH STURGE moved the adoption of the Report, and Mr. SHAW seconded the motion.

Mr. TARTT moved an addition, to the effect that the approval of the Report did not preclude the right of the shareholders to investigate hereafter into the mode of management. It was stated that such an addition was unnecessary, as the right to investigate was undoubted. On a division, the motion was carried by a great majority.

Resolutions relating to the payment of the dividend, and authorising the Directors to dispose of the forfeited scrip were passed.

Additional Trains on Sunday.—Mr. HELLINGS said, that owing to the length of time the proceedings had occupied, and in the hope that the Directors would take up the subject, and order additional trains on Sundays, he would not persevere in the motion of which he had given notice.

Mr. BAKER was not inclined to allow the subject to be disposed of in that way, as the summer would be over before the next meeting. In accordance with this view he moved a resolution directing the running of additional trains. This was met by an amendment, recommending the postponment of the discussion. The amendment was carried.

After thanks to the Directors and the Chairman, the meeting broke up. The attendance was very numerous throughout the whole sitting.

REVENUE ACCOUNT, *to 30th June*, 1841.

Dr. *Cr.*

To Sundry Charges not debited in account to 30th June, 1841, viz.:—				By Balance to the credit of Revenue Account to 31st of December, 1840, viz.:—

NORTH UNION RAILWAY COMPANY—GENERAL MEETING.

[From the *Liverpool Standard*, Feb. 18.]

YESTERDAY a special general meeting of the shareholders in the North Union Railway Company was held in the Clarendon-rooms, South John-street, for the purpose of receiving the receipts of the Directors, and passing the accounts; THEODORE W. RATHBONE, Esq., Chairman of the Directors, took the chair.

Mr. HIGGIN (Chairman of the Lancaster and Preston Junction Railway Company), before the proceedings commenced, requested that Mr. S. E. Bolden, the Secretary to that Company, might be permitted to remain in the room during the proceedings, in order to produce certain documents which he (Mr. Higgin) should have occasion to refer to. (Cries of "no, no.")

The CHAIRMAN said, this was strictly a meeting of the proprietors in the North Union Company, and Mr. Bolden could not be admitted unless he were one.

Mr. HIGGIN said, he could not concur in the justice of that remark.

The CHAIRMAN said, Mr. Higgin must see that if that course was adopted the room might be crowded.

Mr. HIGGIN again requested that Mr. Bolden might be admitted as a privilege, as he should have to refer to some statements in the Report.

The CHAIRMAN said, the request could not be granted, as it would establish a precedent that would be very inconvenient.

Mr. HIGGIN said, he must be satisfied then with this decision.

The CHAIRMAN said, he had not been in the habit of troubling the proprietors with written speeches, but as he had some observations to make now which it was extremely important should be correctly understood, he had thought it better to follow the practice adopted by the Chairmen of the Liverpool and Manchester and Grand Junction Railway Companies, and read his address.

Mr. JOHN CROPPER inquired whether the Directors' Report, which had been printed, should not be read first?

The CHAIRMAN said, his remarks will be introductory to the Report. He then read the following:—The Report of the Board of Directors, which has been already circulated amongst the proprietors, and which the Secretary will immediately read to the meeting, contains a full statement of what the Directors at their last Board considered it needful to communicate to their proprietors; a preferable course, we conceive, to leaving anything which can be so stated to come in the form of a speech from the Chairman, whose statements have a degree of official character, though necessarily without the deliberate sanction and approval of all his colleagues, which can be obtained through their formal and regular Report. What has taken place subsequently to the preparation of this Report, a fortnight since, will, however, call for one or two additional supplementary observations; after which—and submitting to the meeting the proposed Report, the audited accounts of the last half-year, receiving the views of the proprietors as to the proposed dividend, and their formal authority to certain needful official acts on the part of this meeting—the Directors will have great pleasure in furnishing any further information that may be desired, and aiding in any discussions that may appear to their proprietors essential. I must, in the first place, call the attention of their proprietors to the absolute necessity—if they wish the Reports to be hereafter circulated previously to the general meeting—of their making a point of attending these meetings, and not being satisfied with merely perusing the Report, or at all events, of their putting their proxies into the hands of those who will, and upon whom they can depend for the use to be made of them. I have heard with regret, from more than one of our proprietors, on the present occasion, that they were quite satisfied with the Report, and did not intend to be with us to-day; and the proprietors really must bear in mind, that if this practice should become general, and our real *bona fide* North Union proprietors not take the trouble of giving regular attendance at their meetings, and supporting their Directors; those who only come here in the guise and with the name of North Union proprietors, having often no beneficial interest whatever in this undertaking, or a comparatively overwhelming interest in others, may obtain an accidental influence most injurious and detrimental to their interests, and most unfair and unjust towards Directors whose sole fault may have been a too faithful and scrupulous regard to the interests entrusted to them. Two general meetings of the Company are not required in the year by the North Union Act, and the proprietors might, therefore, if they preferred, be satisfied with the Report and the audited accounts for the second half-year, and only hold the second general meeting when circumstances seem to call for it, which the Act, they will be aware, gives them full power to do at all times. But if they wish uniformly, and as a matter of course, to have a meeting every six months, those who have North Union interests at heart, will, it is hoped, take the trouble of regularly attending such meetings. It is now my painful duty to notice to you, that the utterly unfounded statements which have been industriously circulated by some party, apparently with the view of forcing the Directors of this Company into a surrender of what they conceived due to the interests of its proprietors, and of which you may have seen the distinct official contradiction by our Secretary, have been still persisted in, and that a paragraph has again been inserted in last week's *Lancaster Guardian* containing a statement as libellous, false, and calumnious as could have been devised. If any of you have seen the paragraph in question, and wish the real facts of the case stated, they are most simple, and such as are altogether creditable to the servants of this Company, and the Secretary shall give them to you, and can substantiate them on oath if needful. We neither know, nor care to know, the author of these very disgraceful paragraphs; but, whoever he may be, he is mistaken if he thinks he can thus deter the Directors of this Company from the determined discharge of their duty, or that any motive or incentive either is or ever has been wanting, but regard to that duty, to induce us to enter at all times cordially into any and every arrangement calculated to promote, and do the fullest justice to, public interests and convenience. I must next shortly notice a note and pamphlet which have just been forwarded to you by one of the Lancaster and Preston Board, Mr. Higgin, with whom I have latterly had some correspondence, with a view, I hope, to arrangements of mutual benefit to the two Companies, and in which he subscribes himself, "Chairman *pro tempore*" of that Company. Mr. Higgin professes to have been led by fear of injury and loss to the revenue of the North Union Company, to address you in this somewhat unusual way, and with a statement which we can readily show you is utterly inaccurate and erroneous, and that to a degree proving not merely entire ignorance of the affairs of this Company to which it relates, but of the general facts relative to Railway Management, to an extent I should scarcely have anticipated in even the *pro tempore* Chairman of a Railway. And although Mr. Higgin neither is, nor I believe ever was, the actual proprietor of a single share in the North Union Railway, we are not at all disposed to scrutinise his motives in addressing you, but will cheerfully acknowledge the service he has rendered by printing, at all events, a certain portion of the correspondence which is now on the table, and which your Directors were prepared to submit to you, together with a few supplemental and additional letters, which may be useful, in case of need, in bringing the whole case and its real merits fairly before you. I can really, however, at present, add little to the distinct and full account of all that has taken place on this subject in our Report, or do more than say that, whatever feelings may exist in the minds of the Lancaster Board, there neither are nor ever have been any in ours but those of anxious desire to improve to the utmost the revenue of our undertaking, not only by affording every facility and encouragement to the traffic of our line, but to that of every one of those connected with us; and, however injurious the proceedings of the Lancaster Board may appear to us to have proved themselves of late to the traffic of their railway, we neither have forgot, nor shall forget, that this traffic constitutes a portion of our own,—one of the streams, though by no means the only one, which we welcome with cordiality, and at some sacrifice, of what it ma

Digitized by Google

be strictly fair and reasonable to require from us, have done, and wish, if possible, to continue to do, all in our power to encourage. Into the facts of the case and their proof the Board is quite prepared to enter at once, and to whatever extent the proprietors desire; but we apprehend that the wish of the North Union shareholders will rather be to understand the present and future position of the two Boards, than to go further into the history of the past misunderstandings. We can most solemnly and conscientiously assure you, (and after the long period we have been engaged in your service and enjoyed your confidence, some of us from the first origin of the undertaking, upwards of a dozen years ago, I hope and believe this assurance is all you desire,) that we have uniformly been prepared to afford to the Lancaster Company, and to any other Company at Preston, the great advantage and convenience of our station there, on fair and reasonable terms, to be fixed by any competent referee, and only desired a fair and moderate compensation for the trouble, responsibility, and loss of valuable service to this Company, in providing locomotive power for the others. In our original notice, and in every one of our many and continued communications with the Lancaster Directors, remuneration for the power was alone ever even mentioned; and however paltry, and perhaps inadequate, the remuneration we had for our heavy expenditure in Preston, and the continued expenses we were incurring in providing for the Lancaster passenger traffic there, we were not disposed at any time to risk injuring the thorough traffic of the west coast, by attempting to urge this point, nor ever did. The only solitary expression the Lancaster Directors can lay hold of, to warrant their abannoning this station, and subjecting the public travelling over their line to the inconvenience they have, is that at a meeting of some of the Directors of the two Companies, so long ago as August last, when, in reply to their questions of whether the notice terminated the whole agreement, they were told that it did—the only answer, they must have been well aware, that could have been given to such a question. But the Secretary can, I believe, fully satisfy you, that not only at that time, but long previous, and indeed before any notice whatever had been given them, they had been in negociation with the Bolton Company on this subject, and that hence only can their persisting in so extraordinary a manner admit of explanation. All, however, that we shall now probably any of us care to know is, their present position; and we must require that the fact on this subject is honestly and accurately stated. Those who are in communication with them are led to believe that whilst they have made what they consider an advantageous contract for power with another Company, they are prepared to resume the former arrangement as to the Preston station, from the abandonment of which the travellers on their line have, in spite of every effort to prevent it, sustained so much inconvenience, and to submit the terms to reference; and the parties are further led to suppose that the North Union Company are the parties to object. We must repeat most distinctly that the reverse of this is the real fact. We submitted unhesitatingly to the award of Mr. Booth, the umpire proposed by themselves, and at one time a considerable proprietor in their line, and never hinted at or thought of disturbing it in any way. We have since offered to submit to the award of any other referee, if they have not precluded themselves from going to reference by contracts with other parties, and if they have they certainly ought to say so, to those who are under such wrong impressions; and all we can say is, that whenever we are again at liberty, they will probably find us still able and willing to furnish their passengers the accommodation they formerly enjoyed; nor shall we at all regret it, if these two Companies should be the first to be brought by Mr. Gladstone's Bill, under a compulsory and inevitable reference on this question. We may appear to some of our proprietors to go almost too far in our desire to settle this question on public grounds, and certainly not from any anxiety to have the traffic of another Company in our Preston station, for the paltry miserable consideration we ever received for it. We would even be willing to leave it to their own engineer, Mr. Locke, to settle the terms of remuneration we are to have, convinced that Mr. Locke's character and unquestionable integrity, and his knowledge of railway business, would secure us a fair and just award at his hands; and we only regret that Mr. Locke's frequent absence, and multiplicity of other engagements, deprive the Lancaster Board of what would be so valuable to them, as his knowledge and experience in railway management at all times. At all events, you will bear in mind that no offer of reference has ever yet been by the Lancaster Board, nor can we yet understand from a communication lately received, in reply to our renewed offer, whether or not they are even in a position to agree to anything of the sort, though it would appear they are distinctly not so. At the same time there can be no little doubt of the utter impracticability of their having any other available station in Preston at present. In addition to the Report, which the Secretary will now read, I have only further to mention that the amount required in the final settlement of the contracts, or works, between Wigan and Preston, has proved considerably larger than the Board had any reason to anticipate, the referee agreed upon, Mr. M'Neiles, having set aside the contracts and awards of the Company's Engineer in a way which they certainly cannot think equitable to the Company at all events. Part of the original engine stock for the passenger traffic, &c., a considerable amount for cottages, for parties residing on the line, have also to be provided for, with some other disbursements on the capital account, and the Directors will presently propose to you a resolution, authorising, if needful, to extend the loan to 150,000*l.*, being 40,000*l.* beyond its present amount, but the whole of which is still a sum very far within that authorised by the Company's Acts of Incorporation. I will only detain you further to congratulate you cordially upon the continued absence of accidents to all our passengers, the great improvement of the line, and the satisfactory way in which our dividends are sustained amidst so much general gloom and depression.

The SECRETARY (Mr. James Chapman) then read the Report. [This document appeared in full in the *Railway Times* of last week.]

Mr. HENRY HOLMES moved that the Report be adopted and approved.

Mr. WILLIAM BROWN seconded the motion. He said, that having been in some measure mixed with the formation of the Company, and having been in London when the Bill was obtained, and being as he believed the largest proprietor in the undertaking, he begged to express his entire approbation of, and confidence in, the management of the concerns of this Company by the Directors. He was sure that there was not an individual among the Directors capable of doing otherwise than the best for the interests of the proprietors; and even the pamphlet—["Copy of the official correspondence between the North Union and Lancaster and Preston Railway, on the subject of locomotive power and station accommodation: Manchester; Gadsby.]—which had been placed in his hands by Mr. Higgin of the Lancaster Company only yesterday, confirmed him in the opinion that all their acts were honourable.

Mr. HIGGIN said, he intended to move an amendment. Since he last had the pleasure of meeting the Directors and proprietors of the North Union Railway at Preston, the subject of locomotive power, as well as station accommodation at Preston, had undergone the discussion which was so much wished for at that meeting. The shareholders then expressed most decidedly their opinion that the arrangements between the two Companies should be entered into upon liberal terms—that, as Mr. Thomas Battye Addison had expressed it, the North Union Company should treat the Lancaster Company as younger brethren. The shareholders responded to that sentiment very warmly, and from what had occurred at the time he had no other expectation but that an amicable feeling would have arisen. He was sorry to say, as was now known to the proprietors, that the meeting at Parkside (24th Aug., 1841), where a deputation from the North Union Board met a deputation from the Lancaster Board, proved anything but satisfactory. The terms offered by the North Union Board were 2*s.* 1*d.* per mile, which were beyond anything the Lancaster Board could afford.

The CHAIRMAN said, those certainly were not the terms required by the North Union Directors.

Mr. HIGGIN said, that was the Report of the deputation from the Lancaster Board, and he must take it for granted that it was correct. The North Union Board proposed that the Lancaster Board should pay 7*d.* per mile for every mile run more than they paid according to the joint agreement under which they had been working; and as a justification for asking this sum, Mr. Stephenson, the Engineer of the North Union, mentioned that the Wyre Company paid it.

Mr. RICHARD EARLE really must interrupt Mr. Higgin in this statement. He said that the offer made by the North Union Company was to supply locomotive power to the Lancaster Board for 2*s.* 1*d.* per mile; but the deputation from his Board, what did they say in their Report? Why, they said that, "the agreement with the Wyre Company, of 2*s.* 1*d.* per mile, was then alluded to, *but that was considered not exactly in point.*"

The CHAIRMAN said, that it was clearly stated at that time, that in their charge should be a reduction in proportion to the business done. The larger the Company, the smaller would be the rate of charge.

Mr. HIGGIN continued—Then the North Union deputation came to this proposition, that the Lancaster Board should pay them a certain mileage profit—3*d.* a mile—which would amount to 1,000*l.* a-year, in addition to the profit which the North Union derived under the agreement as it then stood. This was thought extravagant by the Lancaster Company, their opinion being that they were paying quite sufficient for the accommodation they received. The remuneration under the agreement had been fixed by the referee, Mr. Booth, of Liverpool, and with his decision the Lancaster Company did not find fault, they never objected to pay one farthing of it; but when an application was made, prior to that, to Mr. Booth for an increased allowance to the superior officers of the Company (North Union), Mr. Booth declined to grant it, considering that the sum he had named was ample and sufficient.

The CHAIRMAN said, it was only just to Mr. Chapman to say, that the statement in the "official correspondence," that Mr. Chapman received 100*l.*, was altogether incorrect.

Mr. HIGGIN believed he was correct in stating that such an award had been made by Mr. Booth, and that an application had been made for an increased rate to Mr. Chapman.

The CHAIRMAN—Never.

Mr. HIGGIN thought that perhaps he should say for an increased rate for management.

The CHAIRMAN—Very well.

Mr. HIGGIN said, the Lancaster Board had Mr. Booth's reply, stating that the sum he had awarded for the service performed was sufficient. Whether it was appropriated to Mr. Chapman, or whether it went into the general fund, he knew not.

The CHAIRMAN said, he must strongly object to any statement going forth that Mr. Chapman received 100*l.*

Mr. HIGGIN repeated, that he did not know how the money was appropriated, but certainly an application had been made for an increased allowance, which was refused by the referee.

The CHAIRMAN—I am not cognisant of it.

Mr. HIGGIN believed he had stated what was perfectly correct, but he begged to be allowed to proceed without interruption. He had got to that part of the proceedings in which an application was made to Mr. Booth for an increased allowance, but Mr. Booth did not think proper to award it. The Lancaster Company were perfectly satisfied with that decision, but if Mr. Booth had ordered another 100*l.* to be paid, they should have said nothing about it—the increased allowance would have been paid. He now came to the point at which the two Companies came to terms at last, which was, that the Lancaster Company were willing to continue the arrangement then existing, paying to the North Union the sum awarded by Mr. Booth, and paying also the actual cost of locomotive power for the number of miles run. This was declined by the North Union Company. Allusion had been made to Mr. Locke, whom he (Mr. Higgin) should have been glad to have seen present to-day, as he would have confirmed him in the statement, that, in submitting the proposition which they had made at Parkside, they acted under Mr. Locke's advice and assistance. The Lancaster Company had been advised that they ought not to pay a larger sum than they did then, and that plenty of persons could be found willing to contract for the working of the line for the same sum as they were then paying. With that advice, could the Lancaster Company pay the North Union a profit of 3*d.* a-mile upon every mile run, which would have amounted to 1,000*l.* per annum. This was the ground upon which the Lancaster Company declined the offer made to them. The Report stated, that the sum which the North Union derived from this source amounted to nearly 1,000*l.* per annum; but as far as he knew the account, it was not exactly stated. He would read the items. The sum awarded by Mr. Booth to be paid by the Lancaster Company to the North Union Company, for station accommodation at Preston, was 420*l.* per annum, and for covering in lines in addition 15*l.*, making 435*l.*; to be paid to Mr. Chapman, or some other party, for management, 100*l.*; and for Mr. Hunt's salary 98*l.*, as their portion for his superintendance of locomotive power; the gain from interest on the plant, 165*l.* 7*s.* 3*d.*; saving from coke to North Union Company from joint working, as per Mr. Chapman's estimate, 152*l.* 3*s.* 8*d.*—making a total of 950*l.* 10*s.* 11*d.*, and coming within 50*l.* of the round sum named at Parkside as the advantage annually derived by the North Union Company from the existing agreement. If he was wrong

Digitized by Google

in this statement he should be glad to know what the error was.

Mr HARDMAN EARLE asked Mr. Higgin whether the sum he named was net or gross receipts?

Mr. HIGGIN in reply said, he did not know which it was—(hear, hear,)—but it was the advantage which the North Union derived from the agreement with the Lancaster Company.

Mr. HARDMAN EARLE—But you call it "annual gain."

Mr. HIGGIN would show how it was "annual gain." If their expenditure continued the same now, upon the various items as it was then, they were, most unquestionably, in the wrong to the extent of 1,000*l.* a-year.

The CHAIRMAN asked Mr. Higgin whether he would be shown the inaccuracy of his statements now or after he had finished?

Mr. HIGGIN would go through his statements first. He had shown that they gained 1,000*l.* per annum by the agreement as it stood, and that if the Lancaster Company had agreed to pay the additional 3d. they would have gained another 1,000*l.* The next point was as to the station at Preston. The Lancaster Company were quite aware that one passenger station for both lines would be a very great advantage; he admitted that, and he was sorry that the course taken at Parkside was such as to induce the Lancaster Company to make an application to the Directors of the Bolton and Preston Company for station accommodation—which was never thought of or contemplated till the question had been raised at a previous meeting of the Board. He himself had raised the question, and he said, that if the notice from the North Union was meant to apply to locomotive power alone, or to the station as well, at the end of six months the Directors might not only find themselves without locomotive power, but also without a station. In consequence of that, the Chairman was specially required to put the question to the North Union deputation, whether they intended the notice to apply to both points or not. The answer was, that they did; therefore the Lancaster Company were in this position, that they must either yield to the terms of the North Union for locomotive power, or be left without a passenger station. Under these circumstances, and being also advised by Mr. Locke not to pay a larger sum than 1s. 6d., the Directors of the Lancaster Company went to the Bolton Company to see whether they could have the use of one station at Preston: the Bolton Company appointed a meeting, and the terms were fixed. Mr. Higgin then urged that every disposition for accommodation had been shown by the Lancaster Company, and contended that the Directors of the North Union, by discontinuing the arrangement between the two Companies had damaged the proprietors in the latter to the extent of 420*l.* per annum. With respect to the Preston station, he admitted that the public had sustained some inconvenience, but the blame did not rest with the Directors of the Lancaster Company. Very far from it. The detentions at Preston, as far as they were concerned, had been very slight; but he knew that great complaints had been made of the detentions upon the North Union side. He had no doubt, notwithstanding the interruptions which had taken place from bad weather, that the Lancaster line would be as efficiently worked as it had been, and he knew that the contracting parties were anxious that no difficulties of that kind should occur.

Some desultory debate followed, between the Chairman, Mr. John Cropper, Mr. Richard Earle, Mr. Hardman Earle, Mr. Higgin, and Mr. Park, respecting the terminus of the North Union at Preston, and the terms upon which the Lancaster and Preston Railway Act had been obtained, but it ended in nothing. After some conversation upon the terms of the original motion,

The CHAIRMAN put it to the meeting whether it would be necessary, by way of reply, to go through all the details which had been mentioned by Mr. Higgin. He thought that the general statements which had been made in the Directors' Report, and in his own address, completely answered Mr. Higgin. If the Lancaster Company could make a more beneficial arrangement elsewhere for locomotive power, there could be no objection to it. As to Mr. Locke's opinion, he believed it was opposed to any great advantage arising from Companies joining together for this purpose. He (the Chairman), however, was afraid that experience would put the Lancaster Company right as to the necessary cost of power. With regard to the double station, all that had been already so completely answered that it was useless for him to go over the facts, and he would only call on the Secretary to go in detail through the figures put forth in Mr. Higgin's appendix to his pamphlet.

Mr. CHAPMAN then proceeded to go through the figures put forth by Mr. Higgin as "annual gain," in the appendix to the official correspondence. He showed that what was said to be annual gain was money which the North Union Company had actually disbursed in pursuance of the agreement with the Lancaster Company.

The CHAIRMAN added, that as to the charge for officers, it was quite unreasonable that their time should be taken up by the affairs of the North Union line without some compensation for it. The 100*l.* said to be paid to Mr. Chapman was by no means adequate to the amount of time he was obliged to give, and the serious loss sustained by the Company from his being so much withdrawn from other urgent duties. Yet this was put down as profit. Mr. Hunt's "salary" was exactly in the same position, and besides this there were large money payments.

Mr. CHAPMAN said, it was unnecessary for him to state that he did not get the money set down in the appendix as paid for him. The statement was untrue. It was Mr. Booth's award under the twelfth article of the agreement and it might as well be said that the Lancaster Company paid the Director's salary to the extent as that they paid him so much.

Mr. HIGGIN claimed claimed the right to reply to Mr. Chapman. If he were not heard they would completely put an extinguisher upon one side of the question. (Cries of "You have been heard all day.")

Mr. DAVID HODGSON warmly defended the proceedings of the Directors of the North Union Company.

A SHAREHOLDER expressed his belief that there was and had been an under-current at work between the Lancaster and other Companies, which were in a sinking condition, to crush the North Union.

The CHAIRMAN assured the worthy proprietor that the Directors would do everything to secure the interests of the North Union proprietors.

Another SHAREHOLDER, in a very conciliatory speech, said that the Directors of both undertakings were honourable men, and he regretted that any collision should have taken place between them. The sooner an amicable arrangement could be come to between them the better would it be for the proprietors and for the public.

Mr. BROWNE, in a few healing observations, suggested that negociations should be opened, with a view of making the North Union station at Preston serve for all the railways centering there.

Much more debate followed, for which we have not room, at the end of which the Report was adopted.

By another resolution the dividend recommended by the Directors was ordered to be paid.

Several other resolutions were afterwards proposed, and the meeting separated, after having occupied three hours.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

WE have already reported the proceedings of the late meeting of the Liverpool and Manchester Railway Company, at which the question of a junction was discussed, but the following Report, which has been sent forth by the Directors, is so much more full and complete, that we reprint it, along with some very interesting supplementary matter:—

Proceedings at the General Annual Meeting, held in Liverpool, on Wednesday, 26th January, 1842.

AFTER the reading of the Report, which was followed by loud and general cheers from the meeting,

Mr. WILSON CREWDSON said, he was sorry to perceive a particular clause in the Report, because, as it appeared to him, it amounted to a complete rejection of the proposal which had been made by the Manchester and Leeds Company, to guarantee a dividend of 10 per cent. to the Liverpool and Manchester.

The CHAIRMAN begged to be permitted to say a few words, in the first instance, which would, he believed, be an answer to what had just fallen from one of the shareholders. (Hear, hear.) He then spoke as follows:—The Report just read by the Treasurer, except upon the important subject of the junction at Hunt's Bank, contains so little but routine business, that it requires no comment upon my part. It is so full upon the first point, that it would be a waste of your time to enlarge upon it. I am, however, particularly instructed by the Directors to state to you, that though they do recommend the abandonment of the Hunt's Bank Junction, they request the Report may be received, with an understanding that an early special meeting shall be called to receive your ultimatum on this subject, and to lay before you such information as they may be enabled to procure respecting the south line. Their object is evident—namely, to give you time to consider their Report, and only to decide after due consideration. (Hear, hear.)

A SHAREHOLDER—But do we not, by the adoption of the Report, sanction the rejection of the proposal?

The CHAIRMAN—No; the Report does not commit you to anything of the kind. The Directors merely tell you what their recommendations are, and when the next meeting is convened, you will be called upon to decide. (Hear, hear.) I hope this will satisfy you.

A SHAREHOLDER—I was merely desirous of saying, that before we came to the conclusion that it is illegal to form a leasing of the line, some other legal opinion should be taken. For my own part, I do not think it illegal. It has been done before, and may be done again.

The CHAIRMAN—Before requesting you to proceed to the business for which you have been convened, I am under the necessity of calling your attention to a publication entitled, "The Report of the Special Meeting of the Manchester and Leeds Railway Company," which has been very generally circulated amongst the proprietors by one of their number, for the professed object of advocating the Junction at Hunt's Bank, now under consideration. (Hear.) It is a matter of much regret to me that the author, Captain Laws, has not contented himself with supporting the cause of his employers, without condescending to libel the Directors of this Company; for, if the arguments in favour of the Junction are so conclusive, supported also by all the practical information of the Manager of the Leeds Railway, they can require no invectives. (Hear, hear.) If, on the contrary, they are weak and inconclusive, they will gain little strength by the use of them. Captain Laws is, however, of a different opinion, and has made a direct attack upon myself and colleagues, for what object it is not for me to express an opinion. I will, however, take the liberty of reading the extract I complain of, and from one of his letters. It is as follows:—

"Firstly, the cause of obtaining an Act by the Liverpool Company to form a junction. The general feeling is, that that Act was obtained with an optional clause, for no other reason than to prevent the power falling into other hands, and a perfect understanding with the Duke of Bridgewater's trustees that it should never be acted on. A person less familiar than yourself with the trade between Liverpool and the district above alluded to, might naturally ask, what possible influence could the rival carriers of the Liverpool and Manchester Company exercise over their proceedings in a matter so importantly involving their interest? To such a question, a direct answer would be that, with the exception of the representatives of the Duke of Sutherland, there is not an individual, either in the Liverpool and Manchester Board, or among their law or other officers, who has now a personal interest in that undertaking, to make it an object with them whether this important means of extending the interest of the shareholders be made or not; and as the identical individuals had, shortly after the question of a junction was first agitated (in the session of Parliament 1836, and the arrangement between the Liverpool and Grand Junction Companies was announced in the Grand Junction half-yearly Report of August of the same year), made an arrangement, as joint Directors of the Liverpool and Manchester and Grand Junction Railways (in the latter of which they are known to hold very large investments), by which the latter Company has ever since divided 13 per cent. of the profits of the former, it is not out of the pale of possibility that the one arrangement was contingent on the other; as it is hardly to be conceived that the clear head to which the management of the Duke of Sutherland's property on the one hand, and the Duke of Bridgewater's trust on the other, is entrusted, would have submitted to the arrangement that exists between the same parties governing the two railways, giving to the one in which they hold a large stake so large a portion of the profits of the other, in which some of them hold barely sufficient to retain their seats at the Board (small as that is) without some guarantee that appeared likely to protect, to a certain extent, the important interest entrusted to his charge."

Now, gentlemen, I have read and re-read this paragraph until I became weary, but it is in plain English this:—That those of your Directors who are chosen by the proprietors not only sacrifice your interests, but actually supply the funds of this Company to increase the dividends of the Grand Junction—(hear, hear)—whilst Mr. Loch, the Director of the Duke of Sutherland, whose influence could have prevented this juggle, is induced to connive at it, having been guaranteed something for the Duke's Trust, to make it worth his while. It is not my intention to go further into this publication, nor to comment on its inconsistencies in lauding Mr. Loch's integrity, and recommending your Deputy-Chairman as the person of all others most worthy the confidence of the proprietors; but I will read Captain Laws' finishing postscript;—

Digitized by Google

"If, in discussing this purely public question, I should in any way have implied individual feeling that might be thought disrespectful to either of the noblemen, or to any of the gentlemen who are named or alluded to, I sincerely regret it; and beg to disclaim any such intention in commenting upon what they have done under very conflicting circumstances, in their official capacity."

Now, gentlemen, the few civil expressions contained in this postscript, do not alter the main charge in the slightest degree. The substantial parts, the fraudulent conduct of your Directors, remains. (Hear, hear.) The assertion of their innocence against Captain Laws' assertions of their misconduct would prove nothing. It, therefore, becomes a duty you, gentlemen, owe to us, as well as your absent proprietors, to take immediate measures to satisfy yourselves that the charges are totally unfounded, or to fill our places with better men. It is not for me to point out what course you ought to follow to obtain this object. But as my colleague, Mr. Moss, wishes to make some suggestion, permit me to caution you against delay, or adopting the common idea of many persons—that "nobody believes the charges of Captain Laws." The rank in society which that gentleman holds, as an officer in the British Navy, must and ought to give weight to any assertion that he makes, and the hundreds of proxies which have been transmitted at his call proves the fact, and makes your investigation of his charges the more imperative. Whilst, on the other hand, Captain Laws, as a British officer, will feel the necessity of satisfying you, or whomever you depute, that he had full and clear evidence to justify that unqualified attack upon the honour and honesty of your Directors, which I have had the painful duty of laying before you. (Cheers.)

Mr. Moss then rose, and said, I trust I may be excused for thus early calling the attention of the meeting to the very extraordinary position in which I feel myself placed as one of your Directors, (Hear, hear.) Without any application from myself, either directly or indirectly, no less than 261 shareholders have sent me their proxies, and of this large number, only nine have stated to me how they wish me to act on their behalf. These proxies appear to have been sent to me in consequence of a letter from Captain Laws, accompanying a pamphlet of his, censuring, in no measured terms, myself and the other Directors of this Company, whilst it is only fair to Captain Laws to state that, in the postscript of his pamphlet, he declares that his observations on the Directors apply to their "official capacity," yet I am of opinion that if we, as Directors, have acted as is represented by Captain Laws in his letter of 31st October (page 2,) it is high time that we should be removed from the Direction, for such conduct could not be excused on the ground of mere error in judgment. If all the shareholders in this great concern resided in Liverpool, I dare say all we Directors should be perfectly satisfied to let our character and station in life answer the charge brought against us in Captain Laws' pamphlet; but the 261 persons whose proxies I hold are almost all distant shareholders, and *they* are entitled to be satisfied as well as our neighbours. In order, therefore, to their satisfaction, as well as my own, I shall, before I sit down, beg leave to move—"That a Committee of five persons, not shareholders in the Grand Junction Railway, be now appointed, of which Captain Laws be one, to make deliberate investigation into the charges made by him in his letter dated October 31st, 1841, against the parties who made the agreement; and that the election of Directors, to replace *myself* and my four colleagues who this day go out of office by rotation, be deferred until that Committee have reported—such report to be made to an adjourned meeting to be held in this place on Wednesday, the 23rd February." With this motion it is my intention to close the few remarks I have yet to trouble you with. (Hear.) Previous to receiving Captain Laws' pamphlet, or any of the proxies, I had intimated my desire to retire altogether at this time from the direction of your concern, and not to offer myself for re-election; but publicly accused, along with my colleagues, to my constituents, as I am in that pamphlet, I feel that I am no longer a free agent, but am bound, before I resign the trust with which I have been honoured from the very earliest days of this undertaking, not to deny the charges brought against me and my colleagues—for that we should none of us think it necessary or condescend to do—but to claim the judgment of the proprietors upon the imputations publicly cast upon us by one of their body. I may add, that my first wish [illegible] upon receiving the proxies sent to me, was to return them at once, not knowing why they [illegible] me; but, upon further consideration, I thought I should best show my deep sense of the confidence placed in me by using them in support of the [illegible] which I have stated my intention to conclude. As to the important subject brought forward in Mr. Laws' pamphlet, I am now only prepared to say, for myself, and in my individual capacity, that I think it must be admitted by all impartial persons that a continuous line of railway from the Irish Channel to the German Ocean, and connecting Liverpool with all the great manufacturing towns in Lancashire, Cheshire, Yorkshire, and Derbyshire, would be a great public convenience; and that if it can be effected without a loss of income to this Company, we ought heartily to concur in the immediate formation of it without considering its possible operation upon other means of communication between those important districts. (Hear, and cheers.) These are my general views, and I avow that I am not yet prepared, any more than some of my colleagues, to commit myself to any definite plan, involving necessarily most important consequences, in various ways, both to ourselves and to others. I am inclined to think that the best thing, under the present circumstances, would be to let the whole matter be discussed and decided at the adjourned general meeting, both proprietors and Directors in the meantime giving the subject the serious consideration which it really is entitled to, and some friendly communication being opened with the other Companies interested, with a view to our adoption (when we meet again) of that plan which shall be in the meantime found to be advisable for all. (Hear.) Having stated thus generally my opinion on the subject, I beg to say that, as to the proxies which I now hold in my hands, it is my intention immediately to return them all, as I feel that to be due to those who honoured me with their confidence without knowing my sentiments. Allow me, Mr. Chairman, to do that which is not customary, namely, to ask you to second the resolution for inquiry. You and I filled the office of Chairman and Deputy-Chairman of both the Companies at the time when the agreement between this Company and the Grand Junction was made (so improperly as Captain Laws states), and I am sure, therefore, that we have no other course to follow but to solicit an inquiry into our official conduct. With these remarks, I beg leave to conclude, by moving the resolution which I previously read. (Cheers.)

The CHAIRMAN seconded the resolution.

Captain LAWS asked whether the Grand Junction Company would be prepared to produce such documents as the Committee might wish to inspect.

The CHAIRMAN replied in the affirmative, and asked whether there was any objection on the part of the meeting to postpone the election of the Directors, until the next meeting should have been held?

Mr. E. F. JONES inquired whether the fact of the non-election of the Directors would not be calculated to lead the public to think these was some truth in the charges advanced by Captain Laws?

The CHAIRMAN thought not.

Mr. JONES said that, for his own part, he was perfectly satisfied with the conduct of the Directors. He was of opinion that the meeting ought to proceed at once to their re-election, convinced as all present seemed to be, that they would do everything right and proper. (Hear.) He thought a Committee might be formed for the purpose of investigating the truth or falsehood of the charges, and that the re-election of the Directors might be proceeded with immediately. (Hear, hear.)

The CHAIRMAN asked, whether, by the adoption of such a course, the meeting would not be acquitting the Directors before the trial?

Mr. GILL thought the next meeting of the Company should be convened on an earlier day than the 23rd of February, because the meeting was not perhaps aware that the compulsory powers of the Act would cease in June next, and that they were, therefore, late in the day at present for putting those powers into execution. He designated a map of the several lines of railway passing through Manchester, which had been handed about for inspection at the commencement of the proceedings, a caricature, and said that the place marked out for crossing Piccadilly was out of level, and not in conformity with the requirements of the Act of Parliament.

The CHAIRMAN said, that the map had been brought to the meeting by some gentleman, and that it had not originated with the Directors.

Mr. BENSON said, it had been taken from the map of Manchester.

Mr. GILL said, that as it was not official, he had nothing more to say on the subject. He was glad to learn that it had not originated with the Board. He begged that a letter which had been received from the Manchester and Leeds Company might be read to the meeting.

Mr. BOOTH read the letter accordingly. It had been received from the Secretary of the Company in question, and enclosed a proposition from the Manchester and Leeds Board, to recommend to the proprietors of that Company to secure to the Liverpool and Manchester Company a dividend of 10 per cent. on their whole capital, including the cost of the junction line, provided the Liverpool and Manchester Company would forthwith make and complete the Hunt's Bank line.

Mr. GILL said, there was a clause in the second Act, page 10, which empowered the Liverpool and Manchester Company to make negotiations with any other Company.

Mr. CLAY having read the clause in question,

Mr. SANDARS asked whether it had any relation whatever to the granting of a certain rate of interest to the Liverpool and Manchester Company.

Mr. CLAY was about to reply, when

Mr. ROBINSON moved, That this meeting, entertaining the most unbounded confidence in the Directors, and convinced of the groundless nature of the charges advanced against them in Captain Laws' pamphlet, proceed at once to their re-election.

Mr. MAXWELL seconded the motion.

The CHAIRMAN thought the meeting had previously adopted the motion made by Mr. Moss for the appointment of a Committee to investigate the charges. He said, the rank and station of the gentleman who had advanced them, rendered it impossible to pass the subject over without investigation. Could any greater proof, he asked, be given to the meeting of the weight which had been attached to the name of the author of the pamphlet, than that, from the mere word of Captain Laws, no fewer than 250 proxies should have been sent to Mr. Moss? Under these circumstances, he expressed a confident hope that the meeting would adopt the original motion, and appoint a Committee.

Mr. SANDARS—There is a charge in the pamphlet to this effect—that there are certain individuals on the Board who possess a small interest in the undertaking, just sufficient to entitle them to be Directors. I am one of the persons on the Board, and I tell Captain Laws that I hold a much greater interest in the Liverpool and Manchester Railway than I do in the Grand Junction. (Hear.) I hold 48 shares in this Company; and before his pamphlet had been published, I was an advocate for the Hunt's Bank line, but now I think it would be an act of deliberate suicide, and I never will consent to it. (Hear.)

Mr. ROBINSON said, he had moved his resolution in the form of an amendment.

Mr. CLAY observed, that although five of the Directors should retire at the meeting, it was in the power of the shareholders to adjourn part of the proceedings, specifying at the same time that particular part. They might, for instance, adjourn the election of the Directors, if they pleased.

A SHAREHOLDER was of opinion that if the election of the Directors were postponed, some inconvenience might be felt in carrying on the general business.

The CHAIRMAN said, that if it was the pleasure of the meeting, the outgoing Directors might be re-elected, with an understanding that the Report should come before the next meeting, and that they be then continued in office or displaced, as to the shareholders might seem advisable.

Mr. ROBINSON said, he was determined to press his amendment.

The CHAIRMAN said, he had no objection to the passing of the amendment, provided it embodied a clause authorising the investigation to be proceeded with.

Mr. MAXWELL believed there was no opposition on the part of the meeting to the appointment of a Committee to investigate.

The CHAIRMAN here read the original motion and amendment, and was about to take the sense of the meeting on the latter, when

Mr. THEODORE RATHBONE rose and said, he thought he could state certain facts which would induce Captain Laws to admit that he must have been altogether in error in the statements he had published, and at once, without waiting for the report of a committee, to retract his assertions. He had been one of the three Directors who had been appointed by the Liverpool and Manchester Board, to discuss and settle the terms of the arrangement with the Grand Junction Board. All the three were deeply interested in the Liverpool and Manchester Railway, but had no interest whatever in the Grand Junction Railway. (Hear, hear.) The late Mr. Wallace Currie, who represented the great interest of the Duke of Sutherland in the railway, Mr. Benson and himself, were the three Directors in question; and he believed that not one of the three had at that time, or for long previously, a single share or interest of any kind in the Grand Junction; and certainly they

Digitized by Google

all considered the arrangement then made a very desirable one for Liverpool and Manchester interests, and that in their deliberate judgment, it was at that time a judicious contract. He believed the Board had placed reliance upon himself and his colleagues upon that occasion; and as the only remaining member of the Board out of the three, he was quite willing to take fully upon himself the responsibility of the arrangement then entered into between the two Companies, so far as this Company was concerned; but it was a contract terminable upon notice, and no individual, belonging to either the Board or the general meeting of proprietors at large, had ever yet thought it advisable to propose the notice to terminate being given, and a fresh contract being made. If better terms for this Company could be obtained, of course they ought to be, and this question was one frequently considered, but at the time referred to by Captain Laws in his pamphlet, the opinion of all the members of this Board, deeply and solely interested as many of them were, in the Liverpool and Manchester Railway, was unanimously to confirm the contract, as proposed by the deputations, by whom it was discussed. Under these circumstances, he thought Captain Laws would see that he had made statements for which there could be no possible foundation. (Cheers.)

Mr. Moss said, that six persons had been appointed to draw up the agreement, three on each side. The Grand Junction chose three persons who were Directors of the Liverpool and Manchester Railway, and the Liverpool and Manchester chose three persons, none of whom were Directors of the Grand Junction. (Hear.). He begged to ask the meeting whether under such circumstances, anything injurious to the Liverpool and Manchester concern could have been contemplated or effected. The preponderance of interest, was, moreover, ten to one, so far as shares went, in favour of the Liverpool and Manchester Company; and if Captain Laws had looked into the share-list he would have seen immediately, that this statement was substantially correct. Mr. Benson was appointed upon the occasion because he represented all the Quaker interest; Mr. Curtis was appointed in preference to the Chairman, the latter having been a shareholder in the Grand Junction; and Mr. Theodore Rathbone, who, upon his own confession a few minutes before, did not hold a share in the Grand Junction, was also appointed; so that to suppose the Directors of the Liverpool and Manchester Company were disposed to do anything unfair, was to suppose what circumstances of the case utterly repudiated. (Hear, and cheers.)

Captain Laws said, that nothing could be more satisfactory to his feelings than to explain away any charge which he had felt it his duty to advance; but no course was so clear to him as to have the investigation. If that investigation were carried on with proper feelings, it would set the Directors in a much better light than any discussion which might take place at the present meeting. If four impartial persons, who had no stake in the Grand Junction, were appointed upon the committee, and if his charges should turn out to be unjust, nothing would afford him greater pleasure than to say that they were unjust.

Several voices—"And to retract."

Captain Laws.—Most certainly, to retract. But though the Directors was as pure as Cæsars's wife, his was not the only opinion which prevailed against them. It was the opinions of others also. The public had never known what the compact between the two Companies was; he ventured to say that few of the proxies which had come to Mr. Moss were acquainted with the nature of it; and therefore what could be more gratifying to the Directors than to have the opportunity of shewing that it was a right and proper contract to continue. It surely ought, in his opinion, to be fully understood.

Mr. Moss hoped the inquiry would extend not to the contract, but to those who made the contract. (Hear, hear.)

Captain Laws said his charge was not against those who made the contract.

Mr. Moss said his motion would have the effect of directing the inquiry to the persons who made the contract, and he was most anxious that such an inquiry should be instituted. (Hear.)

Captain Laws was proceeding to state the substance of his charge, when

Mr. Sandars observed that there was a distinct charge of turning over the property to the Grand Junction. (Hear.)

Captain Laws expressed a hope the proprietors would consider the consequences which had resulted from the contract in question.

Mr. T. Rathbone presumed, from the last observations which had fallen from Captain Laws, that that gentleman retracted the charge of motives which he had advanced.

Captain Laws said that he did not attribute infallibility to Mr. Rathbone, or any other man.

Mr. Rathbone repeated his question—namely, whether the Captain withdrew the charge as to the motives of the Board in making the contracts?

Captain Laws said he wanted the investigatien, and then he would retract, if his charges should turn out to have been unjust.

Mr. Moss said, that in offering his observations in the commencement of the proceedings, he particularly directed attention to the fact, that the charge was one which could not be called an error of judgment. Hear.) If Captain Laws had merely said that he (Mr. Moss) erred in judgment, that might be true enough, because he erred in judgment every day; but, in the present instance, the charge was of a weightier description.

A Shareholder—The charge here is of sacrificing one Company to another. (Hear. hear.)

Mr. Gill—But let it be recollected that Captain Laws has not singled out any individual of the Board.

Captain Laws—Certainly not.

Mr. Counsellor Hodgson—I also am a member of the Board, and I will take the opportunity of saying here, that I considered the pamphlet to be a personal attack on every gentleman at that Board, and further, that I hold the assertions of Captain Laws not worth a rush. (Hear.) Other gentlemen hold the same opinion of them, and it was a question with us whether the pamphlet should not be treated as a libel, and whether he himself should not be prosecuted. (Hear, hear.) Captain Laws now says that he is willing to take another view on the subject, but he has not, to this hour, pretended that he did not make an attack on ——.

Captain Laws—I made it on their body as a Board. (Great uproar.)

Mr. Hodgson.—Here is a man making an attack without offering any reasons or proof, but merely offerring the impressions of a mind which we cannot envy! (Hear.) Here is a man who takes up a subject, and gives publicity to his impressions! He charges the Board with having so small an interest in the undertaking, that they cannot afford to do it justice, as if honourable men were to be bought and sold by the mere consideration of what they had laid out! (Hear.) And what is the position of the single-minded individual who makes a charge of this kind? What is the position of this gentleman, who seems to think that others may be tortuously directed by the situation they hold, and that they cannot be acting rightly because their interests is small? What is the position of this large proprietor in the Liverpool and Manchester Railway, for I find he holds one share? (Hear and great laughter.) Why this—that he seems to think he is qualified, while pursuing a sinister interest, to try to set the whole country in a flame from a zeal to protect his interest in one share! (Great laughter and cheers.) I do not mean to deny that his one share may be as valuable to him as ——

Captain Laws—As 100 to you perhaps.

Mr. Hodgson—I know Mr. Moss's feelings on this subject; but I do not think that there is any necessity for a committee; and I shall tell you why. I think such a charge ought to be treated with the contempt that it deserves. (Hear, hear.) I think that it is even a compromise of your dignity and character to a certain extent, to allow the possibility of its being supposed of you that such can be in anywise necessary. Nay, I adduce against such a weak, foolish charge, the fact that after all those base insinuations which have been attempted to be thrown on the character of the Directors—that after all the base attempts which have been made to injure the characters of men who stand far above the reach of detraction, the very proprietors, in whose hands those scandalous productions were placed, sent to Mr. Moss no fewer than 250 proxies, thereby showing that they had no confidence in the author of the charges, and threw to the winds all the attempts to inquire Mr. Moss's character. (Hear, hear.) I, therefore, hope that Mr. Moss will see that he is falling into an error by submitting to any examinations on the subject. (Cheers.)

Mr Moss said he was exceedingly desirous that an inquiry should be instituted, inasmuch as the charges decidedly went to criminate the Directors. He, therefore, wished to give Captain Laws the power of going into the Board-room and investigating the matter, in order that the characters of the Directors might be cleared of every imputation. He wished particularly that a deliberate investigation should be instituted against all the parties who made the agreement. (Hear, hear.)

Captain Laws said he could not attend such a Committee, because he had not made an individual attack. Although Mr. Rathbone stated that he had no sinister motives in view at the time of making the agreement, it would be admitted that he might have made, nevertheless, a very injudicious contract. He concluded by saying, that he would move an amendment to the following effect:—that as it required four years' notice to terminate the arrangement in question, it was necessary that an inquiry should take place, and that the proprietors would be governed by the Report of the Committee as to whether the notice should be given or withheld.

Mr. Rankin said that the proprietors had already left the settlement of this matter to the Board.

Mr. Cropper said that he held 150 shares in the Liverpool and Manchester Company, and that he was satisfied there had not been any fraud.

Mr. Rigg remarked that he held 59 shares in the Company, and that he had no reason to complain of the Directors.

Mr. Garnett said he never had a share in the Grand Junction, but he was a shareholder in the Liverpool and Manchester, and was actuated by a sincere desire to promote the interests of the Company. He did not hesitate to say that he had, amongst his brother Directors, spoken to them as to the propriety of giving a notice on the subject of the contract, and that he had been advised not to moot the question, for very sufficient reasons, which he would state to the meeting, if desirable. (Several voices—"no, no.") He therefore would distinctly declare that any charge which had been made against the Board, was totally unfounded. (Cheers.)

Mr. Moss said that at the time the agreement was made Mr. Loch had not the charge of the Bridgewater trust at all.

Captain Laws admitted the truth of this assertion, but said the change had occurred immediately after.

Mr. Alston said that after the violent discussion they had had during the day, he believed the characters of the Board never stood higher than they did at that moment. (Loud cheers.) But as the pamphlets had been circulated all over the kingdom, he thought it necessary that their effect should be neutralized. He would, therefore, vote in favour of the motion submitted by Mr. Moss.

Mr. Robinson said he wished the meeting to express an opinion upon his amendment.

Mr. Rathbone reminded the meeting of what Captain Laws had previously said—namely, that he would not act upon the Committee unless the inquiry was directed to the policy of the arrangement between the two Companies. He thought it might be exceedingly improper to throw open the books of the Company to the Captain's inspection, because he might make his information derived therefrom advantageous to other Companies. (Hear, hear.)

Mr. Jones was of opinion that Captain Laws, as a military man, was acting the part of a good tactician in the present instance, in trying to get information from the enemy's camp. (A laugh.).

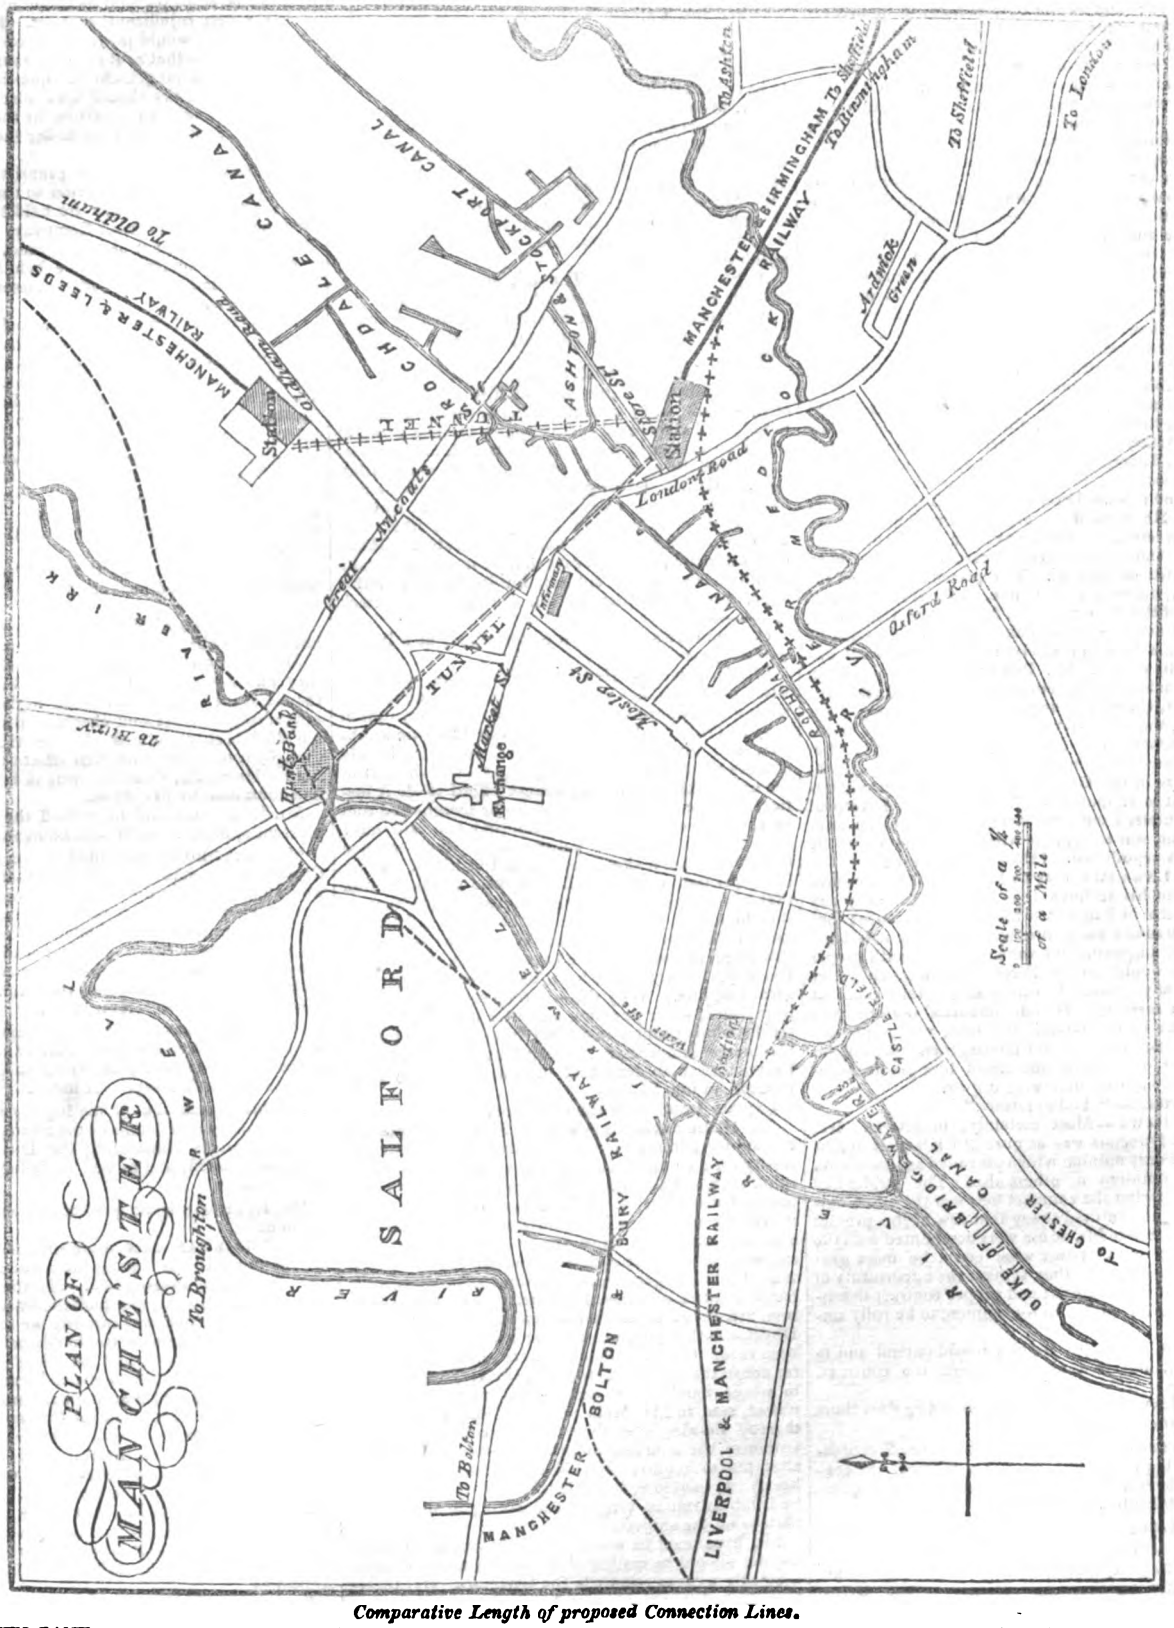
Mr. Moss said that if the inquiry was to be made into the policy and detaile of the arrangement, and not into the charges criminating the Directors, the case was quite altered, and he had no inducement to press his motion.

Mr. Robinson again pressed his amendment to a division.

The Chairman once more suggested to the meeting the propriety of having the conduct of the Directors thoroughly investigated. He then read the motion and amendment, and took the sense of the meeting on the latter, which was carried, we may say, unanimously, there being only two hands held up against it, those of Captain Laws, and his friend Mr. Gill. The result was hailed with loud cheers by the meeting.

Captain Laws said that the only way in which he could consent to act upon the Committee, would be upon condition that the contract was admitted to be fully partaking of the effect he had stated. In that case, he would consent; but he never would consent to go into the inquiry with his hands and legs tied.

Upon the motion of Mr. Robinson, the Report was received and adopted, subject to an understanding that another meeting would be called for the purpose of considering both the Hunt's Bank and the proposed south line.



The five retiring Directors were then re-elected unanimously, with the exception of one hand, that of Captain Laws, which was held up against them, and it was ordered that the dividend, as recommended by the Directors, be paid.

It was then moved, seconded, and carried, that the proceedings of the day should be published for the

Digitized by Google

information of the shareholders at large; after which, thanks were returned to the Chairman, and the meeting separated.

Subjoined is a small plan of Manchester, accurately reduced from Pigot's Pocket Map of that town, showing the several proposed junctions, lines, the length of each, and the total distance comprised in each scheme.

Comparative Length of proposed Connection Lines.

LINE *via* HUNT'S BANK.

Liverpool and Manchester Railway to Hunt's Bank	1840 yards.	
Hunt's Bank to Manchester and Leeds Railway	2260 „	
Proposed tunnel from Hunt's Bank to Store-street	1500 „	
		5600 yards.

LINE *via* STORE-STREET.

Liverpool and Manchester Railway to Store-street	2850 yards.	
Proposed tunnel from Store to Station near Oldham Road	1100 „	
		3950 yards.
Difference in favour of connection line *via* Store-street	1650 yards.	

Population around and in the neighbourhood of Store-street Station, taken from the last census	178033 „
Population around and in the neighbourhood of the Hunt's Bank Station	114371 „
Difference in favour of Store-street Station	33662 yards.

Since the meeting of the proprietors on the 26th, the Directors have received a communication from the Chairman of the Manchester and Leeds Railway, disclaiming on behalf of the Manchester and Leeds Board, any participation in the publication of Captain Laws' pamphlet. The following is a copy of Mr. Houldsworth's letter, and of Mr. Lawrence's in reply.

(COPY)

Manchester, Saturday evening, 29th Jan. 1842.

My dear Sir,—In the only account I have seen of the proceedings at the Liverpool and Manchester Railway Company's meeting on Wednesday last, I find that you alluded to a recent pamphlet issued by Captain Laws, on the subject of the Hunt's-bank junction, in terms which, if correctly reported, lead me to believe, you spoke under the impression that the publication in question was circulated under the authority of the Manchester and Leeds Company. In this belief, I take the earliest opportunity of saying that the correspondence was begun and carried on by Captain Laws in his private capacity, and that the determination to print, and subsequently to circulate it, was his own.

I am induced to make this communication to you, because I feel it is due to the important interests which the Directors of the two Companies represent, that no mistaken impression, particularly one calculated to excite personal feelings, and to multiply the difficulties of a much vexed question, should be allowed to remain on either side. My object in writing will be served, if, by this communication, you are enabled to correct the impression, (if such be entertained in any quarter,) that the Directors of the Leeds Railway were parties to the publication, or the circulation of the pamphlet in question.

I am, my dear Sir, yours faithfully,
(Signed) H. HOULDSWORTH.

Charles Lawrence, Esq.

(COPY.)

Liverpool, 31st January. 1842.

Dear Sir,—I beg to acknowledge your favour of the 29th inst., and am very glad to find in it an entire disclaimer, on behalf of yourself and the Manchester and Leeds Board, of any participation in the publication, or circulation of Captain Laws' pamphlet.

That I had some ground for considering it an official and authorised publication, you will I think admit, when I inform you that it was transmitted to almost every proprietor of this Company, appended to, and bound up with, the authorised published "Report of the Proceedings" of your late general meeting; the same title-page being used at the head of Captain Laws' pamphlet as formed part of the printed "Report of Proceedings," which emanated from your Secretary's office, and to which the correspondence was not prefixed.

I am, dear Sir, yours very sincerely,
(Signed) CHARLES LAWRENCE.

H. Houldsworth, Esq., Chairman, &c. &c.

N. B.—On the subject of *proxies*, the Directors will observe, that they propose to send to each shareholder a brief statement of their views on the projected south line, *via* Store-street, as soon as they shall be able to announce the day for the forthcoming meeting; and in time to enable proprietors to delegate their powers in such way as they shall deem expedient, when they shall be in possession of the requisite data.

Liverpool, January 31, 1842.

THE LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—It is amusing to read in your paper the various letters which have been addressed to you by different correspondents, on the subject of a junction between the Manchester and Leeds and Manchester and Liverpool Railways.

One of your correspondents represents it as "a question now agitating the public mind in the North of England," and which sentence I have therefore transcribed, as affording some excuse for my addressing you, although it does not exactly appear why any *minds* should be agitated, saving and excepting those of the individual Directors and proprietors of the two Companies; and they had better not let their *minds* be "agitated" at all, but discuss the question calmly, which they are more likely to do if your correspondents were not to introduce such rash statements as I have sometimes read in their letters.

There are some of your correspondents who write as if it were certain that there would be so large a traffic consequent upon the formation of a junction, that the remuneration to the Companies would be ample for an outlay of, say 500,000*l.* or 600,000*l.*, and refer for a confirmation of this assertion to some *vague* proposition, which appears to have been made by the Leeds Directors to the proprietors of the Liverpool Railway, to lease their line, thereby taking it for granted that the former have discovered that, if the junction were made, they could derive a profit of *more* than 10½ on the whole cost of the junction and Liverpool lines; without taking into consideration two things—first, that the Leeds Directors are fallible like other men, and therefore that their opinion should be received with some degree of caution, especially when set against that of the more experienced heads (as far as railway matters are concerned) of the Liverpool Directors; and, secondly, that the Leeds Board may be biassed in their opinion by personal considerations.

Again, there are other of your correspondents who take an entirely opposite ground from those last mentioned. In defending the Leeds Railway against the Sheffield, as a competing line to Leeds, they state that the through traffic on the Leeds Railway does not amount to much, and that the returns of the railway are derived from the local traffic. If this, however, be the true state of the case, where is the great remuneration to come from to justify the Companies in such an outlay as the junction line will incur?

The truth appears to be, that these various correspondents to whom I have alluded, in their endeavours to force on the expensive junction, *via* Hunt's Bank, have made most rash and erroneous statements, utterly at variance with eath other; and your readers should perceive that, if their motives for writing are not to be attributed to private considerations, their statements should at least be received with considerable caution.

If I were to advise the Liverpool Railway proprietors as to the course they should adopt, I would recommend them not to incur rashly a large outlay, without a prospect of some reasonable remuneration; because, although it may be all very well to talk of there being a gap, a "*hiatus*," in the railway communication between the east and west coasts, that public interest demands that it should be filled up, &c., &c., &c., yet, with all due difference for the public, I must say, that unless there is a reasonable prospect that they will pay for their accommodation, they have no right to demand that any Railway Companies should incur a large outlay on their account. Again, I would say to the Liverpool Railway proprietors, that if it should appear for any reasons of policy, advisable to make a through railway communication with Yorkshire, let it be done in such a way as will connect your line with the greatest number of railway routes. And as far as I have the means of judging, I must say, that the only mode of accomplishing this satisfactorily for the conveyance of passengers as well as goods, is by making the junction on the south-east side of the town of Manchester. By making the junction on that side of the town, you secure to your railway the prospect of a larger return upon your outlay, and, morever, rest the security of your property on a more enlarged and extensive basis.

I am, Sir, yours very obediently,
G.

London, February 17th, 1842.

MARYPORT AND CARLISLE RAILWAY COMPANY—GENERAL MEETING.

[From the *Whitehaven Herald*, February 19.]

ON Saturday last, the general half-yearly meeting of the Maryport and Carlisle Railway Company was held at Aspatria, F. L. B. DYKES, of Dovenby, Esq., in the chair, when the Report of the Directors and that of the Engineer were read and adopted without discussion. The greatest satisfaction was expressed by the meeting at the prospects of the Company generally. The works are in active operation between Wigton and Carlisle, and a part of that portion of the line will soon be opened. That part of the line which is now open between Maryport and Aspatria is yielding a very handsome return upon the traffic, and new sources of revenue are presenting themselves which will considerably add to the profits of the Company. The traffic returns mentioned in the Directors' Report show that a sum of 2,024*l.* remains to the credit of the Company, after paying the interest of the borrowed money, even though so small a portion of the line has yet been opened. It is confidently expected, indeed, that when the whole extent of road between Maryport and Carlisle is completed, it will be one of the most profitable railways in the kingdom. At this meeting the only interruption to the general harmony of the proceedings was a motion made by Mr. Adair, "that a Committee of Inspection be appointed for the purpose of examining the accounts"—a motion, however, which did not meet with a seconder.

The following are the Reports:—

DIRECTORS' REPORT.

Report of the Directors adopted at the General Half-yearly Meeting of the Proprietors, held at Aspatria, 12th February, 1842.

In laying before this meeting the half-year's statement of accounts, and Engineer's Report, the Directors confidently assert that this line will, from its already developed resources, and ascertained cheapness of construction, yield a remunerative return for the capital employed.

The receipt for Carriage of coal is.....	£2,476	16	7
,, Passenger traffic	298	16	3
,, Parcels and heavy goods	106	9	9
Making a total in the last six months of.....	£2,882	2	7
Deduct cost of maintaining the way and repairing stock employed in traffic	1,251	0	10
Remains net profit on last six months	1,631	1	9
From this take the interest paid on loans, viz., on 50,777*l.*, for seven months	1,458	13	8
There remains a surplus of.....	£172	8	1
To which add the net profit on the first 11½ months	1,851	15	8
Gives a total amount of net profit, from the opening to December 31, after paying the interest on loans.....	£2,024	3	9

The Directors have caused the ground from Aspatria to Wigton to be re-surveyed, and have great pleasure in informing the proprietors that they have made out a much better working line, in every respect, than the Parliamentary line, first taken, and that the new line will cost less than half of the old line.

To carry out their views, it will be necessary to apply to Parliament again for fresh powers, but they can assure the shareholders that the delay in this application in completing the works is only apparent, for the new line, from its more easy construction, having less than one-half of the cutting formerly contemplated, will be sooner completed than could the heavy cuttings of the old line. Moreover, in cheapness of keeping and maintaining smaller cuttings, a great and constant saving is effected.

For an account of the receipts and expenditure on capital, the Directors beg leave to refer to a "general statement of accounts" to be laid before this meeting.

The above account of traffic fully warrants the Directors in reporting, as they have been enabled to do at each successive half-yearly meeting from the opening, viz., that the traffic is steadily increasing, with a proportionably diminished expenditure: in particular, the passenger traffic has increased, over that of the preceding six months, 120 per cent.

Not the least satisfactory part of the Report is, that the traffic has been carried on without any accident attended with personal injury.

ENGINEER'S REPORT.

To the Directors of the Maryport and Carlisle Railway.

Gentlemen,—I have the pleasure of reporting to you that the works of excavation, fencing, and masonry, on the line of railway between Carlisle and Wigton, 11¼ miles, which was let in August last, have been satisfactorily carried on up to this time; and from the opportunities that have been afforded by the cutting into the various excavations, and getting a more correct knowledge of the contents and qualities of the material, and also having ascertained, by the arrangements which have been made respecting the construction of the various bridges, roads, culverts, and other masonry, a nearer estimate of their cost than could be done before the commencement of the works, and from the very moderate prices at which the different works, the iron, and other materials, have been contracted for, I am enabled to say with confidence that the line between Carlisle and Wigton will be completed at a moderate cost.

The remaining portion of the intended way between Wigton and Aspatria, (nine miles), as shown on the plans for which the Act of Parliament was obtained, is more heavy as regards the cuttings than the divisions now formed and forming—but from some inquiries, and sections that have been taken, it appears that an alteration may be made, which will much reduce the cost of the cuttings, and render this part of the work better, in all respects, than that formerly proposed. As the deviation from the original line is beyond the distance allowed by the Act, the further sanction of Parliament will be necessary.

Digitized by Google

Since your last annual meeting, a small portion of the line has been continued from Arkleby pits to Aspatria, now forming an uninterrupted line from Aspatria to Maryport, between which places several necessary works and improvements have been made, and at Maryport additions to the conveniences of the coal and general trade have been made and are still making.

I have the honour to remain, gentlemen,
Your obliged and obedient servant,
WM. BLACKMORE.

February 12, 1842.

GLASGOW, PAISLEY, AND AYR RAILWAY —GENERAL MEETING.

In our last we gave the Directors' Report laid before the general meeting of proprietors, held in Glasgow on Wednesday week. We now print the accounts and a short notice of the proceedings, for the latter of which we are indebted to the Glasgow journals :—

CAPITAL ACCOUNT.

Balance Sheet, 31st December, 1841.

DEBTOR.

JOHN BASS, Manager of Joint Line.
J. FAIRFULL SMITH,
Sec. to the Glasgow and Ayr Railway Company.

E.E.—Paisley, 31st December, 1841.

After the reading of the Report and balance sheet, The CHAIRMAN (William M'Call, Esq.,) said, he had one remark to make upon the Report which had just been read. Their traffic, he was happy to say, for the last six weeks had been improving considerably. On the through line, the first six weeks of 1842 showed an increase of more than 1,200*l.* over those for the corresponding six weeks of 1841. He did not know that he had anything further to state with regard to the Report; but he might mention that there was some difference of opinion as to the depreciation fund, or, in other words, the sum to be set aside for the purpose of purchasing new "plant." That a regular deterioration of the engines, carriages, and other property of the Company, was taking place, must be perfectly evident, and there was a necessity, therefore, for the Directors providing a fund to meet what contingencies of this description might arise, and they had accordingly recommended the setting aside of the sum mentioned in the Report for this purpose. The amount necessary to cover this depreciation must be provided for, either out of their capital stock, or their traffic account, and it was thought desirable to provide for it in the manner proposed. To keep up the present stock as it was, he did not think the proposed sum too large to be set aside, as he was of opinion, that a sum nearly equal to the supposed depreciation of the "plant" up to the present time should be appropriated as recommended in the Report. Perhaps it

Digitized by Google

would be satisfactory for them to know, that it was intended that this depreciation fund should only be taken off once a-year, and it was considered better to take it all from the revenue for the summer months, as that half of the year was much less productive than the other. There was another circumstance which he might mention. The Joint line had not been so productive for the first six weeks of the present year as for the corresponding period of 1841. The decrease in the receipts had been about 400*l.* This, he thought, might be pretty well accounted for by the reduction of the third-class fares, and the present state of Paisley, where trade was at a complete stand-still. Since last meeting the Directors had filled up the situation of Secretary, by the appointment of Mr. J. Fairfull Smith, W. S. That gentleman, he was happy to inform the shareholders, had been most assiduous in his attention to his duties ever since he was appointed, and he (the Chairman) was satisfied that his (Mr. Smith's) talents and good judgment were such as to make the Directors feel that they had placed the interests of the Company, when in his and Mr. Johnstone's hands, in a situation which would prove highly satisfactory.

Mr. JAMES WATSON said, perhaps he would be excused for asking a question. The sum set aside for contingencies appeared large, and he had no doubt but the Directors were actuated by the best of motives. He wished, however, to be informed if the engines and carriages were not in a state of good repair, and if their stock of engines and carriages was not greater than it would have been if it had not been in contemplation to form a branch to Kilmarnock?

The CHAIRMAN said, he had no hesitation in answering the question. They had a greater "plant" than was at present required, and all their engines, with one exception, were in good repair. A good number of carriages, however, for minerals would be required on the opening of the Kilmarnock branch.

Mr. WATSON said, he was perfectly satisfied that the Chairman's reply, and it appeared to him a strong reason why nothing should be taken from the divisible profits at present, for the purpose recommended by the Directors. Their engines were in good repair, they had more carriages than they required, and he could hardly, therefore, conceive why they should set aside 3,000*l.* for such a purpose.

The CHAIRMAN said, the engines and carriages had now been running for two years and a-half, and it appeared to him if they wished to support the value of their stock they would not divide more than they could well afford.

Mr. BLAIKIE argued that it was quite unnecessary to provide a fund for further contingencies. All they had to do with was the depreciation which had already taken place.

Mr. WHITESIDE said, I wish to make a few observations, but, before doing so, I beg to congratulate the Directors and shareholders upon the improved aspect of our affairs, and to acknowledge their efforts to keep down the expenditure. I see by the Report now presented to us, that the income of the Company is increasing, while the expenses are diminishing; but I cannot say I view with satisfaction the proposed plan of dividing 15s. per share, when the revenue would allow of 20s.; and I understand that the locomotives and carriages, with little exception, are as effective, and in as good condition as at first. I believe it to be quite unprecedented to lay by any sum, when a railway is not completed; the Kilmarnock branch, from which a considerable additional revenue has always been expected, is in the course of completion, and when it is finished the Directors may with the utmost propriety lay aside a sum to meet depreciation, but I should consider the plan of keeping the "plant" in efficient repair, by an adequate outlay upon it as it was required, to be most economical and judicious, and this I believe has hitherto been the case to the extent of nearly 2,000*l.* a year. In order to corroborate what I say, I beg to read a few short statements:—

LINE FROM GLASGOW TO AYR.

	1st Jan. to 30th June, 1841.	1st July to 31st Dec., 1841.
Net traffic receipts.....	£22,536	£30,143
Net working expenses	10,730	11,196
Per centage of expenses on receipts.....	47 6-10th 47½	37 16 10ths 37 Decrease, 10

Thus it appears that the income is steadily augmenting, and has increased beyond that of the last six months nearly 8,000*l.*, while the working expenses have considerably diminished in proportion, and are in the course of being still further lessened, as I am informed that a saving of nearly 5 cwt. of coke per trip has been lately made, which is equal to 2*l.* per day. But this is not all that may be effected, as there are engines at present running in England, the consumption of which is from 15 to 23 lb. of coke per mile, while ours is 36 lb.; and there exists little difficulty in burning coal without smoke, which would cost less than half the expense.

After some discussion, Mr. Galbraith, jun., proposed that it should be recommended to the Directors to set aside the sum of 1,544*l.* only as a contingent fund to cover the depreciation of the "plant," with a view to their declaring a dividend of 17s. 6d. per share instead of 15s. as proposed in the Report.

Mr. JAMES WATSON seconded the motion, declaring, at the same time, that if he was not fully convinced that they would be enabled to keep up the same dividend, he would be the last man to support any such proposal.

Mr. CAMPBELL, of Moorepark, having stated on the part of the Directors that they had no wish to oppose what might be the general desire of the meeting, the motion was put from the chair and agreed to.

Mr. WEIR then, in a long elaborate address, in which he adduced many valuable statistical details, brought forward a recommendation to the Directors to increase the fares upon the line. He showed that much higher fares were charged upon the most prosperous railway lines in England, and that it was the opinion of many of those conversant with the subject, that very low fares were hurtful, and not beneficial, to the interests of the shareholders.

Mr. ROBERT SMITH seconded the motion; but after a short debate it appeared that only the mover and seconder supported the proposal.

The Report was then proposed, seconded, and adopted by acclamation.

Mr. WALLACE, of Auchenvole, said, the motion which he had to propose was the appointment of Directors in the room of those retiring from office. He begged leave, therefore, to move, that William Campbell, Esq., of Netherplace, William Brooks, Esq., of Glasgow, Alexander Fletcher, Esq., Glasgow, and Hugh Miller, Esq., Provost of Ayr, be re-elected Directors, with the addition of Wm. Logie, Esq., W. S. The shareholders, he was certain, were much indebted to the Directors for the trouble they had taken in promoting their interests. With regard to Mr. Logie, he would say this—he had known him long, and if the Company choose him as one of their Directors, he (Mr. W.) had not a doubt but that Mr. Logie would perform the duties of the situation in a most efficient manner.

Mr. MILLER, of Monkcastle, seconded the motion, which was unanimously adopted.

After passing cordial and unanimous votes of thanks to the Directors, and to Mr. M'Call for his conduct in the chair, the meeting broke up.

Looking at the proceedings of the meeting altogether, we are of opinion that the prospects of the Company are now such as must prove highly gratifying to all concerned, but particularly to those who were formerly disappointed in their too sanguine expectations.

EDINBURGH AND GLASGOW RAILWAY—OPENING.

[From the *Edinburgh Courant*, Feb. 19.]

THE opening of this great line of communication, which is destined to form an era in the intercourse between the two cities, as well as throughout Scotland, and as marking one of the great steps in the progress of internal prosperity, cannot fail to be hailed with a lively interest by all classes of the community. It is one of those great improvements which deeply affect the interests of commerce, as well as every department of social life, which in its practical results equals, if not surpasses, all other modern discoveries. It is the triumph of science over time and space—one of those miracles of modern art which distances all the speculations of by-gone ages, and which, though it does not create, yet seems to awaken into life the most powerful agencies of nature, and to tame and controul them for the use of man. Science is here seen displaying its power, not in abstract speculation, but in the business of the world—in facilitating the intercourse of mankind—in binding closer social ties—and in multiplying all those conveniences and refinements which render the path of modern life so smooth and agreeable.

The actual commencement of this great undertaking excited the liveliest interest among all classes, and yesterday was most favourable; the weather was mild and clear, and the sun shone with splendour, considering the season. It was generally understood that the train from Glasgow would arrive about eleven o'clock, and, on expectation of its arrival, the road leading to the station was about half-past ten, and for more than an hour, crowded with spectators hastening to different places where they might obtain a view of the train as it came along the line. The embankment, along which the carriages were to pass, is elevated twelve or fourteen feet above the fields through which it stretches westward in a direct line upwards of two miles, and every elevated spot near the station was occupied by dense masses, while inside the walls great numbers were stationed in galleries, in the different houses and offices, and along the line of the railway.

In Glasgow, as might be expected, the opening excited considerable interest. The large banquetting hall, which was capable of accommodating about 1,200 persons, having been finished in the course of Thursday, was visited that afternoon and evening by crowds of well-dressed persons, and, being lighted up with gas, it had an imposing effect. By eight o'clock yesterday morning, those who were fortunate enough to obtain tickets, began to arrive at the station in George-square. A considerable crowd had assembled near the entrance; but as none were allowed to enter, and as the coaches were filled as fast as parties arrived, the scene presented comparatively little animation. The band of the regiment stationed in Glasgow was present, and played several lively airs. When the first ten coaches were filled they were attached to a rope and drawn up the tunnel and inclined plane to Cowlairs station, where they remained till two other trains of ten carriages were in like manner drawn up. When all were attached together, the whole train, forming a magnificent array of thirty first-class carriages, and drawn by three engines, set off soon after half-past nine o'clock. There was also a pilot engine, which kept from half a mile to a mile in front of the train, to ascertain that all was safe and practicable for the progress of the carriages. The rate of travelling, on an average, was twenty miles an hour, but it often reached thirty, the pace being of course much slower at other parts of the line. At Falkirk the train stopped for about twenty minutes, to supply the engines with water; they then set off again, and arrived in Edinburgh at a quarter past one.

The train not making its appearance at the expected hour, considerable anxiety was experienced, lest the delay was occasioned by any accident, and this fear continued to increase when at twelve o'clock it had not come in sight. A locomotive engine was stationed about two miles along the line to give intimation of its approach. All eyes were turned in this direction, when at ten minutes past twelve it began to move forward, and thus announcing the coming of the train, the faces of the assembled multitude seemed to be lighted up with joy when they saw that no untoward accident had clouded the commencement of this great undertaking. The train approached with great rapidity, and landed at the station amid the cheers of the assembled multitude. There was about 1,000 persons in these carriages.

The first engine was directed throughout the day by Mr. Miller, engineer of the line.

It was a considerable time before all the preparations were made for the setting out of the Edinburgh train. It consisted of 27 carriages, and left the station at ten minutes past one. The day was delightful; there was not a cloud in the sky; and the train as it went along presented a magnificent spectacle. In its progress it was hailed as before with the acclamations of the spectators; and as it advanced into the country every place was occupied from which a favourable view of so novel a sight could be obtained. Masses of people were seen dispersed over the rising grounds, viewing with deep interest the commencement of this wonderful improvement, and throughout the whole line the same interest was maintained. In all the towns and villages through which the line of carriages passed, the inhabitants welcomed its approach in crowds with every demonstration of wonder and delight as the vast trains, each extending in length between 200 and 300 yards, swept along. The line being in excellent order, and every arrangement made which could be devised by skill or care for the safety of the passengers, the engines and carriages proceeded with remarkable smoothness, and with as much rapidity as was considered suitable for the first opening. In some parts they proceeded at the rate of thirty miles an hour; and the general speed was from twenty to twenty-five, and sometimes less at particular parts of the road.

It was 34 minutes past one when the train passed the Almond Viaduct; and the view here, aided by the fineness of the day, of the distant and romantic scenery of Arthur's Seat, the Castle, and the Pentland Hills, as they gradually receded from the sight, was remarkably striking and beautiful. At 43 minutes past one the train entered the Winchburgh tunnel, which it passed in little more than half a minute. It then proceeded along the deep cutting in this part of the

Digitized by Google

line for several miles; when at 55 minutes past one the ancient Palace of Linlithgow was descried in the distance. After a short stoppage in this place for water, the train proceeded, and immediately crossed the splendid Avon Viaduct, when the beautiful scenery in this neighbourhood presented new attractions. About half-past two the Callender Tunnel was entered, and passed in a minute and a quarter; and after another stoppage at the Falkirk station, the train emerged into a wide and open country, with the Carse of Falkirk, the Frith of Forth, and the high grounds in the distance. The train arrived at the station, at Cowlairs, at 47 minutes past three, and then descended the inclined plain and tunnel.

The second train, which left Edinburgh about half an hour after the first, occupied nearly the same time in the journey to Glasgow.

On arriving at the station at Glasgow, they proceeded at once to the banquet hall, which was an extremely elegant and spacious building, formed by boarding over the great awning, under which passengers are intended to enter the carriages. It was handsomely decorated with cloth of white and crimson, and the beautiful cast-iron pillars gave it a light and airy appearance, which had a very imposing effect. The cross supporters of the roof were studded with small jets of gas; and over the Chairman was displayed a beautiful representation of a locomotive engine, also in gas. The brilliancy of these, heightened by the lamps at the sides, shed a flood of light over the immense structure. Over the croupier's chair was a small circle, also represented in gas.

Soon after five o'clock, JOHN LEADBETTER, Esq., Chairman of the Board of Directors, took the chair.

The usual loyal and constitutional toasts having been proposed by the Chairman,

The LORD PROVOST of Edinburgh rose and said, I feel that I have had assigned to me a task of very great importance, which it is difficult for me adequately to perform, and from the performance of which I would willingly have shrunk, had I not felt that I could not do so without exposing myself to the charge of not advocating a cause, the prosperity of which I ardently desire. The toast which I have to propose is, "Success to the Edinburgh and Glasgow Railway." (Great cheering, in the midst of which the company rose and drank the toast in the most enthusiastic manner. His Lordship sat down; but being urged by those around him, he again rose and said)—I am indebted to my excellent friends for so soon bringing this toast to a conclusion; but as it seems to be expected that I should make a few additional observations, I shall do so very shortly. I am sure that all who have seen the interesting scene which this day has presented, beginning a new era in this part of the country, will not soon forget it. We have seen the exertions of the Directors and shareholders of this railway brought this day to a happy conclusion, and the inhabitants of Glasgow have arrived in Edinburgh and returned again to Glasgow, while the inhabitants of Edinburgh have met you in this splendid hall. It seems as if the distance between Edinburgh and Glasgow were this day annihilated—(great cheering)—as if by some gigantic power the two cities had been uprooted from their old foundations, and forced into immediate contact. We have this day seen the power of prudence and perseverance, of genius and skill, exemplified in all their perfection. (Cheers.) I do hope that the undertaking, of which we have this day witnessed the completion, will promote the prosperity of Edinburgh and Glasgow, of the adjoining country, and of the empire at large—(loud cheers)—and I hope that all its arrangements, with all their details, will be so wisely and prudently adjusted in the things that yet remain, that this railway will receive, as it deserves, the support of the whole people of the kingdom. (Loud cheers.)

Mr. LEADBETTER said, I beg leave, in the name of the Directors and the shareholders, to return our cordial thanks for the very warm manner in which you have expressed your good wishes for the success of our undertaking. I cannot refuse on this occasion a little self-gratification and pleasure on having arrived at this termination of our labours. (Cheers.) When I look back upon the past, and trace the progress of this undertaking through all its various fortunes—when I find that its germination took place in 1835, and that after a deadly struggle during three sessions of Parliament, it received the royal assent in July 1838; when I find that subsequently a million and a quarter of money was expended on the formation of the line—an expenditure requiring the utmost care and anxiety—when I look at all these things, I cannot but regard it as a pardonable kind of pride, to hail this day with peculiar pleasure, and to ask you to regard it as the crowning termination of all our labours. (Great cheering.) After expressing his conviction that this undertaking would benefit both Edinburgh and Glasgow, he concluded by again returning thanks.

The other toasts were, the Lord Provost and Magistrates of Edinburgh and Mr. Crossfield, of Liverpool, one of the principal shareholders, by the Chairman; the Ladies, by Colonel Fleming; prosperity to the Ayr and Greenock Railways, by the Chairman; Mr. Miller, Engineer, by the Chairman; and the party broke up drinking a safe return to their Edinburgh friends.

On leaving, the train was delayed for more than two hours by an unexpected occurrence, namely, the breaking of the rope on the inclined plane, when the last train was proceeding upwards. But, fortunately, such were the arrangements for preventing the trains from running down the incline, that no inconvenience was occasioned beyond the delay in providing locomotive engines to draw them up. On examining the rope in the part where it was broken, it seemed evident that it was done by design; for while one of the strands, of which these are three in the rope, was stretched out and torn as if by a fair strain, the second was less so; and in the third the fracture was right across, having all the appearance of being cut with a sharp instrument. We understand that this suspicious affair is under judicial inquiry. It was 20 minutes past nine when the train, in consequence of this delay, left the station at Glasgow, and after halting a quarter of an hour at Falkirk, reached Edinburgh at 12 o'clock.

[We shall next week give an account of the extent and direction, and other circumstances connected with this railway.]

LANCASTER AND PRESTON RAILWAY COMPANY—GENERAL MEETING.

THE general meeting of the proprietors of the Lancaster and Preston Railway was held on Thursday last, when the following Report was submitted. We must postpone a notice of the proceedings:—

DIRECTORS' REPORT.

The Directors of this Company have, in common with other Railway Companies, to regret the continued depression of trade noticed in their last Report, with an increased degree of intensity which has been most sensibly felt in the receipts of almost every railway in the kingdom, but more severely by those lines of railway connecting the great manufacturing districts of the country together, and especially of our own line in the decrease of visitors to Scotland and the Lakes. After noticing this cause of a diminution in the passenger traffic, your Directors have pleasure in referring to the steady increase in the *local* passenger traffic, and in the receipts for toll on merchandise, the latter exceeding in amount 63 per cent. the receipts of the previous half year. They refer with satisfaction to the increase of coal traffic, as an item from which they expect ultimately to derive a considerable profit. But this source of revenue cannot fully develope itself until the Bolton and Preston Railway is completed; which event is expected to take place in the autumn of the present year. The proprietors of a large coal field of superior quality will then find an easy communication by your line with the north. From a perusal of the abstract of the accounts for this half year, referred to also in the last Report, it will be seen that the maintenance of the way has devolved upon the Company, and forms a heavy item in the expenditure.

The Directors have again the satisfaction of stating, that not a single passenger has sustained personal injury during the last half year, although upwards of 72,000 passengers have been conveyed on the line during this period: and no injury attended with loss of life or limb to passenger has taken place since the opening of your railway.

The great exertions that are now being made, and the deep interest that is so universally felt in the northern counties and in Scotland, to accomplish that most desirable object, a communication with Scotland by a western line, afford a more cheering prospect than has hitherto presented itself of seeing that undertaking completed.

Your Directors have, with other Railway Companies, subscribed towards a Parliamentary survey of the line between Lancaster and Carlisle. The parliamentary plans of such survey will be deposited in the proper offices in due time.

It is also with much pleasure that your Directors communicate, for the information of the proprietors, that a line much more easy and less expensive than could have been expected, owing to the nature of the country, has been discovered by Mr. Locke, under whose direction the survey has been made. At some future, and it is hoped not far distant, period, it will be for a special meeting of the proprietors to determine, whether this Company should not take measures, in conjunction with the leading Railway Companies on this side of the kingdom, to promote the early formation of the line; as its completion, no doubt, will very considerably add to the revenue of this Company.

The erroneous statement that has appeared in the Report of the North Union Directors, respecting their negociations and connection with this Board, has obliged your Directors to publish the correspondence between the two Companies, to which they respectfully call your attention. It will be seen by this correspondence, how utterly impossible it was for this Board to come to any fair and equitable agreement with the North Union Board, without sacrificing the interests of your Company. The inconvenience to which the public have been subjected by the separation of the two Companies, has constantly been a subject of deep regret to the Directors of this Company. Your Directors, however, cannot take blame to themselves for this undeniable grievance, since they have done all in their power to avert it, as will be seen by their correspondence, particularly by their resolution of the 2nd of December, communicated to the North Union Board. The separation of the two Companies is no justification for the serious inconvenience which the public still experience, and which might be obviated any day, by the North Union Board acceding to the fair and reasonable proposition made to them by your Directors.

That there ought to be only one passenger-booking station at Preston your Directors fully admit, and still hope so desirable a plan for the public convenience may ultimately be arranged.

The right to impose an additional charge of 6*d*., as now exacted by the North Union Company on every passenger passing to and from their station in Butler-street to their terminus at Dock street, a distance of about 200 yards, has been inquired into by this Board, with a view to its removal: the result of the inquiry is, that the North Union Company (as your Directors are advised by high legal authority) is not entitled to make such charge: and your Board have not failed to call the attention of the Directors of the North Union Company to this point, in the earnest hope that it will not be persisted in.

Referring to the annexed account of receipts and expenditure during the past half-year, the Directors recommend that a dividend of 12s per share be paid on the whole shares, and 8s. 6d. per share on the three-quarter shares, leaving a surplus of 2,605*l*. 11s. 4d. to the credit of the reserve fund.

February 19, 1842.

Traffic Account for the Half-year ending the 6th January, 1842.

February 18, 1842. GABRIEL COULSTON.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the shareholders in this Company took place on Wednesday last, at the Albion Hotel, Piccadilly, Manchester. The attendance was not very numerous, about 50 gentlemen being present. On the motion of Mr. THOMAS BLAKE, of Sheffield, the chair was taken by Mr. PERRY, one of the Directors.

Mr. STEVENSON, one of the law clerks, then read the Directors' Report. It was much shorter than the generality of such documents, and the substance of it may be summed up in a few lines. The Directors had gratification in announcing the opening of a portion of the line within the last six months; and the result had been more than commensurate with their anticipations. Number of passengers conveyed, 113,744; amount received, 3,102*l*. 4s. 7d., and for parcels, 35*l*. 15s. 5d.; total, 3,137*l*. 19s. 8d. Out of this, 755*l*. 2s. 8d. had been paid as tolls to Manchester and Birmingham line, leaving the net receipts, 2,382*l*. 17s. The continued increase of the traffic engaged the attention of the Directors to

Digitized by Google

provide the requisite facilities for carrying it on. It was intended to have only one line of rails, but the additional traffic had rendered two necessary from Fairfield to Newton; and the Engineer had been instructed to lay the other down. This, with an increased number of trains, and some other arrangements, would enable the Directors to furnish the additional accommodation required. The progress of the works since last meeting fully sustained the accuracy of Mr. Locke's calculations, and afforded an additional assurance that the line would be completed for his estimate. The total expenditure up to the 19th instant, had been—surveys, road, and timber, 19,760*l.* 1s. 3d.; cottages, 3,805*l.* 8s. 8d.; sinking shafts, 20,185*l.* 18s. 1d.; driftways, 1,537 yards, 16,809*l.* 9s. 6d.; total, 60,560*l.* 17s. 6d. The materials of the driftway and shafts had formed nearly a mile of embankment, which was ready to receive the permanent way; thus proving that the actual, would be within the estimated cost. The Directors had the gratification of announcing that considerable payments of arrears had been induced by their recent resolution to pay interest to the shareholders—(hear, hear)—and they hoped that this measure, and others sanctioned by the proprietors, would enable them to carry on the works to completion with the requisite energy. There was every probability of a communication being effected between the Liverpool and Manchester line and the station of this Company at Manchester. A survey has also been made for a junction line, branching from this line near Penistone, to join the North Midland line, by Barnsley. The Directors considered it unnecessary to enlarge on the beneficial effects which either or both those measures must produce, and should render every assistance in their power to promote an object so essential to the public interest. After a careful revision of the share-list, the Directors had concluded to recommend 230 shares for forfeiture, upon which the amount paid averaged 16*l.* 12s. 2d. per share. Four retiring Directors, eligible for re-election—Wm. Sidebottom, Wm. Butcher, John Dalton, and Cornelius Randall, Esqrs.

On the motion of Mr. T. Dalton, seconded by Mr. John Wood, the Report was adopted without remark.

Mr. Platford (the Secretary) then read an abstract of the accounts, [which we must for the present defer]. He explained, that of the sum of 1,200*l.* put down for Direction, 538*l.* 4s. 4d. was due to the Directors for the interval between the last half-yearly meeting, the 23rd of August (when it was determined that the Directors should receive 1,600*l.* a year, clear of all expenses), and the end of the year. The remainder of the 1,200*l.* was made up of a balance due to them for the previous half-year, and the amount payable to them between the 30th June and the 23rd August. The defalcation of the late Secretary was 1,079*l.* Since the 31st December, one of his sureties had paid over 300*l.* to the Company, leaving a loss of 779*l.* 11s. 10d.

Mr. P. Bradshaw thought that the Directors, who had the appointment of all the servants, and the examination of their sureties, ought to be responsible for this defalcation. He moved that the item should be disallowed from the accounts.

In the course of a conversation it was explained by Mr. Stevenson, the law clerk, that the Directors had taken security for 500*l.*, but that the bond having come accidentally into Thompson's possession, he had introduced words into it which almost vitiated it, and after his conviction had sent for Mr. Latham, his surety, and informed him of this as "something to his advantage." Counsel having given an opinion against the validity of the bond, it had been thought better to compromise the matter by accepting 300*l.*, the amount of the security being 500*l.*

Mr. Bradshaw thought the defence a very lame one, but withdrew his motion for the disallowance of the item, as it had not been seconded.

On the motion of Mr. Ralph Sidebottom, seconded by Mr. Whitelegg, the accounts were passed, and ordered to be printed for distribution among the shareholders:

The Secretary then read the Report of Mr. Gee, the Resident Engineer.

Mr. G. Sidebottom moved, and Mr. Bradshaw seconded, the adoption and printing of the Report.

The Chairman said, the Report was one which must afford all the proprietors great satisfaction. Every effort had been used to show that their undertaking was impracticable, and that the estimate would be far below the actual cost. The most strange means imaginable had been used to prove this; because a tunnel or a mile of railway elsewhere cost a certain sum, it was assumed that theirs would cost the same. However, they had now the satisfaction of having got nearly half, considerably more than one-third, of their works executed; above all, they had got correct information from experience of the material composing the hills through which their tunnel passed. It had proved to be extremely favourable for tunnelling; because, though hard to get through in the first instance, when they once got through, they had done; they were not likely to have any slips or tumblings down; when once executed, it was permanent. Of 60,000*l.* expended upon the tunnel, 44,000*l.* was upon works generally applicable to the tunnel, which would cease in a very few days, on the completion of the shafts. Then they should have nothing to do but drive the driftways through the remainder of the tunnel, and open it to whatever size circumstances might render necessary. Looking at the proportion of the amount which had been expended on that description of works, they had the most substantial proof which experience could afford, that the total cost of the tunnel would be very little indeed, if anything at all, over Mr. Locke's estimate. This tunnel had always been the great bugbear raised up to show the impracticability of their completing this concern; he looked upon it now as completely removed, as though they could see the light from one end of it to the other. The completion of the shafts had shown the cost of working through this material; they now knew their precise position with regard to the tunnel, and almost the precise amount of pounds, shillings, and pence, which it would take to complete it. Experiments were now making, near London, on a new propelling power for railways; and the Board of Trade had ordered their Engineer and Professor Smith to attend and report thereon. The Report, which was expected to be favourable, would be published in a few days; if so, the power would be tried on an extension of the Dublin and Kingstown Railway, in the course of the ensuing summer: and if it succeeded there, as was expected, the Directors would have the opportunity of introducing it through the tunnel, and thus lessening the tunnel, and getting a mode of communication through it which would be rid of all the objections to railway travelling in tunnels. But without this, the tunnel could be completed as intended, for the sum stated in Mr. Locke's last Report.

Mr. Bradshaw—Mr. Locke's estimate for the tunnel was, I think, 200,000*l.*

The Chairman said, Mr. Locke had estimated that if the tunnel should require to be arched through, it would cost about 200,000*l.*; if not, only about 100,000*l.* So much had been said about the tunnel, that the meeting would probably like to hear the Report of the Resident Engineer. It stated that it was impossible to meet with materials more favourable for tunnelling. The water was inconsiderable; they were lifting it with a small hand-pump. Their rate of progress in the drifts, since the shafts had got down, was about eight yards a week each way, and there was no doubt that rate of progress would be maintained. The stone required for lining the tunnel might all be got in the works, of excellent quality. The whole amount yet expended did not exceed the cost of a mile of the Manchester and Leeds tunnel. There was not the slightest similarity between the materials of the two tunnels; the Manchester and Leeds tunnel passed chiefly through blue slate and mountain limestone; in this tunnel they had not met with a bit of either.

Mr. Benjamin Beddome wished to ask why the *Railway Times* had shown so much hostility to their undertaking, depreciating their objects, and defaming their prospects and general proceedings. He should very much like to know what reason could be assigned for this hostility.

The Chairman said, he was not able to assign any reason. Perhaps some of the Directors could answer the question.

Mr. T. Appleby hoped the remark which had been made would have the effect of extracting a reason from the Editor of the *Railway Times* himself. It was hardly becoming for the Directors to say anything on the subject. For himself he knew of no reason which could have prompted the attacks alluded to but blind hostility.

The motion for the adoption of the Engineer's Report was then put and carried.

Mr. W. Bradley moved that the declaration of the forfeiture of 230 shares made by the Directors should be confirmed.

Mr. B. Beddome seconded the motion.

[The forfeited shares were those of seven proprietors, one of whom held 100, one 50, three 20, and two 10 shares each.]

The resolution was then put and carried, as was one authorising the Directors to re-issue the shares at their discretion.

The next business was the election of four Directors.

Mr. Bradshaw proposed, and Mr. Bennett seconded, the election of Mr. John Wood, of Glossop, as a new Director.

An amendment for the re-election of the four retiring Directors (whose names are given above) was moved by Mr. T. Blake, and seconded by Mr. T. Dalton. It was carried by 15 to 7.

A motion by Mr. Bradshaw, for the auditing of the accounts by shareholders instead of public accountants, was lost by a similar majority.

Thanks were then voted to the Chairman, and the proceedings terminated.

NORTHERN AND EASTERN RAILWAY.—THE CASE OF MR. WILLIAMS.

To the Editor of the Railway Times.

Sir,—A report of a meeting of the Northern and Eastern Railway Company appears in your paper of the 12th instant, at which some comments were made on a letter written by me to Mr. John Williams, which render it imperative on me to request you to insert the following brief notice of them:—

In that report it is said that some of the old Directors denied the correctness of my statement as to the "encouragement and incitement" given to Mr. Williams in 1836, to buy up the Northern and Eastern scrip; but I observe that their denial is qualified by the phrase, "the *Board*" had never given such encouragement, &c. Now, the words of my letter were not that "the *Board*" had "encouraged or incited" Mr. Williams to buy scrip, but that the "Directors" had so done. A copy of this letter is herewith forwarded to you, and I request, as an act of justice, that as you have inserted the comments on it, you will now insert the letter, and let it speak for itself. I wish to say no more on the present occasion than is necessary to vindicate myself, and to show that, as all the determinations of the Board were not as a matter of course recorded in the minute-book, the omission therein of any mention of Mr. John Williams's interference on the occasion in question is by no means conclusive evidence of Mr. Williams not having been incited to buy shares by individual Directors, taking on themselves, with the acquiescence of those who were in the habit of attending the meetings, to act for the whole body. I have no desire to add more. My letter to Mr. Williams, the unjustifiable comments on which have reluctantly drawn from me the present communication, is now before the public, through the medium of your paper. I endeavoured, though hardly able to write at the time from long and painful illness, so to express myself in that letter as to avoid giving offence to any right-thinking person; but I felt it to be my duty not to be restrained by any personal consideration from doing an act of justice to Mr. Williams, when ap-

Digitized by Google

pealed to by him, as a present large shareholder, and as one who had done much service to the Company when the Company much wanted it.

I am, Sir, your obedient servant,
CHARLES ROWCROFT.

February 17, 1842.

(COPY OF RESOLUTIONS IN THE MINUTE BOOK.)
Northern and Eastern Railway.

Mr. Rowcroft's resignation as Secretary was communicated to the Board, and accepted, with the thanks of the Directors for the zeal and integrity which he has invariably shown in the service of the Company during the period of his connection with it.

(Signed) H. G. WARD, Chairman.
August 13, 1839.

That Mr. Rowcroft be allowed 400*l.* upon the appointment of a new Secretary, with the payment of his salary up to the time when his services cease.

(Signed) H. G. WARD, Chairman.
August 13, 1839.

The following is the letter of Mr. Rowcroft above referred to:—

(COPY.)

January 6, 1842.

DEAR SIR,—In reply to your request that I would state such of the circumstances as came to my knowledge, relative to your large purchases, in 1836, of the scrip shares of the Northern and Eastern Railway, I beg to say, that so far as I can do so without violating the confidence placed in me by the Directors as their Secretary, I shall feel great pleasure in stating them. I regret, however, that the painful illness under which I have been so long suffering, has so exhausted my strength in mind and body, that I cannot pretend, at this moment, to be able to recollect with strict accuracy, on a sudden and without any reference to persons and to papers, all that passed in 1836, or the various occasions when your name and interference were made matter of conversation or deliberation. But this I remember very well—that you were encouraged and incited by the Directors in 1836 to buy up the scrip in order to get it to a premium, and to maintain it there. I remember also, that you complained that in the midst of your operations, you found that fresh scrip was issued, in violation of promises to the contrary, as fast as you bought up the old, thereby defeating your endeavonrs, and exposing you to serious loss. I remember also that, in reply to this complaint, you were told it was necessary for the interest of the Company that the additional scrip should be issued, and you were assured that in the event of such issue proving ultimately prejudicial to you, the Company would protect you from loss. I am aware that, relying on this assurance, you continued to buy scrip, and I believe that you thereby became saddled with a large amount of scrip, which you were never able to get rid of without a serious loss. I feel bound in justice to add, in reply to the appeal which you have made to me, that from my knowledge of the circumstances under which you were led on to buy the Northern and Eastern scrip, the feeling is irresistibly forced on me, that the Company is bound in honour and justice to make amends to you for the losses which you incurred under the circumstances which I have stated.

I am, yours, faithfully,
CHARLES ROWCROFT.

John Williams, Esq.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That the Books, which are kept in the Office of the Clerk of this Company for the Registration and Transfer of Shares in the Manchester and Leeds Railway, will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday, the 8th day of March, to Thursday the 17th day of March, both days inclusive. HENRY HOULDSWORTH, Chairman.

Clowes's-buildings, Hunt's Bank, Manchester,
February 14th, 1842.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That the next Half-yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Clowes's-buildings, Hunt's Bank, in Manchester, on Thursday the 17th day of March next, at Twelve o'Clock at noon precisely.

Dated this 17th day of February, 1842.
HENRY HOULDSWORTH, Chairman.

Clowes's-buildings, Hunt's Bank, Manchester.

STEAM ENGINES.—WANTED a Second-hand Pillar and Beam Portable Engine, of about 14 horse power, calculated for a coalpit winding engine; also, Two Locomotive Engines, calculated for merchant traffic on a Railway of 4 ft. 8 in. gauge. The Engines must be in perfect order and repair.

Letters, stating full particulars and price, addressed to James Green, Engineer, Newport, Monmouthshire, will have prompt attention.

ANY PERSON in London or Brighton having a good Second-hand SPIRIT LEVEL to dispose of, may hear of a Purchaser, by addressing (post paid) to L. K., Mr. Everett's Newspaper Office, 5, Johnson's-court, Fleet-street, London.

TO RAILWAY DIRECTORS AND CONTRACTORS.—A Gentleman who has had considerable experience in the Construction of Railways, wishes an engagement as Traffic Manager, or Engineer, on a line of Railway. He has a good knowledge of Masonry, and all kinds of work connected with the construction and upholding of Railways, and would have no objection to engage with any respectable Contractor as Engineer or General Manager.

Ample testimonials of character and ability can be given from the Directors by whom he has been employed. Letters or applications, addressed A.B., at Messrs. Harthill and Son's, News Agents, Waterloo-place, Edinburgh, will be attended to.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

OMNIBUSES TO AND FROM EVERY TRAIN—FARE SIX-PENCE.

Post Horses for hire, may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within Five Miles,) including the Driver, 10s. 6d. each pair.

In one handsome quarto volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; price £1 11s. 6d.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ON SALE, a quantity of COAL OIL, for burning in the open Air; affords a good and an economical Light, and is well adapted for use on Railways, and in Public Works generally, where night out-door labour is required. Price 1s. per Gallon. Apply to Mr. Joseph Clephun, No. 14, Sandhill, Newcastle upon Tyne.

Newcastle upon-Tyne, February 15, 1842.

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

RAILWAYS IN GENERAL.—R. B. WATSON and Co., of Leeds, beg to intimate to those interested in Railway Property, chiefly in the Northern Counties, that they are enabled to give information, *and an opinion* as to those lines in which it would be advisable to invest money at this particular period, founded upon a knowledge of the Trade of this district, acquired during a residence of Twenty Years in Hull, and Twelve in Leeds, Ten of which R. B. W. has been a Commercial Broker, and Six a Share Broker; thus giving them an advantage that few possess.

TAFF VALE RAILWAY.—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff, to Messrs. Glyn and Co., Bankers, Loudon, or to Mr. W. Mallard, 27, Small-street, Bristol.

By order,
WILLIAM BURGESS, Secretary.

Railway Office, Cardiff, February 1, 1142.

LLANELLY RAILWAY AND DOCK COMPANY.—The Committee of Management of the Llanelly Railway and Dock Company give Notice, That, pursuant to the powers of the Act of Parliament in that behalf, they do hereby make a Call of FIVE POUNDS per Share, on each Share subscribed for or held by the several proprietors of stock in the above undertaking; and such Call is to be paid to Messrs. Cocks, Biddulph, and Co., Bankers, 43, Charing Cross, London, to the credit of the Company, on or before Thursday, the 24th March instant.

By order,
JOHN BIGG, Secretary.

59, Old Broad Street, London, 4th March, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY.—Notice is hereby given, That a Special General Meeting of the Proprietors of this undertaking will be held at the London Tavern, Bishopsgate Street, in the city of London, on Thursday, the 17th day of March next, at One o'Clock precisely, to receive the Report of the Committee appointed at the General Meeting, held on 20th day of January last, and take the same into consideration.

JOHN HARMAN, Chairman of the Board of Directors.
CHARLES R. MACKENZIE, Secretary.

10, Angel Court, Throgmorton Street, 4th March, 1842.

TO HARBOUR CONTRACTORS.—Wanted Contractors to complete the first division of the works of the New Harbour of Arbroath, in the county of Forfar, agreeably to Plans and Specifications, prepared by James Leslie, Esq., Civil Engineer, Dundee.

These works were commenced in 1840, and considerable progress has been made there with, and a large stock of materials, with implements, machinery, &c., are already provided, which will be given over to the Contractors.

Plans and Specifications of the works to be contracted for, with inventories of the materials, implements, machinery, &c., will be seen in the hands of Mr. Leslie, at his office in Dundee, or of Messrs. Louson and Macdonald, Arbroath, Clerks to the Parliamentary Trustees, on and after the 7th of March, 1842.

Mr. Thomas Knox, Resident Engineer at the Harbour Works, Arbroath, will point out the works, materials, &c., to intending offerers.

Sealed Tenders to be lodged with Messrs. Louson and Macdonald, marked "Tender for Harbour Works," on or before Wednesday the 30th day of March, 1842. Security will be required for the due performance of the Contract. The Trustees shall not be bound to accept the lowest offer.

Arbroath, 22nd February, 1842.

TO RAILWAY DIRECTORS AND ENGINEERS.—WANTED, a Situation as Foreman, to take the Management of the Locomotive Engines on a Railway. The advertiser has had considerable experience in the above line, and can produce most satisfactory Testimonials.

Address, S. H., *Railway Times* Office, 122, Fleet-street, London.

ON SALE, A NEW LOCOMOTIVE ENGINE, Boilers with Copper Fire Box, and outside plates of the usual strength, ready for tubes two inches diameter, and suitable for an engine with 14 inch cylinders. For further particulars, apply T., Post-office, Warrington.

LONDON AND BLACKWALL RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and Blackwall Railway Company was held at the London Tavern, Bishopsgate-street, City, on Monday, and was very numerously attended; WILLIAM ROUTH, Esq., in the chair.

The proceedings having been opened in the usual way, the common seal of the Company was affixed to the share-register. Mr. Tyerman, the Solicitor of the Company, then, at the request of the Chairman, read the following Report:—

DIRECTORS' REPORT.

In submitting to the proprietors the account of their proceedings during the last six months, the Directors have satisfaction in referring to the increase that has taken place in the passenger receipts; showing, as it does, a gradual and steady development of the traffic of the line.

The number of passengers carried during the last half-year, was 1,186,351, and the money received, 22,509*l.* 11s. 10d., exhibiting an increase of about 40 per cent., whether it is compared with the receipts of the previous half-year, or those of the corresponding months of the previous year.

A statement of the weekly receipts from the first week of the opening of the railway in July, 1840, and of those of the corresponding weeks of the succeeding year is annexed, and it is satisfactory to observe, that the increase has been maintained during the winter.

The total number of passengers carried during the year 1841, was 2,058,092, and of these no less than 1,124,816 were carried to and from the intermediate stations; and as the traffic to the East India Docks, and the ship yards, manufactories, and taverns at Blackwall, unconnected with the steam-boats, must have been large, it is clear, that the number that will have used the railway on their passage to and from the steam boats, has fallen very much short of the expectations that were formed.

As the advantages of the Brunswick pier as a steam-boat station are further developed, and as the opposition with which the Directors have had to contend dies away, they calculate, and they hope not unreasonably, upon a very great increase in this branch of the traffic.

Independent of the boats, which during part of last season were running from Blackwall to Gravesend and Woolwich, several other boats called at the Brunswick pier to embark and land passengers, and engagements of the same kind will be renewed.

A constant communication will also be secured between Greenwich and Blackwall by boats which will leave each place every quarter of an hour, and arrangements have been made for running boats exclusively from Blackwall to Herne Bay, Margate, Ramsgate, and Dover. The first of these boats, the *Eclipse*, commenced running on Monday last.

All the parties to these engagements fairly admit the advantages which the Brunswick pier affords; other Companies, on the contrary, will probably continue the competition which exists, by running their boats from the London Bridge wharfs, though the result of last year's experience has proved, that with some of them this cannot be done without a ruinous loss. In the meantime the Directors will persevere in the line of policy they have adopted; their object is to afford by means of the Blackwall Railway (without any increased charge,) a quicker and safer mode of river communication than exists by any other route; and keeping this principle in view, they will always be anxious to avoid any unnecessary opposition to existing interests, and on the contrary, will be ready to afford every encouragement to induce steam-boat companies to transfer their trade to the Brunswick pier.

The Directors have been much mortified at the delay that has occurred in the arrangements for the goods traffic; they fully expected that they would be able to carry goods in any quantity before the end of the past year. A spacious warehouse connected with the railway by the wing platforms at the London end had been prepared; the branch line for the West India Dock warehouses, and the communication with the warehouse on the Brunswick pier had been completed, but the lowering apparatus at the London end, making by Messrs. Ellis and Noton, of Manchester, and the lifting machinery at Poplar, contracted for by Messrs. Bramah, Fox, and Co., of Birmingham, are still incomplete, though there was a positive engagement that the works should be finished by the 31st December. The shareholders may rest assured, that this delay has not been acquiesced in or submitted to by the Directors without every remonstrance, and the most urgent applications, and they will most assuredly take any steps which may be thought practicable for inflicting, upon the contractors, the consequences of their own neglect.

The lowering apparatus on the south side in Fenchurch-street is, however, in such a state of forwardness, that an experiment of the carriage of goods has been tried, and it has been completely successful—several loads of sugar in hogsheads and bags, and other goods, were brought up from the West India Dock warehouses without the slightest interference with the passenger traffic, and as soon as the engagements of Messrs. Bramah, Fox, and Co., and Messrs. Ellis and Noton, are completed, the Company will be in a situation to commence the carriage of goods both up and down upon a scale suited to the extent of the traffic. In the meantime, negociations have been opened with some of the present carriers for the purpose of delivering from the warehouse in Crutched Friars to the consumers, and it seems likely, that arrangements may be completed upon a basis satisfactory and remunerative to both parties.

A considerable extent of the surplus property remains unsold, and the Directors are therefore still unable to report the exact amount of the expense of all the works, but they feel confidence in stating, that it will not be necessary to raise any further capital by shares, and that any deficiency, temporary or permanent, may be supplied without any such call upon the proprietors; and with this view the Directors have prepared a clause to be introduced into a Bill which they propose to bring into Parliament for other purposes. The main object of this Bill is to enable the Company to dispose of the property adjoining the station, which, by the Act of session, 1839, was to be cleared as an area for carriages, instead of the space which has been appropriated to that object.

In the said Bill, power is asked to take one house at the corner of Little London Street, with a view to widen the avenue from the station into Mark-lane; but if any valid objection is made to that clause, the Directors have no intention to press it.

In laying before the proprietors the revenue account to the 31st December last, the Directors have used their best discretion in determining what proportion of the sums incurred, under the different heads of expenditure, should be respectively carried to capital and to revenue. There are many heads under which the expenditure has unavoidably been increased by an outlay of an experimental and precautionary character, applying particularly to this the first line for quick transit worked by stationary power, and independent altogether of those expenses of a general nature, to which it has been found that all lines are during the first year liable.

After dissecting the expenditure according to their best discretion, they find that there is a sum of 13,135*l.* 19s. 8d. which, according to the agreement under which the new shares were issued, is divisible amongst the holders of the old shares; and they recommend that a dividend of 10s. per share upon the old shares shall be made, and the remainder carried to a depreciation fund against the wear and tear of carriages and buildings.

The Directors have to report with regret, on their own account, the intended resignation of their much esteemed Secretary, Mr. Warmington. This resignation arises entirely from arrangements of a private nature, by which his own interests are advanced: and they are satisfied that the proprietors will join with them in wishing him every success in his future engagements. The Directors have found in Mr. Warmington a most efficient and zealous officer, and one every way worthy the high confidence that has been reposed in him: and they have much satisfaction in reporting that he has kindly volunteered the continuance of his assistance for a time, to enable them to complete arrangements in the office department, in which, as well as in other branches of the establishment, it will be their object to combine efficiency with economy.

To the increase of traffic, the proprietors have to look for a remuneration for their outlay. It has been proved that the Blackwall Railway is competent to carry five times the trade that has yet been brought upon it; experience has also proved that every description of the traffic passing on the line is susceptible of great increase; and it is equally certain, that not one half of even the existing traffic has yet been attracted to the line. The increase that has already taken place is, the Directors hope, only an earnest of that which they may expect; and the proprietors may, at all events, rely upon the best exertions of the Directors in every way to foster and encourage it.

On this occasion the three following Directors go out of office, by rotation, namely, Mr. Roskell, Mr. Ferrers, and Mr. Alderman Farncomb; and, being eligible for re-election, offer themselves accordingly. W. ROUTH, Chairman.

That part of the Report which passes so high an eulogium on the merits of Mr. Warmington, the late Secretary of the Company, was received with much applause.

The CHAIRMAN said, he would not trespass long upon the attention of the meeting, because it had been the object of the Directors to comprise in their Report the most ample information with respect to the condition of the undertaking, and he had, therefore, but little to say in addition. The Directors had given the fullest statistical information as to the past traffic of the line, and in the last paragraph of the Report they had told the proprietors what was really the fact, that to an increase of traffic, they must look for a remuneration for the outlay which had been incurred. That such increase would take place, the Directors entertained the fullest confidence. When they looked at the improvement that had already taken place, and knew that as yet they had not received one-half of the existing winter traffic, and probably not one-fourth part of the summer traffic, they had no reason to doubt, that in spite of the opposition they had encountered, and still continued to encounter, the difficulty of diverting the trade of a district from its accustomed channels, would gradually yield to the superior facilities and advantages which the railway presented. (Hear, hear.) He did not know that he had any thing to say at that stage of the proceedings, upon any other topic, except, perhaps, to advert to the station in Fenchurch-street. At a previous meeting, the proprietors had been informed that it would, perhaps, be found desirable hereafter to make some alterations at the terminus, and that probably the line would ultimately be extended, and a communication opened, from Mark-lane instead of Fenchurch-street. The Fenchurch-street station had, however, been open for eight months, and the Directors were of opinion that it supplied to the public all the accommodation that was required. (Hear, hear.) It might be desirable to get possession of one house at the corner of Little London-street, so as to improve the entrance from the station into Mark-lane; but with that trifling exception, the Directors believed that quite enough had been done to meet the requirements of the traffic. (Hear, hear, hear.) The proprietors were aware that the Company had been compelled to purchase a large mass of buildings between the station and Fenchurch-street, and they were now about to apply to Parliament for power to sell that property, instead of opening an area which had been provided elsewhere. (Hear, hear.) The same might be said with respect to the property in Crutched Friars. The Directors had no doubt that the application to Parliament would prove successful, so as not only to relieve the funds of the Company to a very considerable extent, but likewise to promote the convenience of the public in that district, where houses were greatly in demand. The Directors had to regret, as stated in the Report, that they had not yet been able to ascertain exactly the total cost of the line, but they had ascertained it with sufficient precision to be able to state that no new calls in the shape of shares would be made upon the proprietors. It had been estimated, that on the 31st of December last, the surplus unsold property of the Company amounted to 70,000*l.*, and since that date certain portions of it had been disposed of, at a rate which showed that with respect to that part of it, and he trusted with respect to the other parts also, the calculation was not incorrect. His own opinion was, that the property had been undervalued. (Hear, hear.) Some uncertainty still existed with respect to the expenditure necessary to be incurred in carrying goods on the line. At one time the Directors had thought that the Company themselves would be under the necessity of becoming carriers of the goods from the station at Crutched Friars, to the several places of delivery, but from negociations now going forward, it was hoped that favourable arrangements would be effected with the carmen, so that they, and not the Company, would deliver from the warehouse in Crutched Friars to the consumers, so that any further outlay, as formerly apprehended, would be saved. (Hear, hear, hear.) He scarcely thought it necessary to say anything with respect to the delay which had taken place in commencing the carriage of goods. The Directors had adopted every means in their power to force the contractors for the machinery to fulfil their contracts by the appointed time. He begged to state that the contractors evinced no wish to evade their agreements; the only fault of which they had been guilty, was delay, which unquestionably had proved most vexatious to the Directors. He should not further detain the meeting, but should feel happy to hear any comments on the Report, or to give any further information that might be in his power. (Applause.)

Mr. SAINTSBURY would avail himself of the opportunity to put a few questions, which he made no doubt would be answered by the Chairman with his usual ingenuousness. He put these questions the rather that they were such as must occur to every proprietor; and, therefore, as they were certain to be put, it mattered little from whom they proceeded. The balance-sheet, now in the hands of the meeting, showed that, up to the 31st of December last, the expenditure exceeded the capital by about 71,000*l.* Since that date, it appeared that about 7,000*l.* of the excess had been paid off, so that there would now remain an excess of 64,000*l.*, as up to the end of the last year. Since that period the excess must have increased. Now, although it was gratifying to know, from the statement made by the Chairman, that the surplus property would probably realise 70,000*l.*, so as of course to extinguish the above excess of 64,000*l.*, it would no doubt be satisfactory to the meeting to be informed to what extent, upon the whole, the expenditure was likely to exceed the capital already provided. (Hear, hear, hear.) In another part of the Report, it was stated, that it would not be necessary to raise any further capital by shares. (Hear, hear.) This was a comfort certainly; but, if he might be allowed the expression, it was a negative comfort. (Hear, hear.) Many of the proprietors had been looking forward with the hope, not only that they would not be called upon to advance any further capital, but that at the end of every six months they would be called upon to receive a dividend. (Hear, hear.) Now, it was almost superfluous for him to remark, that in proportion as more money was borrowed so must the amount of dividend on the shares be diminished, by the payment of interest upon such further capital, prior to the division of profits. He had no wish to commit the Directors closely to figures; but accomplished men of business, as they were, could not have failed by this time to satisfy themselves of what further amount would be required; and he trusted, therefore, they would give an approximation to the result. One word as to the new application to Parliament. It was stated in the Report, that the Directors proposed to apply for a new Act, whereas he understood that they had already applied. Probably the heads of the Bill would be laid before the present meeting. (Hear, hear, hear.)

The CHAIRMAN intimated, that if there were other questions to put, he would, to save time, endeavour to answer them altogether.

Mr. J. WHISHAW inquired whether the revenue account was for the last six months only, or for eighteen. He also wished to know what was the expense of working the line. They had been told, at a previous meeting, that, exclusive of interest, the expenditure of the Company would be about 450*l.* per week, and that, as the traffic increased, the expenditure would not be materially augmented.

Mr. JOHN BIGG inquired if any part of the capital of the Railway Company was embarked in the steam-boats referred to in the Report. He wished also to know if the Directors had entered into any regular contract with Messrs. Bramah, Fox, and Co., and Messrs. Ellis and Noton, for the supply of the lifting and lowering machinery, and, if so, whether these parties were liable to any specific penalty?

Mr. ECCLES inquired if it were intended, by what the Chairman had said with respect to no further capital being required by shares, that the calls on the existing shares should be dispensed with. (Loud laughter.) He wished to know how long the Fenchurch-street station had been opened —[The CHAIRMAN—Eight months]—as he had understood that goods would be conveyed immediately that that station was completed.

The CHAIRMAN hoped he would be able to answer some, at least, of the questions satisfactorily. We respect to the excess of expenditure, the Directors were not able to state precisely what it would be, but they thought it would amount to about 20,000*l.*

Mr. SAINTSBURY—Over and above the produce the property to be re-sold?

The CHAIRMAN—Yes. With respect to the questions of another honourable proprietor, he had to state that the revenue account was for 18 months, not 6. The expenditure of the Company had, at a previous meeting, been estimated at, he believed, 480*l. plus*, the interest on borrowed money, and the rates and taxes. The Directors had reason to believe, although they could not speak with absolute certainty, that the estimate referred to was not wrong. Some items of their expenditure would be reduced, such as labour, gas, and office expenses, while there were others on which expenditure [illegible] shown that there would probably be [illegible] There were certain items in respect of [illegible] expenditure would increase as the line became prosperous, such as the passenger tax, and [illegible]

Digitized by Google

rochial rates, the amount of which was regulated by their profits as a Company. With respect to the engineering expenses, the Directors had given the subject their most diligent consideration in conjunction with their Engineer, Mr. Stephenson, who was now present, and would tell the meeting that the estimate previously given would be amply sufficient. As respected the carriage of goods, it had been stated on a former occasion that no sensible addition would be made to the expenditure from that circumstance, except as to increased porterage. There would be no extra expenditure in engine power. (Hear, hear.) As to the steam-boats, there was not, never was, and never would be, any part of the funds of the Railway Company invested in these speculations. (Hear, hear, hear.) Of the contracts for the machinery, he begged to say that there had been no clear contract with Messrs. Ellis and Noton. The Engineer, under the instructions of the Board, had ordered the machinery from that firm, but not under contract. With Messrs. Bramah and Fox there was a distinct understanding that the machinery should be completed by the 31st of December.

A PROPRIETOR—Any penalty?

The CHAIRMAN—No penalty.

The PROPRIETOR would contend that under the circumstances this was no contract at all. (Hear, hear, hear.)

The CHAIRMAN differed from the conclusion of the honourable proprietor. If the Company could show that loss had resulted to them from the non-fulfilment of the agreement, they would probably be in a position to recover damages to a much greater extent than by the enforcement of any penalty.

The PROPRIETOR would maintain that there ought to have been a penalty attached to both contracts.

Mr. J. A. HANKEY thought these matters had better be left to the discretion of the Directors, who had doubtless given the subject their best consideration, and had made the agreements with the contractors in the mode which they deemed the most conducive to the interest of the Company. (Hear, hear, hear.)

Mr. ECCLES was ready to offer his best thanks to the Directors, for their zeal and energy which they had displayed — qualities which were the more necessary and the more valuable, as they had had to fight for every inch of ground, and had thus been placed in very different circumstances from some Boards, who could carry out 12 or 20 miles of their several lines without opposition; but, nevertheless, as men and horses both wanted at times the spur, he could have wished that it had been applied to the contractors for the machinery. (Hear, hear, and a laugh.)

The CHAIRMAN would assure the honourable proprietor, that the spur had not been spared. (Hear, hear.)

A PROPRIETOR expressed his regret that they were again going before Parliament, as this could not be accomplished without great expense. With all respect to the Directors, he wished to know by what authority they had gone to Parliament without first consulting the proprietors in special meeting assembled. (Hear, hear.) He had been greatly surprised that the heads of their last Bill were not laid before the proprietors. He had understood that originally it referred principally to the terminus, which clauses, however, had ultimately been omitted. Even now there were parts of that last Act far from unobjectionable.

The CHAIRMAN would state, in reply to the first question, that authority had been given by the proprietors at the last meeting for this new application to Parliament. As the Directors had only yet taken the formal step of presenting a petition for leave to bring in a Bill, he did not know whether he might strictly say, that they had not yet applied for an Act. This, however, was a point of no importance; it he could, he thought, show in a very few words that another application to Parliament was requisite. By a former Act, they had been compelled to purchase property in and near Fenchurch-street to the amount of 30,000*l.*, and by that Act they would be obliged to pull down the whole of such property; but as that was not deemed desirable, and would be anything but profitable, they were under the necessity of going to Parliament for powers to dispose of it. (Hear, hear.) He thought this was a very sufficient reason for seeking a new Act. (Hear, hear, hear.)

Mr. SAINTSBURY hoped the heads of the new Bill would be read.

The CHAIRMAN read them accordingly. The first clause repealed the clause in the previous Act respecting the accommodation of carriages in Fenchurch-street, and of carts in Crutched Friars. The second authorized the purchase of property for improving the entrance to the station. It was explained, that this referred only to one house, as mentioned in the Report, and that if there was objection from any quarter, that clause would not be pressed. The third clause authorized the borrowing, according to Parliamentary usage, of 66,000*l.* on debentures, now that 200,000*l.* had been realised by shares. It was stated, that it was not contemplated that the whole of that amount would be required, although it was thought better to take power for it at once. The next clause referred to the collection of rates at the Brunswick Pier, Blackwall, respecting which it seemed that the present state of the law left the Company in some difficulty, and it was considered but right that the Railway Directors should be armed with power against the owners of steam-boats for any arrears of wharfage dues. The next clause related to the sale of surplus land, and the last had for its object the removal of the restrictions now imposed on the Company of not running their trains on Sunday further into the City than the Minories station.

The mention of this last clause elicited considerable applause.

Mr. SAINTSBURY inquired if the Directors apprehended any opposition to the Bill, particularly as to the last clause.

The CHAIRMAN said, they had had no intimation of any intended opposition, and he really could not see from what quarter it could come.

A PROPRIETOR inquired the estimated value of the surplus property of the Company.

The CHAIRMAN had already stated, that on the 31st of December last, the unsold property was valued at 70,000*l.*; since that time they had sold a portion of it amounting to 12,000*l.*, and it was an interesting and gratifying fact, that some of the lots thus disposed of, brought double what they had been "bought in" for on a previous occasion, thus showing that nothing had been lost by a little delay. (Hear, hear, hear.)

Mr. BIGG regretted that the Directors had deviated on this occasion from their usual practice of giving a tabular statement of the disbursements during the half-year, as distinct from the aggregate of the amounts previously expended. In consequence of that omission, it was utterly impossible to say whether the sum of 500*l.*, which had been stated at a previous meeting as the probable weekly expenditure of the Company had been found sufficient, or whether it had been exceeded. He hoped, therefore, that for the future, the accounts would be presented in the same shape as in August last, as thus not only giving a more lucid statement, but as being more in conformity with the accounts of other Railway Companies. He was sorry that there should have been so loose an agreement, if he might be pardoned the expression, with the contractors for the machinery. (Hear, hear, hear.) He was aware that an action on a case for damages might be sustained, but in contracts of this kind it was usual to insert a penalty, and it was to be regretted that the agreements in question had not been more carefully drawn. He must say that he viewed with considerable apprehension the Company's Bill now before Parliament. (Hear, hear, hear.) The clause as to borrowing was, he thought, objectionable. Although the proprietors might not be called upon to advance further capital by shares, yet, as had been remarked by an honourable proprietor, the result was the same if the available receipts were to be reduced by the payment of interest on loans. (Hear, hear.) Unless good reason could be shown for such an application to Parliament, he doubted the propriety of committing the power to any body of Directors, however able, or however honourable they might be. He greatly deprecated these frequent applications to Parliament. (Hear, hear.) He saw that there had been paid to the Company's Solicitors not less a sum than 22,000*l.* for law charges, in addition to 53,000*l.* expended in obtaining the Company's Acts of Parliament. (Hear, hear, hear.) He found, too, that while at the last meeting the Solicitors' charges had been stated at 12,329*l.*, there was now an additional payment of 10,000*l.*, making altogether about 22,330*l.* paid to these gentlemen, which he must say was not only an extremely large item in itself, but which proved, that at the period of the last meeting very heavy arrears had existed, which ought then to have been laid before the proprietors. (Hear, hear.) He took leave to say, that it was the enormous amount of lawyers' bills and Engineers' charges which neutralized—or rather, he should say, paralized—the prosperity of Railway Companies. (Hear, hear.) It was not that a line might not come up to the estimates of its promoters in regard to the extent of traffic, but these enormous charges increased the original cost and consequently reduced *pro tanto* the per centage divisable among the proprietors. (Hear, hear.) It was a subject which required the most careful attention of the Directors, and although he would not dissent from a liberal scale of remuneration, it was indispensible that the greatest economy should be observed. He was sure that the Directors of this Company enjoyed, and deserved to enjoy, the confidence of their constituents, and he trusted they would not take offensively anything that he had ventured to throw out. (Hear, hear.) It was not his intention to oppose the adoption of the Report, but he would again express a hope that the tabular statement to which he had referred would be resumed on the next occasion. (Hear, hear, hear.)

The CHAIRMAN spoke his own sentiments, and he was sure, expressed likewise the sentiments of his colleagues, when he said that they were not only willing, but anxious, that the utmost latitude of remark and discussion should be allowed; and feeling that they had performed their duty, they could not and would not take offence at anything that might be said by honourable proprietors. (Hear, hear.) With respect to the tabular statement of accounts, he had made a memorandum to the Secretary, and on the next occasion the suggestion of the honourable proprietor should be attended to; while, in the meantime, with respect to the present accounts, any proprietor might readily obtain, at the office, the fullest information as to the details of the several items. (Hear, hear, hear.) With regard to the new Bill, it would be difficult for the Directors to comply with both the suggestions of the honourable proprietor. The honourable proprietor deprecated—and so did the Directors—frequent applications to the legislature, and yet he appeared to suggest the postponement of the clause for authorizing the borrowing of money, whereas the Directors were of opinion that it was desirable to take advantage of the present opportunity, and hence the clause referred to had been introduced. (Hear, hear, hear.) The item paid to the Solicitors was unquestionably large, but when the meeting reflected that there were upwards of 1,300 properties to purchase, and that titles to these had to be prepared and proved, they would see that legal expenses must of necessity have been incurred. The Directors had scrutinized these accounts most closely; nay, they had done more, they had submitted them to the scrutiny of two eminent authorities, and he held in his hand a statement from Mr. Freshfield and Mr. Maynard, certifying that the account of the Solicitors was fair and right. His colleagues and himself regretted that the amount was so large, but he should not be doing justice to his own feelings nor to the gentlemen who acted as the Company's legal advisers, if he did not state most distinctly that the Solicitors had taken no advantage of the Company,

Digitized by Google

and that in his opinion the charges were, under the circumstances, excessively moderate. (Hear, hear, hear.)

Mr. HENNELL said, there was no notice in the Report as to the occurrence of accidents on the line. He thought it ought to be known to the public that travelling by the Blackwall Railway was not attended with danger.

The CHAIRMAN had great satisfaction in stating that they had carried nearly 3,000,000 passengers without the slightest accident to any one of them. (Hear, hear, hear.)

A PROPRIETOR wished to have some further information relative to the working of the line.

The CHAIRMAN said, Mr. Stephenson would give the fullest details in his power.

Mr. JEFFREY said, he saw an item in the accounts of 3,750*l.* for "rope;" was that from the opening of the railway?

The CHAIRMAN—No.

Mr. ROBERT STEPHENSON said, he was glad the question respecting the rope had been put, as it gave him an opportunity of mentioning two or three facts, which he thought would go far to allay, if not entirely to remove, the apprehensions entertained on this point by some persons deeply anxious for the success of the Blackwall Railway. They were all aware of the novelty of the application of steam power, as now in daily and successful use on the Blackwall line, and probably some of them were acquainted with rumours that had been circulated to the injury of that system—rumours which had reached his own ears, and, as he had reason to know, had reached the ears of other parties likewise, thus giving rise to the apprehensions already alluded to, and causing them to doubt the expediency of the plans which had been adopted. For his own part, he had seen no reason to alter the opinion which he had held from the first, of the propriety and policy of the existing mode of working the line by stationary engines. He had always deemed it essential that on short railways in the immediate neighbourhood of London, the intermediate traffic should be brought into account, and the results of the working of the Blackwall Railway proved that he was correct. When they considered that upwards of one-half of the large number of passengers conveyed was due to the intermediate stations, it would be allowed that the plan which had been adopted for securing that part of the traffic was a judicious plan. (Hear, hear.) In fact, if the Blackwall Railway had depended solely on its through traffic, it would have been a hopelessly ruinous concern. (Hear, hear, hear) He had no hesitation in saying that he was satisfied with the working of the line. The rope, it was true, had had occasioned him no little anxiety, and he was sure the meeting would sympathise with him, when they regarded the gigantic character of the machinery employed, and the novelty of its application. (Loud applause.) He would admit that the rope occasionally broke, but not so frequently now as had been the case. Since the commencement of the present year not more than twelve or fourteen breakages had taken place. [The CHAIRMAN—Only nine.] Allow, however, that the number of breakages was twelve. Since the beginning of the year, the number of journeys performed between London and Blackwall had been 6,000, thus giving an interruption by the breakage of the rope to about 1 train in 500. Even a contingency like that was matter of regret, although it was gratifying to know that the delay to the passengers on such occasions did not, on an average, exceed 20 minutes. As regarded the future, he hoped and believed, that the breakages would, in a short time, not occur to more than to 1 in 1,500 or 2,000 trains, and his reasons for thinking so, were these: The proprietors were aware that at first they had commenced with a hempen rope. His attention was soon called to wire-rope, of which there was a variety of kinds, and having had no previous experience in the matter, he had recommended the Directors to make trial of the whole of them. The result had been the selection of a species of wire rope, an improved wire rope he would call it, which had not broken once in four months, and only once during the last six months. He thought this fully justified what he had stated as to future contingencies of breakage. (Hear, hear.) The objectionable wire rope would soon be removed from the line, probably in the course of three or four months. It would be needless to remove it at once, as a good deal of it was at present serviceable, although he believed the principle upon which it was made was objectionable. The improved wire rope to which he had referred, would, he had no doubt, answer every expectation. As related to the conveyance of goods, it had been stated at the last meeting that the arrangements for that purpose would not occupy much time, and in truth he could have laid before the Directors plans that might, ere now, have carried that object into effect. The matter had, however, received his most anxious attention, for he had felt that as soon as facilities were provided, there would be a large goods' traffic upon the line, and it was desirable that the machinery should be as perfect as possible. The machinery for this purpose was like the other machinery to which he had alluded, of a most gigantic and novel character, and he thought it better to hesitate for a month or two, so that it might be rendered as efficient as possible, rather than hurry it forward. (Hear, hear.) The machinery which he had now secured would answer the purpose well, and would be easily kept in repair, so that, as had already been said, the extra expense of conveying goods would be inappreciable. (Hear, hear.) With respect to the contracts for the machinery, the Directors had felt that as it was of an entirely novel character, it was desirable that he (Mr. Stephenson) should give the order to whatever parties he might deem most likely to execute it with satisfaction, and Messrs. Ellis and Noton had accordingly been selected. The novelty of the work rendered alterations necessary as it proceeded, and although he by no means entirely exonerated the contractors from blame, he could well appreciate the difficulties of their position, and therefore he did not consider them so highly culpable as some of the proprietors seemed to suppose. (Hear, hear.) He had had much to do with contractors for machinery, but in his experience he had never known an instance in which a contractor would submit to a fine in the construction of work of which he had had no previous example. He, himself, never would do so, and therefore would never bind down others. (Hear, hear.) If they were so bound down, they would not undertake such works except at an enormous cost, so that the Company must pay either "in malt or meal." (Hear, hear, hear.)

A PROPRIETOR inquired, when the arrangements for the carriage of goods would be completed.

Mr. STEPHENSON said, they would be completed in about six weeks from the present time.

Mr. WHISHAW inquired, whether the rope was not at present partly of hemp and partly of wire.

Mr. STEPHENSON said, the rope was now entirely wire rope. From facts that had come under his notice during the past year, or rather during the last 18 months, for from the first the subject had received his most careful attention, he believed that the expense of the rope would be about 2,000*l.* a year.

Mr. WHISHAW inquired, whether the conveyance of goods would increase the expense of the rope, or from the additional weight, render it more subject to breakage.

Mr. STEPHENSON said, certainly not. (Hear, hear, hear.) He might add, that no case had occurred of the rope having broke from the weight of the load. (Hear, hear, hear.)

Mr. THOMSON HANKEY moved the adoption of the Report, which he said he highly approved of, and he thought almost every gentleman present would be of the same opinion. (Hear, hear.) He was glad that some of the questions, which had been so satisfactorily answered by the Chairman, had been put—in a few of them he had himself been anticipated. Others of the questions had convinced him that it was impossible, at a public meeting like this, to go into details, and how injudicious it would be to tie the Directors down to a specified course of conduct in every particular. For his own part, he felt, and he believed the proprietors at large felt, the greatest confidence in the Directors. (Hear, hear, hear.) They had had very many difficulties to contend with, yet they had brought the undertaking into a position which augured well for its future success. He thought this might be looked upon as the first moment at which the undertaking could be considered as fairly afloat. (Hear, hear.) This was the first summer in which they could have reasonably looked for their due share of traffic; and if such traffic came—as he was sure it must—it could not fail to render the undertaking as profitable to the proprietors, as it was, and would be, extremely beneficial to the trade of London. (Hear, hear, hear.) He had much pleasure in moving that the Report of the Directors be adopted.

Captain PAGE said, he fully concurred in what had been said by the last speaker, and would therefore second the motion.

Mr. WHISHAW begged, before the motion was put, to say that notwithstanding the lecture which had been read to them by the honourable proprietor who had moved the adoption of the Report, he (Mr. W.) should, as an independent proprietor of the Company, put whatever questions he might deem likely to elicit information. ("Hear, hear," from the Chairman and Directors.) He was not about to interfere with the department of Mr. Stephenson, respecting which explanations had already been given, but he would offer a remark or two upon a matter with which they all were familiar, namely, the accounts. He would premise that no one could have greater confidence than himself in the zeal and integrity of the Directors. (Hear, hear.) The manner more especially in which the Chairman had, with courtesy and kindness, answered the questions that had been put to him, deserved the thanks of every proprietor, but at the same time he (Mr. Whishaw) felt it to be his duty not to flinch from investigating fully and minutely the affairs of the Company. (Hear, hear.) The present condition of the undertaking might be satisfactory enough to those who had purchased their stock at its present low price in the market; but when he knew that very many proprietors had paid 25*l.* per share; and when it was borne in mind, that for four or five years they had received no return for their outlay, and had moreover been subjected to the wretchedness of seeing their property depreciated to the extent of 50 per cent. on the original cost; when these things were taken into consideration, he did not think that there was much cause for congratulation, either in the Report of the Directors or the present condition of the undertaking. It should be remembered, too, that the present dividend would be paid upon 24,000 only out of the total number of 48,000 shares, so that if previous to the next meeting the business of the Company did not increase the present dividend of 2*l.* per cent.—for to *that* only did it amount—would be reduced to 1*l.*, as upon twice the number of shares would it then have to be paid. He had no hesitation in saying, that the state of the accounts was most unsatisfactory. (Hear, hear, hear.) Items were lumped together, which ought to have been kept separate, and there were no scrutineers of their accuracy—no go-between, if he might so phrase it, between the proprietors and the Directors. (Hear, Hear.) For his own part, he should never rest satisfied, till he saw auditors appointed, not by the Directors, but by the proprietors, to institute the strictest investigation into every item of expenditure, so that there might be no collusion nor suspicion of collusion between the auditors and the Management. He begged to be understood as not imputing to the Directors any wish to conceal any matter connected with the finances of the Company, but to avoid any suspicion of such a thing, he thought they ought to accede to the reasonable and righteous proposition of appointing creditable and competent persons to investigate the accounts, and under their own names, to certify their accuracy. He was not aware, not having much experience in the matter, whether such auditing as he recommended, was customary in commercial

Digitized by Google

companies, but he knew that in every department of the Government service, whether the accounts related to 100*l.* or 1,000,000*l.*, they were strictly and rigidly examined. The same held true with respect to charitable institutions and literary associations, and what was good for one must be good for the other. (Hear, hear.) There were in the accounts several items which, in his opinion, required further explanation. For example, there was an item of 11,931*l.* charged to the revenue account for "wages and salaries to superintendent, piermaster, station clerks, porters, conductors, enginemen, ropemen, wharfmen, signalmen, carriagemen, and ticket collectors." (Hear, hear, and a laugh.) Now, he would ask any gentleman who had not any particular feeling in the matter, whether it was not right that this multifarious item should be given more in detail. (Hear, hear, hear.) Then again, there was an item of 1,438*l.*, charged for "office expenses, viz., rent, taxes, furniture, printing, stationery, salaries to Secretary and clerks, and *contingencies*," besides another item of 720*l.* "for *miscellaneous* expenses," and although he could not discern the distinction between contingencies and miscellaneous expenses, he must say, that 720*l.* was too large an item to be passed without knowing in any way what it comprised. (Hear, hear.) As to the constitution of the Board of Management, in looking at the list of Directors, of whom he believed there were ten, he found that four of the number were likewise Directors of the Westminster Bank—a number which he thought much too large, as it was quite impossible, in his opinion, that the gentlemen referred to could deal fairly between the two Companies, the object of the one being to get as much interest on loans advanced as they could, and of the other to pay as little as possible. The only other point to which he would advert was, the nomination of a new Secretary. In common with the Directors, he deeply regretted, and he was sure the proprietors generally would regret, that the undertaking was about to lose the benefit of the zeal, ability, and courtesy of Mr. Warmington. (Hear, hear.) He spoke what he himself felt, and he doubted not that others felt the same, when he said that he cordially regretted Mr. Warmington's retirement, although they had the pleasure of knowing that that gentleman was thereby promoting his own interest. (Loud applause.) He trusted that the Company might be fortunate enough to secure a worthy successor to Mr. Warmington; and as the proceedings of another Board of Directors in a similar case had been very unsatisfactory, he should be glad to know what were the intentions of the Directors on this subject.

Mr. HANKEY explained, and disclaimed all desire or design of lecturing the proprietors. The questions put were most proper questions, although he thought the explanations which some of them had called forth, proved that it would be better not to hamper the Management by tying them up too closely on matters of detail. (Hear, hear, hear.)

Mr. STOCK bore testimony to the great merits of Mr. Warmington during the time that he (Mr. Stock) had had a seat in the Direction. He had recently had occasion to inspect the Company's books, when he found them in such an admirable condition as to be most creditable to the Secretary and his assistants. Under these circumstances, he did not think it necessary that Auditors should be appointed. [The honourable proprietor was proceeding to describe the origin of the Company, and the rivalry of another project, when the meeting showed unequivocal signs of impatience, and he resumed his seat, after again speaking of the abilities of Mr. Warmington.]

Mr. ECCLES fully concurred in all that had been said as to the talent and courtesy of Mr. Warmington. There could, he thought, be but one of two reasons why that gentleman had retired—he was dissatisfied either with the situation or the salary.

The CHAIRMAN said, the honourable proprietor had made two guesses, and in both he was wrong. (Hear, hear.) The Secretary left the Directors with regret, and so far as they individually and the Company at large were concerned, they parted from him with regret. (Hear, hear.) They had lived in the utmost harmony with each other, and should, he had no doubt, have continued to do so for the next twenty years. The fact, however, as had already been explained, was, that Mr. Warmington's prospects elsewhere were better, and no salary that the Company could reasonably offer him would tempt him to resign these prospects. (Hear, hear.) He thought they had no right to pursue this matter further. (Applause.) With respect to what had fallen from another honourable proprietor, as meetings like this ought always to be conducted with good temper, he should not comment upon the harsh expressions which had been made use of, such as "collusion," or suspicion of collusion. The Directors were conscious that they did not deserve, and therefore they would not appropriate to themselves, such imputations. (Hear, hear, hear.) The Directors were large shareholders in the railway—he believed they held about one-sixth part of the entire stock—and therefore were as much interested as any other proprietors could be in securing good and economical management. If the Directors had thought that the appointment of Auditors was desirable, or likely to prove beneficial, they themselves would have nominated them; but what, he would ask, were Auditors to do? It would be seen that upwards of 11,000*l.* had been paid as wages for labour. Could any Auditors say whether too many or too few persons had been employed, or whether the wages of this engineman were too high, or of that guard or porter too low? (Hear, hear.) The only duty which Auditors could perform would be, to see that the items of account were correctly added up, and he himself could vouch that they were so. In fact, he felt it right—not because the Directors had any idea that it was necessary, so far as they themselves were concerned, but in duty to the book-keepers—to invite the proprietors to look at the state of their accounts. (Hear, hear.) He believed he had now referred to every point that had been touched upon.

Mr. WHISHAW—The appointment of a new Secretary?

The CHAIRMAN was not able to give any definite answer on that point. In fact, the Directors had had the matter under consideration, but had not as yet come to any decision.

After some further conversation, the motion for the adoption of the Report was carried unanimously.

A motion for the payment of a dividend of 10s. per share on the 24,000 original shares, was likewise carried unanimously.

A motion for the re-election of the three retiring Directors named in the Report having been made,

Mr. GEORGE RENNIE, M. P. (a Director) said, he embraced the first opportunity that had presented itself, after his election to a seat at the Board, to return his best acknowledgments to his co-proprietors for the honour they had done him. He would assure them, that he would use his utmost endeavour to discharge efficiently the duties of his office. (Hear, hear.) At the time of his election the Chairman had stated that he (Mr. Rennie) was likely to scrutinise the affairs of the Company. He was happy to find, that there were others disposed to pursue a similar course, for he did not think that, as Directors, they had cause to fear the strictest investigation. (Hear, hear, hear.)

Mr. SAINTSBURY jocularly alluded to a hostile correspondence which has recently appeared in the daily newspapers, between Mr. Borthwick, M.P., and Mr. John Robertson, remarking that he had feared they would have had on this occasion to fill another vacancy.

Mr. JOHN ROBERTSON (a Director) replied in the same strain, observing that as he was not the gentleman referred to, he stood in no danger from Mr. Borthwick's hostile attitude.

The motion was carried unanimously.

Mr. ROSKELL returned thanks for his colleagues and himself.

It was stated in answer to a question that the dividend would be payable on the 15th of March.

Captain K. SMITH, in a few appropriate remarks, moved the best thanks of the proprietors to the Chairman and the Board of Directors.

Captain PAGE seconded the motion, which was carried by acclamation, amid applause.

The CHAIRMAN made a suitable acknowledgment, observing that no zeal should be wanting on his own part, or the part of his colleagues, to bring the railway to a prosperous issue.

A vote of thanks to Mr. Warmington was likewise carried by acclamation.

Mr. WARMINGTON returned thanks. He could not, he said, but feel grateful to the Directors for the notice so flattering to his feelings, which they had introduced into the Report, and for the kindly approbation which the proprietors had been pleased to bestow on his services, he begged to return his heartfelt thanks. (Much applause.)

The meeting then broke up.

LONDON GRAND JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the proprietors of the London Grand Junction Company was held on Monday, at the offices of the Solicitors, Messrs. Sweet and Co., 6, Basinghall-street, for the purpose of submitting to the shareholders the Directors' Report, and a statement of the accounts.

Mr. FISH took the chair.

The SECRETARY read the Report, which merely stated that three Directors went out of office by rotation, but were eligible for re-election, and that the accounts were,—cash paid, 84*l.* 4*s.*; cash in hand, 3,925*l.* 10*s.* 7*d.*; together with various amounts for interests, &c., leaving a balance in the hands of the Company of 4,007*l.* 7*s.* 11*d.*

The CHAIRMAN said, they would perceive that in the Report they had been as brief as possible, inasmuch as they had nothing to say. They were determined to use economy in everything; and at the next meeting he expected to have to submit further reductions in the expenditure, as the rent would be reduced, together with the Secretary's salary.

The SECRETARY, in answer to the question, said that 1,510 shares had been forfeited, and that there were 7,600 *bona fide* shares on which the calls had been paid up. The original number of registered shares was 9,360.

A PROPRIETOR inquired if there were any new features in the Company.

The CHAIRMAN said, they had talked about new features so long that they did not wish anything more on the subject.

A PROPRIETOR said, he understood that the Birmingham Railway Company were about to remodel their station.

The CHAIRMAN said, he supposed that by remodelling was meant taking in the other side of the yard It had been reported that the Northern and Eastern Railway Company were coming near to King's Cross, and that it was their intention of going to the north of England without taking the Birmingham line. They (the London Grand Junction Railway Company) had been invited to join this scheme, but they were averse to going into new expenses.

The CHAIRMAN, in answer to a question from a shareholder, said they were getting 5 per cent. for their deposits in a joint-stock bank. He then moved that the Report be received and adopted, which was carried.

The CHAIRMAN then moved that certain shares declared forfeited at the last meeting be confirmed, which was carried.

The then Directors were then re-elected, and thanks having been voted to the Chairman, the meeting separated, having sat twenty minutes.

NORTH MIDLAND RAILWAY COMPANY —GENERAL MEETING.

[From the *Leeds Mercury* of this day.]

The eleventh half-yearly general meeting of the proprietors of this railway was held at the station, at Leeds, on Saturday last, and was attended by 130 shareholders.

The proceedings occupied from one o'clock till five, and of course involved a wide field of discussion. In order, however, to avoid entering into useless detail, we have endeavoured to retain those facts, which, from their practical importance, and as bearing upon the present and future prospects of the undertaking, will be most acceptable to the proprietors and to the public generally.

R. Frost, Esq., Secretary, having read the official notice convening the meeting,

The Chairman then opened the business by saying, that although the half-yearly accounts presented the gratifying result of an increase of traffic, both with respect to passengers, goods, horses, parcels, and cattle, yet he confessed that it would have given him great pleasure, if on that, the first half-yearly meeting after his appointment to the honourable situation which he had the honour to hold, he could have stated to the meeting a still more gratifying result, that the increase had not only been considerable in every item, but enough to enable them as Directors to recommend a dividend on the half-year, equivalent to that which was declared on the whole of the preceding year. But he thought they could hardly reasonably expect that the proceeds of a single half-year should be equivalent to the whole of the preceding year, and the shareholders would bear in mind that the dividend made last half-year was equal to the whole amount of the two preceding ones. He had no doubt that some persons might have been sanguine enough to suppose that the same dividend which the Directors had made before they would be able to continue now? but when they considered that the dividend now proposed was only for half a year, and that the last one was for a whole year, it could scarcely be expected that they should be able to recommend the same amount at the present meeting. There was one very gratifying fact to which he wished to allude, namely, the present half-year's surplus balance was equal to the former whole year's surplus, deducting the additional charge made in the permanent way. (Hear, hear.) Before he entered into further detail, he would allude to a circumstance calculated to inspire the deepest regret in the minds of all whom he had then the honour to address. The proprietors would probably be aware that within the last six months the Company had sustained a loss of two of its most able and energetic supporters, the one by resignation, and the other by the hand of death. With reference to their late Chairman, he should have felt considerable embarrassment in alluding to him, if he did not know that he was addressing gentlemen who who had often been witnesses of the great ability with which he conducted the business of the Company—(Hear, hear)—the high honour and integrity manifested by him in all the multifarious transactions in which he had been engaged, and also the very extensive knowledge which he possessed on all matters relating to railway traffic. (Hear, hear.) With respect to the late Deputy-Chairman, he felt that none but those who had been his immediate colleagues in the Directory, could judge of the laborious services which he had rendered to the Company. He (Mr. Newton) would venture to say, that no member of that Board had given more time and attention to the business of the Company, or evinced a greater anxiety for the prosperity of the undertaking than that lamented gentleman. (Hear, hear.) On all occasions he sacrificed his own time, his own interests, to those of the Company, and his services were entitled to the grateful recollection of every proprietor. Almost the last public act he performed was to attend a meeting of the Committee, thus showing that his latest hours were devoted to the interests of the Company. (Hear, hear.) It now only remained to be seen whether the services of the humble individual who then addressed them, and his excellent colleague Mr. Titley, would be satisfactory to the proprietors, and what was more important, whether they would tend to the greater success of the undertaking. Time only could show that. There was another point to which he would briefly advert, namely, the change in the office of Secretary. The proprietors would be aware that Mr. Patteson was a most active and zealous supporter of the Company, and very instrumental in the formation of the line. He continued Secretary up to the period when it was found necessary for the interests of the Company to remove the Board of Management from London to Derby; and the adoption of that alteration being incompatible with his own arrangements, he came to the determination to resign his post. The office was now filled by Mr. Frost, and he (Mr. Newton) trusted that he would prove a most efficient and valuable officer to the Company. Having said thus much, he would refer to what more immediately concerned them, namely, the financial state of the undertaking. If the proprietors would compare the current half-year's receipts with those of the last half-year, whether in passengers, parcels, or cattle, it would be found that there was an increase of 14,385*l.* 8s. 10d.; and if they compared the increase in goods and minerals, there would be found an increase of 11,813*l.* 1s. 3d., making a total increase of 26,118*l.* 10s. 1d. (Hear, hear.) This increase, he was happy to say, had not only been unaccompanied with any increase of expenditure in the locomotive and coaching department, but they would find on a comparison of the present half year with the preceding one, a diminution of 1,098*l.* 10s. 8d. had taken place in the locomotive department. In the coaching department there was also an apparent diminution, but it was not a real diminution, as it arose from an alteration in the mode of charging the police wages. In the present statement of accounts, an entry was made of police wages, amounting to 779*l.* 16s. 1d. The reason he adverted to the matter was this:—If the proprietors had seen, as he hoped they had, the Report of the Committee of Investigation, as to what reduction could be made in the expenditure, it would be seen that they had already succeeded in effecting a diminution of 420*l.* under the head of police. But they would naturally say—"How comes it, if you have reduced this branch of expenditure by 420*l.*, that the entry for policemens' wages now appears to be 779*l.*, whereas before the reduction last half year, the amount was only 589*l.*?" That might seem to be an odd kind of reduction, but it had arisen in this way. A portion of policemen's wages had been charged in the former half-year to the coaching department, whereas the Directors thought it ought not to be so, but that it should be kept as it now was, a separate and distinct item, under the head of "police wages;" so that which appeared an inconsistency was capable of this explanation. With respect to the other items, he thought it would be unnecessary to go through them, because those relating to rates and taxes and the government duty were not under the control of the Board. With regard to the reductions which the Investigation Committee had been able to make, he would state them in a very brief manner. The total amount of reduction which the Directors were about to make, without, as they thought, injuring the efficient working of the line, would amount to the annual sum of 13,101*l.* (Hear, hear.) Of that sum, so far as they could at present distinguish, 7,501*l.* applied to the capital account, and 5,500*l.* to the maintenance of permanent way. The Directors were still going on with this reduction, and before the next half-year, they thought they should be very nearly able to carry out the whole of the reduction intended to be made. (Hear, hear.) Having said thus much, he would allude to one point in the Report, which had been the subject of much discussion—he alluded to a memorial presented to the Board by the owners of coal and minerals on the line, for a reduction of the rates on the carriage of those articles. They said that they could not compete with the parties who had coal conveyed by canal unless reduction was made. The Directors appointed a Committee to report upon the subject, and the engagement which the Board had entered into with the coal proprietors was this. The latter said, and with some force, that as the North Midland Company obtained coke much cheaper than on the Midland Counties' and the Birmingham and Derby lines, they ought to have the benefit of such advantage. The Directors had made the most minute calculations with respect to this item, and although the reduction of one penny per ton per mile which they had made, and which they proposed to try as an experiment for a year, had only been in operation for the last two months, yet it appeared that two-thirds of that penny was a clear profit to the Company. (Hear, hear.) They had found, therefore, on investigation, that they were already gaining considerably by this alteration, and that they were now receiving for the carriage of coals and minerals at the rate of 68*l.* per week, and if the traffic increased, as they expected it would do, the calculation was that the amount would increase to 118*l.* per week. (Hear, hear.) If at the end of the year, they found it was not a beneficial traffic for them to carry on, the Directors would certainly be amenable to the proprietors, if they continued it on the same terms; and on the other hand, if the traffic was large and the profit considerable, they would be equally amenable if they gave it up. (Hear, hear.) Having stated these facts, he would not then enter into further detail, because every proprietor would have an opportunity of making any inquiry he thought proper in the course of the discussion. [Mr. Newton concluded by calling upon the Secretary to read the Report.]

Mr. Frost accordingly read the Report, which was as follows:—

DIRECTORS' REPORT.

"The Directors have great satisfaction in being able to report to the proprietors, the continued increase in every branch of the revenue. In the coaching department, for the half-year ending the 30th of June, 1841, the receipts were 66,465*l.* 15s. 5d., including cattle; whilst on the last half-year they amount to 30,851*l.* 4s. 3d.; and on the goods traffic, for the same periods, the receipts have increased from 22,817*l.* 3s. 1d. to 34,680*l.* 4s. 4d.; making the augmentation between the half-years ending 30th June and 31st December, 1841, 26,198*l.* 10s. 1d.; which affords ample proof that the increase of the traffic on the North Midland Railway has been regular and certain, notwithstanding the unexampled distress which still continues to pervade the commercial world.

"On comparing the revenue accounts of the two last half-years, it is a gratifying fact, that the above additional receipt has been made under a diminished expense of 1,098*l.* 0s. 9d. in the locomotive, and 2,594*l.* 17s. 3d. in the coaching departments; from which last-mentioned sum, however, a deduction must be made of 887*l.* for a portion of the police wages which was included in the coaching department of the half-year ending 30th June, 1841, but has been transferred to the more appropriate and distinct head of police wages in the last half-year.

"In order to place the finances of the Company upon a sound basis, the Directors are of opinion, that a fund should now be raised out of the revenue, to provide for the depreciation and renewal of the locomotive and other stock, and they recommend, that from the balance of 41,675*l.* 13s. 10d., the sum of 3,000*l.* should be set apart for that purpose. This amount may appear small, on comparison with the valuable stock of this Company, though it is believed to be nearly equal to the actual depreciation which has taken place, after due allowance is made for the extensive improvements, as well as substantial repairs which the stock has undergone. The Directors, however, will not incur the risk of misleading the proprietors by the idea that so small a fund may be sufficient in future.

"After this sum of 3,000*l.* is deducted from the balances, the Directors recommend that a dividend be paid of 30s. upon 100*l.* shares, 15s. upon 50*l.* shares, and 5s. upon the third shares; the dividend to be paid on Tuesday, the 15th day of March.

"The amount to be paid to this Company for the conveyance of the mails, has long been a question at issue with the Post-office authorities; and having been referred to arbitration, the award was delivered a few days ago, establishing a rate much lower than had been calculated upon, and consequently been taken credit for, in former accounts. This has caused a reduction from the balance brought forward, from

Digitized by Google

the accounts ending 30th of June, 1841, of 2,705*l.* 2*s.* 6*d.*

"A memorial having been presented to the Board of Directors by the coal and mineral owners on the line, asking for a reduction of the tolls, it was referred to a Sub-Committee, who, after a very careful investigation of the case, and a reference to the course adopted by adjoining railways, recommended that the request should be complied with, as far as regards the toll on coal, limestone, and ironstone, reducing the rate from 1½*d.* to 1*d.* per ton per mile, but that no alteration should be made in the toll on coke, lime, or iron, the reduction only to be tried as an experiment for one year. As the reduction only took place on the 1st of November last, it is impossible at present to come to a decided opinion as to its policy; but the results already ascertained, lead to the confident hope that the alteration will tend to develope a highly valuable source of traffic.

"The Directors have to Report, that since the last half-yearly general meeting, the plan of concentrating the offices and management of the North Midland Railway has been carried into full operation, by the removal of the Secretaries' offices from London and Leeds to Derby, where all the heads of departments are now performing their respective duties; and whilst it must be evident that great advantage will be derived from this change, the Directors cannot but regret exceedingly, that it has caused the retirement of their late Chairman, George Carr Glyn, Esq., who held that honourable station from the first formation of the Company, the principle of this concentration would have been weakened by Directors residing at a distance from the line; and, under this conviction, Mr Glyn resigned his seat at the Board. The loss of his valuable services can only be correctly appreciated by those who have had the satisfaction of being associated with him.

"The Directors have the satisfaction to state, that at their earnest solicitation, Mr. Newton was induced to accept the vacant chair, and his residence at Derby will greatly increase the value of those services which have hitherto been so properly appreciated.

"Mr. Patteson, your late much respected Secretary, has also withdrawn from the North Midland Company rather than make Derby his future residence. His valuable services were zealously engaged in the first formation of the Company, and during the construction of the line; since which he has, by the removal of the offices from London to Derby, completed the arrangements for the more effectual working of the traffic.

"Shortly after these voluntary retirements, a melancholy event occurred, which your Directors announce with sincere and deep regret—the sudden and lamentec death of James Hubbarb, Esq., Deputy Chairman of the Board of Directors, the loss of whose valuable services will be long and severely felt.

"It is some satisfaction to state, that the office of Deputy Chairman has been accepted by Mr. Titley, of Leeds, in compliance with the unanimous solicitation of the Directors.

"The working expenses of the railway are already in such a course of reduction, as it is believed will soon place; the North Midland in favourable comparison with other lines; this has been a measure exceedingly difficult to execute, without incurring some risk of infringing upon the equitable consideration due to the working staff. The Committee to whom the investigation of the Company's affairs was entrusted, have taken great pains to do justice both to the proprietors and officers of the establishment; and their endeavours having been such as to meet the full approbation of the Board, it is hoped they will be found practically useful and satisfactory. A copy of their Report will accompany these proceedings.

"The application now making to Parliament for an Act to continue the railway from Darlington to Newcastle by the Company already formed in conjunction with the eastern lines, will secure a large increase to the traffic of the North Midland, and will probably be the ultimate means of extending a railway communication to Edinburgh—a subject of general interest to all who are sensible of the great importance of completing the best line of communication from London to Scotland.

"Notwithstanding the last winter has been most unfavourable to the maintenance of permanent way, that of the North Midland, as well as the works, is in a highly satisfactory state, none of the slopes or embankments having given cause for apprehension of any extensive failure. This proof of the excellent and substantial construction of the works, is attended by the gratifying reflection that no accident has happened to any passenger during the last seventeen months.

"From the diminished consumption of coke, and important mechanical improvements now in the course of adoption, it is not unreasonable to hope that the future cost of locomotive power will be considerably reduced.

"The following Directors, namely, Mr. Tee, Mr. Childers, M.P., and Mr. L. K. Hall, retire in rotation, under the provisions of the Act of Parliament, and offer themselves for re-election."

Leeds, Feb. 26, 1842.

Report of the Committee appointed to inquire into the Expenditure of the North Midland Railway Company, and to ascertain whether any, and what Reduction, can be made therein.

"The Committee, after a careful inspection of the several departments at Derby, Leeds, and Sheffield, and of the road stations, as well as the Secretary's office in London, arrived at the conclusion, that a considerable number of the Company's servants might be discharged, without detriment to the efficiency of the establishment; but this admission must be qualified with the remark, that many of them have been engaged in a work which is chargeable to capital, and therefore could not be considered as forming a part of the permanent staff of the Company.

"The Committee are of opinion, that some of the salaries were fixed on a higher scale than either the qualifications required, or the services exacted from the parties seemed to warrant; and whilst they admit the propriety of a liberal remuneration, believe that a lower scale of salaries, with a progressive increase, commensurate with increasing duties and the duration of service, would have been better suited to the financial circumstances of the Company, and equally conducive to the procurement of eligible officers.

"Although there is now some difficulty in remedying this original mistake, the Committee feel it to be an imperative, but unpleasant duty to suggest, that if the allowance to the Directors were reduced to one-half of the present amount, and 10 per cent. were deducted from the salaries of all officers which exceed 110*l.* per annum (the office of station master at Derby excepted) and 5*l.* per annum from all salaries amounting to 110*l.*, some alleviation of the pressure upon the receipts of the Company would be effected, and a disposition shown to afford the shareholders the largest amount of immediate return for their capital which present circumstances permit. A saving of expense would hereby accrue of 1,588*l.* per annum.

"The first office which was inspected by the Committee, was that of the stores department at Derby. As this is the great depot for stores, the Committee are of opinion that no reduction could be advantageously made there; but they feel satisfied that the office for stores at Leeds, which is maintained at an annual charge of 375*l.* 8*s.* (inclusive of rent) might be dispensed with, and the whole business of this department transferred to Derby, without any addition to the number of clerks there; the store-keeper employed in the locomotive department at Leeds, taking charge of the stores at the latter place.

"The next department which came under the notice of the Committee, was the locomotive, at Derby. The Committee recommend that the number of workmen employed in this department should be reduced, on or before the 30th of June, so as to make a reduction of expense to the amount of 3,174*l.* per annum.

"The Committee next turned their attention to the department of the police. This consisted of five superintendents, and sixteen perambulating police, exclusive of the permanent police at the Leeds and Derby stations. The Committee recommend that the five superintendents should be discharged, and their duties transferred to the inspector of the line—an arrangement which has since been acted upon, causing a diminution of expense of 420*l.* per annum.

"The next object of supervision was the coaching department at Leeds. The Committee recommend that the superintendent of the station should be dispensed with, as well as the cashier, making a saving of 400*l.* per annum; but they are unable to advise any reduction in the carrying department, either at Leeds or Derby.

"Connected with the coaching department at Leeds, the Committee advert to the same department at Derby, though not inspected at the same time, chiefly for the purpose of explaining why a greater force of porters and policemen is employed in the latter station than at Leeds. This excess, amounting to fourteen, is occasioned partly by the night duty required at Derby, and partly because three-fourths of the trains from and into the Derby station have three times the number of carriages attached, as compared with the trains from and into Leeds; whilst some of the men are occupied exclusively in cleaning and taking care of the carriages of the Midland Counties', and of the Birmingham and Derby Companies, each of which bears a portion of the expense in conjunction with the North Midland. The Committee recommend the dismissal of the clerk to the cashier, and five porters, making a saving of 344*l.* per annum.

"The next object of notice was the station at Sheffield, where, however, no further alteration appeared practicable at present, beyond the consolidation of the two offices of first and second clerk, which, being united in one person at a salary of 200*l.* per annum, will make an annual saving of 150*l.*

"The Committee next inspected the offices of the architect and resident Engineer. The salaries attached to the former, including 25*l.* for rent, amount to 1,103*l.* 12*s.* per annum; and the latter to 3,343*l.* 10*s.*, inclusive of 50*l.* for rent. The Committee recommend the entire discontinuance of the first, and a reduction in the last to the extent of 2,000*l.* or thereabouts, on or before Lady-day, 1842.

"The Committee have next to observe that five Assistant Engineers were employed in the Company's service at the period when their investigation commenced; and though notice had been given that their salaries would be reduced to one-half from the 1st January, 1841, yet the Committee conceived that one Assistant Engineer would suffice to execute all the duties remaining to be performed, till the unsettled contracts were completed, and that the remainder might be discharged, so as to effect a saving of 2,250*l.*; a reduction which has since been nearly effected.

"The Committee are of opinion that the weekly wages of the porters, police, and flagmen were fixed too high, and should be reduced from 19*s.* to 18*s.* a week; and that a similiar reduction of 1*s.* a week from the wages of the guards would place them upon a footing of equality with the average weekly wages paid to the same servants by other Companies, whilst the saving of expense would amount to 416*l.* per annum.

"It appeared to the Committee that the Secretary's office in London, so long as it continued there, could not be effectively carried on with any diminution in the number of clerks, but they had no doubt that the entire business of that department (in which opinion, the Secretary himself concurred) would be more beneficially transacted at Derby. This removal has subsequently been effected, and a saving has accrued by the consolidation of the offices of the two Secretaries; by a reduction in the number of clerks, and by the relinquishment of the London offices, of 885*l.* per annum.

"The whole of the above-mentioned reductions amount to the annual sum of 13,101*l.*

"And now, having completed, to the best of their judgment, the duty imposed upon them—a duty neither grateful to their feelings, nor light as to the time, anxiety, and labour expended upon the investigation—the Committee close their Report, assuring the Directors, that they have been guided in all their recommendations by the necessity of a strict observance of economy, so far as it could be secured without impairing either the efficient working of the line, or the convenience and accommodation of the passengers; or without risking the public safety.

"Revised—December 27, 1841.

"WM. LEAPER NEWTON, Chairman.

"June 5th, 1841."

(The Accounts next week.)

Mr. ALSTON, of Liverpool, said that as his name was appended to the Report, he thought it his duty to give some information to the proprietors, on certain points which were of considerable importance for them to be made acquainted with.

The CHAIRMAN suggested to Mr. Alston the desirableness of a resolution being proposed for the adoption of the Report, before going into a general discussion.

Mr. ALSTON bowed to the suggestion.

Mr. BAINES, in moving a resolution to the effect that the Report be adopted and circulated among the shareholders, said, that at that stage of the proceedings he would not interpose any observations. The very lucid explanation already given by the Chairman was sufficient to direct their judgments, and he would therefore merely move the resolution, and then the gentleman who had previously risen would have an opportunity of making any obser-

Digitized by Google

ations upon it. [Mr. Baines then moved the resolution.]

Mr. HODGSON, of London, seconded the motion.

Mr. ALSTON then rose, and said that his object, as one of the Auditors, was to put the proprietors of the North Midland Railway in possession of certain information which himself and his colleague in the auditorship, Mr. Brancker, had acquired by a great amount of labour and attention; and he hoped, therefore, that the meeting would indulge him for the short time he should occupy their notice. (Hear, hear.) The first matter which had engaged their attention was the difficult question with regard to the carrying of coals. When they found that the rate of carriage was to be reduced 50 per cent.; and when they knew that in many cases the scale was much lower than the charge on other roads, they naturally directed their attention to ascertain, if possible, whether any benefit was arising to the Company from this traffic or not. It was a very curious fact that until he heard the Report read, he could not meet with one individual who could tell him whether any profit was made by the carrying of coals. What he had been very much struck with was, that notwithstanding so great a boon had been given to the coal proprietors, the whole revenue arising from the traffic for six months was such a bagtatelle. What was the proportion of coal traffic for six months? £2806. How was it possible that a large profit could be derived from so very small in amount? Seeing, then, that the reduction was 50 per cent., it was a natural thing to inquire what had been the increase in quantity. He held in his hand a statement showing that on the 23rd of October last, the quantity of minerals conveyed was 949 tons, including everything. On the 30th of October, the number of tons was 2159, no very great increase in proportion to the reduction of charge; on the 29th of January, 2,295 tons were conveyed; and in the week ending the 5th of February, 2,472 tons, all proving, as he said before, that the whole emolument from this coal traffic was a very bagatelle. Their great object, looking at the undertaking as men of business, ought to be how much they could diminish the expenditure, and how much they could increase the traffic and improve the revenue every year. (Hear, hear.) The Auditors thought it a matter of the utmost importance to reduce the frequency of empty carriages, which, of course, added to the cost of making the line. It appeared to them, that by offering too many inducements to persons to travel by third-class carriages, instead of by the first or second, they, in point of fact, offered a bounty to men to travel in a manner unworthy of their characters. (A laugh.) When he saw gentlemen who ought to pay three-pence per mile, only paying a penny, he thought it was below their characters, and he for one did not wish to be led into temptation. (Laughter.) The Edinburgh and Glasgow third-class carriages only travelled once a day, and unaccompanied by any other. The next point to which the Auditors had directed their attention was, the necessity of security being exacted from all persons officially employed on the line, so as to save the Company from the liability of suffering loss, as in the case of Mr. R. Holmes, and also in another instance, which he was exceedingly sorry to say had occurred at Derby only a few days ago. (Hear, hear.) The defalcation in the latter, amounted to 130*l.* Another point was the very heavy locomotive stock in proportion to the length of the line. It appeared from a statement before him, that the value of this stock was 220,000*l.* The Directors, however, had determined to reduce it prospectively, by appropriating 3,000*l.* annually to the depreciation account, but still it was quite clear to him, that next year they ought to make a much larger appropriation on that account. The next subject he would refer to was, the stores department; they found this department a very important one; the expense in salaries varied each year from 20,000*l.* to 24,000*l.* (Hear, hear.) The value of the stores on hand at that moment, was about 10,000*l.* In placing this department under a different system, he thought, for instance that no payment should be made on account of the stores, beyond 10*l.*, unless signed by the Secretary; and he also thought that everything above 50*l.* per annum, should be contracted for and paid for in cash, so as to be done as cheaply as possible. (Hear, hear.) Another subject which had occupied the attention of the Auditors, was the very great expense incurred by printing the lists of proprietors. The document was certainly a very valuable one, but he should propose that it only be printed once in two or three years, when such changes might intervene as would render their announcement useful and beneficial to the public. (Hear, hear.) The last point to which he would advert was one of the utmost importance, and of a corresponding difficulty: it was this—what were likely to be the prospective expenses of the road? How much more was likely to be required to complete the line? The estimate, he was happy to say, was only 120,000*l.*, but still it was as vague as possible; he thought it much too low, and it would certainly have been very desirable, if an estimate on which reliance could be placed, had been before them of the prospective expenses for the next six months. (Hear, hear.)

Mr. BRANCKER, of Liverpool, said that he quite concurred in the observations which had fallen from his friend, Mr. Alston. With respect to the coal traffic, he had the authority of Mr. Booth, Secretary of the Liverpool and Manchester line, a gentleman of great practical experience, to the effect that unless it paid 2d. per ton per mile, it was not worth having, and even at that it was very questionable. He (Mr. Brancker) had asked him what he thought of the charge of 1d. per ton on the North Midland line, and he replied—"Take the wear and tear into consideration, and you have nothing left; in fact, you do not get your own money back again" (Hear, hear.) There was not a single line about which the Auditors had inquired that conveyed coal for less than from 1¾d. to 1¾d., and to 2d. per ton. Mr. Booth had further said, that he had had several applications made to him by coalowners, for a reduction in the charge, and the uniform answer he returned was, that if they did not think proper to pay 2d., they were quite at liberty to go off the line, and get their coals conveyed by some other means. On the Leicester and Leamington road, at the commencement of their traffic, the Company charged 2d. per ton, on a line costing 8,000*l.* per mile, including engines and all working materials. For the first ten years their dividend rose from 7 to 8 per cent. In 1840, the charge was reduced to 1¾d., and what was the consequence? Why, that last year the dividend fell to 6 per cent. (Hear, hear.) Now 6 per cent. was only a net profit of 3,900*l.*, for conveying 93,000 tons of coal and minerals. (Hear, hear.) He thought that the sooner the contract into which this Company had entered with the coal proprietors was put an end to, the better. He did not know whether he should be in order to move a resolution to that effect, but he certainly intended it. He wished to ask the Chairman whether he considered the contract imperative upon them, or whether they had not power to abandon it at the end of six months, if at that period it did not answer their expectations?

The CHAIRMAN replied, that the Directors had made no contract, but the engagement was binding on every principle of honour and integrity. The memorial from the coalowners was assented to after mature deliberation, with the pledge that the experiment should be tried for one year; and on the faith of that promise, many of them had extended their operations in such a way as not to justify the Directors in abandoning the engagement till the expiration of the year.

Mr. VICKERS, of Sheffield, begged to ask Mr. Alston, as one of the Auditors, whether he had ascertained the receipts derivable from the different class carriages, and the average number of persons travelling by each?

Mr. ALSTON answered, that as regarded the receipts, he had not learned the facts alluded to; but he had ascertained that the third-class carriages were filled; the second were moderately filled, and the first were often empty.

The CHAIRMAN said, he was not aware whether it would be quite regular then to answer the questions which had been put, but if it was, he should be perfectly ready to do so. He could assure the proprietors, that in his judgment, nothing could be more kind and conciliatory, than the manner in which the observations that had fallen from the two Auditors, had been spoken. (Hear, hear.) He could also assure them, that the Directors were not only willing to carry out the suggestions recommended, but that they were doing so now. With respect to persons travelling by third-class carriages, who could very well afford to pay first-class fares, he quite admitted that too much advantage was offered by the cheapness; but how were they to help it? The Directors had themselves, on the suggestion of the two Auditors, determined to take off the third-class carriages from the quick trains running in the middle of the day; but at the same time he would tell them very plainly, that he was not quite persuaded, that the change would answer the purpose of the Company. (Hear, hear.) The North Midland line was not to be compared with the Grand Junction, or the Liverpool and Manchester lines. Both the latter had numerous passengers by the first and second class carriages, but the former was greatly dependant upon the third-class carriages. (Hear, hear.) Would the proprietors, therefore, wish to deprive themelves of the benefit they were now obtaining, unless it could be clearly shown that the present classification was a loss to them? (Hear, hear.) Then with regard to the matter of security, he had no hesitation in saying, that that security had not been carried out to the extent to which it ought to be. Those persons who filled the most responsible offices under the Company had given security, and it was now required of those filling subordinate offices; and in future, it would he required to the extent which the Auditors suggested. (Hear, hear.) With regard to the stores, he was free to confess, that the department had not had that superintendence which its importance required, and which the Directors were as desirous as the Auditors it should have. This had arisen from circumstances over which the Directors had no control, but he hoped that in future the management would be placed on a better footing. Perhaps the most important question that had been put, related to the amount required for the completion of the works. Nobody could be more anxious than the Directors to give information on the subject, if they could get at it, but he did not know how it could be accurately given, and for this plain reason—the contracts were not yet wound up. The contractors had disputes with the Company in one or two instances, they claiming a much larger amount than the Directors considered was due to them. Now, until these disputes were settled, the Directors could not know more than the proprietors themselves; all he could venture to say was, that if the contracts were taken to be as they stood at present, it would certainly not require much more than 120,000*l.* to complete the whole. (Hear, hear.) They did not at present, nor could they ever for one moment, contemplate the possibility of any further demand being made, beyond what the Company had ample funds to cover. (Hear, hear).

Mr. BUCKLEY, of Manchester, expressed a hope that the engagement entered into with the coal proprietors would be allowed to have a fair trial. The North Midland line was a mineral one from beginning to end, and if they threw obstacles in the way of the conveyance of minerals, they certainly would not bring capital upon it. (Hear, hear.) He would beg to throw out a suggestion, whether it would not be desirable to appoint some experienced person to have the superintendence of the entire line, who should be responsible to the proprietors for its being efficiently worked. (Hear, hear.)

Mr. MEEK, of York, remarked with reference to the conveyance of minerals, that the Durham Railway Company, who derived their income from such traffic, were now realising 15 per cent. on the paid up capital, and they only charged from 1d. to ¾d. per ton per mile. (Hear.) The North Midland line was essentially a mineral one, and if the Company did not meet the coal proprietors in a liberal manner, how could they meet encouragement? He

Digitized by Google

hoped the experiment would have a fair trial, because otherwise how would they be able to test whether a penny per ton per mile would leave any profit or not? (Hear, hear.)

Mr. BARTON called the attention of the Board to a charge of 4,658*l.* 6s. 4d., under the head of engineering department, and wished to know if a reduction of expenditure had not taken place?

The CHAIRMAN replied that the Investigation Committee proposed to reduce the expenses of the Resident Engineer's department to the amount of 2,000*l.* Those pertaining to the Resident Engineer had already undergone a reduction of 2,250*l.*

Mr. STOCKS, of Halifax, inquired the number of Engineers employed by the Company, with their salaries?

The CHAIRMAN said, that at present there was only remaining a Resident Engineer, with the clerks in his office, and one Assistant Engineer. The latter office would be entirely abolished on the 25th of March next.

After some other unimportant questions on the same subject, the Chairman was about to put the resolution, when

Mr. J. E. TAYLOR, of Manchester, suggested that it should be altered for the receiving of the Report, instead of its adoption, as the latter course would preclude proprietors from making observations upon it.

Some conversation passed between the Chairman and Mr. Taylor on this point, which is not material to be noticed.

Mr. J. RAND, of Bradford, said he considered that the Report which had been read, was a plain and unvarnished statement. There was no mystification about it. It might be a matter of regret that the Directors were not able to recommend a dividend of more than 30s. per share, but there was no attempt to make the undertaking appear better than it really was; and he believed no shareholder would leave the room without being able to ascertain exactly and satisfactorily the real position in which he stood. (Hear, hear.) With respect to the third class carriages, he would venture to say that, considering the locality of this railway, and the class of population through which it ran, they ought to pause before taking any step whatever calculated to throw the slightest impediment to the filling of those carriages. (Hear, hear.) It might be a question whether or not that mode of conveyance should be attached to every train which left the station, but he was persuaded that they would inflict a positive injury on the railway if they imposed the obstacles to which he had alluded. (Hear, hear.)

Mr. STOCKS put a question with regard to the price paid for coke by the Company, which led to the answer, that an experiment was now making to supersede coke by the use of coal, and the parties engaged in it were not without hope that it would be successful. Should their expectations be realized, the change would be a most important one in favour of the Company.

The CHAIRMAN then put the resolution, which was adopted unanimously.

Mr. BRANCKER moved—"That on and after the first of November, 1842, the charge for conveying coal on this railway be increased to 1½d. per ton per mile."

Mr. MONTGOMERY, of Glasgow, seconded the motion.

Mr. BAINES begged to suggest to the gentlemen who had moved and seconded the resolution, whether they were not in reality, superseding the functions of the next half-yearly meeting? (Hear, hear.) It might happen that before the period of their next assembling, facts would present themselves with reference to the profit desirable from the carriage of coal, which would induce the shareholders to take a different view of the matter, than in the absence of any private information at present, they might be disposed to do at that meeting. There was a course which it might be very wise to take, namely, that at the next meeting a return should be presented to the shareholders, of the charges made by other railways similarly circumstanced, for conveying coal. (Hear, hear.) This would be an exceedingly useful species of information, as it would enable them to see how, in comparison with the charges of other lines, their own would apply.

Mr. BAXENDALE, of London, observed, that if they compared the price charged by Railway Companies for conveying coal, with those made by Canal Companies, the former would be found to be high instead of low. He thought it was quite impossible at the end of three or six months to form any opinion as to what was likely to be the ultimate benefit of the engagement entered into with the coal proprietors. (Hear, hear.)

Mr. TITLEY expressed a hope that Mr. Brancker would withdraw the motion. The object of every shareholder must be to develope traffic upon the line, and he thought if the motion were adopted, it would have the contrary effect. (Hear, hear.)

Mr. ALSTON thought that no argument could be more delusive than to talk about developing traffic, by carrying that which paid no profit at all. If, however, the Directors felt that they were pledged in honour to a certain line of conduct, he was not the party to wish them to violate an engagement. (Hear, hear.)

Mr. TITLEY felt that there was another reason in favour of the withdrawal of the motion. He conceived that its adoption would tend to paralise the exertions of the coal proprietors, because they would say—"Oh, we'll bring no more coal on to this line, because we see the charges are to be raised next November." (Hear, hear.)

Mr. BARTON thought that so far from paralyzing the exertions of the coalowners, it would have the reverse effect of inducing them to send all the coal they could into the market, while the charge for conveyance was at the present low rate.

Mr. HARRISON, of Darlington, was of opinion that the charge proposed to be made by the North Midland Company, so far from being a low rate, was a high one, at all events for a great distance, On the whole, however, he was inclined to think that a "graduated scale" ought to be adopted, in proportion to the number of miles. [This allusion appeared to suggest to the minds of the shareholders, the "sliding scale" with reference to another article of equal importance with coal, and it was followed by a burst of laughter, which was indulged in for some time.]

After some other observations, Mr. Brancker, seeing that the general feeling of the meeting was against him, agreed to withdraw his motion, but intimated his intention to renew it at the next half-yearly meeting.

Mr. VICKERS introduced the question which he mooted at the last half-yearly meeting, namely, the importance of ascertaining whether the revenue of the Company might not be materially augmented, by a reduction of the fares paid by the first and second class passengers. After quoting a number of particulars in support of this opinion, he moved the following resolution:—"That a Committee of five proprietors be appointed to ascertain the rate of fares which, in their opinion, will raise the largest revenue to the Company."

The motion was seconded, but we did not perceive by whom.

Mr. BARTON moved as an amendment—"That the consideration of the question be adjourned for six months."

We believe this amendment was not seconded, but on the motion made by Mr. Vickers being put from the chair, at a subsequent stage of the proceedings, it was declared to be negatived, though, from the confusion which prevailed at the time, occasioned by parties leaving the room, it is impossible to say what proportion the majority bore to the minority.

Mr. GLYN (late Chairman to the Board of Directors,) then proposed the following resolution:—"That the three Directors, Mr. Tee, Mr. Childers, and Mr. Hall, now going out by rotation, according to the provisions of the Act of Parliament, and who have offered themselves for re-election, be now appointed." In proposing this resolution, Mr. Glyn alluded with feelings of deep regret to the loss of his excellent and talented colleague in the Directory, Mr. Hubbard, Deputy-Chairman, than whom, he with truth observed, no man could be more devoted to the service of the Company, or more anxious for the prosperity of the undertaking in which they were embarked. He concluded by observing, that a resolution of the nature he had moved, was a matter of course on all Railway Companies; but if, as he did not anticipate, opposition should be offered, he should have an opportunity of reply.

Mr. BAXENDALE seconded the motion.

Mr. R. RODGERS, of Glasgow, moved as an amendment the election of Mr. Brancker, in the place of Mr. Childers.

Mr. MONTGOMERY seconded the amendment.

The moving of this amendment led to a long and somewhat warm discussion, into which, however, it could answer no useful purpose to enter.

Mr. GLYN objected to the election of Mr. Brancker, not because he was not well qualified both by the stake he had in the undertaking, and by his high character, to fill the office, but on principle; because he resided out of the locality of the railway, which was the very objection urged by Mr. Brancker himself, and by Mr. Alston, at the last half-yearly meeting, to the Board of Management being stationed in London, because the Chairman and Secretary, both living in the metropolis, were deemed "non-residents." Mr. Glyn also pointed out the importance of re-electing Mr. Childers, who, as a member of Parliament, would have an opportunity of resisting the obnoxious clauses proposed by Mr. Gladstone, M.P., with reference to railways, and which, if successful, would seriously affect the interests of this Company. It was also contended by Mr. Hodgson, of London, that the proposition of Mr. Rodgers amounted to something like a vote of censure upon the late Board of Management, for whilst the Chairman and his colleagues had resigned office in consequence of a strongly expressed opinion, that not residing in the locality of the railway, they were ineligible for the post, it was now proposed by the very parties who urged the objection, to appoint a gentleman against whom the same principle would apply with equal force. It was also argued, as an objection to Mr. Brancker, that he was interested in the extension of railway communication to Scotland, by what is called the western route, in opposition to the one in connection with the North Midland and York and North Midland lines. Mr. Brancker flatly denied the truth of this imputation, by declaring that he had no interest whatever in any line of railway, save the North Midland and the London and Birmingham. In favour of the appointment of Mr. Brancker, it was stated by Mr. Barton, that the former gentleman had 30,000*l.* invested in the North Midland line, whereas Mr. Childers had only 2,600*l.* On this account, and because the time of Mr. Childers would be taken up in attending to his Parliamentary duties, he considered Mr. Brancker much better qualified to fill the office of Director. In answer to the argument relative to the number of shares, Mr. Hodgson remarked, that the Act of Parliament fixed the qualification at ten shares, and, therefore, it was useless to have a limit, unless it was properly observed.

After observations from Mr. STOCKS, Mr. HUDSON, Mr. RAND, and others, who strongly recommended the withdrawal of the proposition, which course was declined by the mover and seconder,

The CHAIRMAN proceeded to put the amendment, which was negatived by a large majority. He then put the original resolution, which of course was carried.

A vote of thanks was given to Mr. Alston and Mr. Brancker, the Auditors, with an earnest request that they would continue their valuable services, to which request both gentlemen expressed their willingness to accede.

A similar compliment was also proposed to the Directors for their important and able services, and it was adopted amidst acclamation.

A vote of thanks to the Chairman, for his gentlemanly and impartial conduct in presiding, terminated the proceedings, and the meeting broke up at five o'clock, having lasted four hours.

LONDON AND CROYDON RAILWAY.

To the Proprietors of the Croydon Railway.

GENTLEMEN,—I am unwillingly induced to address a few remarks to you on the present unfavourable position of the affairs of your railway.

In making the following observations, I am anxious it should be understood that I am in no way condemning the management of your Chairman or Directors. We are now in the third year of the working of the railway, and I fear that the line, so far from having hitherto realised a profit, has—if proper allowance be made for two years and a-half depreciation of stock, and interest on bonds—been worked at a positive loss, interest on bonds having been carried to capital account, and the important item of depreciation of stock not even named. It is very evident, then, that all the talent of your Board has failed in bringing the concern into profitable operation. We are even worse off than the two famed Kilkenny cats, who ate themselves up in their terrific encounter, leaving only their tails behind them. But we have not even a tail to look to, the proceeds of our line being devoured by its expenses.

It is surprising that so short a line should absorb some 40,000*l.* a-year in working it; but it appears it cannot be done for less,—undoubtedly the toll payable to the Greenwich Company is an additional burden, but I really think this is but a secondary cause. I will now point out what I think is the remedy for this unpromising state of things.

First. Make an offer to the Brighton or Dover Company to take your line, either jointly or separately, *on equitable terms*, which, if declined—

Secondly. Request the Greenwich Company to modify their toll, to enable you to work your line with a profit, which, if also declined, I then say, *suspend all further traffic on your line*, as far as you are concerned, and I am prepared to prove that you will be considerable gainers by so doing, which I think the following facts will show. I find there travel on your railway about 600,000 passengers annually, exclusive of the third-class; and I have good authority for stating, that about half this number travel either to or from London Bridge to Croydon. Supposing the Brighton Company (who would doubtless be very happy to do so) to take these passengers, you would receive from them as toll 12,500*l.* a-year, without a farthing expense on your parts of carrying them, and the endless &c., &c., &c., to which should be added toll on merchandise, say 2,500*l.*; and by disposing of stations down the line, and other sources, I consider you would get about 3,000*l.* more, which together makes a total of 18,000*l.*, from which must be deducted maintenance of way, about 4,000*l.*, and interest on bonds, 6,000*l.*, which will leave a net tangible profit to you of 8,000*l.*, exclusive of course of Brighton and Dover tolls.

As it may not be possible for me to be present at the approaching meeting, I trust some influential proprietor will be induced to take the matter in hand.

I am, Gentlemen, your humble servant,

A CROYDON SHAREHOLDER.

Exeter, Feb. 23, 1842.

LONDON AND GREENWICH RAILWAY.

To the Editor of the Railway Times.

SIR, — Your correspondent, "Mentor," may amuse himself with his long-winded letters; but he may rest assured that the Directors of the Greenwich Railway Company will not be induced to *alter* the tolls until they have demonstrated that a toll of 4½d. may produce *less* than a toll of 8d. It is true that they led the proprietors to believe that the larger toll would produce half as much again as the smaller; they submitted that as so many passengers yearly at 3d. each gave a receipt of 6,000*l.* per annum, it followed that the same number annually at 4½d. would give a receipt of 9,000*l.* per annum; the proposition was undeniable, and the proprietors raised the further capital for the additional lines, regardless of the warning of the Croydon Company, who pointed out to them that the annual receipts depended on the number of passengers, the number of passengers on the magnitude of the fares and the magnitude of the fares on the Croydon Company; and too surely have they made good their position—the fares were increased, the number of passengers were *decreased*, and the annual receipts at 3d. each, were *reduced* to 4,000*l.*!

The Greenwich Directors, not taught wisdom by experience, cling to their old logic—if so many passengers annually, at 3d. each, produce 4,000*l* per annum, the same number, say they, at 4½d. each, will give 6,000*l.* per annum. True! But again they are cautioned by the Croydon Company: the number of the passengers depends upon the magnitude of the fares, the fares *will be raised*, and you will find that the number of passengers will be thereby reduced to one-half of the present number, and one-half of the present number, at 4½d. each, you will also discover will produce an annual receipt of *only* 3,000*l.* When this has been reduced, as lamentably obvious from actual experience, (at a loss of some further thousands of pounds,) as the former warning of the Croydon Company, then, and not till then, will the Greenwich Directors abandon their logic, and *alter* the tolls.

I am, Sir, your constant reader,

SPECTATOR.

THE TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—I concur entirely in your expression of regret, that the arrangement for the modification of the short traffic toll between the Northern and Eastern and Eastern Counties' Railway Companies, should not have been concluded; because I consider that such a modification, imperfect as it is, would have been highly beneficial to both Companies.

But, Sir, after having read so many disquisitions upon this subject in the pages of your journal, I am sorry to perceive how little of principle seems to have had place in the concoction of this proposed arrangement. It seems never to have been considered that any rule could be established by which to determine what toll should be justly payable by one Company, and receivable by the other; and what particularly strikes me is, that after the low rate of toll is agreed upon, with the condition of the greater number of passengers (to be induced by a lower fare) upon which the said toll is to be paid, no security is taken by the toll-receiving Company that the toll-paying Company shall not revert to high fares, and thus destroy the whole advantage which the former is to derive from the projected alteration.

The great desideratum in all such arrangements must be, that no exclusive advantage should be gained by either party, but that the profits of the traffic passing over two or more lines of railway, should be divided in some equitable proportion between the proprietors of each. Now, as the number of passengers must always be determined by the rate of fare, and as the Company charging the fare has a right to choose whether it will derive its income from a high rate levied upon small numbers, or a low rate levied upon large numbers; and as it is still a question of debate, and will always be in some measure dependent upon the peculiar circumstances of each particular railway, which of these two courses is likely to lead to the largest net revenue, it appears to me that a division of the *fare* charged per passenger is the only just method of arriving at a fair apportionment of the profits between the parties. Such a division would effectually secure the toll-receiving Company from any capricious system of charging to be adopted by the toll-paying Company; because if the latter should charge high fares, and thus limit the number of passengers, the former would be compensated at least to the same extent as the other, by the larger amount of the fare to be divided.

The next question to be raised is the proportion in which this division should be made. All railways may be supposed to have been constructed with a view to the traffic which their situation may be expected to command, i. e. to the *number* of persons likely to pass over them, and the fare such persons can be induced to pay; and the sum originally applied to the construction of each railway may be supposed to be proportioned to such expectations. But as passengers will not pay *individually* a larger sum on account of the greater cost of any particular railway, although they will, most probably, do so *collectively*, by coming in greater numbers, on account of greater facilities obtained by such cost,—it must be to these greater numbers, and not to a higher individual fare or toll, that recourse must be had, if at all, for remuneration of superior outlay.

This point disposed of, there would seem to be no other guide for an equitable division of the fare charged for the whole journey than the very simple one of the length of each line used in its course, deducting the expense of locomotive power over the line, upon which such power is not furnished, in favour of the Company by whom it is supplied.

I should hold, therefore, that in all arrangements between different Companies, the toll payable to each Company for passengers passing over its line from the railways of other Companies should be calculated at exactly the same rate per mile per passenger as that which is obtained by those Companies respectively from the passengers in question, after allowing for the cost of conveyance of such passengers over the line for the use of which the toll is paid.

I am aware, Sir, that there is nothing new in this position—nothing, in short, which I have not seen laid down in the correspondence between the Croydon and Greenwich Railway Companies, and in the pages of your journal; but, upon a subject of such deep importance to the railway system, I cannot think that the principles upon which tolls should be arranged can be too often explained, or stated in too great a variety of form.

I am, Sir, your obedient servant,

A RAILWAY DIRECTOR.

March 4, 1842.

NORTH UNION RAILWAY.

To the Shareholders in the North Union Line.

GENTLEMEN,—The time has now arrived when your attention ought to be directed to the best method of amalgamating your interests with those of the Lancaster and Bolton Companies. If this cannot *yet* be effected, you ought to endeavour to form *a close alliance* with those Companies, or to lease their railways. It is thus alone you can secure yourselves against that keen and *relentless opposition* which you must otherwise inevitably encounter on the completion of the Bolton and Preston Railway, and of the Junction line through the town of Manchester, a junction which, depend on it, will be made, ere long, in spite of all the efforts of interested parties to prevent it. The late unseemly differences with the Lancaster line ought to be immediately put an end to.

I am yours with respect,

TROS TYRIUSVE MIHI.

London, February 25, 1842.

ETHEROW VIADUCT ON THE SHEFFIELD AND MANCHESTER RAILWAY.

ON Thursday, the 17th instant, the foundation stone of this viaduct was laid by — Chapman, Esq., of Broadbottom, one of the Directors of this railway, in the presence of the contractor, Richard Hattersby, Esq., many of the resident gentry and others interested in this great undertaking, and a numerous body of workmen. The latter, and the different agents connected with the works, were afterwards regaled with a good substantial supper in the "good old English style." The length of this viaduct will be about 500 feet, and upwards of 130 feet in height. It will consist of three arches, the centre one being 150, and the others 120, feet each. The arches are to be composed of Memel timber, deals similar to those erected on the Newcastle-upon-Tyne and North Shields Railway. Joseph Locke, Esq., Engineer-in-Chief, and Alfred S. Jee, Esq., Resident Engineer.

2. *Minus* toll to London and Birmingham 31*l.* 15s. 6d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83¾+21+31.)

14. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

16. The 38*l.* 5s. 1d. from goods, &c. is for toll only.

17. Ten per cent. is the maximum dividend allowed by the Company's Act.

18. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of [illegible] On the quarter shares the dividend is 24.

mile, the seven miles of the Aylesbury line are included.

19. The dividend is from the opening, and on the old shares alone.

20. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

21. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

22. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

23. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

24. Including Toll, &c., from Sheffield Company.

25. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only. The 4,009*l.* 6s. 9d. are the receipts after deducting dividend is from the time of opening.

27. The receipts for goods, &c. include, carriages, 23*l.* 19s. 0d.; horses, 75*l.* 11s. 0d.; dogs, 1*l.* 15s. 6d.; parcels, 222*l.* 5s. 7d.; cattle, 12*l.* 16s. 0d.; corn, 22*l.* 16s. 0d; heavy goods, 461*l.* 19s. 4d.; coal, 114*l.* 19s. 1d.—Total, 936*l.* 1s. 6d. The dividend is from the time of opening.

30. The details of the receipts are as follows:—Passengers, 1,817*l.* 1s. 2d.; parcels, carriages, horses, and mails, 301*l.* 18s. 1d.; merchandise, 1,232*l.* 1s. 1d.; minerals, 239*l.* 7s. 3d.; cattle, 26*l.* 2s. 2½d.—Total, 3,616*l.* 9s. 9½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 98*l.* 11s. 8½d.

31. The receipts are after deduction of L. and M. toll.

32. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

33. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

34. The returns are inclusive of Man. and Bir. toll.

TO CORRESPONDENTS.

J. B.—*There is no Act of Parliament "for a railway from Exeter to Falmouth;" we wish there were.*

R. P.—*The particulars referred to are in the form of an engraving.*

One of Your Readers *wishes to know when the Birmingham and Derby dividend will be made payable.*

Reflector.—*We must refer our correspondent who adopts this signature to Mr. Aston, of the Birmingham Plate Company, who can give a more minute detail of the invention in question; we believe the light is produced with lamps with parabolic reflectors, similar to those used for light houses and floating light vessels, and that it has succeeded admirably when applied to railway carriages.*

The Greenwich Railway and Mr. George Walter.—*The letter of Mr. Walter, to which we referred last week, was in type, with some comments of our own, but at Mr. Walter's request we have cancelled both. Second thoughts are said to be best, and certainly we think Mr. Walter has, on every account, exercised in this instance a sound discretion.*

South-Western and Blackwall Railways—*The reports of the meetings of the South-Western and Blackwall Railway Companies, contained in our present number, were published in a second edition of our last number; but we now repeat them for the benefit of our ordinary subscribers.*

A Lover of Truth *(on the Sheffield line).—Would you have us give the Chairman the lie direct upon anonymous authority? Attach your name and address to the communication, and then we will consider as to its publication. The same to* **A Sheffieldite** *on the same subject.*

A Birmingham and Derby Shareholder.—*Our correspondent is quite right The fault was not ours. We gave the report as it was sent to us.*

Railways in Germany *and a second letter on* **Irish Railways,** *have been in type for several weeks; we hope to be able to find room for them in our next, as also for a leading article on* **Railway Communication with Scotland,** *which has likewise been in type for a fortnight.*

A Manchester and Leeds Shareholder *complains that the Managers of the Company have refused to supply him with a list of his co-proprietors, although he offered to pay the charge for making it out. He refers to Mr. Glyn's statement at the North Midland meeting in August last, to the effect that the shareholders had a right to such a list, and thinks the same course ought to be followed in the Leeds Company.*

W. B. M. *(Liverpool).—Yes; as you will see by looking at the figures.*

Birmingham and Derby Railway.—*The traffic returns did not reach us last week.*

P.—*We do not think that any good purpose would be served by occupying our space with predictions as to futurity, and we must therefore decline the communication, only regretting that our intelligent correspondent should, so far as we are concerned, have taken so much trouble to no purpose.*

Liverpool and Manchester Railway.—*We have to acknowledge the receipt of the packet of letters that have passed between Mr. Benton and Mr. Booth, with reference to a parcel lost or stolen on the Liverpool Railway, but, really, we have not yet been able to find time to give due attention to the matter.*

The Junction of the Manchester Railways.—*We have received several letters, which the publication in our Supplement will supersede. We would earnestly recommend to future correspondents on this topic to be as brief as possible.*

A Shareholder *(North Midland Railway).—If the omission referred to were really made, it could only be accidental. He will see that (thanks to the courtesy of a Leeds contemporary) we have reported the proceedings fully.*

Edinburgh and Glasgow Railway—*We have to-day given the traffic returns upon this line for the first six days only. We hope to be favoured with it weekly.*

An Old Subscriber *remarks upon what he terms the "ridiculous absurdity" of applying the title of "Esquire" to all Directors, Secretaries, &c., of railways, a title to which, he says, nine out of ten of them are no more entitled than they are to be ranked as Knights or Baronets; and he refers us to Johnson's Dictionary for an explanation If this be a fault, we, certainly, are less culpable than some of our neighbours, but after all it is scarcely worth notice. We do but follow the custom. Our friend says, it is "quite refreshing" to see that in the Edinburgh and Dunbar advertisement, inserted in our paper of last week, this "gross absurdity" is eschewed.*

"Law's delay"—Grand Junction Railway.—*We have seen the letters referred to, but do not intend immediately drawing our readers attention to them, under the hope that without our appearance in the field, the Company may alter their course, and settle the question. With respect to the odious charge of falsehood made by order against a gentleman of character so much above suspicion as the one upon whom it was directed, we certainly do feel astonished, that knowing the groundlessness of the accusation, a retractation has not long ago taken place. Of this more, however, shortly.*

The Croydon Railway Meeting.—*A correspondent requests us to hint to the Directors or Secretary of the Croydon Railway Company at the forthcoming meeting, to embody in their Report an inventory of the effective goods and chattels belonging to the Company, (which, he thinks, ought to be done by every Company once a year at least,) that the proprietors may know something of what they possess; viz, the number of engines and tenders, the number of carriages, distinguishing each class, luggage-waggons, barges, &c.—likewise if any houses or land unoccupied by the Company, where situated, whether let, and for what rent, and what is open for disposal in any manner.*

The iron firm who wrote to us a few weeks ago respecting the Continental railways, may obtain some information by application to our publisher, 122, Fleet-street.

Who may our **Constant Reader** *at Edinburgh be, who stands forward in defence of the anti-Sunday travelling agitators? Is he one of the gentlemen whom we have felt it our duty to notice in another part of our present number? His letter contains no argument, and can have weight only through the personal influence of the writer. Let him, therefore, append his name and address to it, and it shall be given unabridged.*

The **Midland Counties'** *Accounts are unavoidably postponed.*

TRAFFIC OMITTED LAST WEEK.

Glasgow, Paisley, Kilmarnock, and Ayr Railway.—*Week ending February 12, number of passengers, 9,539; receipt from passengers 521l. 2s. 8d.; goods, &c., 303l. 15s. 5d; total, 824l. 18s. 1d.—Week ending the 19th of February, number of passengers, 10,446; receipt from passengers, 561l. 17s. 9d.; goods, &c., 267l. 2s 9d.; horses and carriages, 71. 6s. 2d; total, 836l. 6s. 8d.*

THE RAILWAY TIMES.

SATURDAY, MARCH 5, 1842.

THE proceedings at the half-yearly meeting of the London and South-Western Railway Company will be found fully reported in another part of this day's journal. It will be seen that although from circumstances connected with the delay in bringing the Gosport branch permanently into operation, the expenditure of the Company was in some items very considerably augmented without any corresponding return, the aggregate expenditure has been somewhat reduced, while the revenue exhibits such an improvement as promises well for the future. The regularity with which the trains have for months past performed their journies, was alluded to by the gentleman who presided, and it gives us much pleasure to find that in this respect the South-Western Railway is second to few in the kingdom.

We could have wished that the Chairman of the Company had been "in his place" at the meeting—not that Mr. CHAPLIN did not acquit himself most admirably, but because we very much dislike to see the office of Chairman of a vast establishment like the South-Western Railway become a mere honorary sinecure. A Chairman, to perform his duties as he ought, must be frequently, we had almost said constantly, on the spot; whereas, on two successive occasions, and during the intervening months, Mr. GARNETT has been absent, we believe from England, certainly from Nine Elms. If profit or pleasure call Railway Directors elsewhere for so long a period, they ought, in our opinion, to resign their seats. It is quite clear that the number of South-Western Directors might be reduced by at least *one*, for if the affairs of the Company have been equally well administered during the Chairman's absence, as when he was present—and we have never had any reason to think that they have *not* been so administered—for what purpose should the proprietors retain a superfluous number of the Board? Mr. GARNETT's high respectability and influence would have been valuable to the South-Western or any other Company, while the project was in its earlier stages, even had he contented himself with merely lending the Management the sanction of its name; but now that his railway is finished, and in full operation—now that it is no longer of importance to attract subscribers by the most convincing of all arguments, the example of a man of intelligence and practical experience in matters connected with these undertakings—now that it is not necessary to influence members of Parliament, or protect the Company from the rapacity of landowners—*now*, there should be in the Management none but those who are willing *to work*, and whose other avocations allow them a reasonable time for the performance of their official duties. We mean no offence to Mr. GARNETT by these remarks. The precedent is highly dangerous, and it is for that reason that we denounce it.

It will be seen that Mr. CHAPLIN thinks the institution of a depreciation fund unnecessary. If the honourable Vice-Chairman speaks the sentiments of his colleagues, the South-Western Board stands, we believe, very nearly alone in their views upon this matter, but whatever reasons may exist for deferring the commencement of such a fund upon that line, we have little doubt that ultimately the same course will be followed there as in other Companies. The principle of a depreciation fund may be explained, we think, in a few simple propositions:—

A Railway Company having expended a given sum on their works must either let their railway at an annual rent, or expend a further sum on a working stock to obtain a profit.

This working stock constitutes a portion of the Company's capital, and is subject to a wear and tear, the annual average of which (from the nature of the machinery employed), there are at present no means of ascertaining.

The extent and character of the stock must, of course, be regulated by the work to be performed, but as no Railway Company can, in the first instance, ascertain what that work may be, and what the character of machinery best adapted to the object, so can no sum be assigned as the amount of capital required for this specific purpose.

The probability is, that every Railway Company will provide a considerable proportion of working stock which will be found practically useless, and of which the cost will therefore greatly exceed the intrinsic value.

The first three years' experience of the working of any railway, will, however, in most cases, furnish data by which the extent and character of the available stock may be determined, and a value (unavoidably arbitrary) may be then assumed as a standard for this portion of the Company's capital.

If a subsequent increase in the extent of the Company's operations require a corresponding increase in the extent of the working stock, such increase must be an addition to the integral standard.

Subject to this contingency, every sum ex-

Digitized by Google

pended for repairs, and every sum expended for replacement of working stock will then become a charge on income.

The amount of this charge will increase annually with the age of the stock, and assuming that all portions of it are subject to an average degree of work, the probability is, that each particular denomination will demand a simultaneous renewal, unless it be contended, contrary to all experience, that machinery may, by constant repairs, become eternal. Looking, however, to the fact that after a given wear and tear it will be less costly to break up old machinery and buy new, than to repair the old, and that invention is constantly at work to effect improvement, *he* must be a bold man who would advocate the monstrous proposition of an eternity for machinery.

The term of depreciation will vary in proportion to the state of repair in which the stock may be kept, but the principle of a limited existence will apply to all.

Hence it follows that the proprietors in the later years of the existence of the stock, will be liable to a tax for renewals which, as the wear and tear leading to this final result is progressive, should have been borne rateably by the proprietors of antecedent years.

But as the term of existence of stock may be prolonged, if it please Directors to sacrifice the permanent interests of the Company to the craving of shareholders for large dividends, the outlay for renewals may be too long deferred, and the injustice be aggravated.

Hence also railway Companies should early provide the means of spreading over a number of years, a charge which will otherwise fall partially on the income of future years.

This may best be done by the aid of a per centage for depreciation on the standard value of the stock, deducted from the half-yearly income of the Company in addition to the ordinary repairs; the per centage to be computed for each half year, after deducting from the standard value the previous half-year's deduction for depreciation, and adding the replacements.

The sufficiency of the per centage may be tested at intervals by actual valuations of stock, but no Company should ever be deterred by the apprehension that the rate of charge will be too high, since what they may lose in income, they will gain in capital. Above all, let no Company be misled by comparisons of stock, which bear no analogy to machinery. A carrier provides a stock of horses of all ages and all descriptions; his charge for replacement begins in the first year of his operations, and remains at a common average, because the mean term of existence of his horse is already ascertained.

The term of existence of a locomotive engine is undefined, but the engines provided by every Company will have about the same duration, if kept in an average state of repair. The remedy for depreciation is in the one case ready provided, in the other case it is to be created.

It is somewhat singular, that within the last few days, the question of appointing Auditors, should have been brought forward, at no fewer than three metropolitan railway meetings, namely, the Great Western, the South Western, and the Blackwall; although, perhaps, not at all singular, that at every one of them the proposition was successfully opposed. The arguments most frequently urged against the system of share-list auditing, are its alleged insufficiency, and the superiority of the existing plans of Directoral supervision. It seems to be forgotten that the introduction of the one practice need not supersede the continued use of the other. Directors might use the same vigilance as before—might display the same anxiety to economise the funds of their constituents, and yet the share-list Auditors exercise their functions ably and usefully. At all events, *no harm* could arise from it. Be it a useless form, surely proprietors may at times have their whims attended to. The very circumstance that Boards of Management oppose the nomination of Auditors unconnected with themselves, has a tendency to lead shareholders to suppose that investigation would not be palatable to them.

The exhibition made by Mr. LIGGINS, the Chairman of the Southampton Dock Company, was not very much to that gentleman's credit. There was a *spitefulness* in his manner, that would lead one to suppose he had met with some personal disappointment at the hands of the Railway Directors. His affectation of candour deceived no one; but, nevertheless, the Directors ought to feel obliged to him, since his carping and cavilling elicited facts that redounded very greatly to the honour of the Board, who it was shown had not only displayed a most commendable zeal, but had incurred personal liability, in their efforts to bring traffic to the railway. Could it be that in the breast of Mr. LIGGINS there still rankled the slight put upon himself and his co-Directors, in the message which he asserts to have been sent to him by Sir JOHN EASTHOPE, the late able occupant of the Chair, to the effect that if aid were expected from the Railway Company in the construction of the Docks, there must first be a clean sweep of the existing Management? Be this as it may, the oratorical display made by Mr. LIGGINS on Saturday, will not have a tendency to promote the interests of the Company over which he presides. The Southampton Docks are a noble undertaking, and the prosperity of the railway, and this, its neighbour and ally, is indissolubly associated with the prosperity of the town. The Dock Company have suffered much, and most undeservedly, from the attacks of foes; let us hope that the mischief will not be aggravated by the defence of injudicious friends.

THE peculiarities so prominent in the construction of the Great Western Railway have elicited no small censure from one party, and an equal enthusiasm of support from another. It is not our intention, on the present occasion, to pursue either of these courses, but simply to place on record a few facts deduced from the accounts submitted by the Directors to the late meeting, and which, by comparison with the working results of other lines, go far to prove that Mr. BRUNEL'S plans have, in practice, realised to a very great extent the theoretical anticipations of their advocates and admirers.

Let us take the two other great metropolitan lines which are opened throughout, namely, the London and Birmingham and the London and South-Western, and see how they stand the test of comparison with the Great Western. It is to be regretted, that from the differences which exist in the mode of making out the accounts of the several lines, it is impossible to contrast more than one or two items of expenditure; but these will, we think, be sufficient to show a decided superiority on the part of the Great Western Management.

And first, as to the cost of locomotive power. The usual mode of estimating the comparative working of railways, by a per centage on the gross receipts, is most fallacious, for *that* will vary upon every line according to the nature of the traffic, the rates charged, the cost of fuel, and many other circumstances. The only fair and accurate plan is, by looking at the mileage. Taking, then, the number of miles, as stated in the several Reports to have been run upon the three lines—the South-Western, the Birmingham, and the Great Western—and the several amounts set down under the head of locomotive power, we find, that while on the South-Western the expenditure has been at the rate of 1s. 7¼d. per mile run, and on the Birmingham 1s. 5¼d., it has on the Great Western amounted to no more than 1s. 2¼d. When the extraordinary calibre of the Great Western engines is considered, and the largeness of the item for coke, this result must be regarded as worthy of notice. It will have been seen, from the statement made in our last number by the Chairman of the North Union Company, that the cost of locomotive power upon that line exceeds 1s. 6d. per mile, *though the price of coke in that part of the country is less than half that paid by the Great Western Company*; and, if we are not mistaken, it is not long since the cost of power on the Liverpool and Manchester and Grand Junction lines was stated to exceed 2s. per mile.

Then as to maintenance of way, the comparison is equally to the advantage of the Great Western. Taking the data furnished by the Reports, we find that on the South-Western, under what is reckoned a very favourable contract, the maintenance has cost 160*l.* per mile; and on the Birmingham, which has been so long in operation, 204*l.*, including the Aylesbury branch, whereas on the Great Western and branches it is only at the rate of 130*l.* per mile! It surely cannot be that the maintenance of the whole of the Great Western line and branches is comprised in the item of 24,300*l.*, and yet one can hardly think that, had it been otherwise, the Directors would have failed to state, as in all other Companies has been stated, that only a portion of the maintenance had, as yet, fallen on the Company, and that in future half-years the disbursements under this head would be increased.

As respects depreciation, either the Great Western stock must be less liable to decay than that of other Companies, or the 20,000*l.* per annum which the Directors propose to set apart under this head will be very insufficient. The cost of the Great Western plant, namely, engines, carriages, waggons, &c., is upwards of 500,000*l.*, to be increased to about 550,000*l.*, as compared with the London and Birmingham, of 360,000*l.*, Grand Junction, 198,000*l.*, and South-Western 170,000*l.*, and yet while the Birmingham Company have found 30,000*l.* per annum inadequate on a capital of 360,000*l.*, the Great Western propose on an outlay of more than half a million, to set aside only 20,000*l.* A valuation of the Great Western stock prior to the next meeting would, we think, be a useful guide to the Directors, and very satisfactory to the proprietors.

If we leave particular items, and take the charges *as a whole*, the contrast in favour of the Great Western is still more striking. The total working expenses of the Great Western line during the last six months are set down (exclusive of interest, depreciation, and rent of branch lines), at 125,910*l.*, or on the 169 miles at 745*l.* per mile; whereas the expenses of the London and South-Western during the same period, were 70,284*l.*, or about 912*l.* per mile, and of the Birmingham, 134,684*l.*, that is, 1,132*l.* per mile, although the Birmingham

Digitized by Google

Company run a less number of trains, have fewer stations, and a smaller staff, and do not pay for coke more than one-third part of the gross expenditure, while this item on the Great Western amounts to about one-half!

What is the inevitable inference from these comparisons? Why, either that the whole of the Great Western expenditure is not charged to revenue, as it ought to be, or that the superiority of the system of management adopted on that line is most decided. The Chairman of the Great Western Company affirms, and we have no right to assume the contrary to be the fact, that nothing that was fairly chargeable to current income has been put down to capital, and hence the conclusion is forced upon us that to something peculiar in the construction or mode of working the Great Western Railway this remarkable economy, as compared with its neighbours, is to be ascribed. We have hitherto been inclined to ascribe to the Management of the Birmingham Railway a high degree of praise for economy, as well as efficiency in their arrangements, but they will at once see that they are now fairly thrown into the shade, and that should the Great Western rate of working be hereafter kept as low as during the last six months, they, the Birmingham Directors, will have to account to their constituents for the extreme disparity which exists.

We had intended to refer in our present number to a few of the many memorable sayings of the anti-Sunday travelling Saints, at the late meeting of the Edinburgh and Glasgow Railway Company, but on carefully re-perusing the very full, and apparently very impartial, report of the proceedings contained in the *Glasgow Constitutional*, we find that it would be an utter waste of valuable space, and an unwarrantable tax on the patience of our readers, were we to dwell at length upon the strange compound of bigotry and blasphemy, of falsehood and folly, which the late meeting gave to light. Our object in at all alluding to the matter is, mainly to put on record the official statement which has appeared of the result, and from which it will be observed how signally the agitators, spite of their prayer meetings and preachments, their memorials and their menaces, have been discomfitted. The motion, it will be remembered, was to the effect that a morning and evening train be run on Sundays, and the amendment that the railway be entirely closed on that day. The decision stood thus:—

	Motion. Shares.	Votes.	Amendment. Shares.	Votes.
Proxies	7832..	1235....	3535..	649
Parties present	620..	99....	963..	131
	8452	1334	4498	780
Deduct for amendment,	4498..	780		
Majority for motion	3954..	554		
Proxies not available for voting from being too late, &c...	649..	121....	263..	59

We have already alluded to the "ingenious devices" of the Agnewites in forging a vast number of signatures to the memorials by means of which it was at one time attempted to cajole, and at another to coerce, the Directors and the shareholders at large into the adoption of their narrow-minded policy. From what was stated at the meeting by Mr. M'Neill, one of the Directors (who deserves the thanks of every right-thinking and really religious man, for the course which he has pursued in his business), not a shadow of doubt can exist as to the shameful practices which have been connived at, if not directly encouraged, by the ringleaders of the agitation. When it is shown that, out of 30 or 40 petitions and memorials, taken at random, more than one-half of the signatures are in the same hand-writing—that, as remarked by Mr. M'Neill, the names appear as if taken out of some directory, there being "placed altogether about half-a-dozen Marshalls, as many Eastens, and about a dozen Jenkinsens, with five or six Wilsons,"—when it is clear, beyond a doubt, that clerical memorial-mongers have compelled—aye, *compelled*—parish paupers to subscribe these documents, there can, we think, be but one opinion as to the value which ought to be set upon this so-called "expression of the feelings of Scotchmen!" Even were the whole of the signatures as genuine as we are persuaded that a large number of them are false, we should not attribute a vast deal of importance to the fact; for, strange as it may appear, Scotland, with all its boasted intelligence, is about as priest-ridden a country as exists upon the face of the earth. We know it well, and have no reason to misrepresent it, but quite the reverse; yet the fact unquestionably is as we have said. The matter of the forgeries is now in the course of further inquiry, and we shall not fail to report the official result.

We are somewhat surprised that the proprietors of the railway should have allowed their time to be occupied at the meeting by the introduction of some score or so of "deputations" from various bodies of self-constituted guardians of the religion and morality of the land. What right have these persons, avowedly non-proprietors, to intermeddle in the management of the railway? If they do not like the running of trains on Sunday, let them do as they threaten, refuse to patronise it either on Sunday or Saturday—let them establish, as it is said they mean to do, opposition coaches on the common road, running them, of course, on Sunday, under the superintendence and to the secular gain of that pious personage, Mr. Bain, quondam contractor for the horsing of Sunday mails, and now a Director of the Sabbath-desecrating railway; let them do this, or anything else out of doors they please, but keep them from the meetings of the Company, who have much more momentous matters to discuss at their periodical assemblings than the dogmata of an illiberal and intolerant faction. By the way, we should be glad to know what pecuniary interest is held in the Edinburgh and Glasgow Railway by Sir Andrew Agnew, who laments over the "last Sabbath that Scotland is to see,"—by a Mr. Cassels, who "so help him God, believes in his conscience" that all the signatures to all the memorials are genuine [we beg it to be understood that we are quoting from our Glasgow contemporary, who is far from being a partisan on either side],—or by a kindred spirit, named Crichton, who [we again quote our Glasgow friend] swore "so help him God, he would give every encouragement in his power to canals and coaches, and all other means of travelling in opposition to the railway," if the motion for morning and evening trains were carried? We cannot help again expressing an earnest wish that means could be devised for preventing such persons as this "admirable Crichton" from at any time making use of the railway.

Since the general meeting of the proprietors the discomfited minority, aided and abetted by the larger body of non-proprietors, have held a meeting to protest against the decision to which the shareholders have come. This meeting was originally announced as "public," but subsequently, dreading the force of common sense and public opinion, the getters-up of the movement limited the admission by the issue of tickets, and actually prevented a respectable individual from speaking, and had well nigh turned him out of the room, because, although stating that he was opposed to the "desecration of the Sabbath," he would not at the outset pledge himself to oppose the running of Sunday trains! So much for the "expression of public opinion"! Sir Andrew Agnew was in the chair, supported by a large number of clerical brethren; and the same denunciations of divine vengeance, the same nauseous compliments to Scottish morality, which for the last few months have formed the texts at meetings of this sort, were reproduced. This hole-and-corner meeting ultimately entered their protest against the impiety of the railway proprietors, and with this part of their proceedings we have no quarrel. Let them protest till doomsday, if it afford them any consolation under their signal defeat. We find, however, that not content with this, they are about to involve the Railway Company in litigation. We learn from the local journals that "the minority of the shareholders intend to present a bill of suspension and interdict to the Court of Session against the resolution of the majority sanctioning the running of a morning and evening train on Sunday. This application will necessarily be founded on some of the old Scotch Acts, as to the compulsory observance of the Sabbath-day, and must open up a wide field of discussion, as many of the statutory injunctions of that period on this subject have fallen into desuetude. In anticipation of such an appeal to the Court of Session, the majority retained Mr. Rutherford. The minority were also anxious to secure the aid of this eminent counsel, who is now the acknowledged leader of the Scottish bar, and subsequently sent him a retainer, which he, of course, was bound to decline." Really this *is* "too bad!" No sooner are the Company relieved from the expensive squabbles of the Directors than they must again be involved in processes of law! It appears, too, that the question is to be re-opened at an approaching special meeting, so that notwithstanding the decision of an overwhelming majority, the time of the Management is to be wasted, and the funds of the Company squandered, in the further discussion of this most unprofitable question. We again call upon the *English* proprietors to look to this matter. If other means fail, application must be made to Parliament to set the matter finally at rest, and we entertain no doubt whatever that such application would be successful.

A similar meeting was recently held in Dundee, with reference to the running of trains on the Dundee and Arbroath Railway. It would be tedious and unprofitable to enter into details. Suffice it to say, that the following motion having been proposed,—"That it is expedient that such passengers as may offer themselves for conveyance by the mail train on Sundays be conveyed by the trains; and further, that passengers should also be conveyed by such other trains as may be resolved on, not interfering with the time of divine service; and that this meeting instruct the Committee of Management to give effect to this resolution by ordering a train to be run in the morning, and another in the evening, from both ends of the line, at such hours as shall not interfere

Digitized by Google

with the hours of divine service;" it was moved as an amendment, that "whereas the shareholders of the Company, at the annual general meeting held in June last, after being specially appealed to on the subject, came to the following resolution:—'This meeting strongly disapprove of the opening of the railway for travelling or traffic of any kind on the Sabbath, and resolve to apply to the Post-office authorities for exemption from carrying the mail on that day.' That the present meeting do adhere to that resolution, and instruct the Directors to take the necessary steps for carrying it into effect."

The amendment was, after a long discussion, carried by a majority of 34 votes; but we learn from a friend, whose name, if we were at liberty to give it, would be a sufficient guarantee for the accuracy of his statement, that the Puritans effected their object by *making* 40 votes within two days of the meeting, by dividing their stock, besides inducing several persons who had given proxies in favour of the motion to grant second proxies against it.

We cannot do better than conclude this notice, which has extended further than we meant it to do, by re-quoting a stanza, brought forward at the Dundee meeting, from EBENEZER ELLIOT, the workman-poet of Sheffield:—

"God blames not him, who toils six days in seven,
Where smoke and dust bedim the golden day,
If he delight, beneath the dome of heaven,
To hear the winds, and see the clouds at play,
Or climb his hills, amid their flowers to pray.
Ask ye if I, of Wesley's followers one,
Abjure the house where Wesleyans bend the knee?
I do, because the *spirit* thence is gone:
And truth, and faith, and grace, are not with me
The hundred Popes of England's Jesuitry."

The charge of "Jesuitry," there is convincing proof in this Sabbatical crusade, is not applicable to "Wesley's followers" alone.

THE statistical details supplied in the Report of the Directors of the London and Blackwall Railway Company laid before the meeting on Monday last, afford convincing and pleasing proof of the steady increase of traffic upon that line. Far, very far, it still is from realising the expectations that were entertained of its pecuniary results; nevertheless, we see nothing in its past progress or its present condition to cause the shareholders to despair or doubt of its eventual prosperity, but on the contrary, very many things to encourage and animate their drooping spirits. There has hitherto been a combination of obstacles in the way of immediate success, not the least important of which was the incompleteness of the steam-boat arrangements in connection with the railway. This defect, it will be seen from the Report, is about to be in some degree remedied by the putting on of an additional force of vessels, and should these be equal in point of accommodation, and speed, to the boats which during last summer plyed between the railway and Gravesend, we have no doubt that the vast number of visitors to Margate, Herne Bay, and other places of popular summer resort will, while it renders *that* speculation profitable, contribute largely to swell the revenue of the railway. The establishment of a regular steam-boat communication between Blackwall and Greenwich will create a new influx of traffic to the latter place. To parties resident in the north-eastern districts of the metropolis, the route *via* the Blackwall line, will, as compared with that by the Greenwich, save a very considerable journey through one of the most crowded quarters of the town, while the time taken up in reaching Greenwich and the amount of charge, will, we presume, be much the same by both lines. We should suppose that the result of the two railways carrying the public at low fares, would be to sweep from the river nearly all the Greenwich steamers, at least such of them as do not run beyond London Bridge. Of course the great distance from the west-end of town to the terminus of either line, will continue to give the Hungerford boats an advantage which no reduction of fare or extent of accommodation on the part of the Railway Companies could neutralize.

During the whole of last summer, the most active rivalry was kept up between the railway and the river steamers, and the somewhat frequent detentions which at that time occurred from the breakage of the rope, told very much to the injury of the former. These vexatious delays are now, it would appear from the explanations given at the meeting by Mr. STEPHENSON, the Engineer, likely to be almost wholly obviated; and when it is known that several of the London Bridge steam-boats were last year kept up at a loss, it does not appear likely that so much opposition will, in the ensuing season, be encountered from that quarter. Nor do we doubt that, as the facilities afforded by the railway and at the Company's commodious wharf become better known, many of the sea-going steamers will stop at Blackwall to land their passengers, thus very considerably shortening the time occupied in passing up the river, as well as avoiding the perilous navigation of the "pool."

Another source of increased revenue to the Company will spring up in the conveyance of goods, the arrangements for this department of traffic being, we are glad to learn, very nearly completed. There must be an immense amount of business from the East and West India Docks alone, as any one will readily admit who has witnessed the vast number of waggons and carts that at present convey the trade of the docks by the common road. We think the Directors quite right in endeavouring to effect an arrangement with the existing carriers for the delivery of the goods in different localities of London, as not only will the business of the establishment thus be simplified, but a large present outlay avoided in the purchase of the proper appliances.

Under all the circumstances, we look with considerable confidence to a speedy development of the resources of the Blackwall Railway, sufficient to ensure to the proprietors a much larger amount of dividend than they have yet had the good fortune to receive. The undertaking is well and economically conducted, although from the novelty of the system employed in working the line, many items of expenditure, which further experience will diminish or destroy, may have hitherto helped to sweep away a large proportion of the profits. The fact, that in one year there has been carried on the railway, without a single accident, a number of persons larger than the entire population of the metropolis and its far-stretching suburbs, reflects the highest credit upon all parties concerned.

We are glad to find, that a warm and well-deserved tribute to the merits of Mr. WARMINGTON, who is about to retire from his official connection with the Company, was paid, alike by Directors and proprietors.

THE long-looked-for Report of the Committee of the North Midland Railway Board, appointed to inquire as to the reduction of the working expenses of the establishment, has at length appeared, and will be found in another column, attached to the usual half-yearly Report of the Directors.

The publication of this document has in no way modified our previous impressions in regard to the great majority of the late reductions. It was quite right that sinecure and useless offices should be abolished, and we are glad that this has been effected to no trifling extent; but the impolicy—the cruelty—of cutting down a poor clerk's pittance by nearly one-tenth, and at the same time of increasing his work by diminishing the number of persons employed, is to us most apparent. And then, the lopping off of 1s. from the 19s. previously allowed to the porters, police, &c.—to effect what? The magnificent saving of 416*l.* per annum! Is it to be supposed that there is one person on the establishment, who has been subjected to such reduction, that does not "carry with him a discontented and repining spirit?" Will be *cordially* execute his duties? Will he dread to incur censure or dismissal? Will he not rather become careless of retaining a situation in which he is exposed to capricious reductions of income? One hour's inattention of a policeman, a signalman, or a switchman, and then comes a smash upon the line which will swallow up ten years' amount of the so-called saving! This cheese-paring, candle-end saving, system of economy is totally unworthy of a Company like the North Midland. If they cannot secure satisfactory dividends without cutting off the shillings of policemen and porters, they may as well shut up the line at once, or dispose of it to the best bidder. Let them consult their late excellent Chairman as to the course pursued upon *his* line, and they will find, that while the subordinate servants are paid much better than on the North Midland Railway, an amount equal to more than twice the expected saving on the latter line is annually distributed among those persons in gratuities for good conduct. What is the result? An active, zealous body of men, entering with spirit into their business, and co-operating with those in a higher station, to preserve to the Birmingham line the character which it has acquired of being the best conducted railway in the kingdom.

It is said, we know, that if the parties who have been subjected to these reductions do not like the treatment, they may resign their situations, into which hundreds of others would gladly enter. Unfortunately it is too true that, under the pressure of the times, very many able and intelligent men would eagerly snatch at employment upon almost any terms; and we make no doubt that parties—and parties (with all deference be it said) equally competent—might be found to undertake, for less than the reduced allowance at present paid to the Directors, the duties of this sub-Committee, but it does not follow that it would be for the interest of the Company to make the change. There is, besides, a peculiar hardship in the case of some of the North Midland clerks. When the railway was on the eve of opening, the Directors used every effort to secure the services of parties conversant with the practical business of the system, and by the temptation of augmented salaries they in many cases succeeded. In this we believe they consulted true economy, for nothing is more expensive than the training of a railway establishment—but what is the issue to these parties themselves? Why this; that if not entirely discharged, they are now reduced to their old standard, with the not very pleasing reflection that, if they had remained in their old berths, hey would by this time have advanced pro-

Digitized by Google

gressively, and stood little chance of being exposed to future reductions. We *know* this to be the case in more instances than one, and we know, moreover, and are prepared to prove, that there is not one of the lines newly opened, or about to be opened, to the Managers of which numerous applications for situations have not been made by parties now in the service of the North Midland Company. Is this as it ought to be? For the present we have done.

In the House of Commons on Thursday, Mr. FRENCH brought forward the motion of which he had previously given notice, namely, "that this House do resolve itself into a Committee of the whole House for the purpose of preparing an Address to her MAJESTY, praying that she would be graciously pleased to recommend to Parliament, that such measures shall be taken as may appear most likely to secure to Ireland the advantages of railway communication." After some discussion, the motion was by leave withdrawn, partly on account of a formal objection, but principally because of the opposition offered by the Government to any public assistance in the shape of money for promoting Irish railways.

The discussion derived its importance from the declaration of the sentiments of the Premier on the subject. The right honourable gentleman positively refused to sanction any grant for the purpose, because he did not think that "an undertaking by the Government to make 540 miles of railway in Ireland, would be a substantial and permanent benefit to that country." One of the arguments adduced by Sir ROBERT in proof of the non-permanency of the benefit was, unless the reports in yesterday's papers greatly belied him, exceedingly flimsy. "My belief [said he] is, that an undertaking to construct an extensive system of railways in Ireland would not pay the expense; but, even if it did, what would be the consequence? Why, you would bring together an immense mass of labourers, by the incentive of the advantage to arise from undue exertion; but when the works were finished, and these labourers could find no employment, is it not probable that the evils of Ireland, instead of being mitigated, would be increased?" Arguing thus, one might refuse to give a meal to a starving beggar, because he would by and by become hungry again.

Sir ROBERT PEEL contended, that if railways in Ireland were likely to prove remunerative, they would be made, as in England, by private enterprise; if not likely to prove profitable, they ought not, he argued, to be made at all. This is the view which would be taken of the question by a speculator looking only to immediate pecuniary returns, not that which one would expect from an enlightened statesman. Sir ROBERT knows well, that benefit to the country and profit to individual speculators are not necessarily combined; and, moreover, that what would be a remunerative result for money advanced by the State, might not, and would not, be satisfactory to private capitalists. How would the public suffer, if the least remunerative of the English lines were now closed!

Sir ROBERT adroitly turned to account the previous opposition offered to Lord MORPETH'S measure a year or so back. He hit sharply some of those who were then clamourous against, but are now equally clamourous for, the undertaking of Government Railways. These parties, we have all along said, have much to answer for; but we need scarcely remark, that their ignorance or inconsistency forms no valid objection to the principle o public aid.

The conclusion at which we arrive from Thursday's debate is, that the people of Ireland have nothing to look for in the way of direct Government assistance in the construction of railways, although Sir ROBERT hinted that he was disposed to afford every facility in lessening the cost of obtaining Acts of Parliament, completing surveys, &c., and distinctly promised the "same advantage as England possesses, by the advance of Exchequer Bills on proper security, in order to enable the works to be completed." This may answer very well for a few of the most productive districts of Ireland, but as regards the country at large, we fear the benefits of railway communication are as far from being realised as ever.

We have much pleasure in making it known to the proprietors of the South-Eastern and Croydon lines, that an arrangement for the mutual working of the two railways, so far as locomotive power alone is considered, has been entered into between the Directors of the Companies. We are not at liberty to give the details, but we are quite satisfied that the arrangement is based upon such an equitable foundation, that advantages of a very superior character to each Company must be the result. Of the harmony most happily subsisting between the two Boards, the foregoing affords incontestible and agreeable evidence. This arrangement will necessarily form a prominent feature in the forthcoming Report of the Directors to the Croydon proprietors, at the meeting which will take place next week.

A REPORT has been current in the City for some days past, that it is intended at the Croydon meeting on Thursday next, to bring forward a motion to *compel* the Directors of the Croydon Company to lease the railway to the Brighton Company, and that for the purpose of carrying this measure certain interested parties are busily soliciting proxies. We have reason to believe that such intention *does* exist, and deeming the question of vital importance to the best interests of the Croydon Company, we hesitate not to recommend every proprietor, who can, to attend the approaching meeting and thwart this *coup de main*. We say "thwart" it, because we consider the Directors the best judges of the propriety of entertaining the proposal, and do not approve of an attempt to force such a question in such a manner, and at a period too when the traffic of the Brighton line being virtually undeveloped, and the South-Eastern wholly so, the data from which the true worth of the line is to be deduced are not yet in existence.

It is just possible that this notice of ours may, in springing the mine before the desired moment, scatter the proposition and its concocters to the winds; but, under the circumstances, we should fail in our duty to our readers, and to ourselves as independent journalits, if we failed in warning the proprietary of the movements of these *jobbers*.

The Croydon proprietors have stood too long by their line, and think too well of it, to become second Esaus, and sell their birth-right for a mess of pottage.

THE "Railways' Regulation Bill" was read a second time on Monday last, and is to go into Committee next week. On the occasion of the second reading, Lord SANDON expressed a hope that ample time would be given to all parties interested in the Bill to become acquainted with its details. Mr. GLADSTONE said, that no very great extent of time was required for that purpose, as the parties interested in the measure were at present in communication with the Board of Trade, and were evidently alive to the nature of it. No difficulty should be interposed to the fullest discussion of it. The only Companies who have as yet petitioned against the Bill are the Liverpool and Manchester and Grand Junction. It will have been noticed from the remarks of the Chairman of the Great Western Railway at the meeting last week, that a Committee from the principal Companies are narrowly watching the measure.

THE map and statement put forth by the Manchester and Leeds Railway Directors in reply to the Liverpool Board, will be found in our Supplement, as also a letter from Captain LAWS, in explanation of the course which he has pursued, and another from Mr. HAWKSHAW, the Engineer of the Manchester and Bolton Company. We recommend these statements to the attention of our readers, who with the map and documents which we presented last week, have now the full particulars of the case before them. We shall probably have something further to say on the subject on a future occasion.

THE following distinguished persons have travelled by the Brighton Railway during the last fortnight:—Baron and Lady Park; Lady Freemantle; Sir Thomas and Lady De Todford; Honourable Mr. and Miss Stanley; Sir Isaac Goldsmid; Captain Armstrong; Dr. Holland; Sir James and Lady Clarke; Lady Norbury; Mr. and Mrs. Soames; Colonel Bentinck; Mr. Shea; Mr. Cowley; Lady Elizabeth Parsons; Captain Lucas; Sir John Key; Duchess of Beaufort; Mr. Mozeley; Honourable Mr. Melville; Sir George and Lady Cooper; Earl of Carnarvon; Earl of Porchester; Honourable Dudley Ward; Sir Walter and Lady Farncombe; Colonel Hughes; Mr. Hankey; Count and Countess Aulaine; Earl of Aberdeen; Miss Mackie; Captain Meynell; Sir Hesketh and Lady Fleetwood; Mr. Lushington, M.P.; Captain and Mrs. Freemantle; Honourable Charles Murray; Mr. King; Honourable Sir Robert Peel; Honourable Mrs. Molyneux; Lord Mountcharles; Sir Edward Bowater; Sir Bellingham and Lady Graham; Sir Roger and Lady Palmer; Lord Monson; Earl and Countess of Dunmore; Lord Rivers; Mr. Burdett; Mr. Oliver, M.P.; Lady Clinton; Sir Horace and Miss Seymour; General Wellesley; Lady Jane Peel.

AMONG the petitions lately presented to the House of Commons was one from "the gentry, merchants, and other inhabitants of the town of Dundalk and its vicinity," on the subject of Irish railways. The petitioners represent that they are deeply sensible of the great advantages arising from the improved means of communication afforded by railways—that a line of railway, connecting Dublin with Belfast, and passing through Dundalk would follow the present stream of traffic, and be a great public convenience to this populous district and the north of Ireland generally—that the connection of the line now in progress of construction from Dublin to Drogheda with the railway recently opened from Belfast to Portadown, would afford the most desirable and best method of carrying this object into

Digitized by Google

effect—and that they have reason to believe that this great national work would be undertaken and completed by private capitalists, if aided by the legislature to such extent only as would be perfectly safe and practicable. They therefore pray "that your honourable House will take the subject into your serious consideration, and adopt such measures for the promotion of this important object as to your honourable House may seem meet."

—o—

The Earlswood embankment on the Brighton line, which has given the Engineer so much trouble and anxiety, and cost the Company so much money, has, from its semi-fluid state when saturated with rain, been called "Rastrick's juice."

—o—

The petition of the Newcastle and Carlisle Railway Company, to which we referred last week, praying for an alteration of the passenger tax on railways, represents that the present mode of charging duty on passengers by railway, is unequal and unfair, and is attended with much unnecessary trouble and expense; and that the only just and satisfactory mode of charging that duty is by a per centage on the monies received by each Railway Company for the conveyance of passengers. The petitioners therefore pray, "that such alterations may be made by Parliament in the existing duty on railway passengers, as to make it in future a duty payable on the amount of the monies received for the conveyance of such passengers."

HAMBURG AND BERGEDORF RAILWAY.

We have much pleasure in extracting the following from a Hamburg paper. It will be seen that the carriage improvements of Mr. Adams, whose able communications have so frequently graced our pages, have been adopted on this foreign line. We wish our Railway Managers at home would generally imitate so good an example:—

"On Sunday, the 20th of February, an experimental trip took place on this railway, the party consisting of the Directors, the members of the Committee, the Senate, and various gentlemen connected with the railway, in all about 100 persons.

"The whole ten miles distance was run over with the rails merely laid in the temporary mode for ballasting, their permanent laying being deferred to give as much time as possible for the subsidence of the embankments during the wet season. By this means the rails when permanently laid will be much firmer, and the "maintenance of way" will not fall so heavy on the after receipts.

"The trip was performed in two second-class carriages, each of them arranged for the accommodation of 60 passengers (on six wheels). Notwithstanding the unfinished state of the rails, which in some parts required a slower rate of travelling, the ten miles to Bergedorf was performed in about 37 minutes. The whole population of the town were assembled to greet the arrival of the train with a thorough recognition that a new era had commenced for the prosperity of their town in its closer connection with Hamburg.

"After a short stay to inspect the beautiful station and hotel erected by the Railway Company, the train returned to Hamburg in 31 minutes. In future this trip will occupy from 15 to 20 minutes. This first trial on the railway was very gratifying to the passengers, and not the slightest accident occurred. The trip being quite of a private kind, few persons in Hamburg were aware of it, or there would doubtless have been an immense crowd.

"The carriages fitted with Adams's bow springs and spring buffers, were remarkable for their great ease of motion, and the absence of noise, adding greatly to the comfort of the passengers. The locomotive, *Hansa*, from Stephenson's manufactory, is a beautiful machine. The whole arrangements do great credit to the Engineers, Messrs. Lindley and Giles, for the accuracy of their calculations; and very much to their honour, the expenses fall within the estimates, a result not very common in railway calculations."

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE.)

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

BIRMINGHAM AND DERBY RAILWAY.

Feb. 24.—Petition for Bill, referred to the Select Committee on Petitions for Private Bills.

Feb. 25.—Committee on petition fixed for Tuesday, 8th March.

BOLTON AND PRESTON RAILWAY.

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

Committee on petition fixed for Tuesday, 8th March.

BRANDLING JUNCTION RAILWAY.

Feb. 18.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Ord and Mr. Huth.

Feb. 21.—Bill "to authorise the Brandling Junction Railway Company to raise a further sum of money" presented, and read a first time.

Printed breviate laid on the table.

The object of this Bill is to enable the Brandling Junction Railway Company (incorporated by an Act of 6 & 7 W. 4.) to raise a further sum of money.

Original Capital.—By their Act of Incorporation the Company were empowered to raise a capital of 110,000*l.* in shares of 50*l.* each, and a further sum of 36,000*l.* on mortgage. By an Act of the 1st Vict. they were empowered to raise a further sum of 190,000*l.* in shares, and to borrow a sum of 100,000*l.* in the whole, including the before-mentioned 36,000*l.*

The whole of these sums are stated to have been raised and expended.

Further Capital.—The present Bill empowers the Company to raise a further sum of 100,000*l.* in shares, making the capital 400,000*l.* in the whole: and so soon as half the additional 100,000*l.* shall have been paid up, to borrow a sum of 33,300*l.* in addition to the 100,000*l.* authorised by the former Acts.

The priority of former mortgages is saved.

The Bill empowers the Company to convert any part of the borrowed money into capital by the creation of new shares.

Feb. 25.—Bill read a second time and committed, and referred to the Committee of Selection.

Bill referred to Mr. Greene, Mr. Hardy, and Mr. Busfield: Committee to meet on Thursday, 10th March.

BRISTOL AND GLOUCESTER RAILWAY.

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

Feb. 24.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Cripps and Mr. Masters.

Feb. 25.—Bill "to amend two Acts relating to the Cheltenham and Great Western Union Railway," presented, and read a first time.

DUNDEE AND ARBROATH RAILWAY.

Feb. 21.—Committee on Petition fixed for Friday, 4th March.

EDINBURGH AND GLASGOW RAILWAY.

Feb. 24.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Dennistoun and Mr. Oswald.

Feb. 25.—Bill "to amend the Acts relating to the Edinburgh and Glasgow Railway, and to grant further powers to the Company of the proprietors thereof," presented, and read a first time.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.

Feb. 21.—Petition of John Taylor Gordon, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

Feb. 23.—Petition of Commissioners of Police of Paisley, against the application; to lie on the table.

March 1.—Petition for Bill reported; and Bill ordered to be brought in by Lord James Stuart and Mr. Dennistoun.

March 2.—Bill "to amend the Acts relating to the Glasgow, Paisley, Kilmarnock and Ayr Railway, and to grant further powers to the Company of proprietors, thereof," presented, and read a first time.

Printed breviate laid on the table.

March 3.—Second reading fixed for Monday, 7th March.

GREAT NORTH OF ENGLAND RAILWAY.

Feb. 18.—Petition for compensation: of John Ebdy and Henry John Wenshall; to lie on the table.

Feb. 24.—Bill "for the abandonment of a portion of the line of the Great North of England Railway, and for altering and amending the Acts relating thereto," presented, and read a first time.

GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL JUNCTION RAILWAY (No. 1.)

Feb. 24.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

Feb. 25.—Committee on petition fixed for Tuesday, 8th March.

March 3.—Petition of the Company of Proprietors of the Clarence Railway, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL JUNCTION RAILWAY (No. 2).

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

March 3.—Petition of the Company of Proprietors of the Clarence Railway, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

LEVEN VALLEY RAILWAY.

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

March 3.—Committee on Petition fixed for Monday, 14th March.

LONDON AND BLACKWALL RAILWAY.

Feb. 25.—Petition for Bill; referred to the Select Committee on petitions for Private Bills.

Committee on petition fixed for Tuesday, 8th March.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH).

Feb. 24.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

Committee on petition fixed for Monday, 7th March.

March 3.—Petition of the London and Greenwich Railway Company, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

LONDON AND GREENWICH RAILWAY (No. 1).

Feb. 18.—Bill "for enabling the London and Greenwich Railway Company to purchase property for altering certain streets and places contiguous to their railway, and for amending the Acts relating to such railway" presented, and read a first time.

Printed breviate laid on the table.

The object of this Bill is to enable the London and Greenwich Railway Company to purchase property for altering certain streets and places contiguous to their railway.

The Bill empowers the Company to purchase the land &c. mentioned in the schedule to the Bill, and to pull down the buildings, and to lay such parts of the land as they may think proper into the streets, &c., contiguous to the railway.

Digitized by Google

The time for compulsory purchase is limited to two years.

The Bill provides that if after 14 days' notice left at the office of the surveyor or clerk to the Street Commissioners, of the intention of the Company to form any street, &c. under the provisions of the former Act, the surveyor of the Commissioners shall not attend, or if there should be no surveyor, the Company may proceed to form the street, &c. without the direction or superintendence of such surveyor, notwithstanding the clause in the former Act, requiring the streets to be formed under the superintendence of the Commissioners or their surveyor.

The Bill repeals the clause contained in the former Act, for regulating the width and inclination of roads and bridges to be constructed under the Act, so far as relates to a bridge already constructed, and a bridge to be constructed over Bermondsey street, with a proviso that the intended bridge is to be constructed in a similar manner, and with the same extent of roadway, as the existing bridge.

Feb. 23.—Bill read a second time and committed, and referred to the Committee of Selection.

The Bill is referred to Mr. Greene, Mr. Barnard, and Captain Dundas. The Committee meet on Monday, 7th March.

Feb. 28.—Committee on Bill fixed for Monday, 7th March.

March 1.—Petition of Commissioners for Paving the East Division of Southwark, against the Bill; referred to the Committee on the Bill; counsel ordered.

March 2.—Petition of John Cox, against the Bill; referred to the Committee on the Bill; counsel ordered.

Order of reference to Mr. Greene, &c. discharged; and Bill referred to the Surrey List, and Mr. Packe (Leicestershire), Mr. Forbes Mackenzie (Peeblesshire), Sir John M'Taggart (Wigton, &c.), Mr. Mundy (Derbyshire), Sir T. Colebrooke, (Taunton). Three to be the quorum of selected members, and the Committee to meet on Monday, 7th March.

March 3.—Petitions against; from Commissioners of Paving for the Eastern Division of Southwark; and Commissioners of Highways of St. Mary Magdalen, Bermondsey; referred to the Committee on the Bill; counsel ordered.

LONDON AND GREENWICH RAILWAY (No. 2).

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

LONDON AND GREENWICH RAILWAY (No. 3).

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

MIDLAND COUNTIES' RAILWAY.

Feb. 18.—Bill "for altering and enlarging the powers of the Acts relating to the Midland Counties' Railway" presented, and read a first time.

Printed breviate laid on the table.

The object of this Bill is to enable the Midland Counties' Railway Company, incorporated by an Act of the 6th William 4th, to raise additional money, and to give some further powers to the Company.

CAPITAL.—By their Act of Incorporation the Company were empowered to raise a capital of one million in shares, and to borrow 333,000*l.*

By a subsequent Act they were empowered to raise a further capital of 150,000*l.*, and to borrow 50,000*l.*

It is recited that those sums have been duly raised.

The Bill empowers the Company to raise a further capital of 250,000*l.* in shares, and to borrow 83,000*l.*

The power to borrow money may be exercised so soon as half the sum authorised by the former Act and this Act shall have been paid up.

The new shares, if at a premium, are to be offered to the existing shareholders. If not at a premium, they may be issued as the Company think fit.

The priority of former mortgages is saved.

DIRECTORS.—The Company are empowered to reduce the number of Directors to 12.

LANDS.—Power is given to the Company to take temporary possession of lands adjoining the railway for the purposes enumerated in sect. 16, making compensation.

If any such lands be required for making spoil banks or side cuttings, or for obtaining materials for the repair of the railway, the proprietors may require the Company to purchase the lands instead of paying compensation for temporary occupation.

TRENT WEIR.—Some variation is made in the provisions relating to the Weir over the Trent, to be constructed by the Company, as required by the Trent Navigation Company.

Feb. 22.—Bill read a second time and committed, and referred to the Committee of Selection.

The Bill is referred to Mr. Greene, Mr. Packe, Mr. W. Evans, and Mr. Halford. Committee meet on Monday, 7th March.

Feb. 28.—Committee on Bill fixed for Monday, 7th March.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.)

Feb. 25.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

Feb. 28.—Petitions complaining of non-compliance with the Standing Orders:—from Sir George Musgrave, Bart.; and, Mary Dixon, Ralph Dixon, and John Thwaites; referred to the Select Committee on Petitions for Private Bills.

SAUNDERSFOOT RAILWAY.

Feb. 23.—Petition for Bill referred to the Select Committee on Petitions for Private Bills.

Feb. 24.—Committee on petition fixed for Monday, 7th March.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

Feb. 18.—Committee on Petition postponed till Tuesday, 1st March.

Feb. 25.—Petition of William Quarton, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

SOUTH-EASTERN RAILWAY.

Feb. 22.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Rice and Mr. Curteis.

Feb. 23.—Bill "to enable the South-Eastern Railway Company to raise a further sum of money, and to amend the Acts relating to said railway," presented, and read a first time.

March 2.—Bill read a second time and committed, and referred to the Committee of Selection.

STANHOPE AND TYNE RAILWAY.

Feb. 21.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Liddell and Mr. Maclean.

Feb. 22.—Bill "to facilitate arrangements consequent upon the dissolution of the Stanhope and Tyne Railroad Company, and to incorporate some of the proprietors, for the purpose of continuing the working of a part of the railway belonging to the said Company," presented, and read a first time.

Printed breviate laid on the table.

March 1.—Bill read a second time and committed, and referred to the Committee of Selection.

March 2.—Petition of Joseph Hargrave, William Harrison, and others, against [presented 28th February]; referred to the Committee on the Bill; counsel ordered.

Bill referred to the Durham List, and Mr. Escott (Winchester), Lord Emlyn (Pembrokeshire), Mr. Gregory (Dublin), Lord C. Hamilton (Tyrone county), Mr. Hawkes (Dudley). Three to be the quorum of selected members, and the Committee to meet on Thursday, 10th March.

STOCKTON AND HARTLEPOOL RAILWAY.

Feb. 24.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

Committe on petition fixed for Tuesday, 8th March.

THAMES HAVEN DOCK AND RAILWAY.

Feb. 24.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

Committee on petition fixed for Monday, 7th March.

YARMOUTH AND NORWICH RAILWAY.

THIRD-CLASS TRAINS.

To the Editor of the Railway Times.

SIR,—There are two ways of driving third-class passengers, one up, and one down; and I will venture to say, that for one passenger who is driven up into a second-class carriage, three or more are driven down, that is, entirely from the road. The cruel policy of Directors has diminished the receipts from the most numerous classes of society, who, if debarred from a cheap and comfortable transit, must in general give up travelling altogether. At all events, fancy travelling, that great source of revenue, and which has uniformly doubled the receipts of railways, has no place with them. It must be some dire necessity which obliges a poor wretch to mount a mud cart, and to be exposed at night to all kinds of weather, and to a current of air, varying from 30 to 60 miles. This exposure has doubtless affected the health of many, for vast numbers of the working classes, from confinement to small and hot rooms, are more delicate than the higher orders; but in a late instance, was attended with the lamentable death of a mother and her child. The many cases, where health has suffered, are entirely out of sight, and can only be guessed at; but this single instance ought to reform a system, which is not only cruel, but highly unproductive. If the accommodation for third-class passengers were made more comfortable, possibly a needy or stingy tradesman would occasionally avail himself of them; but the number of third-class passengers would increase three or four fold, so as amply to make up for it. Many of the poor have relations in and near London, who would gladly share with them their food and lodging for a short time, and multitudes would cheerfully save from drink, and other useless expenses, enough to afford them a pleasant trip; but if this be attended with the risk of disease and death, such plans are at an end, and nothing but extreme necessity would oblige them to travel. The goods trains, if I may judge from the Great Western Railway, generally travel by night, and they are necessarily exposed to much delay. These circumstances alone would more than compensate for the difference of fare, if the carriages of the third-class were fully as comfortable as the second-class carriages. Few who could afford it would prefer a tedious journey by night, consequently would not be inclined to leave the second-class carriages for the third, while the numbers in the third-class carriages would be constantly increasing. Thus little would be lost, and much, very much, be gained.

I am, Sir, your obedient servant,

H. B.

HULL AND SELBY RAILWAY COMPANY —GENERAL MEETING.

(The meeting took place last Saturday. The proceedings we must defer.)

DIRECTORS' REPORT.

"Notwithstanding the long-continued depression in the general trade of the country, your Directors, in again meeting the proprietors, are gratified to be enabled to inform them the traffic upon this line of railway has continued to improve, and that to an extent which, all circumstances considered, they could have scarcely ventured to anticipate. By the statement, which will be laid before you, the receipts and amount due on the traffic account, for the past half-year, are 24,808*l.* 6s. 1d.; and the disbursements, with the interest on money borrowed, amount to 18,646*l.* 19s. 8d., leaving a balance (with 69*l.* 10s. from last half-year) of 6,256*l.* 16s. 5d. in favour of the Company, and your Directors reccommend that a dividend of fifteen shillings per share should be made, to be payable on the 11th April.

"It has been the anxious wish of your Directors to reduce the expenditure in every possible way, consistently with the effective working of the railway, and the maintenance of the line in good condition—which are objects of primary importance. Since the last meeting, Committees have been appointed from their body, with special reference to these matters—and very beneficial results will arise from the course which has been pursued; it will be apparent, however, that the per centage of expenses, in proportion to the receipts, is rather large, arising from the moderate charges which are made for the conveyance of both passengers and goods, when compared with other railways, whose fares, &c., are much higher; it is hoped, however, that this will be remedied to some extent, by the economy practised in the various departments. The Government tax upon passengers presses very heavily upon the railways whose fares are low: on this line it amounts to about one-tenth part of the receipts from passengers; and your Directors, in November last, memorialized the Treasury upon the subject, representing the unfairness of the present mode of taxation, by which the Companies have to pay one-eighth of a penny per mile upon passengers of all classes, without any reference to the amount of fare charged, and suggesting the propriety of levying a moderate per centage on the gross amount received, by which the public would be benefited, as encouraging the adoption of low fares. It is hoped that some alteration will be made in this tax during the present session of Parliament.

"During the six months, from the 1st July to the 31st December last, the number of passengers conveyed on the line was 123,854, viz., 19,887, first-class; 27,656, second-class; and 76,311, third-class; being an increase of 13,876 on the corresponding six months of 1840, and of 35,786 over the first six months of 1841. It is a source of peculiar gratification to your Directors, that about 212,000 passengers were conveyed on the railway during the past year, without the slightest accident to any of them, and it is also satisfactory to state that voluntary testimonies have been received from various parties, of the attention which they have experienced from the servants of the Company, at the different stations on the line.

"Your Directors have long had their attention directed to the establishment of a coal trade at the stations on the line, and also at Hull; a considerable quantity has already been sold at the stations, where supplies are regularly kept, and arrangements have been made with the proprietors of the Garforth and Manston collieries for bringing them to Hull, where the coals are sold at a very reasonable price, and it is a most gratifying consideration, especially with reference to the poor of our town, that the railway communication will effectually prevent exorbitant prices being demanded for coals at Hull, when the canals are closed by a severe frost, or by any cause whatever. It is probable that a considerable export trade in coals might be carried on, were suitable places provided for loading vessels, many now taking in ballast at Hull, and proceeding to Sunderland or Newcastle in order to load coals.

"In connection with the Managers of the Manchester and Leeds and York and North Midland Railway Companies, your Directors have taken great pains to promote arrangements for sending regular supplies of fresh fish to be sold at a cheap rate in Manchester, the various towns on the line of the Manchester and Leeds Railway, and in the large and populous towns of Stockport, Ashton-under-Lyne, &c. A commencement was made a few weeks ago, and the result has been most satisfactory: not only will it be productive of advantage to the various railways, as a source of revenue, but *a great national benefit*, by affording the poor and dense population of those districts, the means of obtaining a supply of cheap and nutritious food, the high price of which, and the very small supply hitherto furnished, entirely precluding them from obtaining it. By thus opening new markets, the employment of our hardy fishermen, on the eastern coast and Dogger Bank, will be materially increased, as the finest fish are found there, and may be taken in any quantity.

"Your Directors have the pleasure of stating, that the best understanding exists with the Directors of the neighbouring Railway Companies, and mutual efforts will be used to increase the general traffic.

"The construction account, exhibits a total outlay, to the present time, of 628,919*l.* 19s. 11d., from which is to be deducted, 15,165*l.* 4s. 7d. for land resold, interest received, &c., thus leaving the net outlay, 613,751*l.* 15s. 4d. It is probable that further expense will have to be incurred on this account, in consequence of the accommodation which an increasing trade will render necessary. This is a circumstance causing gratification rather than regret, both to the Directors and the proprietors. The railway has been constructed, and the great object now is, to obtain the utmost possible amount of profitable traffic upon it; the prospect of increase is most cheering, and the advantages of railway communication are being constantly developed in various ways. Your Directors do not doubt that, with a revival of trade, which is confidently anticipated, the traffic on the railway will be considerably increased during the present year. The warehouses prepared for the Manchester carriers, are all occupied, and additional accommodation will be required for goods. Of the balance due on the construction account, the sum of 22,894*l.* 4d., for the purchase of land, is allowed to remain upon interest for a term of years, if required.

"Soon after the last meeting of the proprietors, the remainder of the money which the Directors were authorised to take upon loan was subscribed, and after maturely considering the subject, your Directors think it may be desirable to go to Parliament in the next session, to obtain power to convert the money, borrowed upon mortgage and on loan, into shares, at any time which may appear to be the most desirable, and they anticipate that, by so doing, an important saving to the Company may be effected.

"The whole of the contractors' accounts, for the formation of the railway, are now adjusted, with the exception of that of Mr. Charles Faviell, for the Howden contract. An agreement was made that the amounts in dispute with him should be settled by arbitration, in accordance with the terms of his contract, and the arbitrators were accordingly appointed. The Court of Queen's Bench has now directed this mode of settlement to be proceeded with, and your Directors hope that their reasonable views as to the liquidation of this account will be realised in a short time.

"The suit with Mr. William Bell stands over, in consequence of his not having proceeded with the motion of which he gave notice to be heard before the Lord Chancellor, in August last. The only question remaining for the decision of the Court of Chancery, is the proportion of Mr. Bell's cost which the Company is liable to pay.

"Some of the shares which were forfeited have been sold, and your Directors intend to dispose of the remainder at an early period. In addition to the shares previously forfeited, the Directors, on the 16th October last, declared 159 shares to be forfeited, on all which 15*l.* per share, or upwards, had been paid, and, although no loss is likely to arise to the Company on account of them, it was considered that sufficient indulgence had been given to the proprietors, and, the money being wanted, a resolution will be submitted to you to confirm the forfeiture of such portion of them on which the calls may remain unpaid on the day of the meeting.

"The Directors who go out by ratation, are Mr. Tottie, Mr. Pease, Mr. James G. Marshall, Mr. Eggington, and Mr. Kirk, all of whom are eligible to be re-elected. The much-lamented death of William Spyvee Cooper, Esq., who had been a Director from the time when the Act was obtained, and who had devoted much time, and the energies of his intelligent mind so far as his health would allow, in furtherance of the undertaking, and who ever manifested the most lively interest in its concerns, having created a vacancy in in the direction, Joseph Sykes, Esq., of Wolfreton House, was elected to fill it.

BALANCE SHEET.

BRISTOL AND EXETER RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the Bristol and Exeter Railway Company was held at Bristol, on Thursday. We have not room this week for the proceedings, but they were of a very satisfactory character. Mr. Baker moved an amendment to the adoption of the Report, that a Committee be appointed to examine into the charges made by Mr. Gravatt against Mr. Brunel, and into other matters, but it was not seconded. Subsequently, Mr. Baker, in token of his good feeling, moved the re-election of the retiring Directors. We are glad to learn that tenders for loans are daily coming in. The following are the Reports and balance-sheet:—

DIRECTORS' REPORT.

At your last half-yearly meeting, your Directors had to congratulate you upon the opening of the line to Bridgewater, and they have now the pleasure of stating that the works between that town and Taunton are so far advanced, and the engagements of the contractors are such, as to warrant a confident expectation that these 11¼ additional miles will be ready to open for traffic early in the ensuing summer.

It will be satisfactory to you to know that, notwithstanding the unusual wetness of the season, the works have continued in excellent condition, and that there has been no interruption to the regularity of the trains.

For the general state of the works, the Directors refer to the Engineer's Report.

The share of toll belonging to this Company for the half-year ending on the 13th of December last was 3,377*l.* 12*s.* 6*d.* viz.:—

For 143,894 passengers, 3,118,771 miles, at ½d. per mile	£3,248	14	5
And 4,046 tons 12 cwt 2 qrs. 19 lbs. of merchandise, 123,708 miles, at ½d. per mile	128	18	1
	£3,377	12	6

which, with 15,000*l.* for a half-year's rent, would make a net revenue of 18,377*l.* 12*s.* 6*d.* for the six months.

On account of this sum, in consequence of the unavoidable delay of the thirteen days opening of the line in June last, only 10,877*l.* 12*s.* 6*d.* have been received, the Directors of the Great Western Company not deeming themselves justified in paying the remaining 7,500*l.* without the sanction of their proprietors.

To facilitate the accomplishment of this object, however satisfied your Directors may have felt that you were equitably entitled to the full rent of 30,000*l.* a-year, they readily availed themselves of the friendly disposition of the Great Western Board, to enter upon an negociation for an amicable settlement of this difference; and it will have afforded you pleasure to learn, from the Report made at their meeting on Thursday last, that they have agreed to pay the full amount of rent at the rate of 30,000*l.* a year (deducting 500*l.* for their estimated loss from the delay) on the following conditions, viz:—

The line from Bridgewater to Taunton to be ready for opening in the manner prescribed by the lease on or before the 7th of July next.

Two further portions to be ready for opening on or before the 1st of July, 1843, and the 1st of July, 1844, and the line throughout to Exeter, on or before the 1st of July, 1845.

The rent for the half-year ending on the 13th of June next, at 30,000*l.* a year (deducting the said sum of 500*l.*) to be paid when due, upon a certificate from the Engineer, that the railway to Taunton will be ready to open at the time specified.

The sum of 7,500*l.* for the balance of the first half-year's rent, to be paid on the opening to Taunton, provided it take place on or before the 7th of July next.

In default of the line being ready for the three several openings on or before the 1st of July in each year, one-third of the 7,500*l.* with interest at 5 per Cent. per annum, to be refunded to the Great Western Company, or retained by them out of the rent, with respect to any such failure.

If the line from Bridgewater to Taunton be not ready to open by the 7th of July, then one moiety of the extra sum which may have been previously received, to be either refunded to the Great Western Company, or retained by them out of the rent.

This arrangement not to be binding without the sanction of the general meetings of the proprietors of both Companies, nor to effect any other covenants in the existing lease.

Your Directors think that you will be the more disposed to approve of this arrangement as the acceleration of the periods of opening, if accomplished without much additional expense, is a manifest advantage to this Company; and these periods have been agreed to with the full concurrence of the Engineer.

Your Directors therefore strongly recommend your passing a resolution to sanction and approve this agreement.

The amount of revenue arising from the portion of the line to Bridgewater for the first half-year from the opening, being at the rate of 4 per cent. per annum neat on the cost of that part, is highly satisfactory to your Directors, although not yet fully equal to that which in their estimates formed the basis of their arrangement with the Great Western Railway Company. From the advantages possessed by the latter Company in working your line in connection with their own, and the economy thence arising in working expenses, it is evident that the same amount of gross traffic must yield a larger net return to them than it would afford to this Company under separate management; and whilst your Directors look forward to a large increase of traffic as the line is further extended, to the benefit both of this Company and of the Great Western Company, they are gratified to find their anticipations confirmed by the receipt of a larger net revenue under the lease, than would otherwise have been derived from this portion of the line.

The four Directors who retire by rotation are, your Chairman, Mr. Frederick Ricketts, and Messrs. W. D. Wills, William Morgan, and Francis Parker, who offer themselves for re-election.

At the period of your last autumnal meeting, your Directors had reason to expect that the influx of loans on debenture would preclude the necessity of any call upon you before the opening of the line to Taunton; but from that time until the end of December, they fell off so considerably as to leave no alternative but a call.

Since the beginning of the new year, however, they have again become abundant. The amount

Digitized by Google

received to the end of 1841, was 190,000*l.* The total amount of tenders to this time is 228,000*l.*

The promptitude with which the 11th instalment has been paid affords decisive evidence of the solid character of your present register; a larger amount having been received by the bankers within three days after the 31st January (when it became due), than within as many months after any former call.

It will be seen by the accounts, that the sum of 11,000*l.* has been received from the insurance offices for the loss by the fire in the Temple Meads in April last, besides the damaged timber valued at the sum of 550*l.*

A supply of iron rails for the 11½ miles to Taunton, is now ready at Bridgewater; and a further contract for 1,600 tons has been made on terms considerably below those of any former purchase. A proportionate supply of timber has likewise been secured for delivery at Bridgewater; where sawing-mills, erected by the contractor for the permanent-way, creosoting-tanks, and other conveniences for preparing timber, are in active operation.

The advantageous terms on which the principal materials have been provided, combined with the present and probable comparative cheapness of railway labour, strengthen the expectation of the Directors, that the remainder of the line will be economically constructed.

By the acconnt of receipts and expenditure to the 31st of December last, you will find that there was a balance of 173*l.* 6s. 9d. due to the bankers; but your Directors have the pleasure of stating, that after providing for the current outlay for works between Bridgewater and Taunton, and paying several thousand pounds for land and works beyond the latter town the balances in favour of the Company now amount to upwards of 100,000*l.*

ENGINEER'S REPORT.

To the Directors of the Bristol and Exeter Railway.

GENTLEMEN,—The progress of the works beyond Bridgewater since the last half-yearly meeting, although much impeded by the winter, and by some other untoward circumstances, has, upon the whole, been sufficient to lead me to anticipate no difficulty in opening the line to the Taunton station early in this summer. The circumstances to which I have referred, as having impeded our progress, have arisen from the pecuniary embarrassments of of one of the contractors, who had undertaken, aprently, a greater extent of work than his command of captial and other capabilities justified him in doing. After some unavoidable loss of time, the contracts in his hands were re-let, and divided amongst other contractors then engaged upon the line; the engagements into which they have entered bind them to comple the several portions of the works, including the ballasting, at different periods, none of which are later than the middle of May. These contractors have proved themselves, upon other parts of the work, to be able men, and, I believe, trustworthy men: there is no practical difficulty in the completion of the work they have undertaken, within the time specified; and there are penalties attached to the non-completion of the several stages of the works, which penalties, should they become due, will be levied.

I think, therefore, the arrangements are such as to render the early completion of these works as certain as any such event can be.

Every arrangement is also made to ensure the permanent way being rapidly laid upon each portion of the line, as it becomes ready for receiving it.

Beyond Taunton, contracts have been prepared, and are now advertised to be let.

There are no works of any magnitude upon this portion of the line, until we arrive at those connected with the tunnel at White Ball Hill. These have been commenced; and although possession of the land was obtained only about the first week in January last, considerable progress has been made in the excavation of the deep cuttings at each end of the tunnel.

As far as I can at present judge, from the appearance of the ground, the execution of the tunnel will be much facilitated by these excavations being carried well into the hill, before the tunnel itself is commenced; and upon this plan, we are at present proceeding.

The appearance of the ground, and our prospects as regards the execution of the tunnel, are at present very satisfactory.

Beyond this point, and towards Exeter, the line has been revised and definitely settled at the several places at which the principal works occur; and the negociations are commenced for obtaining possession of the land.

Upon that portion of the line which has now been open to the public for nine months, I am happy to say that nothing has occurred which is worthy of remark. The works have stood well, and with trifling exceptions, have been unaffected by the season, which has produced so much mischief upon almost every other newly opened railway.

I am, Gentlemen, your obedient servant,

I. K. BRUNEL.

Bristol, March 1, 1842.

ROBERT FLETCHER, Public Accountant.

RAILWAY ADJUDICATIONS.

SHARPE *v.* THE BRISTOL AND EXETER RAILWAY COMPANY.

Court of Exchequer, Feb. 21.—Mr. Richards and Mr. Martin appeared for the plaintiff; the Solicitor-General, with Mr. Wortley and Mr. Talbot, were counsel for the defendants.

This was an action brought for the recovery of a balance of the price of five locomotive engines, stipulated to be finished at 1,765*l.* each, by Messrs. Sharpe and Roberts, the celebrated engine manufacturers of Manchester, for the defendants. The sum for which the action was brought was 2,375*l.*, and the defence set up was that in the construction of the engines the plaintiffs had departed from the agreement or specification entered into between them and the defendants, by using iron fastenings or rivets in making the fire boxes instead of copper fastenings, which they were bound by contract to use; it appeared that the plaintiffs had built ten engines for the Great Western Railway Company, who subsequently became connected with the defendants, and that they stipulated to build the five engines in question, precisely on the same principles, and in every respect the same, as the Great Western Railway engines, the fire boxes of those engines were made with copper rivets, but the plaintiffs substituted iron, because as they alleged it was more durable, of more absolute strength, and more capable than copper to withstand the power of expansion. This variation from the original contract was not discovered until some time after the delivery of the engines, and then the defendants objected to pay for the engines on the ground that the substitution of iron for copper was never acquiesced in by them, and that they considered copper fastenings better and safer. It now appeared in evidence that the substitution of iron for copper rivets was a substantial and practical improvement, and that that, amongst other deviations from the original specification, had been made for the advantage of the defendants, and to render the engines more durable. In many instances the alterations cost the plaintiffs more than the construction of the engines, according to the original agreement would have amounted to. The plaintiffs had turned out 200 engines within the last three years, and none of them had copper rivets. They were all very much approved of.

Mr. Gregory, Engineer of the Croydon line, deposed that iron rivets were much better than copper. Iron might be more safely heated to a greater degree than copper; besides, it was more powerful, and capable of drawing the flanges, which form the copper joints of the fire-boxes, much closer than iron. In saying that iron could be heated to greater degree than copper more safely, he meant that it could be heated to a greater degree without deteriorating the quality of the metal; the tenacity and strength of iron were greater than copper, and in contracting, it exercised greater force. Iron contracted more rapidly than copper could, it was better for rivets because it had the power of drawing the joints together more tightly. There was no fear of corrosion. It was observed that the heads of copper bolts used in fire-boxes were worn away, whilst the heads of iron bolts used for similar purposes were comparatively sound. There were several engines supplied to the Croydon Railway Company by Messrs. Sharpe and Roberts (the plaintiffs). All of them were made with iron rivets—they had now been working on that line for four years, and there was no reason whatever to complain of them; the iron fastenings were found to be much better than copper.

Mr. Thomas Statham, Resident Engineer of the Brighton Railway, and Mr. Fife, of the Northern and Eastern Railway Company, likewise deposed that iron rivets were preferable to copper.

The SOLICITOR-GENERAL objected to the opinions of the witnesses being received as evidence, and addressed the jury for the defendants. The simple question was whether the plaintiffs had complied with the contract entered into between them and the defendants or not, and if not, whether the defendants had waived the non-compliance by receiving and using the engines in question prior to the discovery of the defects in them; that the plaintiffs should be strictly tied down to the terms of the stipulation they had entered into, as to the degree of latitude to be allowed in deviating from the particular contract, he denied that the plaintiff had liberty from the defendants to deviate from the terms of the specification without the consent of Mr. Brunel or Mr. Gouch, the Engineers of the Company. A proposition, it is true, was made to Mr. Brunel, to alter the contract by making some of the stays or bolts from copper instead of iron, but Mr. Brunel, on behalf of the defendants, absolutely refused to acquiesce in such an alteration, because it was found that the copper bolts had worked well in the engines of the Great Western Railway, and therefore no consent had been given to alter or deviate from the specification in that respect. He contended that the plaintiffs could not maintain their action, as they had deviated from the terms of their written contracts.

Mr. Daniel Gouch, one of the Engineers of the Great Western Railway, proved that the fire-boxes of the 112 engines on that line, with the exception of those supplied by Messrs. Sharpe and Roberts, were made with copper rivets. Had seen all the engines supplied by Sharpe and Roberts from time to time, and did not discover that the rivets were iron until long after they were delivered to the defendants. The whole of the ten engines delivered to the Great Western Railway were defective.

Lord ABINGER asked when these engines had been delivered?

The witness stated that they were to the best of his recollection delivered in 1840; they had all done considerable work. The five engines delivered to the defendants had not done much work, the boiler of one of them (the *Panther*) failed and burst; it failed near the door.

Lord ABINGER—Could you form a judgment whether that failure in the *Panther* engine was owing to iron rivets being used?—I don't know. We have had no proof of that. I have had conversation with Messrs. Sharpe and Roberts, but I never on any occasion consented to the substitution of iron rivets for copper rivets. It was never mentioned to me. I am still in the employment of the defendants.

Mr. Brunel, Engineer-in-Chief, deposed that he had never authorised the plaintiffs to use iron instead of copper fastenings.

Mr. RICHARDS contended for the plaintiffs, that the defendants had acquiesced in the deviation that had been made from the terms of the agreement, in using iron instead of copper rivets, and in any event the departure, according to the evidence, must have the effect of serving the defendants, in rendering the engines more efficient and durable, while it could be of no advantage to the plaintiffs, the difference of cost being only a few shillings in each engine for copper fastenings.

Lord ABINGER in summing up said, that with regard to 625*l.* being the balance of one of the engines delivered to the defendants and not objected to, they were bound to find a verdict for the plaintiff. The question then was, whether 1,750*l.*, being the price of another of the engines delivered to the defendants, should not be added to that sum; that engine had been objected to because it was not executed in the way specified in a contract entered into between the parties; it was true that if a man ordered work, and if it was not done according to the contract, and as it had been ordered, it could be rejected; on the same principle, if the engines in question were not made as they were ordered, they could be rejected by the defendants; but then the jury would have to determine whether the contract had been substantially performed—whether the objection taken long after the delivery of the engines arose from some collateral cause; the contract was not to be inferred merely from the specification—there were many engines delivered by the plaintiffs to the defendants, and the jury should consider whether there were not abundant opportunities for the defendants to consider the deviation that had been made from the contract; it might have been easily ascertained, but no inquiry had been instituted, and no objection made. Several engines made with iron rivets had been received and had not been objected to by the defendants. That seemed as if they had approved of them, and if they were, in point of fact, aware of the deviation in that respect from the terms of the agreement, that acquiescence on the part of the defendants gave rise to a new contract, by which they should now be bound, if the jury thought that the alteration had not been made with a fraudulent intention, but with a view to effect a substantial improvement in the machinery, and that the defendants having had sufficient time and opportunity to discover that the alteration was made, acquiesced in it, and permitted it to be made, particularly when it was for their own advantage, a verdict should be returned for the plaintiffs; but if the jury were of opinion that the deviation was not acquiesced in by the defendants, and that it was detrimental to their interests, they should find a verdict for the defendants.

The jury immediately handed in their verdict for the plaintiff, for 2,375*l.* damages and interest.

[We are informed that the contract for the engines was assigned at the time of the lease to the Great Western Company, and that consequently the Bristol and Exeter Company had no pecuniary interest whatever in the issue of the trial, which was defended by desire of the lessees.—ED. R. T.]

GORDON *v.* THE CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.

Rolls Court, Feb. 21.—Lord Langdale pronounced his final judgment to-day in this cause, which had stood over from last week for further investigation and consideration on some reserved points.

The facts have already appeared.

His LORDSHIP, at the last hearing of the cause, was not satisfied with the evidence adduced at either side respecting the inconvenience which might arise to either the plaintiff or defendants, by the refusal or granting of the injunction sought to be obtained by the former. His Lordship had also reserved the point, whether, if an injunction were granted, there ought to be any condition attached to it. It giving judgment this morning, his Lordship said he had had two affidavits made by the defendants, and one by the plaintiff. Looking at the former he feared that an injunction could not be put on those parties now without occasioning considerable inconvenience—he would not say danger—to all who made use of that line of railway. In the affidavits he saw no limitation mentioned of the time during which the inconvenience complained of by the plaintiff should continue. That formed the strongest case against the defendants. In that matter their own option ought not to be alone consulted. The only difficulty his Lordship felt in the matter was, the apprehension which any Judge must have in granting an injunction, lest inconvenience should arise therefrom to a great many persons. He should, therefore, direct an order for an injunction absolutely. The defendants not to consider themselves held by the order till after the last seal-day following Trinity Term next; and undertaking not to make any additions to the buildings mentioned in the pleadings; as also to bring their petition in the meantime for re-hearing before the Lord Chancellor or the House of Lords.

BRISTOL AND EXETER RAILWAY COMPANY.—ELEVENTH HALF-YEARLY MEETING.

—At the Half-yearly General Meeting of this Company, held at the White Lion Hotel, in the City of Bristol, on Thursday, the 3rd March, 1842,

JAMES GIBBS, Esq., in the Chair,

It was unanimously resolved,

Moved by Edward Brett, Esq., M.P., and seconded by Dr. Miller,—

1st. That the corporate seal of this Company be affixed to the Register of Proprietors now produced.

Moved by Mr. Archdeacon Froude, and seconded by J. M. Gutch, Esq.,—

2nd. That the Report of the Directors, now read, be received and adopted, and that they be requested to send a copy thereof to every Proprietor.

Moved by William Tothill, Esq., and seconded by A. K. Baker, Esq.,

3rd. That Messrs. Frederick Ricketts, W. D. Wills, William Morgan, and Francis Parker, be re-elected Directors of this Company.

Moved by John Tyrrell, Esq., and seconded by John Browne, Esq.,

4th. That the arrangement entered into with the Great Western Railway Company for the settlement of the Rent for the first year, under the Lease, be approved and confirmed, and the same is accordingly approved and confirmed.

Moved by William Hollister, Esq., and seconded by Thomas W. Hill, Esq.,

5th. That the best thanks of the Proprietors be given to the Directors, for their able, zealous, and successful management of the affairs of this Company.

JAMES GIBBS, Chairman.

The Chairman having quitted the Chair,

It was Resolved by acclamation.

6th. That the cordial thanks of this meeting be given, to James Gibbs, Esq., for his able and judicious conduct in the chair.

And it was Resolved by acclamation,

7th. That the best thanks of this meeting be given to J. B. Badham, Esq., the indefatigable Secretary of this Company, for his zeal and ability in promoting the interests of this undertaking.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.

—NOTICE is hereby given, that the Directors of the Bristol and Exeter Railway Company will receive on Saturday, the 26th of March, at 12 o'clock, at their office, Broad-street, Bristol, TENDERS for the execution of the following Works:—

CONTRACT, No. 1, D.—The formation of the Railway, and the execution of all works connected therewith, except ing the laying of the Permanent Way, of that portion of the Line extending from the field next adjoining the proposed Station at Taunton, to the crossing of the Grand Western Canal, in the parish of East Nimehead—a distance of about four miles and fifty chains.

CONTRACT, No. 2, D.—The formation of the Railway, and the execution of all works, connected therewith, excepting the laying of the Permanent Way, of that portion of the Line extending from the last mentioned Contract to a field in the parish of Wellington, and joining the Wellington and Milverton road; being a distance of about two miles and forty chains.

CONTRACT, No. 3, D.—The formation of the Railway, and the execution of all works connected therewith, excepting the Laying of the Permanent Way, of that portion of the Line extending from the last mentioned Contract, to a point near Beam's-bridge, in the Parish of Sampford Arundel; being a distance of about two miles.

Drawings and Specifications of the above Works will be exhibited at the Engineer's Office, in Temple Meads, Bristol; and Printed Forms of Tender may be had at the same Office, or at the Company's Office in Broad-street, on or after MONDAY, March 7.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the parties to attend at the Office, Broad street, Bristol, at Twelve o'Clock, on SATURDAY, March 26.

By Order of the Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol,
March 1, 1842.

SEA SIDE.—Mr. FURNER of the Royal Hotel and Family Boarding-house, Hayling Island, Hampshire, begs leave to inform the public, that he has a choice of sitting rooms commanding fine views of the Isle of Wight, Spithead, &c., with other necessary accommodations, that can be taken for any period, and if wished upon terms, including every charge. Hot, cold or shower Baths can be had in the hotel.

Mr. H. can supply particulars of any house to let, furnished or unfurnished, having one or two detached residences with gardens at this time.

TO RAILWAY COMPANIES, ENGINEERS, CONTRACTORS, &c.—For Sale, Three Locomotive Engines and Tenders; cylinders 12 inches diameter, length of stroke, 18 inches; diameter of driving-wheel, 5 feet, adapted to the usual gauge. These Engines are most substantially made, highly finished, and will be sold considerably under the usual price. To be seen at the Manufactory of Messrs. George and John Rennie, Engineers, No. 6, Holland Street, Blackfriars, London, to whom application is to be made.

HUNGERFORD AND LAMBETH SUSPENSION FOOT BRIDGE COMPANY.

Directors—

The Right Honourable The EARL OF DEVON, Chairman.

William Curry, Esq.	James Lys Seager, Esq.
Charles W. Christie, Esq.	Daniel Sutton, Jun., Esq.
Thomas Harrison, Esq.	James Ruddell Sodd, Esq.
Benjamin Hawes, Esq.	George Vaughan, Esq.
William Hawes, Esq.	G. F. Walker, Esq.
James Rhodes, Esq.	

Treasurer—Alexander Rogers, Esq.

Bankers—London and Coventry Joint Stock Bank.

Engineer—I. K. Brunel, Esq., F.R.S.

Surveyor—J. B. Bunning, Esq

Solicitors—Messrs. Few, Hamilton, and Few.

Clerk—Mr. Laurance.

At the Half-yearly General Meeting of the Proprietors, holden at the Company's Offices, No. 9, Villiers-street, Strand, the 26th day of February, 1842, the following Report was read:—

REPORT.

Your Directors have to report that the contractor has proceeded as rapidly as the weather has allowed him, in the performance of his contract, and the work has been executed so far, to the entire satisfaction of your Engineer, whose Report upon the present state of the works will be read to the meeting.

In the course of a month the works will be proceeding at both coffer-dams and abutments.

The Contract for the Iron-work is completed, and the Contractors, Messrs. Carne and Vivian, are proceeding with it.

Your Directors have not yet disposed of any of the Forfeited Shares, and feel they cannot bring this subject too prominently before the Proprietors, having relied upon their assistance in disposing of them.

The Balance Sheet of the Company's Half-yearly Accounts, ending 31st of January last, and signed by the Auditors, will be read by the Clerk.

ENGINEER'S REPORT.

18, Duke-street, 25th February, 1842.

GENTLEMEN,—I have the the satisfaction of reporting to you that the works are proceeding regularly and successfully, and that nothing whatever has as yet occurred to create any difficulties, beyond those anticipated and provided for.

The foundations on the north side are completed; and as soon as the last of the castings, which form the means of attaching the chains, shall have arrived, the abutment itself will be rapidly built up. On the south side, the foundation for the abutment has been excavated, and the ground exposed, and the result of my examination is perfectly satisfactory: the pile driving and foundations for this abutment will now be proceeded with. Of the river pier one coffer-dam is complete, and an engine is being erected for the purpose of pumping the water and removing the mud. The bed of the river appears to be hard, and well fitted for founding the piers.

"The iron work for the suspended portion is commenced; and I am happy to say that we have every right to expect that this part of the contract, upon which, of course, so much depends, will be well executed. The works of Messrs. Harford, at Ellonvale, are capable of furnishing very excellent iron, and I cannot doubt that they will use their best endeavours to manufacture the best material in the present case; and so far as it is safe to form an opinion from the first delivery of the chains for the Clifton Bridge, which are similar to ours, Messrs Carne and Vivian, our contractors, can, and I have no doubt will, execute the work in a very excellent and creditable manner.

"Upon the whole, we have every reason to be satisfied with the present state and progress of the works, and to expect that during the ensuing summer a very considerable and a much more apparent advance towards completion will be made. I am, Gentlemen, your obedient servant,

"I. K. BRUNEL.

"To the Directors of the Hungerford Bridge."

It was moved and seconded, and resolved—

That the Report be received, and printed and circulated amongst the Proprietors.

It was moved and seconded, and resolved—

That the Thanks of the Meeting be given to the Chairman, and to the Directors, for the care and assiduity they have manifested in the affairs of the Company.

By order of the Board,
RICHARD LAURANCE, Clerk.

HUNGERFORD AND LAMBETH SUSPENSION FOOT BRIDGE.

—At the Half-yearly Meeting of this Company, held the 31st of August, 1841, the following shares were declared to be forfeited, viz.:—

100 Shares, Mr. John Wright.
40 " } Held by Proprietors Deceased.
10 " }
15 " }

Applications for these Shares may be made at the office of the Company, No. 9, Villiers-street, Strand, between the hours of Ten and Four o'clock.

By order of the Board,
RICHARD LAURANCE, Clerk.

HUNGERFORD AND LAMBETH SUSPENSION FOOT BRIDGE COMPANY.

—Sixth Call of £2 10s. per Share.—NOTICE is hereby given, That the Directors have this day made a Call of £2 10s. per Share; and that in pursuance thereof, the Proprietors of Shares in this undertaking are hereby requested to pay the same on or before the 6th day of April next, to the credit of Alexander Rogers, Esq., the Treasurer of the Company, at the London and County Bank, No. 71, Lombard-street.—Dated this 3rd day of March, 1842.

W. HAWES, Deputy Chairman.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

—NOTICE is hereby given, That in pursuance of a resolution of the Board of Directors, Proprietors of New Shares in the said undertaking, are required, on or before Tuesday, the 22d day of March next, to pay into any one of the undermentioned Banks, the further sum of £1 10s., as a Third Call on each new share held by them spectively, viz.:—

Edinburgh—Royal Bank of Scotland.
Glasgow—Ditto.
Greenock—Any of the Banks there.
Liverpool—Liverpool Commercial Bank.
Lancaster—Lancaster Banking Company.
London—The Chief Office of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry,—Branch of the Provincial Bank of Ireland

Discount at the rate of 5 per cent. will be allowed on all payments made previously to the 22d March, and the Bankers have been instructed to charge interest from that date until payment.

By order of the Board of Directors,
WYNDHAM HARDING, Secretary.

Railway Office, Greenock, 26th February, 1842.

NORTHERN AND EASTERN RAILWAY.

—NOTICE is hereby given, That the Directors have this day made a Call of Five Pounds on each share of Fifty Pounds, to become payable on the 2nd day of April next, and the Shareholders are requested to pay the same to either of the following Bankers, viz:—

London—Messrs. Masterman and Co.
Manchester—Sir B. Heywood, Bart., and Co.
Liverpool—Messrs. Heywood and Sons.
Cambridge—Messrs. Fisher and Sons.

Interest at the rate of Five Pounds per cent. per annum will be charged on all sums which remain unpaid after the day above appointed.

Shareholders are requested to take Notice, that each original share of £100 has been, by the late Act of Parliament, converted into two shares of £50 each, so that the Call hereby made is equal to £10 per share on each of the original shares.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 2nd March, 1842.

STEAM ENGINES.—WANTED a Second-hand Pillar and Beam Portable Engine, of about 14 horse power, calculated for a coalpit winding engine; also, Two Locomotive Engines, calculated for merchant traffic on a Railway of 4 ft. 8 in. gauge. The Engines must be in perfect order and repair.

Letters, stating full particulars and price, addressed to James Green, Engineer, Newport, Monmouthshire, will have prompt attention.

VAN GOODS to CHELTENHAM and GLOUCESTER.—The GREAT WESTERN RAILWAY COMPANY give Notice, that they have established DAILY VANS from their station at Cirencester, to and from the towns of Gloucester and Cheltenham, in order to secure a direct and punctual conveyance of goods to all parts of Gloucestershire, and South Wales. Their prices, including all charges for collecting and delivering in London and the aforesaid towns are, from 1s. for small parcels, up to 6s. for packages of two cwt. and for aggregate quantities, 40s., 44s., 48s., 52s., and 60s., per ton, according to the description of goods, of which full particulars may be obtained. Receiving Houses—London: Princes-street, Bank; Bull and Mouth, St. Martin's-le Grand, and Regent circus: and the Paddington Station. Gloucester: King's Head Van Office. Cheltenham: Plough Hotel Van Office.—1st March, 1842.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and Aldersgate street, in the Parish of St. Botolph Without-Aldersgate, in the City of London, and published by at the *Railway Times* Office, No. 122, Fleet-street, g Saint Bride's Church), in the Parish of Saint Bride's, -street, Middlesex.—Saturday, March 5th, 1842.

SUPPLEMENT TO

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 218. Vol. V.—No. 10. Part II.] SATURDAY, MARCH 5, 1842. [Price, with Part I., 1s.

LONDON AND SOUTH-WESTERN RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the proprietors of the London and South-Western Railway Company was held on Saturday last, at the Nine Elms terminus, Vauxhall; William Chaplin, Esq., Deputy-Chairman of the Board of Directors, in the chair. There was a numerous attendance.

The advertisement convening the proprietors having been read, the minutes of the last meeting were read, and unanimously confirmed.

With reference to one of the resolutions passed upon that occasion, authorising the Board to repurchase from one of the Directors (Mr. Ambrose Humphrys) the wharf adjoining the Nine Elms terminus, and which that gentleman had generously offered to give up for cost price, although it would have been to his individual advantage to retain it, Mr. Nathan said, he had not been present at the last meeting, but he had seen the circumstance of the offer noticed in the *Railway Times*, and he presumed that the item of 7,461*l.* 14s. 6d., in the present accounts, under the head of "premises at Nine Elms," had reference to the wharf. Now, it had been stated at the last meeting that the purchase-money was only 7,000*l.*

The Chairman said, Mr. Humphrys, who had so liberally given up an advantageous purchase for the benefit of the Railway Company, had not received one farthing beyond the money out of pocket. The excess upon 7,000*l.* was for cost of conveyance and other incidental charges. (Hear, hear.)

The Secretary (Alfred Morgan, Esq.) then, at the request of the Chairman, read the following Report:—

Digitized by Google

By the statement of the half-yearly accounts, from June to December last, the Directors are enabled to congratulate the proprietors upon the satisfactory proceeds of the traffic during that period.

The amount derived from passengers, parcels, &c. is 130,878*l.* 18s., and from merchandise and general traffic 22,282 14s. 11d, making together a total of 153,161*l.* 12s. 11d., which will show an augmentation of 8,995*l.* 10s. 11d. over the same months in 1840.

The line opened throughout to Southampton on the 11th May, 1840, and comparing the receipts between that date and the 31st December, with those of the corresponding time in the past year, the result leaves a sum of 15,845*l.* 12s. 3d. preponderating in favour of the latter.

That portion of the traffic derivable from what has been denominated pleasure travelling, doubtless depends upon the summer months, and when the unpropitious state of the weather during the last season is remembered, an unfavourable effect might have been anticipated. This for a portion of the summer was no doubt experienced, yet the receipts during the whole six months have nevertheless exceeded those of any simiair period; and although the depression in all branches of commercial industry during the past year has, to some extent, influenced them, there is in the above fact sufficient ground for believing, that independently of other sources of revenue, there are, in connection with this railway, great mercantile interests springing up, which cannot fail to be productive of a permanent rather than a mere season traffic.

As was expressed in a former Report, the opening of the ocks at Southampton is regarded with considerable interest. The West India Mail Packet Company have, by the selection of Southampton as their port of departure and arrival, created another extensive public establishment, with all its obvious and important advantages. The organization of a more enlarged steam communication with the south-western coast of England, the Channel Islands, Havre, &c., may confidently be expected, and the encouraging reports of the rapid progress of the railway from Paris to Rouen, open flattering prospects for a realization of much future benefit.

With a view to cultivate the traffic, and to increase the public accommodation, the Directors determined to continue throughout the winter all the long trains which had been running during the summer; and although this measure, by the extra mileage, necessarily involved some additional expenses in the locomotive and carriage departments, still they see no reason to doubt the propriety of the course they adopted, believing that by giving such facilities they are likely to secure the cordial support of all those who may have occasion to travel by the railway.

The Gosport branch line, in consequence of the difficulties experienced at the Fareham tunnel, and which were alluded to in the last Report, was not made available to the public so early as the Directors anticipated. An extension of the original slip of earthwork which occasioned the first failure having occurred, it was deemed expedient to make an open cutting of that portion of the tunnel which had given way; and although the most unremitting exertions were used, both by day and night, its completion was so much retarded by the operation of the continual heavy rains, on a soil so precarious, that it was found impracticable to open the line during the summer months; and even in November, when this was effected, the protracted wet weather produced great subsidence in nearly all the newly-formed embankments, and several fresh slips appeared in some of the larger cuttings; under these circumstances the Directors, with a view to the public safety, which they deemed paramount to any other consideration, as well as to enable the contractor to finish the works with the least possible interruption, considered it prudent, at that season of the year, to discontinue the passengers' trains, keeping the line open, however, for the conveyance of merchandise.

The line was re-surveyed on the 4th February, by the Inspector-General of Railways, and being approved by him, was re-opened for passengers on the 7th February, and the Directors have the satisfaction to report, that the works and line are at present in excellent condition, and the trains running with perfect regularity.

The Directors, who retire according to rotation, are James Aikin, Esq., Lieut. Col. Henderson, and Thomas Smith, Esq., and these gentlemen are eligible for re-election.

The revenue having yielded a gross total of 153,434*l.* 1s. 6d., inclusive of the residue of the last account, and the amount received for pier dues; this, after deducting the various items of expenditure and interest on bonded debt, as stated in the "revenue account," will leave the sum of 67,549*l.* 17s. 3d., out of which it is recommended to pay a dividend at the rate of 30s. per share; a balance of 8,750*l.* 14s. 9d. will then remain available for future application.

In conclusion, the Directors cannot but express their conviction, from the experience of the past six months, that the prospects of the Company have upon no previous occasion, borne a more satisfactory aspect than at present.

By order of the Court of Directors,

ALFRED MORGAN, Secretary.

The Report was most favourably received.

The CHAIRMAN said, the continued absence of his worthy friend, Mr. Garnett, the Chairman of the Board, afforded him another opportunity of presiding upon that occasion, an opportunity which he the more readily embraced, as he trusted the opinion which he had expressed at the last meeting as to the favourable prospects of the traffic, and the mode of managing that traffic, would be found to have been satisfactorily realised. (Hear, hear.) He hoped the Report which had just been read, would be found sufficiently explicit on passenger traffic, and for his own part he was of opinion that, whether regarded as to quantity or (if he might be allowed the expression) to quality, it was such as fully to realize their expectations. (Hear, hear, hear.) If they did but secure the anticipated mercantile interest, in addition to those claims upon the passenger traffic, which the numerous opportunities for the promotion of health and recreation the line afforded, it could not fail to create such a permanent traffic, as would lead to the most brilliant results. They hoped indeed, that the railway would soon participate in the benefits arising from Royal patronage. As regarded the management of the traffic, it gave him extreme gratification to be able to state, that during the past half-year they had carried no fewer than 333,854 passengers, without a single accident—nay, even up to this date. (Hear, hear.) He trusted that many gentlemen present were in the practice of travelling by the South-Western Railway, and that they appreciated, and could bear testimony to, the regularity of the trains. (Hear, hear, hear.) In truth, the South-Western line had now attained in this respect the character of one of the best railways in the kingdom. (Hear, hear, hear.) He doubted not that the meeting would give the Management credit for carrying out a most efficient system, when he informed them that with all these 333,854 passengers, but one solitary instance of loss of luggage had occurred—and even as to that he doubted much whether the property had ever been in the possession of the Company. (Hear, hear, hear.) When such circumstances as these became known, he trusted that Government and the public would have some little patience with Railway Companies; and when it was found that Directors were manifesting so much care and anxiety for the safety and accommodation of the community, and, notwithstanding the ramifications of the system and the novelty of its details, with so much success, he would venture to express a hope that there would be found but very little cause for censure or interference from without. (Hear, hear, hear.) Such was the condition of the traffic; and the next point of importance, and really it had been of very serious anxiety to his colleagues and himself, was the expenditure; and it was due no less to the Directors than to the executive officers of the Company to show, that in spite of the perplexing and vexatious delays in the opening of the branch to Gosport, there was a good account to be rendered. The proprietors would recollect, that when he had last the honour and the pleasure of meeting them in that room, he had expressed a hope that the branch to Gosport would be ready for opening in a fortnight from that date, but he was sorry to state, that from that period up to the commencement of the present month they had been kept in constant suspense and expectation with respect to such opening. The consequence was, that they had been compelled to keep numerous servants engaged, who otherwise would not have been wanted, but whom it was not thought prudent to discharge; and he need not inform the meeting that considerable additional expense had thus been incurred. There was, moreover, another cause for an augmentation of expenditure, and it was this, that the Directors in calculating upon a considerable increase of traffic from Gosport, and looking at the importance of furnishing to parties connected with the great national depot at Portsmouth the utmost facilities of communication with the metropolis, had deemed it desirable to keep up during the winter the same number of trains as had been running during the summer. The advantage which had resulted from parties thus being enabled to reach London by 10 o'clock in the morning—an advantage which in no previous winter they had possessed—had been very great, but it had been attended with some additional expense to the Company, although the Directors had been and were of opinion, that where the public paid a liberal price for the facilities of railway travelling, they were fairly entitled to liberal accommodation. (Applause.) Under all these circumstances he trusted that those who had a practical acquaintance with the working of railways, would not consider that their expenditure had been disproportionate, and although the usual plan was to look at such an expenditure according to its amount as a per centage upon the gross receipts, he hoped that in the peculiar position of this railway, they would rather take it by the mileage, and in that case he had no doubt the Directors would be acquitted of any want of economy. During the last six months the trains had run upwards of 303,917 miles, which was about 33,800 miles more than had been run in the corresponding period of 1840, and yet the expenditure in the two periods was, if reckoned in money, about 910*l.* in favour of the last six months, or taken as a per centage on the gross receipts, there was a reduction from 40¾ to 39, reckoning upon the plan which had always been adopted in this Company—he did not know why—of deducting from the gross expenditure the Government duty, and the local rates and taxes, as items over which the Company had no control. (Hear, hear, hear.) One word with respect to the alteration which had recently been made upon this line in the conveyance of third-class passengers. The general opinion seemed to be, that the plan of conveying third-class passengers by goods trains was not so safe as by passenger trains, and the Directors of this Company had therefore deemed it advisable to discontinue sending third-class passengers by the luggage trains, and to attach them instead to the first of the usual passenger trains in the morning—an arrangement which, while it secured to the humbler classes what was deemed a greater degree of safety—and that was the paramount consideration—would at the same time stimulate them to habits of early rising. (Hear, hear.) With respect to the question of poor rates, which had been touched upon at the last meeting, the Directors had certainly not thought that, looking at the character of the land through which the railway principally passed, they should have been the first par-

Digitized by Google

ties selected for an attempt to impose a property tax—a tax out of profits; but so it was. The question had, however, been discussed by the most eminent counsel, and was at present in the hands of enlightened and upright judges, and he hoped and believed that the result would be satisfactory. (Hear, hear, hear.) There was only one other subject to which he would briefly advert, and that was the state and prospects of the Gosport branch. They were all no doubt aware that the Gosport branch was constructed with funds supplied on the terms that the holders of Gosport shares should have the option, within six months after the opening, of continuing to receive 5 per cent. from the revenue of the South-Western Company, or of risking the chance of a general dividend, whether larger or smaller. The Solicitor of the Company, Mr. Bircham, would state at what time the option expired [Mr. BIRCHAM—The 29th of next May], and as printed notices would be sent to every proprietor, it would be for themselves to decide which course they would adopt. They were all acquainted with the prospects which the undertaking presented of ultimate success, and whether the dividends were likely to be increased or not. No doubt many persons would prefer the steady solid security of 5 per cent., while others would embrace the chance of receiving a larger return. He alluded to the matter solely because he knew, from various questions that were from time to time put to him, that the exact position of the Gosport stock was not fully understood. The interest of 5 per cent. would be paid out of the general receipts of the main and branch lines prior to the division of profits, and he need scarcely say that a more solid security for 5 per cent. per annum could not be found. Sometimes it happened, that when these preferred dividends were paid, the original stock did not realise more than 2 or 3 per cent., while in this instance the surplus warranted a dividend of 7½ per cent.; but, as he had already said, it would be for the proprietors themselves to weigh maturely all the circumstances of the case, before coming to a final decision. He would only add, that as the attention of legal gentlemen became more directed towards railways as permanent investments, they could scarcely fail to recommend to their clients to embark their property in this species of stock, for the benefit of survivors, rather than in consols, and whenever such a time arrived, as arrive it must, he was sure that no safer investment could be found than the Gosport branch of the South-Western Railway. (Hear, hear, hear.) He would not trespass longer—he was sorry he had trespassed so long—on the time of the meeting, further than to say, that his colleagues and himself would feel pleasure in hearing any remarks on the Report, answering any questions, or giving any further information in their power.

The honourable gentleman sat down amid loud applause.

Mr. NATHAN would avail himself of the Chairman's kind offer, by asking a few questions. He saw that the buildings at the terminus, recently destroyed by fire, had been rebuilt. Was the cost paid by the fire-offices or by the Company?

The CHAIRMAN said, the building had been partly insured, and consequently part of the cost had been paid by the fire-offices. The Company had, however, lost something.

Mr. NATHAN—May I ask how much?

The CHAIRMAN—About 1,300*l.* in the building, but the principal loss was on the stores destroyed; and as the Directors had not had an opportunity of taking stock or of ascertaining the exact cost of the property destroyed, which was purchased at various times, they could scarcely tell the extent of the loss.

Mr. NATHAN was very desirous of getting an approximate estimate, even if it were larger than the actual loss.

The CHAIRMAN said, the loss on the building and stores probably amounted together to between 4,000*l.* and 5,000*l.* By that sacrifice, however, they had secured considerable improvements in their buildings, which experience had pointed out.

Mr. NATHAN inquired if the whole of this cost was included in the accounts now submitted.

The CHAIRMAN—Yes.

Mr. NATHAN had observed that a dividend had been declared on the estate of Messrs. Wright, the bankers. What loss was this Company likely to sustain by the bankruptcy of that firm?

The CHAIRMAN said, they had already received a dividend of 5*s.* in the pound, and probably other dividends would be declared. Even if nothing more were paid, the loss to the Company would not exceed 2,500*l.*

Mr. NATHAN said, the Company's books were closed on the 31st of December, and the meeting was not held till now, and probably the dividend would not be payable till after the lapse of three weeks or a month. The books must have been made up before this time, and therefore he should like to know why the dividends were not to be paid at an earlier date than was usually the case?

The CHAIRMAN said, all the calls were not paid so quickly as was desirable.

Mr. NATHAN begged to remind the honourable Chairman that interest was payable on calls in arrear.

The CHAIRMAN was aware of that, but if the calls were not paid in time there was not money in hand to pay the dividend.

Mr. NATHAN thought this statement confirmed an opinion of his, which was referred to at the last meeting in his absence, namely, that the dividends were paid out of capital.

The CHAIRMAN had taken some pains to explain this matter at the last meeting. The honourable proprietor would admit that the line was completed; and how could that have been effected if they had not applied the produce of the traffic to do it? (Hear, hear, hear.) The traffic receipts had merely been borrowed, and when the amount was repaid out of calls the dividends arising from such receipts would be paid. (Hear, hear, hear.)

Mr. NATHAN had seen it stated in the *Railway Times*, in the account of the last meeting, that the contractors had lost money by the construction of the Gosport branch, and that the Directors had said it was right that the Company should reimburse them. Now he begged to ask, if the contractors would have returned anything to the Company if they had made a handsome profit by the work, or if, in point of fact, they had contributed anything towards the 80,000*l.* which had been incurred principally through slips?

The CHAIRMAN was not aware that the Directors had ever said anything of the kind. (Hear, hear, hear.)

Mr. NATHAN had given his authority for what he had stated; he himself knew nothing of it except what was mentioned in the *Railway Times*.*

He would put it in another way. Was the loss said to have been incurred on the Gosport branch, to be borne by the contractors or the Company?

The CHAIRMAN, without any wish to avoid the question would refer it to Mr. Locke, the Company's Engineer, in whom the Directors had the most implicit confidence. (Hear, hear, hear.) Mr. Locke had come to a settlement with the contractor for the Gosport branch, and when he mentioned that the whole line and branch had been completed for 28,000*l.* per mile, including stations, staff, plant, &c., he thought their confidence in Mr. Locke ought not to be abated. (Great applause.)

Mr. LOCKE said, he had made the contract with Mr. Brassey for the construction of the Gosport branch, and it was he who had gone through the items of the work, and certified the payments to be made.

Mr. NATHAN (interrupting) merely wished to know if the Company had to pay, supposing the contractor to have sustained a loss. Was the amount actually paid to the contractor more than he was entitled to under his contract?

The CHAIRMAN said, it was to a certain extent. They had found the soil to be different from what was expected, so that it was necessary to build the brickwork of the tunnel in cement, instead of mortar, as at first intended. Of course, if they had known at first what they subsequently discovered, the contract would have been for brickwork in cement.

Mr. LOCKE said, the contract for the Gosport branch amounted to 180,000*l.*, whereas the Parliamentary estimate was for 210,000*l.*, thus bringing the amount for which it was let 30,000*l.* below the original calculation. It was notorious, however, that in a railway contract everything was not included, but he would state, frankly, that he had hoped to have saved a considerable sum on the Gosport branch, as compared with the Parliamentary estimate. The unforeseen difficulties of the Fareham tunnel had, however, frustated his design, and when he told them that the whole 210,000*l.* was gone, they would have a pretty accurate notion of the state of the case. He begged, however, to state that the actual cost of constructing the Gosport branch had not exceeded the Parliamentary estimate by more than 5,000*l.*—(hear, hear.),—and all that he had to blame himself for was, in attempting to save money where it had been found impossible to do so.

Mr. NATHAN was sure no one would find fault with their excellent Engineer for *that*.

Mr. LOCKE resumed. He was sorry that Mr. Brassey was not present at this meeting, as he would have been able to offer any further information that might be required. He (Mr. Locke) had certified that Mr. Brassey was entitled to more than 20,000*l.* above the amount of his contract. He thought a contractor was in law entitled to extra remuneration when he was ordered to put in additional work. Even beyond that sum Mr. Brassey had sustained considerable loss, and under his (Mr. Locke's) recommendation the Directors had met the case on liberal terms. Including, however, that extra sum paid to Mr. Brassey—a gift it might be called if the honourable proprietor chose—the actual cost of constructing the Gosport branch as already stated had not exceeded the Parliamentary estimate by more than 5,000*l.* (Hear, hear, hear.)

Mr. NATHAN had an idea that the total cost of the branch to Gosport had been set down at 300,000*l.*, whereas he found from the accounts that it had in reality amounted to 356,000*l.*

Mr. LOCKE could only say, that the cost of construction had been as he had stated. The land had been in excess, an item for which he could not be held responsible, and there was, moreover, the in-

* We (ED. R. T.) trust Mr. Nathan will in future be more cautious in what he attributes to the *Railway Times*. The only notice in the *Railway Times* which could afford the semblance of a reason for such statements as are ascribed to us is comprised in the following paragraphs, of our notice of last meeting, (see *Railway Times*, September 4, 1841, page 925,) which, we need scarcely say, bear a widely different meaning from that of the version given by Mr. Nathan:—

"Mr. KEET inquired what expense would be involved by the failure of the Fareham tunnel.

"Mr. LOCKE said, the extra cost would be from 10,000*l.* to 15,000*l.* But whether that will ultimately fall upon the Company or the contractor, was yet to be determined. He was of opinion that by the terms of the contract, the loss would fall on the contractor, but he had no hesitation in saying, that this was a case which ought to be *liberally* dealt with.

"Mr. KEET hoped that it would not happen in this Company as in some others, where the work was pronounced satisfactory by some subordinate, and then the risk and loss fell upon the Company.

"Mr. LOCKE said, it had not been, and would not be so in this Company.

"The CHAIRMAN said, the nature of the contract would, he thought, throw the onus on the contractor, but as the soil was extremely bad, it must be a matter for future consideration how he was to be dealt with."

Digitized by Google

terest on capital, which had not been included in the original estimate.

Mr. J. B. Boothby (a Director) thought, if the honourable proprietor wished to go minutely into all the accounts—which, however, he had a perfect right to do—the business of the meeting would be interminable. He (Mr. Boothby) would, however, mention a few general facts which probably would throw some light upon the matter. The Chairman had stated that the total cost of the line, including everything, would not exceed 28,000*l.* per mile. Compare this amount with the cost of any other railway in the kingdom; compare it more especially with the neighbouring lines, the London and Birmingham and Great Western. On the 76 miles of the South-Western there had been, as their Engineer would inform them, 16,000,000 cubic yards of earthwork to remove; on the 112 miles of the Birmingham there had been only 14,000,000; and on the 118 miles of the Great Western not more, he believed, than 11,000,000—but say 12,000,000. Now, the South-Western Railway had cost only 28,000*l.* per mile, whereas each of the other two had cost double, at least they had cost on an average 50,000*l.* per mile, and this comparison ought, in his opinion, to satisfy the honourable proprietor and the shareholders generally, that economy had not been overlooked in the construction of the works. (Hear, hear, hear.) He (Mr. Boothby) was a proprietor in many railways, and if he was not so large a holder in this as in some other lines, it was principally because he had not believed it possible that the line could have been constructed at so small a cost as had proved to be the case. (Hear, hear, hear.)

Mr. Nathan had no doubt the money had been judiciously expended; but as to saying that there were not cheaper lines it was a mistake. For example, the York and North Midland Railway had not cost more than 20,000*l.* per mile.

Mr. Boothby begged to remind the honourable proprietor that the earthwork upon the York and North Midland line was not to be compared, for heaviness, with that on the South-Western.

Mr. Nathan had a very good opinion of the capabilities of the South-Western Railway, and of the judicious manner in which it had been constructed; and the best proof he could adduce of his confidence was, that he had increased his holding from 8 shares to 87. (Hear, hear, hear.) All he had meant to say was, that the Gosport branch had cost 50,000*l.* or 60,000*l.* more than he expected; but if the Directors and Engineer said the expenditure was unavoidable, he felt no desire to dispute their decision.

Captain Ramsay, R.N., wished to put one or two questions; but before doing so he would take that opportunity of expressing his gratification that, while the traffic for the last six months had exceeded the amount of the previous six months by about 9,000*l.*, the expenditure had been reduced by upwards of 2,000*l.* (Hear, hear.) Including every item, the expenditure was about 46 per cent. on the gross receipts. [The Chairman—Little more than 45.] This result, for a railway recently opened was, he thought, most encouraging. (Hear, hear.) He wished, however, to call the attention of the Directors and of the meeting to the fact that no fund was set aside for the depreciation of stock. It was very well for those who wished to sell their shares to divide all the current receipts, without looking to the future; but many of his friends who were interested in the railway were family men, and of course they were anxious that the dividend should not, on any future occasion, be diminished by an extraordinary expenditure during any particular half-year.

The Chairman said, if he understood the honourable proprietor's argument in favour of a depreciation fund, it was that it would equalize the dividends. [Capt. Ramsay signified his assent.] The principle of a depreciation fund was very comprehensive, and the practice was getting very popular. When he found men of sound judgment and financial experience declaring themselves in favour of such a fund, it would be bad taste on his part to say anything in disparagement without due consideration. He would, however, with the permission of the meeting offer a few observations with a view to show that in this respect the South-Western Railway was somewhat peculiarly circumstanced. The South-Western line differed from most others, inasmuch as its traffic was to a considerable extent of a prospective character. It was not the custom for persons to provide for the decay of nature before they had become adults, and when they, as a Company, had approached maturity it would be time enough to make provision for the future. (Hear, hear.) The only items upon which depreciation could possibly take place, were the permanent way, the engines, and the carriage stock. If they looked at the locomotives, and considered the extravagant price which at the outset had been paid for this species of stock, the want of practice which the manufacturers then had, and the imperfect machinery which was the inevitable result; when they looked at the vast sums which it had been found necessary to expend to bring this stock into efficient use; when they reflected upon the saving which was sure to arise in the article of coke, he thought they would admit that any depreciation in the locomotive stock was likely to be fully met by the savings under these several heads. (Hear, hear.) They might, like some other Companies, have at the outset set apart 5 per cent. for depreciation, but they had already, from the circumstances alluded to, saved more than *that* in the cost of working. (Hear, hear.) He had already shown that with more miles worked during the last six months the expenditure had been less than that of the previous six months, and under these circumstances he thought they might fairly and safely reckon upon a further decrease rather than an increase of expenditure. (Hear, hear.) If he could show—or rather if he would undertake, which he certainly would, to hold himself personally responsible—that for ten or twenty years to come the cost of maintaining the locomotive stock should be less than it had been during the last six months, and that at the end of the ten or twenty years the plant should be given up in a condition quite equal in *value* to its present state, why should the proprietors trouble themselves with the phantom of depreciation? (Hear, hear, hear.) Then with respect to the depreciation of the permanent way, they had a contract with a most respectable and responsible party that *that* should be efficiently kept up; and as he had already said, he himself should be quite willing to keep up the locomotive stock for ten or twenty years, and at the end of that term restore it to the Company in an equally efficient state, at the rate which it cost during the last six months. (Hear, hear.) If they were selling the railway and the moveable stock, it would be a very different thing, and probably, in that view of the case, a depreciation would be found to exist; but as regarded the practical efficiency, the every-day working of their engines, he could assure the meeting that they were in a better condition that moment than they were three months after being put upon the line. (Hear, hear, hear.) The depreciation, therefore, could apply neither to the road nor the engines. But it had been represented that the greatest decay took place in the carriage stock. If, however, the meeting would reflect upon the inexperience of the makers of railway carriages when this mode of locomotion first came into use — they were wholly ignorant of the parts of the carriage where the greatest strength ought to be centered as to springs and other matters of construction—and what extent of depreciation must have been occasioned by exposure to the weather from the want of proper carriage sheds, he was certain they would agree with him—and but for fear of trespassing too much upon their time he could give data for his opinion—that for the next ten years the expenditure under this head would not exceed the proportion of the last six months. (Hear, hear, hear.) He had read the observations of eminent men upon this topic of depreciation, and, therefore, he was diffident in expressing an opinion—which he begged to say was that of himself as an individual, and not that of the Board, whom he had had no opportunity of consulting on the subject. Every one must be anxious to have some reserve fund in hand to meet contingencies, but the principle of a depreciation fund he could not understand. An eminent authority in railways had said in effect "Woe to those Companies that do not establish a depreciation fund." Such was not his opinion, but what he was desirous now to enforce was, that the meeting should not separate without distinctly understanding that their interests were not in peril, and that for at least ten or twenty years their stock would be in no worse condition than it was at present, and at less cost of maintenance than during the last six months. At the end of that period it would be time enough to consider what steps ought to be taken. (Applause.)

Mr. Nathan inquired whether the new engines supplied during the half-year, were included in the current expenditure?

The Chairman replied in the affirmative; 4,500*l.* had been paid during the six months for new materials out of the current expenditure. This, according to Cocker, was at the rate of 9,000*l.* per annum, which would be one-sixth of the original outlay for engines; and it was not possible that any greater current outlay would hereafter be incurred. He himself had had some considerable experience with animal power, and he had found that the year before he had given up the coaching business, or rather that it had been annihilated by the railways, his stock was better than at any previous period, while it had cost him less to keep it up, and this because instead of vamping up the old stock he had at various times thrown in new—a practice similar to that recommended by the best Engineers, as tending to get rid of the cost of workmen for repairs. (Hear, hear, hear.)

Captain Ramsay could of course have no other object in view than that the stock should be kept up in an efficient condition. Whether that were effected by a depreciation fund or in the mode indicated by their worthy Chairman, was a point of comparatively minor importance.

The Chairman said, the best criterion of the soundness of a principle was its performance, and as it had been allowed that the stock had hitherto been properly attended to, he thought the same might be augured of the future.

Captain Ramsay regretted that the items of the capital account did not comprise the same details from one half-year to another. For example, in the accounts laid before the present meeting, there was an item of 217,000*l.* for "iron rails and chairs," whereas in the previous half-year's accounts the item was, "iron rails, chairs, and *sleepers*," the sleepers being now put under a different head. He thought such changes as these prevented the possibility of instituting comparisons.

The Chairman hoped that previous to the next meeting the line would be thoroughly completed, and the capital account closed. At present any information as to the several items might be obtained from the Secretary.

Mr. W. Tite said, mention had been made in the previous Report of the policy of encouraging steam navigation in connection with the railway. Had anything been done in that respect?

The Chairman said, they had made some progress in organizing a Steam Navigation Company, and the particulars and prospects of that scheme had been laid before the proprietors of the railway. He was satisfied that the institution of steam packets to and from the West of England, would contribute greatly to the prosperity of the South-Western Company. He regretted that the proprietors of the railway had not met the proposition in the way that might have been expected. Some five or six of the Directors had taken about 1,000 shares, while the whole number taken up by the proprietors only amounted to 330 shares. He trusted that the matter would be reconsidered by the gentlemen present. If 400 or 500 more shares were

NEWSPAPER
SERIES
Digitized by Google

taken up, it would prevent the necessity of bringing the scheme before the public—a result which they were anxious to avoid. He trusted that the honourable proprietor who had mooted the subject would himself set a good example by taking shares in the Company. (Hear, hear, and laughter.)

Mr. LIGGINS, (Chairman of the Southampton Dock Company) then addressed the meeting at great length. He said, every establishment at Southampton was calculated to increase the business of the railway, and he regretted that the principle of encouraging such establishments had not been acted upon at an earlier period. It must be known to most gentlemen present, that a most important steam navigation was in progress at Southampton, and yet no encouragement had been held out, no recommendation had been offered, by the Directors of the Railway Company. Where the proposed new Commercial Steam Navigation Company, which the Directors now patronised, was likely to return one sovereign to the Railway Company, the Company to which he referred, the Royal Mail Packet Company, was sure to return fifty. He was surprised, therefore, that no allusion should have been made to this latter Company, either in the Directors' Report or in the speech of the Chairman. Could it be that this omission had arisen from the circumstance that the management of the Company to which he had referred was not in the hands of the Directors of the Railway Company? He mentioned this, because it was put forward as a recommendation of the Company which the Directors patronised, that its affairs would be conducted by them. He thought the principle of supporting tributary undertakings might have been applied with advantage in the case of another Company, which had been allowed to linger on without any aid, but which he was happy in being able to state was now rapidly passing into the full gleam of prosperity. He alluded to the Company with which he was more immediately connected—the Southampton Dock Company—which would supply to the railway the most magnificent terminus the mind of man could conceive; and yet that undertaking had received no aid from the Railway Company. If, as he had said, the Royal Mail Packet Company would return 50 sovereigns to the Railway Company to one that the Commercial Steam Navigation would bring to them, he did not think he stated too much when he expressed his belief that the Dock Company would return 100. (Hear, hear.) Surely if he were correct in this estimate, it was not too much to expect that the Directors of the railway, at some one or other of these periodical meetings, would have the foresight, the prudence, the propriety of recommending the docks to the support of their constituents. And yet he had seen no circular from the Secretary of the Railway Company, recommending the docks to the attention of the proprietors; in fact, he had not till now known that the Secretary of the Railway Company had so little to do, that he could act the part of Secretary to another Company likewise. Was *this* omission likewise to be ascribed to the fact, that the affairs of the Dock Company were not under the management of the Directors of the railway? His reason for surmising this was, that a message from the late Chairman of the Railway Company had been delivered to him—and as the bearer was a Post Captain in her Majesty's service he could not question its accuracy—intimating that the Railway Company were prepared to take up the docks, and to furnish the means for completing them, but with this proviso, that a clear sweep should be made of the existing Management. He did not know whether the proprietors present would consider this conduct creditable, but when he saw the Vice-Chairman of this Company stand up, and in the discharge of his official duty recommend them to patronise a Company which had no existence, and which in his opinion ought never to have an existence—for he hesitated not to characterise it as a "bubble" Company—when he saw this, he could not help feeling surprise and something more, that enterprises of far higher utility should be altogether overlooked. Living in London, he could not shut his ears to the rumours which were current respecting this Company, which the Directors now patronised, and if these rumours were correct, that Company was in a state of insolvency—had large debts and nothing to meet them.

Mr. R. T. CADBURY rose to order. He thought the honourable proprietor was wandering into matter totally irrelevant. (Hear, hear, hear.)

The CHAIRMAN said, the honourable proprietor had fallen into one or two mistakes, which it would be as well to set right at once. It had never been contemplated that the Secretary of the railway should have anything whatever to do with the Steam Navigation Company, further than that being in possession of the names of the railway proprietors he had addressed the circulars to them. (Hear, hear, hear.) With respect to the message which had been represented as having been sent by the late Chairman of the Railway Company—

Mr. LIGGINS (interrupting) wished to know if he was in order, as an appeal had been made to the Chair?

The CHAIRMAN did not wish to interrupt the honourable proprietor. All he wished to say was, that if such a message had been sent by the late Chairman—and it was not yet proved that it had been sent—that if a proposition had been made for the sweeping out of the Management of the Dock Company, the Railway Company had nothing to do with it. (Hear, hear, hear.) The question had never been discussed at the Board, where indeed a very different feeling prevailed. (Hear, hear.) The Secretary of the Dock Company could confirm what he now said, that there had always been a disposition, on the part of the Railway Directors, to recommend the docks to their proprietors; but looking at it as an arduous undertaking, and considering that they themselves had made very heavy calls upon the pockets of their constituents, they did not deem themselves justified in pressing the matter further. The Steam Navigation Company was a very light affair; and with regard to any difficulties in which the old Commercial Company might be placed, that had nothing to do with the proposed new Company. (Hear, hear.) It could not, for instance, be supposed that the new Company would purchase of the old any vessels having liens on them. In a word, the proprietors of the railway could not imagine their Directors to be so mad as to recommend them to enter into any connection or speculation which would prove dangerous to them. (Hear, hear, hear.)

Mr. DREW (a Director) thought the expression which had been applied to the Commercial Steam Navigation Company—as being "a bubble"—a very strong one, as he was satisfied it was one which was wholly undeserved. (Hear, hear, hear.) With respect to the non-mention of the Dock Company in to-day's Report, it would be recollected that scarce one railway Report had been submitted that did not contain a marked reference to the project. If the honourable proprietor were out of order in no other respect, he certainly was so in designating the Steam Navigation Company "a bubble." (Hear, hear.)

Mr. LIGGINS would give his reasons for applying that epithet. (Cries of "Order.")

Mr. CADBURY must again call the honourable proprietor to order, as entering into matter wholly irrelevant to the business of the meeting. (Hear, hear.) They were not met there to discuss the affairs of other Companies, but to look after their own, and if they were to enter into extraneous topics like this the proceedings would never have an end. (Loud cries of "Hear, hear.")

Mr. LIGGINS said, a report had for some time been in circulation—he had heard it in Southampton, and he heard it in London—that the Directors of the Railway Company had advanced a loan to the Commercial Steam Navigation Company. He could not believe that the rumour was true, because in the first place, he knew that the Railway Directors had no power granted by their Act to lend the money of their proprietors; and secondly, because he hould deem it highly improper to lend money to other Companies, while calls were being made on their own. Was the rumour true?

The CHAIRMAN said, at the last half-yearly meeting the subject of steam navigation to the West of England had been discussed, and it had been then suggested by one of the proprietors that the Directors should use the best means in their power for promoting that desirable object. Now it was clear that nothing could be done without money towards carrying out the wishes of the proprietors, but the Directors had taken especial care that the property of the Company should not be risked. He believed it would be found that a similar feeling had been entertained towards the Dock Company, for the Railway Directors had not pressed for the payment of 2,500*l.* which was due to them, feeling that, like the money appropriated to the Steam Navigation Company, it was a part of the capital necessary to be distributed for the purpose of bringing an increased traffic to the railway.

Mr. NATHAN presumed, therefore, that the Company's money had been spent in the purchase of steam-packets?

The CHAIRMAN said, they had not spent one farthing.

Mr. NATHAN inquired if they had advanced any sum?

The CHAIRMAN said, they had.

Mr. NATHAN strongly deprecated such a course without first consulting the proprietors. The appropriation of the money might be very proper, but he did not see what right the Directors had to apply it to other purposes than those of the railway, without first asking the leave of the proprietors; in fact it was very wrong. (Hear, hear, hear.) "In fact, gentlemen, said the speaker, we are all interested in it." [The frequent repetition of this and other phrases, by the honourable gentleman, occasioned considerable merriment.]

Mr. BOOTHBY wished to say a few words but was interrupted by

Mr. LIGGINS, who insisted upon his right to be heard, as he was "in possession of the Chair" when he was interrupted. He had heard the answer of the Chairman with surprise and regret, because he knew that the Directors had no power under their Act of Incorporation to lend money to other Corporations or individuals. He was still more surprised that the Chairman, in claiming for himself and his colleagues the merit of having assisted other undertakings which were likely to be beneficial to the railway, had adduced as another example of their patriotism that they had given credit to the Dock Company for 2,500*l.* He would take upon himself to say that nothing of the kind had been done by the Railway Directors. The credit for the 2,500*l.* had been given not to the Dock Company, but to the contractors of the Dock Company. It had been stated that the 2,500*l.* had been owing for twelve months, whereas the fact was that the goods had been advanced to the contractor on credit for twelve months, which twelve months had not yet expired.

The CHAIRMAN said, their Resident Engineer, Mr. Martin, would be better able than himself to speak to this point.

Mr. MARTIN said, the goods referred to were rails, the delivery of which to the contractor he had superintended, although he had not made the agreement with that party. The contractor had, however, told him that the Dock Company had engaged to pay for the materials as they came upon the ground, and that in fact the credit given to him was credit given to the Company through him. (Hear, hear.)

Mr. LIGGINS said, that was no answer to his assertion.

Mr. BOOTHBY would remind the proprietors, that the question of steam navigation in connection with the railway had been discussed at the last meeting. One paragraph of the Report of the Directors approved of on that occasion said, "There can be no doubt, that during the construction of the Great Western Railway this line enjoyed more than its share of that traffic, [the traffic

Digitized by Google

of the West of England,] but the Directors are satisfied that the wide stretch of country lying between the Great Western Railway and the southern sea coast, as well as that coast itself, will supply to this line all the traffic which has been calculated upon in the statements they have heretofore made to the proprietors; and they will deem it their duty to cultivate that traffic by every means in their power." That paragraph had led to a slight discussion at the last meeting, and one proprietor, although he brought forward no specific motion, had suggested that some efficient means should be put in force to carry out the views of the Directors. (Hear, hear.) Subsequently to the meeting a Steam-boat Company had proposed to put on two steam-boats between Plymouth and Southampton, whereby the funds of the Railway Company would be increased. Ths steam-boat people, however, had not sufficient funds to carry out their views, and therefore they applied to the Railway Company for a loan, offering the most ample security. This proposition was in no small degree embarrassing to the Board. They looked at the wish expressed by the meeting of August last, and they applied to their legal adviser, Mr. Bircham. That gentleman informed them that the Directors were not authorised, by any particular clause, to advance the money, but he thought they were empowered to do so under the general provisions of the statute. The result was, that the Directors determined to lend 5,000*l.* for one year, at 5 per cent., taking as security two boats, valued at 10,000*l.*, which were duly insured in the Royal Exchange Insurance-office. They had intended that, if the running of the steam-packets were found to be beneficial to the railway, the arrangement should be continued; if not, the boats were to be sold to repay the advance. Mr. Bircham had very properly told the Board that if the Directors thus appropriated the money of the proprietors, without convening a special meeting, they did so at their own risk, whereupon he (Mr. Boothby) and others had at once come forward in their anxiety to see the scheme carried out. He thought that if the arrangement were found beneficial, the proprietors would doubtless confirm the outlay; if the experiment failed, the Directors were prepared to take the loss upon themselves. (Hear, hear, hear.) Under these circumstances, there appeared no necessity for convening a meeting to obtain the formal sanction of the proprietors. He was satisfied that if loss had arisen the matter would never have been mooted to the proprietors by the Directors, and he thought it would have been quite time enough for censure when the proprietors found that the money of the Company had been sacrificed. (Hear, hear, hear.) He firmly believed that a very large proportion, if not the whole of the excess of traffic of the last six months over the corresponding period of the previous year, had arisen from these steam-boats. (Hear, hear, hear.) When he mentioned, that sometimes as many as 80 passengers came, at one trip, from Plymouth to Southampton, and that there were boats twice a week from Plymouth, and twice from Torquay, the meeting would see the benefit which the Railway Company must receive from the through traffic to London. (Hear, hear, hear.) If the Directors had, in any respect, exceeded the powers granted them under the Company's Act, they had done so on their own responsibility and at their own risk. (Great applause.)

Mr. SHEDDEN (a Director) had from the first urged upon his colleagues the propriety of taking the power under the Act of putting on steam-vessels to the West of England, in conjunction with the railway, but objections had been started to a combination of the one business with the other. With respect, however, to the loan of the 5,000*l.*, nothing could, in his opinion, have been more judicious. The Railway Company were thus holding an advantage at the expense of the steam-boat Company—they were receiving a large profit without the smallest risk. (Hear, hear.) If one of the steam-boats were run down, or met with any other disaster, the loss would not fall upon the Railway Company, but on the other. Had he been present at the last meeting, which however the state of his health would not permit, he should have proposed the application to Parliament of which he had spoken; for he had no doubt, that if his views in this respect were fully carried out, the traffic of the railway might be at least doubled. (Hear, hear.)

Mr. NATHAN said, that quite altered the matter, and the explanations which had been given were perfectly satisfactory to him. (Hear, hear, hear.)

Mr. SAINTSBURY (Secretary to the Southampton Dock Company) said, there was no motion before the meeting, and that they might proceed in proper form, he would therefore move that the Report of the Directors be received and adopted. He was glad that their excellent Chairman had not availed himself of the point of "order" to stop the discussion which had arisen, and which he was sure could not but prove beneficial to all parties. His own connection with the Dock Company to which reference had been made, enabled him to state, that whatever misunderstanding might have arisen between the two Companies, whatever apparent want of cordiality there might have been on the one side or the other, he was satisfied there could be at the bottom but one feeling of good will, one thorough appreciation and settled conviction of the benefits which the undertakings would mutually confer. (Hear, hear, hear.) If the Directors of the railway had not been so ready in rushing to the rescue as some might have wished, it was probably because they did not think, that with an enterprise of so much merit any foreign assistance was required. With respect to the 2,500*l.* of which mention had been made, he could confirm what had fallen from the Chairman of the Dock Company, that there had never been one farthing of debt due by the Dock Company to the Railway.

The CHAIRMAN said, he had alluded to the circumstance solely as a proof of the good feeling which the Directors entertained towards the Dock Company.

Mr. SAINTSBURY resumed, and adverted to the traffic of the railway during the last six months, which he described as highly satisfactory, as showing that their trade was increasing, and would continue to increase. (Hear, hear.) The Chairman had alluded to the punctuality of the trains, and as a frequent traveller on the line, he (Mr. Saintsbury) could fully confirm the Chairman's statement, for he could calculate upon arriving at home to his dinner within three minutes of the prescribed time. (Hear, hear.) The Directors had recently introduced a very considerable improvement in lighting up the carriages by night. It would be an additional inducement to persons to travel by the railway, when they found that instead of having to dose away two or three hours in the dark, they could read, or as he had done, write, during their passage. (Hear, hear.) With respect to the Gosport branch he had understood the Chairman to recommend that the steady dividend of 5 per cent. should be preferred to the chance of share and share alike.

The CHAIRMAN begged pardon for the interruption, but he had not offered any such recommendation. He had merely wished to explain how the matter stood, as he knew that there was much misapprehension prevalent with respect to it.

Mr. SAINTSBURY said he certainly should not recommend any one whom he wished to serve to keep the 5 per cent. If he could at all judge of what was likely to be the future prosperity of the railway, the general dividend was certain to be much larger. As another meeting would not take place before the period for declaring the option had expired, he wished to say, that in his opinion, the man would be half mad who should think of tying himself down to the 5 per cent. He had understood the Chairman to recommend keeping the 5 per cent., and he had taken it as another proof of his never-failing interest in the welfare of the undertaking, as the acceptance of the 5 per cent. by a portion of the proprietors, would leave a very handsome dividend upon the Company's original stock. (Hear, hear, and laughter.) He had much pleasure in moving the adoption of the Report. (Hear, hear, hear.)

Mr. NATHAN seconded the motion, which was then carried unanimously.

Mr. SNOW would move the re-election of the three retiring Directors named in the Report, but before doing so, he wished to ask a question with respect to one of them, namely, Lieut.-Col. Henderson. It had been asserted that Colonel Henderson was closely connected with a Gas Company at Southampton, with which the Railway Company had a contract, and that if elected to serve on this Direction, he would be liable to a heavy penalty. Was it so?

The CHAIRMAN said, the Railway Company certainly were supplied with gas from a manufactory at Southampton, but they had nothing to do in that matter with Colonel Henderson. The bills were not made out in Colonel Henderson's name, nor was the amount paid to that gentleman. Colonel Henderson might be a shareholder in the Gas Company, but even *that*, he (the Chairman) did not know to be the fact.

Mr. SNOW was anxious only that Colonel Henderson, if elected, should be safe from common informers. He (Mr. SNOW) knew an instance in which the Chairman of a Board of Directors had been sued in that way, and was only saved from a heavy penalty by the Company buying off the informer.

Captain WARD said, the allegation had originated in local political feeling. If there was one man at the Board whose zeal and ability entitled him more than another to be re-elected, it was Colonel Henderson. (Hear, hear.) It was stated in the newspaper which he held in his hand [the *Hampshire Independent*, we believe] that Colonel Henderson was the principal in a contract with the Company for gas.

The SECRETARY said, they had no contract at all for the supply of gas with Colonel Henderson.

Captain WARD thought it would be extremely hard that because Colonel Henderson might happen to be a shareholder in the Gas Company, he should, on that account alone, be excluded from office in this Company. (Hear, hear, hear.) A similar question was at present occupying the attention of her Majesty's Government under the Municipal Corporations' Act, it being alleged that even holding a lease under a borough corporation disqualified the party for office. He would second the motion.

The resolution was passed unanimously.

Mr. BIRCHAM then, at the request of the Chairman, read a series of bye-laws, which required to have the common seal of the Company affixed to give them force. Mr. Bircham explained that the statute law of the land was inadequate to reach some offences, and slighter nuisances which it was nevertheless necessary to repress. These bye-laws had been taken principally from some that had recently been suggested by the Board of Trade*.

---

* The following are the bye-laws to which Mr. Bircham refers.

1. *Tickets.*] No passenger will be allowed to take his seat in or upon any of the Company's carriages, or to travel therein upon the said railway, without having first booked his place and paid his fare.

"Each passenger booking his place will be furnished with a ticket, which he is to show when required by the guard in charge of the train, and to deliver up before leaving the Company's premises, upon demand, to the guard, or other servant of the Company duly authorised to collect tickets.

"Each passenger not producing or delivering up his ticket as aforesaid, will be required to pay the fare from the place whence the train originally started.

"2. *Fraud.*] Every person *attempting to defraud* the Company, by riding in or upon any of the Company's carriages without having previously paid his fare, or by riding in or upon a carriage of a higher class than that for which he has booked his place, or by continuing his journey in or upon any of the Company's carriages beyond the destination for which he has paid his fare, or by attempting in any other manner whatever to evade the payment of his fare, *is hereby subjected to a penalty not exceeding forty shillings.*

"3. *Smoking.*] Smoking is strictly prohibited both in and upon the carriage and in the Company's stations. Every person smoking in a carriage is hereby subjected to a penalty not exceeding 40*s.*, and every person persisting in smoking in a carriage or station, after being warned to desist, shall, in addition to incurring a penalty not exceeding 40*s.*, be immediately, or if travelling, at the first op-

Digitized by Google

Captain RAMSAY moved, that the common seal of the Company be affixed to these bye-laws.

Mr. NATHAN seconded the motion, which was carried unanimously, and the seal was affixed accordingly.

Mr. LYNN suggested the appointment of Auditors from the proprietors, not that he by any means doubted, he said, the veracity or integrity of the Directors, but because it would save them a great deal of labour, of which they must now have more than enough. It might, besides, be more satisfactory to some of the proprietors, that the accounts should be audited, than that as at present the Directors should send up their own accounts. There was scarcely any Corporation except Railway Companies, where the mode of auditing which he recommended was not adopted. With so large a ready-money business as that of the South-Western Railway, he thought Auditors very necessary, but he would content himself with merely suggesting it as a hint to the Directors, from whom he would much prefer that such a proposition should proceed.

The CHAIRMAN said, the very fact which the honourable proprietor had stated of the business of the railway being a ready-money business rendered Auditors less necessary. The machinery for checking the accounts was already expensive enough, but it was for the proprietors to say whether anything further was required. He was not aware that any of the Corporations referred to by the honourable proprietor had benefitted very largely by such a mode of auditing as was proposed.

Mr. LYNN said, the additional expense would not amount to more than 2d. per annum, per share.

The CHAIRMAN said, they already had an Audit Committee of the Directors, but the question should be considered. Any suggestion proceeding from a proprietor of so long standing, and who attended so regularly at the meetings, deserved and should receive, the best consideration of the Directors.

Mr. BARFORD said, the appointment of Auditors had been discussed at the Great Western meeting on Thursday, and negatived without a division.

Mr. TITE observed, that the question which he had put, and which had led to so much discussion, had referred principally to the means of steam communication to France in connection with the South-Western Railway, as it was on that route that he himself had most suffered. He was glad that he had put the question, for it had led to a very important debate, and he was sure the meeting would agree with him that the Directors had come out of it most satisfactorily. (Hear, hear, hear.) If the meeting thought with him, and he believed there was not one person present who did not, that the Directors had acted wisely and discreetly—for it was very clear that they had acted safely and successfully—he would suggest that a resolution to that effect should be passed. (Hear, hear, hear.) He was not particularly acquainted with the wants of the West of England, but as the Chairman had very justly remarked, auxiliary undertakings frequently required assistance, and in this instance it had been most judiciously given. (Hear, hear, hear.) The honourable proprietor concluded by moving a resolution to the effect, that the meeting highly approved of the encouragement extended by the Directors to steam navigation in connection with the railway, and more especially of the course which had been pursued with respect to the Commercial Steam Navigation Company.

Mr. VALPY immediately seconded the motion.

Mr LIGGINS had risen he said as quickly as he could in order to second the motion. Hear, hear, hear.) He regretted, however, that he had been anticipated, but perhaps the honourable proprietor would still allow him to do so. [Mr. VALPY assented.] He had not attempted to cast any imputation on the Directors, although he felt it his duty to mention the rumours which were current, and which the explanations now given would set at rest. (Hear, hear.)

The resolution was then carried unanimously.

The CHAIRMAN said the Directors had been anxiously looking to the means of establishing such a communication with France as the honourable proprietor referred to. Mr. Reed, of the Paris and Rouen Railway, was present, and would perhaps favour the meeting with some information.

Mr. REED (whose presence was hailed with loud marks of approbation) said, he could bear testimony to the zeal and energy with which the Directors had sought out occasions for improving the communication with France in connection with the South-Western Railway. With respect to the two undertakings with which he was now more immediately connected, or would probably be connected, he could not but look back with pleasure to the period, now about a year or a year and a-half ago, when in that room the project of the Paris and Rouen Railway was submitted to the consideration of the proprietors of the South-Western Company, and he looked back with the greater pleasure because everything that had since transpired afforded confirmation of what had then been said as to the importance of this link in the chain of international communication. (Hear, hear, hear.) He was glad to see, from the movement that was now going forward in France, that another not less valuable link was likely soon to be supplied, he meant a railway from Rouen to Havre. He did not think that all that could be done had been done, until the public were able to book themselves in the South-Western Railway office for Paris, and on the faith of the respectabilty of the management of this Company, undertake the journey with perfect security, that they would not be exposed to the annoyances and impositions now so rife. (Hear, hear.) He was satisfied that such a consummation would increase the dividends of this Company and would harmonize the feelings of the two countries—would make them better men and better neighbours. (Applause.) He was sorry to intrude upon the meeting the particular Companies with which he was connected, but it might be gratifying to them to be informed of what Mr. Locke could have told them much better than himself, namely, that great progress had been made in the works of the Paris and Rouen Railway, and that there was every expectation of its completion in the early part of the next year. (Applause.) It would be completed within the means already provided, and in a manner so substantial as to bear the strictest criticism, or a comparison with any other line. (Hear, hear, hear.) There was, however, another link wanting, to which he had already alluded, namely, a railway to Havre. He believed that the merits of the port of Havre were but little understood; till he himself had investigated its claims, he had no idea of its importance. It was not merely the port of the metropolis of the country, but of such commercial magnitude that its imports and exports were many times larger than those of all France combined. (Hear, hear, hear.) The French Government were very desirous that a railway to Havre should be constructed, and would lend the most substantial aid in the execution of the work, and although he was not empowered at present to lay any specific proposition before them, he had no hesitation in saying that the affair was now upon the anvil. (Hear, hear.) The passenger traffic from Havre to Paris was by steam navigation on the Seine, and was very large, while not fewer than 100,000 tons of goods were conveyed annually by land, and more than double that quantity by the Seine, exclusive of those which were conveyed direct to Rouen. (Hear, hear.) He did believe that this was the most important route in France; for although as regarded priority of execution the Government might give the preference to others with an eye to what were termed national considerations, he had no doubt the gentlemen present would agree with him in thinking that the development of the commercial resources of a country was of paramount consequence. (Applause.)

Mr. NATHAN moved a vote of thanks to the Directors generally, for their most efficient services, and to the Chairman in particular, for the great kindness and attention which he had that day shown in giving every information that was required.

Mr. FARGATE seconded the motion, which was put by Mr. Nathan, and carried by acclamation.

The CHAIRMAN returned thanks for himself and colleagues. The cares and responsibilities of managing such an undertaking as this were, he said, very considerable, but it went far to remove them when they had the gratification of seeing on these periodical occasions the smiling contenances of their friends and fellow proprietors. He trusted the Directors would long continue to hold the same place in the estimation of their constituents. (Much applause.)

The meeting then broke up.

portunity, removed from the Company's premises and forfeit his fare.

"4. Any person found on the Company's carriages or stations in a state of intoxication, or committing any nuisance, or otherwise wilfully interfering with the comfort of other passengers, and any person obstructing any of the Company's officers in the discharge of their duty, is hereby subjected to a penalty not exceeding 40s., and shall immediately, or if travelling, at the first opportunity, be removed from the Company's premises and forfeit his fare.

"*Note.* Persons wilfully obstructing the Company's officers, *in cases where personal safety is concerned*, are liable, under the 3rd and 4th Vict., c. 97, s. 16, to be apprehended and fined 5*l*., with two months' imprisonment in default of payment.

"5. Any person wilfully cutting the lining, removing or defacing the number plates, breaking the windows, or otherwise damaging any of the Company's carriages, is hereby subjected to a penalty not exceeding 5*l*., in addition to payment for the damage done."

THE NORTH UNION AND LANCASTER AND PRESTON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Now that the Government is about to bring in a Bill for the regulation of railways, it is particularly desirable that every case of abuse should get publicity, in order that such a measure may pass the legislature as will meet the numerous, and I fear increasing, evils in the direction of those great national undertakings.

The prevention of serious accidents naturally occupies the first place in public attention, but this is not the only point to which legislative enactment should be applied. The letter of "A North Union Shareholder" in the last *Preston Chronicle*, which I send you, discloses an evil of such magnitude, as to create the necessity of giving power to a Board of Controul, to arbitrate on those differences between competing Companies, whose attempts at overreaching each other is the cause of most serious inconvenience, and unreasonable expense to the public.

In the instance I more immediately direct attention to, there seems no hope of redress for the public, unless by legislative interference. The affair stands briefly thus. The North Union Company applied for an injunction to restrain a rival, the Bolton Company. The injunction was refused, and thereupon the former, being proprietors of a tunnel through which the Bolton and Lancaster Companies must pass, immediately put on a toll of 6d. on every passenger of every class going through the tunnel, a distance of about 100 yards. If the passenger, from want of means or otherwise, does not chose to pay the toll, he is obliged to get out of the Lancaster carriage at the north side of the tunnel, to cross over the street on foot, to proceed thence down to the North Union Railway station, and there get into his carriage again, which has, in the meantime, passed through the tunnel; for the North Union are bound to take the train through, but not the passengers.

It matters little to inquire, what party is most to blame, the question being how long the public are to be subject to treatment such as this, which bears on the face of it the contemptuous disregard of the trader for the customer, when monopoly is secure.

It is notorious, that the Companies are losing by conduct so vexatious, and if they are not to be restrained, either by their own interests or by public opinion, the legislature ought, and I am sure will, interfere, to vindicate its tutelary sovereignty over the common weal, and teach those blind votaries of Plutus, that they must not pursue their discreditable course of mutual annoyance, totally regardless of the interest or convenience of those for whose benefit they have received the extensive powers conferred on them by Parliament.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

Reply of the Directors of the Manchester and Leeds Railway Company, to the Report of the Directors of the Liverpool and Manchester Company, at their last Half-yearly Meeting on the subject of the proposed Junction Lines through Manchester.

THE Report (see Appendix A) of the Directors of the Liverpool and Manchester Railway to the shareholders of that Company, on Wednesday the 26th ult., having at length made known simultaneously to the public and to this Company the views and determinations of the Liverpool Board in regard to the Hunt's Bank junction, and having at the same time intimated their intention of shortly again assembling their proprietors, for the purpose of submitting to their approval a counter project, professing to offer them greater advantages than would be secured by carrying out their engagement with the Manchester and Leeds Company, the Directors of this Company feel called upon, no less in justice to themselves than or the satisfaction of the proprietors of both Companies, and for the information of the public to make known their views of the case *as it now stands*, not doubting but that the shareholders of the Liverpool Company, whose interests are materially involved in this question, and to whose ultimate decision the matter is about to be submitted, and will give to these representations their candid consideration. In fulfilling this task, it is the desire of the Leeds Board to avoid any expressions of a personal nature, or calculated to give offence.

As already stated on previous occasions, the scheme of connecting the Manchester and Leeds Railway with that of the Liverpool Company, by a junction *vis* Hunt's Bank, and thus forming a continuous line of railway from Hull to Liverpool, originated with the Manchester and Leeds Company in the summer of 1838, and being approved and adopted both by the Liverpool and Bolton Companies, became the immediate subject of joint negociation, by which it was eventually arranged that the Liverpool and Leeds Companies should, with the consent of the Bolton Company, make application to Parliament for powers to proceed with the project, which powers were granted in the spring of 1839. Throughout all the preliminary steps and surveys, and up to the time when the Bills had been read a second time, the Liverpool Directors appeared sincere in their desire to complete the junction; and having proceeded so far on a mutual understanding, the Directors of the Leeds Company have always contended that the Liverpool Company could not in good faith, by any subsequent change of opinion, relieve themselves from their implied obligations to execute their part of the work unless it could be shown clearly that the scheme, as proposed, would not accomplish the end in view, or would become a source of permanent injury to the Liverpool Company. Every circumstance, however, that has transpired since the parliamentary powers were obtained, and every information given in the meantime by the Liverpool Directors to the public, afford grounds for the presumption that, from the period above alluded to, the majority of the Liverpool Directors have had neither the desire nor the intention to proceed, but have manifested an unwillingness to give fair weight to the considerations that have been urged in favour of proceeding with the undertaking, and an evident desire to multiply and magnify objections against it. The Directors of the Leeds Company conceive that they have grounds for this statement in the general character of the various communications that have taken place, from time to time, between the two Companies in the minutes of the Liverpool Board, dated 16th January, 1839—(see Appendix B) —in the mode in which the question has been treated in the recent report, and in the course which the Liverpool Directors have pursued towards the Bolton Company, as made known by the correspondence and statement now published by the latter.—(See Appendix C.)

Had the Directors of the Liverpool Company ever seriously entertained the question of carrying out the Hunt's Bank line *after* obtaining their Act, they would undoubtedly have communicated with the Bolton Company, respecting the terms of the parliamentary agreement. But in the words of the reply of the Bolton Directors to the Report of the Liverpool Directors, lately published, (see Appendix C) "Neither at that time [viz. when in parliament] nor since, nor until the present late hour, and in their present very guarded terms of expression has the slighted intimation been conveyed to the Bolton Company that the Liverpool and Manchester Company were dissatisfied with the arrangement (as to terms) referred to." More especially does this appear to be the case, when it is considered that the Bolton Company had, during that interval, unequivocally manifested their desire to remove every obstacle on their part to this junction, by submitting to the Liverpool Board a plan to obviate certain practical objections, which had been suggested to the exact line specified in the Act, by a new line, to which a still further amendment has been recently proposed, by carrying it in a straight direction from the Liverpool line to the New Bailey station of the Bolton Company, thus shortening the total distance between the Liverpool line and that point to about 900 yards, being in its whole length (with the exception of a very few yards) within land belonging to the Bolton Company, or to the town of Salford, and consequently capable in all probability of being formed without the necessity of another application to Parliament.

The opinion of the Directors of the Leede Company, that the Liverpool Board have never seriously entertained the design of proceeding with the Hunt's Bank junction, is further confirmed by a passage in their late Report, which showed that althoughithe compulsory powers for purchasing the required land were rapidly drawing to a close, it was not under the influence of that consideratoin that they at length began to move in this matter, but *because* the Manchester and Leeds Company had resolved upon, and the Manchester and Birmingham Company had announced their intention, of extending their lines, and forming a communication with each other at Hunt's Bank. "Then, and then only, it became evident that the period had arrived the when the scheme for a general union of railways should be definitively settled."—(See Appendix A, paragraph 10.)

It might surely have been expected from the encouraging result of their own undertaking, under circumstances of a much more doubtful character, that possessed as they have always been of ample means to raise the required capital without calling upon their proprietors for any portion of it, they would have allowed the spirit of enterprize, which guided them so successfully at a former period, to have influenced them in this, and to have prevented them from persevering in that negative course, which they have followed up to the last moment, with manifested inconveniece to the public, with some degree of injustice to the Leeds and Bolton Companies, and, in the opinion of many, to the detriment of the permanent interests of their own proprietors.

Having disposed of this preliminary part of the subject, the Directors will now advert to the points more particularly at issue between the Liverpool Board and the Manchester and Leeds Company.

These may be conveniently treated under three distinct heads, viz.—

1st. The grounds on which the Directors of the Liverpool and Manchester Company have "come to the conclusion to recommend to the proprietors not to carry into effect the proposed junction line to Hunt's Bank."—(See Appendix A, papagraph 22.)

2nd. The reasons advanced in favour of a junction round the south side of Manchester.

3rd. The grounds on which the proposition of the Leeds Company to secure to the proprietors of the Liverpool Company an annual dividend of 10 per cent. upon 1,434,725*l.* (the total capital of the Company as reported in their last balance sheet), together with the same rate of dividend upon the cost of the Salford junction, *has not been entertained.*

The first head relates to the pecuniary part of the question in dispute, and the Directors of the Liverpool Company, in their Report, enter upon it in the following words:—

"The proprietors are aware that the first estimates of traffic expected to accrue from a junction with the Leeds line, as furnished by the Manchester and Leeds Company, were not substantiated by subsequent investigation." (See Appendix A, paragraph 3.)

This statement is here laid down as undisputed, and is alleged, throughout the Report, as the cause and justification of the course pursued, although it is well known to be a point on which the two Companies are at direct issue, and as regards the Leeds Company, disputed on the following ground:—

The estimates were obtained from actual daily observation at different points on the canals; the particulars of them were furnished to the Liverpool Board, and after many explanations, an opportunity was given to them of personally examining Mr. Stanway, the person employed to make and superintend the making of those observations, and to deduce the results. On their part they have never attempted to make such observations, nor have they ever contributed *any documentary evidence whatever* in support of their opinion, but have confined themselves to merely pointing out the difficulties of obtaining accurate results by observation (though this is the universal plan adopted in preparing evidence of traffic for Parliament), and affirming that from certain statements procured *confidentialay* from the Canal Companies, to which they could only allude, they believed the Leeds Directors were mistaken. It is under these circumstances that the Liverpool Directors have hazarded the bold assertion above quoted, and that they proceed in a subsequent paragraph in the same strain, stating that "with reference to pecuniary considerations, there appeared no inducement to execute the work."

Into this question then of the prospect and probability of an adequate return for the outlay required it is essential to go, and as the Directors of the Liverpool Company devote a considerable portion of their Report to the professed purpose of proving the fallacy of the expectations of the Leeds Company, it may be well asked, what *facts* they have brought forward in support of their assertions, and how far they have succeeded either in disproving the deductions of the Leeds Company, or weakening the facts on which their opinions are based.

The Report states, that "the Directors agree with the Chairman of the Manchester and Leeds Company, that it is very difficult to give formal proof of the precise amount of traffic passing in a particular direction. They are quite willing, however, to take the printed Report of the proceedings of the Manchester and Leeds Company, at their late general meeting, as data from which to satisfy any unprejudiced mind that the Manchester and Leeds estimate of traffic is undoubtedly and greatly erroneous, and, consequently, that any calculation of pecuniary return founded on that estimate, must be altogether fallacious."—(See Appendix A, paragraph 16.)

Proceeding in this manner to controvert the estimates of the Leeds Company, instead of taking the more direct course of proving the very limited extent of the through traffic from data of their own, they have, however, inadvertently taken an erroneous view of those estimates, probably from a mistake in the Report of the late special meeting of the Leeds Company, where it is said, in page 10, that the Chairman represented, that 210,000 tons passed annually through Manchester *from* Liverpool *towards* Yorkshire, and at page 16, there is another mistake of the same nature. In both cases the statement was intended to include the traffic in *both* directions.

The Directors of the Manchester and Leeds Company cannot but regret, that any statement calculated to mislead even the most casual reader, should have gone forth on their part; but they could scarcely have expected, that the acute authors of this Report could have so far mistaken the Chairman's statement, as to have rested their proof of inadequate traffic upon it, and thus staked their whole case on such indefensible grounds.

With Mr. Stanway's estimates in their possession, documents personally discussed several times between the two Boards, in reference to the very facts in dispute, showing clearly, that the traffic *both ways* was included, it is difficult to conceive how they could be misled to the extent set forth in the following sentence:—

"And yet the Manchester and Leeds Report *assumes* that 210,000 tons per annum, more than half the immense tonnage from Liverpool by all modes of conveyance, passes to the interior exclusively in one direction, up the comparatively limited channel of communication—the Rochdale canal."—(See Appendix A, paragraph 18.)

Although the discovery of this misconception destroys the whole argument of the Liverpool Directors on this subject, it does not at all affect the conclusion drawn by the Chairman of the Leeds Company, viz., that if the statements of traffic on which the Liverpool Directors relied *were correct*, say 62,000 tons per annum, the existing traffic between Liverpool and Yorkshire did not exceed *one-tenth* of the traffic between Liverpool and the manufacturing districts, which is in this Report admitted to be 375,000 tons per annum in *one* direction, and is therefore probably not less than 620,000 tons in both directions; a conclusion, it should be observed, directly drawn from the figures given by the Liverpool Directors, and the force of which they endeavour in their Report to evade, by the statement of a few generalities on the different descriptions of traffic between the two districts, and by efforts to throw discredit on all the data of the Leeds Directors, by remarks on a statement not affecting the basis on which this conclusion is founded.

Digitized by Google

Directors of the Leeds Company "do not think that any more minute proof is required of the utter fallaciousness" of such a mode of dealing with estimates formed by actual observation.

The way is now prepared for estimating correctly the force of the arguments used by the Liverpool Board to impugn the statements of the Leeds Directors. The general accuracy of Mr. Stanway's estimates was attested by him *on oath*, and his estimate was that 210,000 tons per annum passed through Manchester *from and to* the Rochdale Canal; and between Liverpool at one end of the Leeds and Liverpool Canal, and Leeds and Bradford at the other end, 89,000 tons per annum; total, by the estimates of the Leeds Directors, 299,000 tons. In opposition to this, the statements of the Liverpool Directors, obtained from Canal Companies, represented the through traffic as follows:—

Per Rochdale Canal.....	45,000	tons per annum.
Per Leeds and Liverpool Canal....	17,000	,,
Total by the estimates of the Liverpool Directors.....	62,000	,,

That there is an error in one if not both of these estimates is undeniable. On this subject, the Chairman of the Manchester and Leeds Company, in his address to the proprietors, stated that "when these discrepancies were first reported to this Company, every endeavour was made to discover the cause, but without effect; deputations from the two Companies met to consult and explain; but, after a lengthened sitting, we found it impossible to convince the Liverpool Directors that there was an error in their statements, and we could see no grounds for concluding that there was any in ours, and the discrepancies which existed on that day remain to the present time."

In support of Mr. Stanway's estimate, the Chairman stated that the facts on which it was founded had been obtained by stationing men for a week at different points on the canals, to take the tonnage that passed, and to obtain from the captains of the vessels, or other persons in charge of them, the nature and the destination of their cargoes, and he claimed credit for the probable correctness of the estimate, on the ground that the accuracy of Mr. Stanway's estimate of traffic for the main line, prepared some years before from observations made in precisely the same way, had been remarkably verified since the opening of their line; the revenue to be derived from goods having been by this estimate 113,000*l.* per annum, while the actual receipts during six months of the first nine months of their opening, had been at the rate of 96,000*l.* per annum, from that source; the actual tonnage carried over an average distance of 29½ miles of the Leeds line having been 99,000 tons during the same six months. But the Manchester and Leeds Directors never rested their case on the perfect accuracy of any estimates of existing traffic; *for they frequently stated* to the Liverpool Company, that even if these could be satisfactorily ascertained, there remained the equally difficult task of estimating what proportion of the existing traffic would be transferred to the rails by connecting the lines, and what amount of traffic would be diverted from other channels into this route. It was in allusion to these difficulties, when speaking of the alleged inadequacy of the traffic, that the Chairman said, "with respect to this, it may be exceedingly difficult to demonstrate by figures that the junction line would be remunerative, from the acknowledged difficulty of arriving at and fixing the necessary data; while, at the same time, looking at the general features of the case, nothing I think can be more satisfactorily established." In support of this assertion, a statement to the following effect was made: "That the probable traffic between the West Riding of Yorkshire and Liverpool, might in some measure be inferred from a comparison of the population with that of the Manchester district, between which and Liverpool the traffic might be ascertained without much difficulty."

That as the West Riding of Yorkshire contained a population of 1,154,924, the majority contiguous to the line of the Manchester and Leeds Railway, and others connected with it, and the Manchester district, a probable population of from 700,000 to 900,000, it was reasonable to suppose that there either did exist, or might be induced, a traffic *between* Yorkshire and Liverpool, bearing some similar proportion to the population of the West Riding, as the traffic between Liverpool and Manchester did to the population of this neighbourhood. It was assumed by the Chairman of the Leeds Company, (and from what has been shown above, we may now conclude *correctly* assumed,) that the traffic *both ways* amounted to 12,000 or 14,000 tons per week, and as the statement on which the Liverpool Directors relied, gave only 62,000 per annum, or 1,200 tons per week *both ways*, between Liverpool and Yorkshire, or in the form in which the Chairman put it, "as the Liverpool Company's statement of tonnage between Liverpool and Yorkshire was only one-tenth of the existing traffic between Liverpool and this manufacturing district," therefore the Manchester and Leeds Directors were led to suppose that there must be some error in the Liverpool statement. That part of the Liverpool Directors' Report, which is intended as a reply to this argument, may be seen by a reference to their Report, which is subjoined hereto. (See Appendix A, paragraphs 16, 17, and 18)

It will there be seen, that some trouble is first taken to depreciate a statement of tonnage, mentioned incidentally by the Chairman, on the authority of a gentleman long connected with one of the present water Companies, but not used in any manner in support of his arguments, and consequently totallly irrevalent in any attempt to refute such argument. The fact is then questioned (whether there are one million of people in Yorkshire residing so near to the Leeds Railway, as to render it probable that their intercourse with Liverpool will take that route) by a significent but not very logical sign (!)

After that the Chairman's argument, that the district of Yorkshire in question, must draw its supplies either from London or Liverpool, is attempted to be weakened by construing the term "supplies," to mean food, grain, and flour, whereas any candid opponent must have understood it as applying chiefly to those articles of foreign or distant produce, which are so largely consumed in every populous neighbourhood, and particularly in a manufacturing district, and which reach the interior through one or both of the ports abovementioned. The Report then informs us, that, "With respect to the traffic in raw materials passing upwards by various modes of conveyance from Liverpool to Manchester, the Directors believe it will not exceed, if it reach, 1,200 tons each working day, or 375,600 tons per annum,"—a fact which has just been been alluded to, and which is the more valuable from its being one of the only two contributed by this Report, towards the solution of the pecuniary part of the question.

The second fact is stated in the following words: "Of this gross traffic, cotton, the great staple of this district, constitutes about one-third;" the rest of the three paragraphs devoted to this head, require no further comment. Of the cotton here mentioned, probably 200 tons per week, or upwards, are consumed in Heywood, Oldham, Rochdale, Todmorden, Hebden Bridge, and other places contiguous to the Leeds Railway, thus forming one important item of the through traffic expected by the Manchester and Leeds Company; but to this the authors of the Report have not alluded; neither have they attempted any estimate of the through trade in grain, butter, and bacon, Irish cattle and pigs, wool, dye-stuffs, oil, metal, timber, tea, coffee, sugar, tobacco, wine, spirits, fruits, &c., all Liverpool imports, and undeniably consumed largely in Yorkshire; nor have they alluded to the through trade *via* Hull between Liverpool and the northern ports of Europe.

Can it be argued that the Directors of the Liverpool Company, so intimately acquainted as most of them are with commercial affairs, and so influential in other respects, have been unable to obtain any measure of the probable consumption of these articles in the district of Yorkshire alluded to; or that, in their joint capacity, as most extensive railway carriers, enjoying, at the same time, it is to be presumed, the means of obtaining every necessary fact as regards the carrying trade on the Duke's canal, they are unable to present such a statement as would incontrovertibly establish the fact of the insignificancy of the intercourse between Liverpool and Yorkshire, *if it be so small?* Circumstanced as the Liverpool Board now is, as the *only* opposing party to a great public convenience, and under an implied obligation to proceed in good faith with the Leeds Company, is it just to evade the question of the sufficiency of the traffic, by confining themselves to attempts indirectly to invalidate the arguments of the Leeds Company, and by endeavouring to depreciate the value of their data, rather than to establish the correctness of their own opinion by an appeal to facts obtained by themselves?

The next point which requires remark, is introduced by the Directors of the Liverpool Company in the following words (see Appendix A. paragraph 20):—"The gentlemen of the Leeds Railway, indeed, seem now very much to have moderated their ideas of the quantity of traffic necessary to constitute an ample return on the required outlay, and 100 tons per day, or 31,000 tons per annum, of increased traffic is announced to be abundantly sufficient for the purpose." Afterwards it is added, to complete the above sentence (see Appendix A. paragraph 21):—"Allusion, it is true, was made to an increase of passengers, as one item of remuneration, in addition to the assumed 100 tons per day." On this point, it may be sufficient to remark, that, as an important part of the working disbursements of a railway are fixed and subject to little or no increase, after a certain amount of traffic is attained, so the actual profits arising to the Liverpool Company, from the additional traffic induced by the junction, would probably equal 60 per cent. of the gross receipts from goods, and 70 to 80 per cent. of those from passengers. One thing is certain, all agency, porterage, cartage, and other expenses now paid by the Liverpool Company, at the Manchester end on through traffic, would be saved, and with the exception of locomotive power, and tear and wear of waggons and carriages, and duty on passengers, the other expenses of the Company would not be sensibly increased by the small amount of additional traffic required to yield 5 per cent upon the outlay for the junction. As this statement bears much more directly upon the question of adequate remuneration, than the inquiry into the amount of total existing traffic from its effect, (in proportion as the resulting profit can be proved large,) in diminishing the required remunerative amount of tonnage, it may be expected that the Directors of the Liverpool Company, who are in possession of the most accurate data to settle this part of the question, will demonstrate its correctness, if they dissent from it.

The Liverpool Directors being unable, according to their own statement, to recommend the junction through Salford, on pecuniary grounds, suggest that motives of general policy and public convenience may still require that a general connection of the various railways centering in Manchester, should be formed; and the southern junction is proposed as the line best adapted for that purpose.

This introduces the second head proposed for consideration, viz., the reasons advanced in favour of a junction round the southern side of the town.

The exciting cause of the active movement now making in favour of a southern junction is stated in the Report in the following sentence (see Appendix A, paragraph 26):—"At this juncture, when the Manchester and Leeds Company have already announced their intention of coming down to Hunt's Bank, and when the Manchester and Birmingham Company are understood to be desirous to form a junction with the Leeds Company at Hunt's Bank, and it is presumed with the Liverpool Company, it is evident that prompt measures must be taken, or it may be too late to secure any union of purpose for successfully promoting the desired objects." What objects? The junction of the several railways? That, under the circumstances just described, would evidently be effected with the least delay by the Liverpool Company proceeding forthwith to Hunt's Bank; but probably the individual interests of the Companies are the objects in view. If so, why should three out of the four have already declared their opinion in favour of the junction at Hunt's Bank? Are the Directors of these Companies blind to the interests of their proprietors? This point is worthy of examination; for it is reasonable to suppose that the predominant interests of the Companies will in the end decide the question.

And, 1st, as regards the interests of the Manchester and Leeds Company. They stand in the position of having already expended 50,000*l.* in their extension scheme to Hunt's Bank. The most important branch of their through traffic being that with Liverpool, it is their interest that the connection should be as direct as possible, and continuous. This is secured by the Hunt's Bank junction, which also advantageously connects the Bolton line, and which may be completed in 18 months, the necessary Parliamentary powers being obtained; while, by the latest amended scheme of a southern junction, for which the Parliamentary powers are not obtained, and which could not be completed in 3½ years from this date, the continuity between the Liverpool and Leeds line is broken by a tunnel, requiring a perpendicular descent of the traffic of 60 feet at one end and an equal ascent at the other. Besides which, the interest of the Leeds Company is deeply involved in securing a direct communication with the Old River Company, which is also secured by the Hunt's Bank line, and not by the southern junction.

2nd. The Manchester and Birmingham Company, as is presumed, must be desirous of a connection with Liverpool; but, shut out as they are, from drawing traffic from the west of Manchester for any long distance southward, by their agreement with the Grand Junction Company, it is evidently their interest to extend the field from whence to draw their revenue, by forming a connection with the Bolton line northwards, and by the Leeds line with Yorkshire and the north-

Digitized by Google

east of England. This double object can be most economically effected by a direct extension to Hunt's Bank.

3rd. The interest of the Bolton Company; the question of a connection with that line is entirely dependent on the Hunt's Bank scheme, no connection whatever with Bolton being contemplated by the southern line.

Thus of the *four* Companies whose lines terminate in Manchester, and to whom a communication with the port of Liverpool is a matter of importance, the interests of *three*, point clearly to the Hunt's Bank junction, and their Directors have accordingly decided in its favour; while the decision of the fourth (viz., the Sheffield, the only one incomplete, is involved in that of the Manchester and Birmingham Company.

But "public convenience" is put forward as one of the "desired objects," and the superiority of Store-street over Hunt's Bank, as the point for a general station, is dwelt on at such a length, as to make it appear the chief inducement to adopt the southern line.

It is undeniable that, looking only at the map, Store-street is more central than Hunt's Bank; but looking to the localities occupied by those whose business leads them most frequently to travel by railway, the advantage of convenience is undoubtedly in favour of Hunt's Bank.

The Report informs us, (see Appendix A. paragraph 18,) "that of the up-trade from Liverpool, 'cotton constitutes above one-third,' and that 'another great item of this aggregate traffic, is grain or flower, constituting the principal supply for the 900,000 inhabitants' previously mentioned." Now, where are the cotton and corn merchants to be found? To what locality do the numerous country spinners and manufacturers resort? Or where do the innumerable country dealers in grain, flower, vegetables, fruit, bacon, butter, cheese, groceries, cattle, leather, clothing, &c., who visit Manchester daily from the surrounding towns and villages, transact their business, if not in the immediate vicinity of Hunt's Bank, the Manchester Exchange (1) being the centre of business of one class, the Corn Exchange (2) of another, and Shudehill market (3) of another? How, then, stands the Hunt's Bank station in relation to these objects.

	Yards.
The Manchester Exchange is from Hunt's Bank....	500
From Store-street.....	1150
Difference in favour of Hunt's Bank	650
The Corn Exchange is from Hunt's Bank.....	300
From Store-street	1200
Difference in favour of Hunt's Bank	900
Shudehill Market is from Hunt's Bank.....	500
From Store-street	1100
Difference in favour of Hunt's Bank	600

The foregoing measurements may be presumed to settle the question of convenience in favour of Hunt's Bank, as respects that numerous and constantly moving class of railway travellers, whose places of business are almost without exception in the district coloured yellow in the accompanying map.* But the superior convenience of Hunt's Bank as a central station for the majority of travellers, is strongly attested by the fact, that of 28 inns and hotels (occupied) given in Pigot's Directory for 1841,

19 are nearer Hunt's Bank than Store-street,
2 are equi-distant,
7 are nearer Store-street than Hunt's Bank.

and of the 19 nearest to Hunt's Bank, 14 are situated within the district coloured yellow in the annexed map.

Then as regards the merchants and others engaged in the Manchester trade generally, the inquiry into the best site for the Post-office proved that the centre of general business was at the end of High-street, which is equi-distant between Hunt's Bank and Store-street, so that no great advantage can be claimed in that comparison. There remains, then, only the question of convenience to the families of the upper classes, who mostly reside in the outskirts. The localities chiefly inhabited by them may be divided into three districts,—

1st. Hulme, which is equi-distant from Store-street and Hunt's Bank.

2nd. Ardwick, Chorlton-upon-Medlock, Rusholme, and Didsbury, which lie nearest to Store-street.

3rd. Pendleton, Broughton, Cheetham, and Prestwich, which are situated nearest to Hunt's Bank.

But as the numbers of the upper classes who reside in the 2nd and 3rd divisions are nearly equal, no balance of superiority is yet made out in favour of Store-street.

* The *colour* refers to the lithographed map issued by the Manchester and Leeds Company, which colour cannot be transferred to our pages. The district is that indicated in the cut by shading.—ED. R. T.

If the two stations, then, be but equal in point of public convenience, what motive can so strongly urge the Liverpool Board in a southerly direction? Can the proprietors of the Liverpool Company believe, that it would more promote their interests to extend their line to Store-street at an enormous outlay, while the Leeds Company push forward their extension to Hunt's Bank, than to spend half the amount in making the connection through Salford to that point where the other Companies are prepared to form their junction? And at what time is this proposition brought forward and urged upon their proprietors?

The Report states, that your Directors have been recently informed, (see Appendix A, paragraph 9,) "that the Manchester and Birmingham Board were now disposed to adopt prompt and efficient measures for making a junction between their station in Store-street and the Manchester and Leeds Railway at Hunt's Bank." This intelligence, it might have been anticipated, would rather have determined them in the same direction; seeing that in addition to the through Yorkshire traffic, they would now, for a less outlay than the southern line involves, and without the expense and risk of a second application to Parliament, secure the traffic from and to the Manchester and Birmingham line, and thus at length be relieved from their fears of an inadequate return. But instead of drawing from that declaration any new inducement to fulfil their engagement with the Leeds Company, they turn it to the opposite account, and bring it forward as a ground for immediately preparing plans for a southern junction, professing therein to be actuated by a desire to promote the convenience of the public, and the interests of the railways, but exposing themselves to the imputation of being animated rather by a desire to place themselves in a situation to impede, if possible, the Hunt's Bank Junction, even between the consenting parties. Whatever be the impelling motive, however, of those members of the Liverpool Board who have devised this course, it has hitherto had no other effect than to give an impulse to the long agitated scheme of a northern line to Liverpool; and although there may be no desire on the part of the public to interfere with or injure the interests of that Company, from whose enterprise they have hitherto reaped so great advantages, by the extended facilities given to commerce, there can be no doubt that if the means of communicating with that port be now refused to the inland railways, by the Directors of the Liverpool Company, the public feeling will strongly support any scheme by which, at a moderate cost, that important object can be secured.

There is yet another view of this southern junction scheme,—the utter improbability of its being sanctioned by Parliament. It is doubtful even if the other Companies were consenting parties to it, whether Parliament, after having granted to the Liverpool and Leeds Companies compulsory powers for three years to take property, for the purpose of forming a junction comprising land and buildings occupying a strip two miles long by forty-two yards wide, through the towns of Manchester and Salford in one direction, would consent to impose upon another and a larger section of owners and occupiers a similar hardship, merely because the Liverpool Directors had made their previous application to Parliament without due consideration. Such a demand would, it is presumed, require a stronger case in its support than the Liverpool Company could adduce, and especially in the face of the direct opposition of the two Companies, who are included without their own concurrence in the notices they have given of a new application to Parliament. Under such circumstances to allow their present powers to expire, leads unavoidably to the opinion, that no real desire to form a junction through Manchester prevails at the Liverpool Board.

The third head now claims attention, viz.,—the grounds on which the proposition of the Manchester and Leeds Company to secure to the proprietors of the Liverpool line an annual dividend of 10 per cent. upon 1,434,725*l.*, the total capital of the Company, as reported in their last balance-sheet, together with the same rate of dividend upon the cost of the Salford junction, *has not been entertained.*

This offer is equivalent to the division of about 37,000*l.* of extra profit per annum, among the proprietors of the Liverpool Company, or nearly 2½ per cent. *greater* dividend upon their capital than they have ever yet received.

A resolution (see Appendix D) embodying this offer, was formerly sent by the Leeds Company on the 4th January last, accompanied by the following letter, explaining the circumstance under which it was proposed:—

SIR,—I am instructed to send, for the information of the Directors of the Liverpool and Manchester Railway Company, the copy of a resolution, passed yesterday by the Board of Directors of the Manchester and Leeds Railway Company, in furtherance of a suggestion, made by the Chairman of this Company, at the special meeting of the proprietors, held in Manchester, on the 23rd ult., with the view of removing the alleged ground of objection, understood to exist in the Liverpool and Manchester Board, to proceeding with the junction line, according to the Parliamentary powers and plan, for connecting the two railways through Salford and *viâ* Hunt's Bank.

"In making this communication, I am commanded to state, that the sole object of the Manchester and Leeds Board, in the proposition now submitted to the Liverpool Company, is, to promote the immediate formation of that junction between the two undertakings, which, while it offers every facility for ultimately connecting all the various lines of internal communication, centering in Manchester, whether by rail or water, admits of being executed in the least time, at the least cost, and with immediate advantage, to the proprietors of both Companies.

"Presuming, that the question now occupies the serious attention of the Liverpool Board, and will shortly be brought under the consideration of the proprietors, the Directors of the Manchester and Leeds Railway Company have been anxious, in as far as it lay in their power, to simplify the points for consideration, and, if the proposition now made be favourably received by the Directors of the Liverpool Company, the Manchester and Leeds Board is quite prepared to enter into the particulars of the arrangement which appears to them best calculated to carry out the desired object, and secure the interests of the respective proprietors.

"In considering the difficulties, which have appeared to the Directors of this Company to present themselves to the Liverpool Board, in reference to this question, they have not been unmindful of the important canal interests, likely to be affected by the early completion of a continuance of line of railway through Manchester, and with their knowledge, a letter was addressed by Captain Laws, of this Company, to James Loch, Esq., M.P., the influential representative of the Bridgewater interests, both in the Liverpool Railway and in the canal, dated the 20th December last, suggesting a mode, in which it was conceived in the event of the immediate formation of the junction, the various conflicting interests might be most equitably provided for, with the greatest advantage to the proprietors of both Railway Companies, and convenience to the public.

"A copy of that letter, I am instructed to inclose for your information, together with a full printed statement of the proceedings of the special meeting of the proprietors of the Manchester and Leeds Railway, in reference to the Hunt's Bank junction."

To this the following reply was sent—"The resolution of the Manchester and Leeds Board, respecting a guarantee to this Company of an annual dividend of 10 per cent. on their total capital, was taken into consideration by the Directors this day; and I am instructed, in reference thereto, to inform you, that the proposition of your Board will be submitted to the general annual meeting of the proprietors of this Company on the 26th instant."

Important as this offer will appear to many of the shareholders, it is evident from Mr. Booth's letter, it made no favourable impression on the Board. Still it was necessary to allude to it in their Report, and to dispose of it, and the manner in which that is done may be seen by reference to their Report, which is subjoined, and the Manchester and Leeds Directors cannot but think that the public will agree with them in the conclusion, that there has been manifested in this particular instance an extreme degree of unwillingness to entertain the question in any form, and no little ingenuity and industry in inventing difficulties, and conjuring up objections. The Liverpool Directors inform the proprietors, that (see Appendix A, paragraph 28)—"It is not very clear in what way this proposition to secure a dividend of 10 per cent. is to be understood." What more obvious course in this difficulty, than to have sought an explanation from the Leeds Company, who had intimated in the words just quoted, "that they were prepared to enter into the particulars of the arrangement which appeared to them best calculated to carry out the desired object and secure the interests of the respective proprietors." Had there been a disposition to entertain this offer in any shape, the supposed legal difficulties would not have prevented the inquiry, for what has been done already by many Companies (and it is presumed legally done) might either by the present Parliamentary powers of the two Companies, or by a short Act, to be applied for jointly, be legally carried out.

Digitized by Google

It is with great regret that the Manchester and Leeds Directors are compelled to notice a plan of Manchester, with the several stations and proposed junction lines marked thereon, and accompanied by a statement of distances through Manchester, and by this means to Leeds, Sheffield, Hull, &c., which was lately brought before the proprietors by one of the Liverpool Directors; for though this was disclaimed by their Board, at their late meeting, as not being official, yet being put forth at their general meeting, together with the half-yearly accounts of that Company, and being confirmed in its main points by an official map subsequently issued by them, and having been widely circulated amongst, and commented on by the public at large, it has contributed very materially, as these Directors believe, to a misapprehension of the facts and relative merits of the two projects under discussion.

In the first place, it should be observed that, in the southern line marked upon that map, the junction line from the Store-street station to the Leeds Railway is supposed to be effected by means of a tunnel, which, in addition to the disadvantage of making the communication at each end into the very centre of an important station, already crowded with as much business as it will be capable of accommodating, would require every carriage, waggon, and truck, passing through it, to be lowered at one end, to a depth of 60 feet or thereabouts, and raised again to a similar height at the other end, a serious obstacle to the great stream of traffic from west to east, and one, which, by its consequent delay and expense, would clearly render the Water Companies able to compete successfully with the railways for goods' traffic, while none can expect that any passengers could be induced to make use of such means of conveyance. According to this plan also it will be seen, that, the junction line from the Liverpool Railway joins the Manchester and Birmingham, close to their station, which, though constructed at great expense, and amply sufficient for the purposes of that Company, is totally inadequate to accommodate the united traffic that would be poured into it in all directions.

The most important misrepresentation, however, consists in the statement of relative distances to Sheffield, Leeds, Hull, York, &c., by the route of the Sheffield Railway. It is nowhere stated on that plan, that this railway is yet incomplete, and persons ignorant of facts, would certainly be led to conclude, that, if not open, it was at least in an advanced state, and would probably open as early as the junction line could be made. Without at all seeking to disparage that undertaking, the Manchester and Leeds Directors feel it due to themselves and the public to say, that such is decidedly not the case, as that Company are at present in circumstances of almost unparalleled difficulty, so that it appears extremely doubtful whether their gigantic works can ever be executed, their capital being exhausted, more than half their shares forfeited, and the remainder at 60 per cent. discount.

It may, however, be urged, that these difficulties will eventually be overcome, and that the ultimate convenience is more important than the immediate profit to the Railway Companies, and we must therefore pursue this subject a little further. In order to communicate with the north and east by so short a route as is stated on that plan, it will be necessary to construct an entirely new line of railway from Penistone by Barnsley to the North Midland Railway, a direct distance of about nine miles, through an exceedingly difficult country. In fact, the Leeds Directors have the authority of Mr. George Stephenson, who has himself surveyed the district, for saying, that it is impossible to form such a line otherwise than by the valley of the Barnesly canal, which would considerably increase the distance above-mentioned of new line required to be made; and which besides, in consequence of the difference of level between the Sheffield line at Penistone, and the North Midland line near Barnsley (about 700 feet, according to the sections given on Bradshaw's map), would probably render necessary the use of a stationary engine on an inclined plane of two to three miles long. This obstacle, added to the difficulties of working a tunnel three miles long, with only a single line of rails, which is all that is at present contemplated by the Sheffield Company, would, in the opinion of these Directors, more than counterbalance any saving in point of distance, which could not be more than two miles between Manchester and Leeds.

But in discussing a scheme in reference only to its possibility (for in no other form is it yet before the public), the inquiry may with propriety be extended to other possibilities, bearing on the same point, and among them none appears, under existing circumstances, more likely to be carried out, in the event of threatened competition with the Manchester and Leeds Company, than the already mentioned line between Bolton and Liverpool, and the extension of that line eastward to the Manchester and Leeds Railway at Heywood, by which the most direct possible railway communication between Liverpool and Yorkshire will be effected.

The Directors of the Leeds Company have now stated their case, they cannot but regret that a measure which seemed calculated to unite together two of the most important districts in the empire, and promote the joint interests of the proprietors of two great Companies, should so far have produced only disappointment and disunion; and they cannot conclude without expressing a hope that, when the facts of the case are fully known, and the proprietors of the Liverpool Company become aware that, to accomplish a connection with the other railways entering Manchester by a southern junction, they must either bear the whole expense themselves, or fail in carrying out the objects in view, they will allow more weight to the circumstances which recommend the Salford line; and seeing the strong interests which impel the other Companies to form their junction at Hunt's Bank, and the disposition of the Bolton Company to meet, in some degree, the difficulties arising out of the Parliamentary agreement, they will, at the forthcoming meeting, in some form or other, take up their original plan under their present Act, and abandon the southern junction, to persevere in which, under existing circumstances, can lead to no other result than delay and public inconvenience, and permanent injury to the proprietors of the Liverpool Company.

By order of the Board,
JOHN JELLICORSE, Secretary.

Manchester, February 17, 1842.

—o—

COMPARATIVE LENGTHS of new Railway to be made by the Liverpool and Manchester Company, and parties co-operating with them, to connect the several railways centering in Manchester, as the question *now* stands for the consideration of the Liverpool proprietors; it being known that the Manchester and Leeds Company are proceeding with the Hunt's Bank line, on which they have already expended 50,000*l.*, and that the Directors of the Manchester and Birmingham Company, after a full consideration of the comparative advantages offered to them by the two proposed junctions, have decided in favour of that by Hunt's Bank, and have given notice to Parliament for powers to extend their line to that point.

BY THE SALFORD JUNCTION, the Length and Character of New Railway to be constructed would be as follows:—

	Yards.
From the Liverpool and Manchester Railway to the Bolton Railway, on arches or embankment. .	580
From the Bolton station to Hunt's Bank, on arches, for which an Act of Parliament is already obtained	880
Total length of new line to be made by the Liverpool and Manchester Company to connect their line with Hunt's Bank, if they make use of 450 yards of the Bolton line	1,460
Total length of new line to connect the Liverpool Railway with Hunt's Bank, if they do not make use of any part of the Bolton line . . .	1,910

BY THE SOUTHERN JUNCTION, the Length and Character of New Railway to be constructed would be as follows:—

	Yards.
From the Liverpool and Manchester station to the Manchester and Birmingham station . . .	2,500
From the Manchester and Birmingham station to the Manchester and Leeds station, at Oldham-road, by a tunnel, &c.	1,160
From the Liverpool and Manchester line to the Bolton line	580
Total length of new line to be made by the Liverpool Company, and parties co-operating with them, to accomplish the same object as would be effected by their making the 1,910 yards of railway through Salford	4,240
Making a difference in favour of the Salford junction	2,330

The Manchester Exchange (marked 1 on the plan) is distant from Hunt's Bank station . . .	500
Ditto, ditto, Store-street station	1,150
Difference in favour of Hunt's Bank . . .	650
The Corn Exchange (marked 2 on the plan) is distant from Hunt's Bank station	300
Ditto, ditto, Store-street station	1,200
Difference in favour of Hunt's Bank . . .	900
Shudehill Market (marked 3 on the plan) is distant from Hunt's Bank station	500
Ditto, ditto, Store-street station	1,100
Difference in favour of Hunt's Bank	600

South end of High street, (marked 4 on the plan) equidistant between Hunt's Bank and Store-street.

[The Appendices A and B, above referred to, are too long to be given in our columns; nor is it necessary, as the text sufficiently explains itself.—Ed. R. T.]

—o—

APPENDIX (D.)

At a special meeting of the Committee of Management of the Manchester, Bolton, and Bury Canal Navigation and Railway, held in Salford, 19th February, 1842; John Crosthwaite, Esq., in the chair.

Read—The Report (dated 26th January, 1842,) of the Directors of the Liverpool and Manchester Railway to their proprietors.

Read—The notice (dated 10th February, 1842,) in the *Manchester Guardian*, given by the Liverpool and Manchester Railway Company, of an application to Parliament in the next session, for a junction railway, on the south side of Manchester.

Resolved:—"That it appears to this Committee, that while the Directors of the Liverpool and Manchester Railway profess, in their Report as it respects the junction of the various railways entering into Manchester, to take enlarged views of the public convenience and accommodation, they show, by their recent notice of application to Parliament, that they are chiefly governed by particular and special interests, which are largely represented at their own Board; for on no other principle can it be explained why, in proposing a scheme which admits of an union of four of the railways into Manchester, they should be careful, in the said notice, to exclude from all participation in the proposed scheme the Manchester and Bolton Railway, which forms the most direct communication with the north."

Resolved:—"That a copy of these proceedings be sent to the Directors of the Liverpool and Manchester Railway, and that they also be inserted in some of the principal newspapers."

JOHN CROSTHWAITE, Chairman.
Committee-room, Salford, February 19th, 1842.

Extract from the Minutes of the proceedings of the Directors of the Manchester and Leeds Railway, 3rd January, 1842.

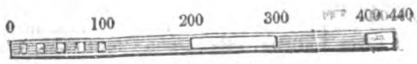
Mr. Gill and Captain Laws reported an interview with Mr. Booth of the Manchester and Liverpool Company, in which the latter confirmed the opinion previously current, that the Manchester and Liverpool Company did not proceed with the Salford junction, on the ground of its not being likely to prove remunerative.

The Board having taken this communication into consideration,

Resolved:—"That a communication be made from the Manchester and Leeds Company, to the Directors of the Liverpool and Manchester Company, to the following effect:—

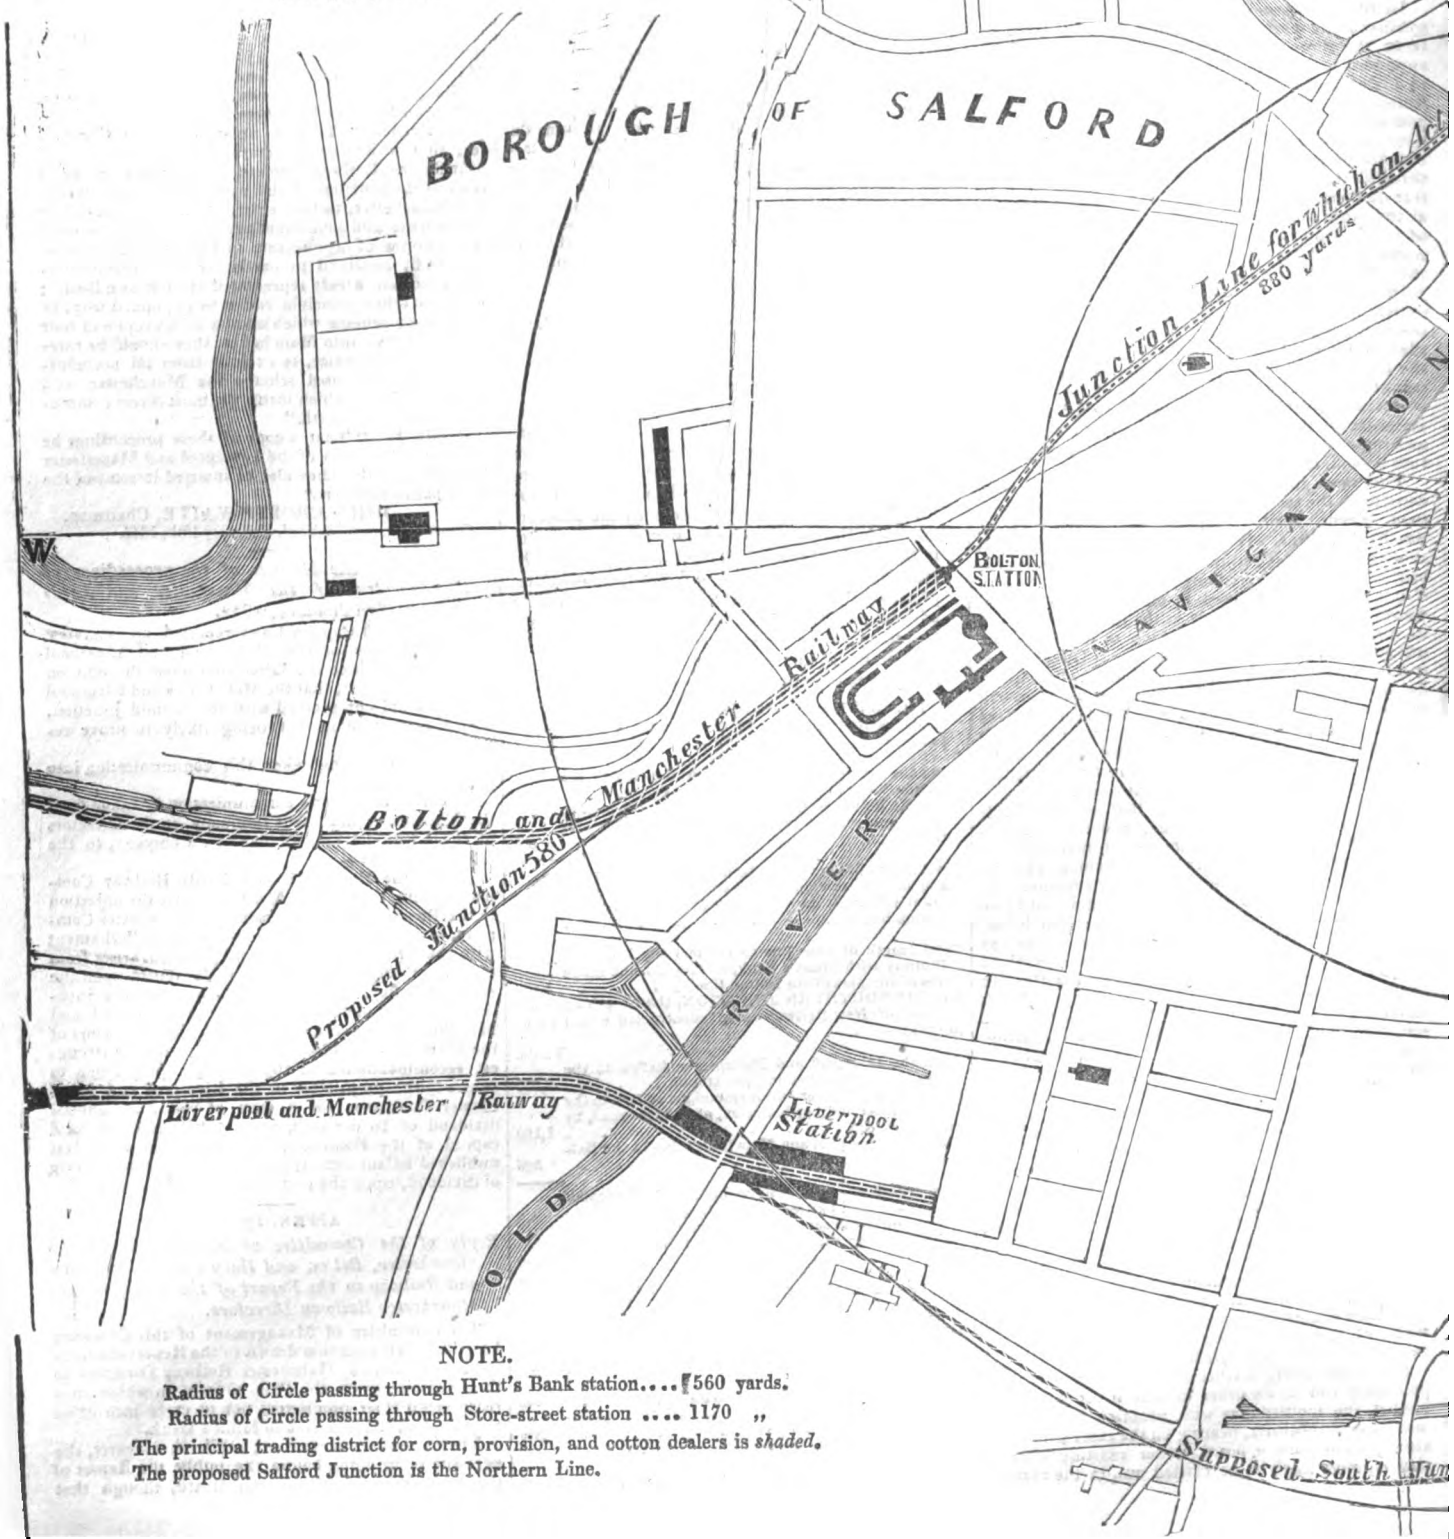
"That the Manchester and Leeds Railway Company having learnt from Mr. Booth that the objection to the Board of the Liverpool and Manchester Company, to proceed under their existing Act of Parliament with the formation of the Salford junction, arises from a doubt of there being an adequate return upon the required outlay, is prepared in the event of the junction being completed forthwith by the Liverpool and Manchester Company, to submit to the proprietors of the Manchester and Leeds Company, with the strongest recommendation of the Board, a proposition to secure to the proprietors of the Liverpool and Manchester Company, for a term of years, an annual dividend of 10 per cent. upon 1,434,725*l.*, the total capital of the Company, as reported in their last published balance-sheet, together with the same rate of dividend, upon the cost of the Salford junction."

APPENDIX (C.)



Reply of the Committee of Management of the Manchester, Bolton and Bury Canal Navigation and Railway to the Report of the Liverpool and Manchester Railway Directors.

The Committee of Management of this Company have had their attention drawn to the Report made by the Liverpool and Manchester Railway Directors to their proprietors on the 26th ultimo, in which they recommend their proprietors not to carry into effect the proposed junction line to Hunt's Bank.



The Committee submit to, while they regret, the necessity of bringing before the public the Report of the Liverpool and Manchester Board, though that

Report has already, by circulation through the public press, become in some measure a public document.

It is not intended to enter into a minute investigation of the reasons of the Report for recommending the abandonment of the Hunt's Bank junction: they are laboured and at length, but they appear mainly to resolve themselves into two,—"want of traffic" and "difficulties annexed to the agreement with this Company." It is with the latter that the Committee have chiefly to do. The other observations as to the value of "Hunt's Bank" for a station, compared with "Store-street," will be differently esteemed by parties differently interested: but it does not appear likely that any will be guided to an impartial decision on the point, by Hunt's Bank (which is only a short distance from the door of the Manchester Exchange) being represented in the Report to be in a "remote corner;" nor again, when comparing it with Store-street, by its being stated therein to be in a "distant quarter of the town." Persons resident in Manchester will form their own opinion as to the correctness of the Directors' observations on this head: but to the Committee they certainly do not appear to be well founded

The Report states that the Manchester and Birmingham Board are now disposed to adopt prompt and efficient measures for making a junction between their station and Hunt's Bank

This would connect the Sheffield as well as the Birmingham line (the Hunt's Bank junction being made) with all the other railways into Manchester. It does not appear that the South junction could in any respect remedy the deficiency of traffic so prominently set forth by the Liverpool and Manchester Directors as an objection to the Hunt's Bank line; and, as the Manchester and Leeds Company are already proceeding with their works to Hunt's Bank, and cannot, as will be obvious to any one who will consider the requirements of their line, go in any other direction, it does not seem clear in what manner the circumstances under which the Liverpool and Manchester Directors may make a South junction, are to be improved, as compared with the circumstances under which they might make the Hunt's Bank junction. They would at least lose the co-operation of one powerful Company; they would also lose its traffic over this South junction at events; and perhaps, in process of time over their own railway also.

The Committee will now turn to those observations in the Report which led to their nouncing it. The object of them appears to have been to assist in exculpating the Liverpool and Manchester Directors; but the Committee are unwilling that this should be done at the expense of the Manchester and Bolton Company. For the natural inference that would be drawn from such observations by parties not intimately acquainted with the whole nature and terms of the agreement, would be, that the Manchester and Bolton Company had been intractable or exorbitant.

Unfortunately, the subject is dealt with in a manner so general, as is only calculated to leave the public, as up to the present time it leaves the Committee, quite at a loss to know whether the unsatisfactoriness of the agreement arises from its pecuniary terms, its physical difficulties, or for some other thing involved in it.

Judging from one observation in the Report, which states that when before Parliament, the Liverpool and Manchester Directors were unable to conclude any satisfactory arrangement with the Manchester and Bolton Company, it might be inferred that the objections now stated to the arrangement arise from the amount of remuneration then agreed to be given; for so far as the Committee are aware, on no other point when they were before Parliament, did there arise any discussion whatever. However, the difficulty still attaching to the question is, that neither at that time, nor since, nor until the present late hour, and in their present very general terms of expression, has the slightest intimation been conveyed to the Manchester and Bolton Company, that the Liverpool and Manchester Company were dissatisfied with the arrangement referred to.

In consequence of a report that reached the Committee last month, that the Liverpool and Manchester Board ascribed to the terms of the agreement, a chief objection to proceeding with the junction, a letter was immediately addressed to the Chairman of the Liverpool and Manchester Board by a member of the Committee, to ascertain its accuracy, and the reply to that letter was the first intimation this Company received that the Liverpool and Manchester Board were dissatisfied with the arrangement.

To prevent misapprehensions on the score of this agreement, the Committee will state the terms that were agreed upon between the two Companies.

For passing over half a mile of the Manchester and Bolton Railway in Salford, being the most expensive portion of the line, and over which the Manchester and Bolton Company were bound to lay down a third line of rails, and to keep two lines of way open clear from obstruction day and night, the Liverpool and Manchester Company were to pay—

1½d. for each passenger.
Nothing for carriages, horses and parcels.
6d. per ton for goods.

It was also stipulated that should the Liverpool and Manchester Company raise their passenger fares, then the Manchester and Bolton Company were to receive a penny per passenger additional for every sixpence added to the present fares between Liverpool and Manchester.

The Liverpool and Manchester Company had also a clause in the agreement which would prevent the Manchester and Bolton Railway from becoming part of a competing line to Liverpool.

The Committee conceive that the amount of charges stipulated to be paid to them in the agreement were moderate; considering the nature of the works, and that three lines of way were required.

But the Liverpool and Manchester Directors may not have thought the arrangement objectionable in a pecuniary sense, and it may be to other things involved in the arrangement that they are averse:—the Committee can only deeply deplore that they have no guide to these occult difficulties save conjecture.

Notwithstanding that the Report, while it discusses many other objects, is quite silent on the very important one, of connecting the various lines from the east and south, with the Manchester and Bolton Railway, as being the first link of the direct line from Manchester to the north, the Committee are unwilling to give credence to the suggestion, that this important part of a comprehensive scheme the Liverpool and Manchester Directors would prefer leaving out. The Committee think that the luminous statement in the Report, of the propriety of taking broad views of the requirements of the public, and the Directors' own knowledge of the advanced state of the public mind on such matters, are sufficient to deny the possibility of its being intended so to stultify a great public measure; or of its being conceived that if attempted it could be permanently successful.

The Committee have now done that which they thought the observations in the Report required of them. They consider their task would have been spared by more openness and candour on the part of the Liverpool and Manchester Directors. They cannot but regret that for two years the Liverpool and Manchester Board have chosen to remain silent on the subject of this agreement; and that at the end of that time they have broken silence, in a manner which, though probably not intended, was certainly well calculated to convey to the public mind the impression that this great waste of time, and waste of powers, and waste of negociations, originated in no small degree, with the Manchester and Bolton Railway Company.

The Committee are the less willing to allow such an imputation to rest upon them, because they know better perhaps than most of the Liverpool gentlemen, what have been the consequences of the steps taken by the Liverpool and Manchester Board in going to Parliament; which step it appears by the Report was taken upon such very problematical pretences. They know that the Liverpool and Manchester Board have virtually had possession of that part of the town of Salford through which their junction line was to pass, so as utterly to deter any one in it from doing what he thought fit with his own (the Board only having the right to do what they thought fit with it);—they know that in several cases holders of private property have been left in great perplexity and embarrassment, from the knowledge that the Liverpool and Manchester Board had the power of taking their property at any moment, if they should think fit, while all this time the Liverpool and Manchester Company were totally irresponsible to them for the loss and inconvenience thus suffered;—and they also know that their own arrangements and views have been suspended and interfered with, by the adoption and by the subsequent abandonment of a scheme which, whatever may have been the private intentions of the Directors thereto, this Committee are aware was eagerly grasped at by the Liverpool and Manchester Board, at the time the Committee had made surveys for effecting the said junction themselves.

Salford, February 10, 1842.

The Committee, having received the following letter from the Secretary of the Leeds and Manchester Railway Company, think it right to give to the public all the correspondence which has taken place since the signing of the agreement with the Liverpool and Manchester Company:—

(COPY.)

MANCHESTER AND LEEDS RAILWAY.

Secretary's Office, Clowes's Buildings
Hunt's Bank, February 5, 1842.

To the Chairman of the Manchester, Bolton, and Bury Railway Company.

Sir,—I am instructed by the Board of Directors of this Company to state, that as it is their intention to publish a reply to the statements put forth by the Directors of the Liverpool Railway Company, in their recent Report to their shareholders, respecting the Hunt's Bank junction question, they are desirous of obtaining from the Bolton Company, in an authentic shape, such information as they feel themselves at liberty to give respecting the negociation between the two Companies, when the Bills were before Parliament, the understanding of the parties when the agreement was at length settled, and the communications that have since taken place; particularly whether the Bolton Company were made at all aware that the Directors of the Liverpool Company assented to the terms of the agreement, so unwillingly, as to indicate the probability of their never carrying it out; whether they ever intimated to the Bolton Company, subsequently to obtaining the Act, any objection either to the Parliamentary line or to the terms of the agreement, or expressed, directly or indirectly, any desire to negotiate with them for a modification of terms, or in any other way to ascertain the views of your Company, or manifested a desire to enter again into the question of a junction through Salford. An early answer will oblige the Board. I am, &c.,

JOHN JELLICORSE.

Correspondence referred to between the Manchester, Bolton, and Bury Canal Navigation and Railway Company, and the Liverpool and Manchester Railway Company.

(COPY, NO. 1.)

To the Chairman of the Liverpool and Manchester Railway.

Sir,—The Committee of the Manchester, Bolton, and Bury Railway, feel themselves called upon to notice a report, which they are assured, has proceeded from a member of your Board, viz., that the long projected junction of the Leeds and Manchester with the Liverpool and Manchester, has been hitherto delayed solely by reason of the exorbitant terms of the agreement made with the Manchester, Bolton, and Bury.

The Directors of the Manchester, Bolton, and Bury, being unwilling to bear the blame of the delay, will feel much obliged by receiving from the Liverpool and Manchester Board a declaration to the effect that there is no foundation for such report, and that, from the signing of the agreement in question, to the present time, the Manchester, Bolton, and Bury Directors have had no communication with the Liverpool and Manchester Board on the subject. I remain, Sir, yours, &c.,

(Signed) JAMES BRANCKER.

January 7, 1842.

(COPY NO. 2.)

LIVERPOOL AND MANCHESTER RAILWAY.

Lime-street Station,
Liverpool, January 11, 1842.

Sir,—I am instructed to acknowledge the favour of your communication of the 7th instant, stating that the Committee of the Manchester, Bolton, and Bury Company felt themselves called upon to notice a report, said to have proceeded from a member of the Liverpool and Manchester Board, viz., that the long projected junction of the Leeds and Manchester with the Liverpool and Manchester line, has hitherto been delayed solely by reason of the exorbitant terms of the agreement made with the Manchester, Bolton, and Bury Company.

In reply, I am requested by the Directors to state, that any such report as that to which you allude, would certainly be incorrect; at the same time, the Directors will not disguise that the nature and terms of the agreement to which you refer, were amongst the many difficulties, which from the first, surrounded the question of the proposed junction, and formed part of those considerations, which have induced the Directors hitherto to pause in their proceedings in relation thereto. I am, Sir, your very obedient servant,

(Signed) HENRY BOOTH.

James Brancker, Esq., Chairman of the Manchester, Bolton, and Bury Company.

(COPY NO. 3.)

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION, AND RAILWAY.

Railway Office, Salford, January 29, 1842.

Dear Sir,—Your favour of the 11th instant, addressed to James Brancker, Esq., was this day laid before the Committee of Management. In your letter (referring to the agreement between your Company and ours as to the junction line) you say, that your "Directors will not disguise that the nature and terms of the agreement to which you refer, were amongst the many difficulties, which, from the first, surrounded the question of the proposed junction, and formed part of those considerations, which have induced the Directors hitherto to pause in their proceedings in relation thereto."

In reply, I have been instructed to state this Committee's regret, that an agreement, which was deliberately entered into, and to which the common seals of the two Companies have been attached, should now be stated as an obstacle by your Board; and the Committee may be allowed still further to regret, that hitherto, you should have refrained from all communication with this Company on the subject. I am, dear Sir, yours truly,

(Signed) JOHN HAWKSHAW.

Henry Booth, Esq., Liverpool and Manchester Railway, Liverpool.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—Having thought it your duty to adopt certain expressions, in commenting upon the question at issue between the Manchester and Leeds and Liverpool and Manchester Railway Companies, which have already fallen in the nature of a threat from influential parties connected with the latter Company, to the effect, that the course I had pursued, in reference to that subject, was not calculated to promote the interest I advocated, I beg you will pardon my suggesting your return to the arguments you have hitherto so ably and impartially advanced, and leave such vague expressions to those who are more practised in the use of them, than, it is hoped, an independent and highly respectable journalist will ever condescend to be. But to prevent any misapprehension that might naturally arise, from the convenient assumption of the Liverpool Directors, that my correspondence with Mr. Loch was an official document put forth by the Manchester and Leeds Board, I beg to inform you, that so soon as it appeared I brought the circumstance to the attention of that Company, and Mr. Houldsworth's letter addressed to Mr. Lawrence, and published with the Report of the meeting in your last number, was forwarded with my full concurrence, and it is right for me further to explain, that I was invited to the public discussion of the greater part of the subject-matter of that correspondence by Mr. Booth, the Treasurer and Actuary of the Liverpool Company—the invitation being accompanied by a pamphlet circulated by him about 12 months since (just as the Manchester and Leeds line was to open throughout), when, with all the confidence of local and limited experience, he violently attacked the system of working the line adopted by the London and Birmingham and Manchester and Leeds Companies, the nature of which may be gathered from a subsequent letter he addressed to me, a copy of which, I here insert:—

(COPY.)

Liverpool, 28th February, 1841.

My Dear Sir, — Several passing observations which I have heard on my recent pamphlet, have led me to fear that I have fallen into the too common fault of being betrayed, in the eagerness of controversy, into a disregard of personal courtesy, and on looking over my pages, I am afraid I must confess, there is occasionally an uncalled-for individual antagonism, in reference both to yourself, and the Manchester and Leeds Railway Company.

Will you allow me to express to the Directors and yourself, my regret that this should have taken place, and will you be pleased to attribute it to my desire, at the moment, to make my *argument* as strong as I could, and not to my deliberate feeling?

Having experienced at your hands a uniform courtesy, whether in our casual intercourse, or touching the business of the Companies, I should be sorry you should think I could fail in this point, without regretting it afterwards.

Believe me to remain, Dear Sir, yours truly,

(Signed) HENRY BOOTH.

To Captain Laws, R. N.

Feeling how little these steps, or the publication in your last number, has to do with the real question at issue, I beg to avail myself of your columns to again draw the attention of the independent shareholders of the Liverpool and Manchester Railway to the present proceedings of their Directors, who are, in violation of a distinct pledge to call a meeting in ample time, to discuss the relative merits of the Parliamentary plan, and the scheme subsequently concocted, procrastinating the meeting, to render impossible either to secure the permanent dividend of 12*l.* 5s. per 100*l.* share, offered by the Manchester and Leeds Company, or to make a junction with the entire railways and canals, diverging from Manchester, under their existing powers, at an expense of one-third what would be necessary, even if they had *the power* to make the line advocated by the trustees of the Duke of Bridgewater's canal, to the exclusion of the Manchester, Bolton, and Preston line, and Mersey navigation; forming, in defiance of any step they can take, the direct line to the north, as well as the port of Fleetwood, and, in the meantime, fully bearing out my prediction, by placing themselves in a most objectionable view to the manufacturing interests, with which they ought to be so closely connected, "that the shareholders will be appealed to by the most powerful of all arguments," viz., a reduction of their dividends. That such a result may be expected, the relative receipts of 1841 and 1842, so far as they have hitherto gone, is an indication that will hardly be controverted by the most ingenious and practised devices. Since 18th of February their receipts have fallen off to a much greater extent, by a reduction of 40 per cent. in their charges, without any increase in the quantity of goods. Feeling how inconvenient it is to encroach on your space at this season, I will only further state, that

I am, Sir, your most obedient and
Very humble servant,
JOHN M. LAWS.

Broughton, near Manchester, March 1, 1842.

Liverpool and Manchester Railway weekly Receipt for January and February, 1841 *and* 1842.

	1841. Total.	1842. Total.	Decrease.
For week ending —	£	£	£
January 7.....	4,154	4,090	64
January 14	4,709	4 057	652
January 21	4,992	4,313	679
January 28	4 509	4,020	489
February 4	4,236	4,272	*
February 11.....	4,601	4,056	545
February 18.....	4,544	3,856	688
	£31,745	£28,664	£3,117

* There is an increase this week of 36*l.*

During the whole of this time the Manchester and Leeds have gradually increased; they last week exceeded the Liverpool by upwards of 100*l.*, which is for toll and power only.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—I send you herewith a copy of the proceedings of a special meeting of the Committee of Management of this Company, held on the 19th inst., which please to insert in the next *Railway Times*, as an advertisement.*

As I perceive your attention has already been drawn to the question, I will explain some of the circumstances which lead this Company to consider that the proceedings of the Liverpool and Manchester Company do not admit of very complete justification.

You will be aware that in the spring of 1839, an Act was applied for and obtained by the Liverpool and Manchester and Manchester and Leeds Railway Companies, for a junction of their railways at Hunt's Bank, which also formed a connection with the Manchester and Bolton Railway. The Manchester and Leeds Railway Company have purchased the land for their portion of the junction, and intend to proceed therewith; but the Liverpool and Manchester Board, after retaining their powers to near the expiration of the term for buying the land (the 14th of June next) have all at once recommended their proprietors to abandon this scheme, and to take up another, passing on the south side of the town.

At the time of the application to Parliament, this Company also gave the requisite notices, and deposited the plans for the Hunt's Bank junction; and they were put to considerable expense in Parliament in obtaining a proper agreement from the Liverpool and Manchester Railway Company, for passing over the Manchester and Bolton line, which agreement was however ultimately settled and sealed.

There is in the Liverpool and Manchester Company a very powerful interest, represented by the trustees of the Duke of Bridgewater; there is also another very influential party, representing the North Union Railway.

The Hunt's Bank junction might afford some facilities to the Mersey and Irwell navigation, which it is imagined could not be inimical to the interests of the public, though, it can be conceived, that the trustees of the Duke of Bridgewater will prevent, if they can, the possibility of their old rival being so favoured.

The said junction would also form, by means of the Manchester and Bolton and Bolton and Preston Railways, a direct line from east and south to the north, (the Manchester and Birmingham Railway having already given notices of their intention to proceed to Hunt's Bank); but the North Union interest setting at the Liverpool and Manchester Board, would prevent this if possible.

That the Liverpool and Manchester Directors should have a regard for special interests, cannot, perhaps, be wondered at; particularly if such interests can be protected without injury to the Liverpool and Manchester Railway, for I do not consider them capable of sacrificing the Liverpool and Manchester interests to any other, except by mistake; which is possible to them, notwithstanding their long experience.

But the complaint is, that, while their eyes are steadily fixed on one or two objects of this kind, they should seek credit for taking comprehensive views, or for caring greatly for the public convenience.

It cannot be for the public good, that a passenger from the east or south, coming through Manchester, should be obliged (if he wishes to get to Preston or Lancaster), to travel six miles *round*, which he must do if he is to go along the Liverpool and Manchester and North Union Railways, and which it is evidently intended he shall do by their present schemes.

And there is as little to claim on the score of public advantage, in abandoning the Hunt's Bank junction, on another ground, viz., the Hunt's Bank junction would communicate with the old river, which has no railway interest to control it, while the south junction will unite with the Bridgewater canal in Castle-fields, which is not quite so free from railway interference.

I am, Sir, yours very truly,
JOHN HAWKSHAW.

Manchester, Bolton, and Bury Canal Navigation and Railway, New Bailey-St., Salford, Feb. 21, 1842.

* See our last number.—Ed. R. T.

GRAND JUNCTION AND BIRKENHEAD RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A Chester Man," evidently knows little of what he writes about. The Manchester and Birmingham agreement with the Grand Junction Company is a *contract*, and cannot affect other Companies. If the Birkenhead Company were induced by "A Chester Man" to try the experiment of working, they would soon find that the toll was the least part of the expense, and that they could *claim* neither use of stations, clerks, porters, water for engines, nor the thousand-and-one necessaries to conduct a traffic. While he was about it, why did not "A Chester Man" advocate the trains of the Birkenhead Company running through to London paying toll to that Company also, and then *doubling* the profit he calculates on? The same rule applies in both cases.

Your's, faithfully,
NO SUBSCRIBER TO EITHER RAILWAY.

TAFF VALE RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the shareholders in this undertaking was held at the Angel Inn, Cardiff, on Tuesday, February 22. There was a considerable body of proprietors present.

Precisely at one o'clock the chair was taken by Sir J. GUEST, who commenced the business of the day by desiring the Secretary, Mr. Burgess, to read the notice calling the meeting, and the following

REPORT.

In meeting the proprietors at this time, the Directors have to express regret, that from a variety of circumstances they have been disappointed in the amount of traffic, which has up to the present time come upon the railway.

The most prominent of these circumstances are the depressed state of trade generally, and of the iron trade in particular, by which latter, the condition of the whole population of this neighbourhood is greatly affected. Neither has the coal trade at present equalled the expectations of the Directors; this has arisen principally from the inadequate supply of waggons hitherto placed upon the Llancaiach branch. No circumstance has, however, arisen, to shake the confid ence of the Directors in the ultimate and speedy success of the undertaking.

Notwith standing the causes before mentioned, the passenger traffic has undergone a less ratio of diminution through the winte months than on most other Railways; and has proved of much more importance than was at all anticipated. The general merchandise traffic has of late been greatly affected by the depression in trade; there is however no doubt, that very nearly, if not quite, the whole of this trade will very sh ortly be on the railway. In the management of this depar tment various alterations have lately been made —and others are contemplated for its improvement.

The coal rade on the Dinas branch, although it has not increased to he full extent anticipated, has been steady, and latterly on the increase. That on the Llancaiach branch amounts at present to about 100 tons per day, and will increase as the supply of waggons is augmented; this is in regular process.

It addition to the coalowners at present using the railway, several others have made application to bring their coal, and arrangements are being made to accommodate all who wish to use the railway.

In the iron traffic but little progress has hitherto been made; the Directors have, however, now the pleasure to report, that a satisfactory arrangement has been made with the Dowlais Iron Company for the whole of their traffic which will be immediately placed upon the railway.

A negociation has for some time been in progress between the Marquis of Bute and this Company, with the view of establishing such arrangements at the Bute Docks, and adopting such a rate of charges for wharfage, &c., as will ensure to both undertakings a much greater portion of trade than they have yet had.

Appended to this Report will be found a statement of the capital and revenue accounts of the Company, to the 31st of December last; by the latter it will be seen, that a profit of 6,600*l.* 9s. 1d. has accrued on the working of the line up to that period; of this sum 3,470*l.* 0s. 10d. has been applied to the payment of interest on the debentures, loan notes, and new shares, and the balance 3,130*l.* 8s. 3d. is for the present placed to the debit of the capital account, as the Directors would not recommend any dividend to be declared at this time.

The capitalized interest up to the 31st of December last, as authorised by the last Act of Parliament, and by the resolution of proprietors of August 5, 1840, has been carried to the credit of the proprietors in the books of the Company; but as it does not affect the receipts and expenditure, it is not shown in the printed statement.

With respect to the working expense, the Directors have no hesitation in stating that they will be small. The present ratio of expenses forms no criterion upon this point, as with double the traffic the expenses would not be materially increased.

The services of the engineering staff for the formation of the railway being no longer required, have been dispensed with, and the attention of the Directors has been given to the reduction of every expense to the lowest practicable point.

The whole of the masonry and other works on the line are in a good state; no failure whatever has taken place in the bridges or archways.

A satisfactory contract has been entered into with responsible parties for the maintenance of the permanent way and works.

The engine and carriage stock of the Company is in the most efficient state; and although some improvements and additions must necessarily be made at the stations, and on some other parts of the road, the Directors feel confident of being able, with their present means, to produce a revenue which will be satisfactory to the proprietors,

Balance Sheet to December 31st, 1841.

Audited and found correct,
WALTER COFFIN,
E. H. LEE.

February 17th, 1842.

The CHAIRMAN said, the Directors had thought it their duty to place before the shareholders a detailed account, so far as could be prepared, of the whole affairs of the Company; if there was any gentleman present who did not consider it sufficiently explanatory, and would put any questions, he should have much pleasure in answering them. There were no secrets to keep back. Though the Report was not so favourable as might be desired, it contained the germs of future prosperity. (Hear.) There was one point which was particularly satisfactory, namely, the amount received for passenger traffic, for the last half-year it had exceeded 4,000*l.*, making on the year more than 8,000*l.*, an amount far greater than was ever contemplated. (Cheers.) The general merchandise traffic during the same period had reached to nearly 3,000*l.*; and from coal they might confidently expect a large and increasing traffic. The Directors had the same confidence in the undertaking as heretofore. (Cheers.) If any gentleman had questions to put to him, he should be most happy to reply. (Hear.)

Mr. JAMES put a question to the Chairman, with the view of ascertaining what number of the new shares had been taken by the Directors; as it was understood they would take two of the new for every one of the old which they held.

The CHAIRMAN stated, that he had not taken a number of new shares in proportion to his old ones, because the conditions on which he undertook to do so were not fulfilled. (Hear.) He had advanced 40,000*l.* on the faith of a branch being made to Dowlais Works, which had not been complied with. If it had been fulfilled he would have taken the new shares.

Mr. POOLE said, as one of the Directors, I wish to make one remark. I held 60 old shares; I took 160 new shares. It was not convenient for me to hold so many, and I got my father and other near relations to take some, which I certainly should not have done, if I did not consider the undertaking a good and safe investment. (Hear.)

Mr. WALTER COFFIN and Mr. BURGESS (the Secretary) also afforded explanations to the meeting; after which,

Mr. JAMES said, he was glad he had put the question, as the result showed there had been no withdrawal of confidence on the part of the Directors.

A PROPRIETOR made some observations condemnatory of the Sunday traffic on the railway, but made no motion.

Mr. JAMES said, he observed by the balance-sheet that the outstanding liabilities of the Company were about 70,000*l.* Was that all?

The CHAIRMAN—The liabilities are confined to that except some sums in dispute, in which the party claims 4,000*l.* or 5,000*l.*, and we say there are not so many hundreds due to him.

Mr. VAUGHAN—In the early part of the meeting, the resolution I am about to propose was put into my hands. Whatever hesitation I might have had in doing so has been removed, and all such feelings are terminated in one of unmixed satisfaction. (Hear.) The discussion which has taken place must have dissipated any feelings of dissatisfaction from the minds of the shareholders, and I think they, as well as the Directors, are indebted to the gentlemen from Bristol for putting the questions. Notwithstanding there is no dividend, I think there is matter for much gratification; because, looking at the traffic already on the road, we find it has nearly doubled the calculations made, and reached an amount, though with only one branch open, which has enabled us to clear upwards of 3,000*l.* Mr. Vaughan, after expressing his regret that the clause enabling the Company to provide waggons for the coal proprietors had been thrown out in the original Bill, thereby confining the exertions of the Company, concluded by moving, "That the Report of the Directors now read be received and approved of, and that they be requested to print the same, together with the statement of receipts and expenditure, for the information of the proprietors."

Mr. JAMES, jun.—I have much pleasure in seconding the motion. After the very satisfactory explanations that have been given, I will not take up the time of the meeting further than to express my full confidence that the traffic will continue to increase. Owing to the depressed state of trade, the merchandise traffic has been less the last half year than for several years, and less than what we may fairly calculate on in future.

Mr. DAVID EVANS moved, "That the resolution of the Board of Directors passed September 29, 1841, declaring 14 shares forfeited, be confirmed, and that the Directors be desired to dispose of such shares as they may think fit."

Mr. C. VACHELL seconded the motion, and expressed his regret at the necessity of adopting such a measure.

Digitized by Google

The CHAIRMAN said, he need not feel uneasy about it, the parties would pay up the money.

A conversation then arose respecting the best means of raising the new shares in the estimation of the market, but it did not terminate in any course being resolved on.

Thanks were then voted to the Chairman, and the Directors and the company separated.—*Bristol Gazette.*

LANCASTER AND PRESTON RAILWAY COMPANY—GENERAL MEETING.

On Thursday last, the half-yearly general meeting of the above Company was held in the large room at the Station-house. J. DUNN, Esq., the Mayor, presided. The other Directors present were, T. Eastwood, Esq., W. Jackson, Esq., R. Preston, Esq., and G. Coulston, Esq. The room was crowded with shareholders.

The CHAIRMAN, in opening the proceedings, much regretted that the Report was not altogether so favourable as might have been desired; but various circumstances had occurred, which, in the course of time, he hoped would be surmounted. He regretted much that the misunderstanding with the North Union Railway Company had not been arranged; but he begged to assure the meeting that everything that could be done on the part of the Lancaster and Preston Directors had been done to bring it to an amicable conclusion. He was not prepared to give a straightforward opinion upon the subject, for he was unwilling to say anything that might be offensive to any one. They had solicited an interview, and they had had a conference with the North Union Company with regard to the locomotive power, the engines, and the station-house, and if they could have had the station-house on fair and equitable grounds, they would have declared their willingness to have excepted it. They had, therefore, no other alternative than to make arrangements with the Bolton Company, and it was not until that was concluded that the North Union Company intimated that they were willing that the Lancaster Company might have the station as heretofore. The North Union Company stated that they required a small remuneration. According to the opinion of the Lancaster and Preston Directors, they wanted 3d. a mile more than the 900*l.* which they were receiving. The proposition was declined, as it would have been 1,000*l.* more than what had been previously paid to them.

The SECRETARY then read the Report, which was given in the *Railway Times* of last week.

The CHAIRMAN moved that the Report be received and adopted.

W. GARNETT, Esq., seconded it—at the same time he wished to know if the maintenance of the way would be any less for the current year than it had hitherto been.

The CHAIRMAN said, that under the sanction of Mr. Locke, they had contracted for it for seven years, at 200*l.* per mile.

To a question as to Mr. Locke's salary, it was stated that his services had been retained at 170*l.* a year; but he was quite willing for them to cease whenever they could be dispensed with. Although Mr. Allen had contracted for the way, yet it was necessary that a competent engineer should survey it from time to time. Some part of the salaries were charged to the capital account, and some to the traffic account; for the Chairman was not aware that any line, saving the Liverpool and Manchester line, had closed their capital account.

They had a number of accounts on their hands, which they could not close all at once. The items divided were Directors salaries of 100*l.* a year and that of the Secretary; all the other clerks' salaries were in the current year. The Chairman hoped that the capital account would be in less compass by next June, and that they would stand in a better position when they had a communication through to the north. With regard to the dividend, the Chairman would not flatter them by saying that it might have been more; on other occasions they had divided too near, but the Directors were now anxious at once to meet all contingencies and expenses. They had been enabled to dispense with clerks and others connected with the establishment, so as to make a saving in salaries of 253*l.*

In answer to a question by Mr. Garnett, as to an item of 1,309*l.* 19s. 7d. for locomotive power, which he thought had been supplied by the North Union Company, it was stated, that it had been a charge from the 1st of January to the 1st of July. An arrangement had been at first offered to be entered into with that Company, but they asked in round numbers 5,000*l.* a year more than it cost. They then reduced it to 3,000*l.*, which ultimately induced the Directors of the Lancaster and Preston Junction Railway Company to order six engines for their own. A contract had now been entered into with the Bolton and Manchester Railway, to supply the locomotive power at 1s. 6d. per mile, and were allowed to put on 12 carriages, so that they might be benefited in conveying their own merchandise.

Mr. GARNETT wished to know if there was any likelihood of the misunderstanding between the Directors and the North Union Company being arranged.

Mr. JACKSON thought there was.

Mr. GARNETT then complained of the manner in which some friends of his had been treated, who had come to Preston from Parkside, on their route to Garstang by the North Union line, which arrived soon after one o'clock. When they arrived at Preston they were told that they would be at Garstang much sooner by the packet-boat than by going on by the train; it so happened that he (Mr. G.) had gone from Parkside

Digitized by Google

in the same train and arrived at Garstang at half-past two, whilst his friends by the boat did not arrive until half-past six; which circumstance appeared to him to be an infamous and flagrant piece of injustice, and especial hostility to the Lancaster and Preston Company. Mr. Garnett also stated a second case displaying a similar ill-feeling by the officers of the North Union, who "jeered and sneered" at his son and a friend of his who had got to Preston by the Lancaster train, and were too late to take the train on to Manchester. The men seemed to think it a very good joke.

The CHAIRMAN said the Lancaster train had been detained once or twice by the snow about Christmas. He was not willing to impute anything to the Directors of the North Union.

The GARNETT said, that the extra charge of 6d. by the North Union was a contemptible one, and had excited very angry feelings in the minds of the public.

The CHAIRMAN remarked, that they had nothing do with it; although the Manchester and Liverpool Company had complained.

Mr. KNIGHT considered a much smaller return than had been originally looked for had been produced from the tolls. £2,200 had been received on the Wyre Railway, whereas, on their line, it was not more than half that sum. He recommended that trucks should be attached to the second-class carriagest as was adopted on other lines, and their amount might be doubled. The delay in building the station at Garstang had been another drawback to the passenger traffic; as it has been remarked that from 20 to 30 passengers frequently got out at Lancaster in an evening, who had nearly all got in Garstang; but he thought when the station was finished they would prefer the railway, provided a cheap conveyance could be constructed to take them to it.

The CHAIRMAN explained, that the station would have cost 500*l.* or 600*l.*; they had offered 100*l.*, and they expected that Mr. Keppel, who was so much interested in property there, would have contributed 300*l.* or 400*l.* to the building. It appeared also that arrangement was expected to be completed soon with the Earl of Derby and others also interested.

Mr. KNIGHT said, I think it must be admitted that the toll for goods has produced a much smaller return than was originally looked for, and I believe that a strong feeling exists amongst the proprietors that when the Bolton and Preston line is open, that some different arrangement might be made in that department, so as to produce a very considerable increase, for it appears our receipts for goods are small in comparison with other lines. I admit that the amount of toll is net profit, at the same time I do not doubt and I believe that a great majority of the shareholders are of the same opinion, that we might double that amount by being our own carriers, and adopt the same plan as other short lines, by attaching trucks to the second-class trains; there is another circumstance which is considered to have been rather a drawback to the passenger traffic, the unavoidable delay in building the station at Garnstang. It may be only a matter of opinion, but it has been remarked, that the boat in the evening has frequently brought from 20 to 30 passengers, and almost in every instance they have come in at Garstang; but when the station is finished, I think they would prefer the railway, if any cheap conveyance can be constructed to take them there; and even now, if it put nothing in our pockets, till the station is built, it would be a drawback to the opposition we have to contend with in another quarter. I would likewise beg leave to allude to the inconvenience and grievance to which the public have been subjected by the separation with the North Union Company. I think that the Board of Directors are entitled to our special thanks, for having done all in their power to avert the inconvenience, and likewise for their zealous exertions in protecting our interests in reference to that; but I am convinced that a considerable misunderstanding still exists respecting the dissolution with the North Union, and the extra charge of 6d. by that Company, which is considered a most unjustifiable act. I think, on purpose to enable the public rightly to understand the matter, and to know on whom the blame attaches, that the correspondence between the two Companies on that subject ought to be published in the *Railway Times*.

The meeting generally disapproved of the proposition.

Mr. SHARP wished to know if the 1s. 6d. per mile for locomotive power was prospectively.

The CHAIRMAN said, that it was so, from the 1st January.

A conversation, extending to some length, then took place as to the remuneration in the Directorship and Secretary's department being diminished. As from the dividend being so small, and other circumstances, the most rigid economy ought to be observed, a memorial to that effect, signed by 40 shareholders, was then read. Upon a remark being made that some arrangement might be perhaps entered into with the Canal Company, so far as regarded the running of the packets, it was stated that the Canal Company had asked 1,000*l.* a-year as an equivalent for taking them off.

Mr. THOMPSON (of Settle) was perfectly willing to leave matters of detail to the Directors. He was satisfied, from the straightforward manner in which they had answered questions, that they were anxious to do their best for the Company, and he was willing to let them get the important dispute with the North Union settled. He doubted not but that they would bring the expenditure to the most economical point.

Mr. WAITHMAN said, that he should feel himself called upon to move a reduction in the various salaries next June, if nothing then were brought officially before the meeting. Under present circumstances, he did not think that the expenses of Directors and Secretary should be more than 500*l.* When he was paid 7 per cent. instead of 3 per cent. for his capital embarked, he was quite willing that the remuneration should be doubled.

Mr. SHARP said, that he should wish the salary of the Secretary to be put on a proper basis. He was not complaining that any one had too much: he only wished to have an equitable adjustment of the capital and traffic accounts.

Mr. HADWEN asked, if it was necessary to continue Mr. Dickinson, the stone mason, in his situation.

The CHAIRMAN said, that he had notice given him to leave; and that he was to be employed by the job, as he might be wanted.

Mr. WAITHMAN remarked, that something had been said as to the Company taking the carriage account into their own hands. He was sorry to hear that, as it might make Mr. Hargraves throw a quantity of goods in the way of the Canal Company.

The CHAIRMAN explained that it was not intended to take the whole department into their hands; what he meant could only be done when the Bolton line opened; they might have the benefit of the locomotive power which Mr. Hargraves received added to the toll, as they still could contract to carry Mr. Hargrave's goods.

Mr. WAITHMAN considered that in that case the difficulty was removed.

The dividend of 12s. 6d. on the old, and 8s. 6d. on the new shares, as given in the Report, was then adopted.

Mr. W. SATTERTHWAITE moved that the cordial thanks of the meeting should be given to the Directors for their strenuous exertions in forwarding the interests of the Company—carried by acclamation.

The CHAIRMAN returned thanks, and the meeting adjourned.—*Lancaster Guardian*, Feb. 28.

EDINBURGH AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

LAST week we gave a notice of the proceedings at the late meeting, with a few extracts from the Report of the Directors, which we now present in full:—

DIRECTORS' REPORT.

The greater part of the Report which your Directors made to the last half-yearly meeting of shareholders was occupied with a detail of the differences which then subsisted between the majority of the Board and the Directors who reside in Edinburgh. They have now peculiar satisfaction in being able to commence the present Report with an assurance that these differences are at an end, and that all the members of the Board are united in the support of a plan whereby the future administration of the affairs of this great undertaking will be placed on a footing calculated to secure a united and efficient management.

It is proposed in the Bill, which must be introduced into Parliament this session, to insert clauses whereby the following important changes will be made in the constitution of the Company:—

1. The Edinburgh and Glasgow Committees are to be abolished, and all the powers formerly vested in them are hereafter to be exercised by the Board, with power from time to time to appoint such Committees as the Directors may see fit.

2. The number of Directors is to be reduced to 15, of whom four are to be resident in or near Edinburgh, and six in or near Glasgow.

3. The right of shareholders to vote at general meetings is in future to be regulated as follows:—For every 4 shares up to 20 shares 1 vote; for every 10 shares above 20 and up to 100, 1 vote; for every 20 shares and above 100 and up to 200, 1 vote; for every 40 shares above 200, 1 vote.

Your Directors trust, that these provisions will appear to you calculated to place the conduct of the business of this Company on an improved footing, and will meet with your entire approbation.

In the last half-yearly Report, your Directors considered themselves entitled to hold out the expection, that the opening of the railway for traffic would not be postponed beyond the month of October last, but the unusually rainy weather which prevailed in autumn soon proved that these hopes could not be realised, and the continuance of the unfavourable season rendered it at last necessary to delay the opening till spring. Although your Directors cannot but express their regret at the loss of several months' traffic, occasioned by this delay, they are satisfied that the line will now open under much more favourable circumstances that it could have done last autumn. The consolidation of the embankments—the completion of the drains and fences, the lengthening day and improving weather—the near approach of the summer traffic—are all advantages calculated to compensate for the disappointment of last year.

The whole line of rails is now complete. The locomotive engines and carriages have been tried, and are pronounced by the Engineer to be in the best working order. The stations and station-houses are either finished, or so far advanced as to admit of being used. Major-General Pasley, the Inspector-General of Railways, surveyed the whole work last week, and has expressed his entire satifaction with them. The private and public opening of the railway has taken place under the most auspicious circumstances.

Your Directors trust, that the arrangement they have made as to the number and time of starting the trains, and as to the fares, will meet with your approbation. As a measure of precaution during the first month or two, while the days are still short, and some of their servants are new to their work, it has been resolved not to run the trains so fast, nor so frequently, as will afterwards be necessary. Your Directors have therefore postponed the starting of the 9 o'clock morning and 7 o'clock evening trains.

Much attention has been bestowed on the arrangements necessary to establish connections, by coaches, with Stirling; Alloa, Dunfermline, and other more distant towns; all of which, it is hoped, will be completed very soon after the opening; omnibus accommodation will also be provided at Edinburgh, Falkirk, Kirkintilloch, and Glasgow. The Company have not themselves taken any share in these several undertakings, but have entered into agreements, whereby, in return for certain privileges granted, parties of respectability and capital have undertaken to provide ample accommodation for the public, on moderate terms.

The traffic in goods cannot be commenced for a few weeks. Although the goods' sheds are far advanced, and the requisite number of trucks, &c., are already on the line, it requires considerable time to perfect the other arrangements. The Board have resolved, for some time at least, to take into their own hands the carrying trade on the railway between Edinburgh and Glasgow, and the towns on the line; but, as regards more distant places, not to do more than supply the locomotive power and carriages for those carriers who may wish to send their goods or carts along the line. A considerable number of those parties have already intimated their intention of doing so. Your Directors have engaged an experienced Superintendent for this department.

The attention of the shareholders is now requested to the financial affairs of the Company. The completion some time ago of several of the contracts on the line, has enabled your Directors to commence the labourious task of adjusting accounts with the contractors. But this operation has not yet advanced so far as to enable them to speak with confidence as to the precise amount of what may still be due for work done on the line. There are also various unsettled claims (under arbitration) for the price of land and for damages. Some little time must therefore elapse before your Directors can state to you the exact cost of this great national work; but they have no reason to think that any of the items will greatly exceed the amount at which they have been estimated at the recent general meetings of the Company.

In the meantime, however, your Directors have been obliged to pledge the Company, and also their own individual credit, to raise a certain sum of money, partly by cash credit, and partly by loan notes, beyond the sum authorised to be raised by the original Act of Incorporation. In order to give the Company the statutory powers to raise the funds necessary to repay

Digitized by Google

these loans, and to complete the works, a Bill is about to be introduced in the present session of Parliament, and will, according to the Standing Orders of the House of Lords, be hereafter submitted to a general meeting of the Company for approval. The amount which it is proposed to take power to raise by this Act, partly in stock, and partly in loans, is 300,000*l*. This sum, your Directors expect, will be fully sufficient to meet all demands.

Your Directors have felt a deep interest in the discussions which have lately taken place as to the formation of one or more lines of railway to connect England with Scotland. Should such a vast and useful undertaking be resolved on, along either the east or west coast, it would be of incalculable benefit to the public, and could hardly be otherwise than advantageous to the Edinburgh and Glasgow Railway. One course only would be injurious—that is, the formation of a central line through Clydesdale, with branches leading from the trunk, both to Edinburgh and Glasgow. But its great expense, the sterile character and thin population of a large portion of the country through which it would pass, and many other objections which may be made to the proposed central line, lead your Directors to believe that, on the facts being known, the public will not encourage, nor the legislature sanction, such a line. It is a line obviously opposed to the interests of the Edinburgh and Glasgow Railway.

On the other hand, your Directors feel that all the shareholders of this Company have a direct interest in promoting the success of the projected line of railway from Edinburgh to Dunbar. As completing the connection of a rich agricultural district, from which Glasgow already draws large supplies of grain and of cattle, with that city; and as completing the connection of the best fishing station on the east coast of Scotland with the largest market on the west, there can be no doubt that this line would prove an excellent feeder, and bring a large accession of traffic to the Edinburgh and Glasgow Railway; and if it should hereafter be prolonged to Berwick, and ultimately to Newcastle, it would establish a direct communication with one of the great English trunk lines leading to London. Your Directors, therefore, earnestly recommend the undertaking to your notice.

Your Directors are not losing sight of the long-projected railway to Stirling. It would form an important feeder; and as the opening of the trunk line will now develope its value as a branch, your Directors may hereafter bring the subject before you, with the advantage of more information and experience of its probable traffic.

The propriety of opening the railway partially on Sunday, by running morning and evening trains, has occupied much of the attention of your Directors. All of you are aware of the resolution of the Board to leave the decision of the matter in your hands.

Your Directors have now successfully, as they hope, conducted to a completion the important task which was committed to them, and they trust they will be pardoned for now taking a retrospect of their work.

This undertaking was originated, after several previous unsuccessful attempts, in the year 1835. The canal influence in Edinburgh and Glasgow was then so powerful that it was no easy matter to find independent men who were willing to undertake the arduous and unpleasant duty of acting as its patrons. This difficulty, however, was surmounted. A few gentlemen who still stand connected with your Company, agreed to devote themselves to the duties of Directors; and encouraged by these respectable names, the public in Scotland and England quickly filled up the subscription list.

Peculiar circumstances occurred to prolong the contest in Parliament for an Act of Incorporation for three sessions. In 1837, the Bill was in Committee for 37 days. The opposition was the most determined that any Scottish measure had ever encountered, and from the wealth and influence of the opponents, the contest was of a most expensive kind. At last, in July, 1838, the Act of Incorporation was obtained.

It was not, however, until the autumn of 1838, that the first contract on the line was let; and from the advanced period of the year, scarcely any heavy work was begun until the spring of 1839. The summer of 1839 and that of 1841 were excessively wet; and some of the most difficult works on the line were much retarded by the unreasonable and vexatious opposition of certain parties, some of whom had also been the most active opponents of the measure in Parliament. But notwithstanding these adverse circumstances, the works on the line have now been completed within a period not much exceeding three years.

Of the nature of these works, your Directors think this Company have every reason to be proud. The combination of strength and solidity with economy, and with beauty of design, does the utmost credit to your distinguished engineer. The amount of accommodation which is afforded to the public, will, it is hoped, equal that of any railway of the same extent.

Before concluding, your Directors beg to warn the shareholders to avoid the two extremes, of being either too much elated or much depressed, by the result of the traffic on the line during the first few months. Your Directors do not anticipate certainly, that at this season of the year, with only a limited number of trains—with the connections, by coaches, with distant places not yet established—and without any goods traffic—the revenue will be large. But they have reason to feel confident, that in a very short time, when the different sources of traffic shall have been more fully developed, the result will fully equal the just expectations of those who have embarked their capital in this great undertaking.

The following gentlemen retire by rotation from the Direction at this time, viz.—Messrs. Learmonth, Zoller, Rathbone, M'Kenzie, Forbes, Caddell, and J. G. Hamilton.

Your Directors beg to state that these gentlemen are, in terms of the Act of Parliament, re-eligible to office.

Balance-Sheet of Income and Expenditure, to December 31st, 1841.

JOHN LEADBETTER,
ARCH. SMITH,
ALEX. DRYSDALE,
} Directors.

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY.—GENERAL MEETING.

[*For a notice of the proceedings see our last number.*]

DIRECTORS' REPORT.

Opening of the Line.—At the last half-yearly meeting the Directors informed the proprietors that they entertained no doubt of the various works on the line being completed by the 12th of March next, and these expectations will be realized except as regards the Manchester station, which, owing to extremely unfavourable weather and to combinations of the workmen since this contract was let, cannot be sufficiently advanced to accommodate the public before April, in the course of which month the line will be opened to Crewe.

The Directors refer with satisfaction to the Engineer's Report respecting the slight excess upon the aggregate amount of the several contracts between Stockport and Crewe.

The Directors have considered it prudent not to incur at the outset any expense in the erection of stations, except at Manchester, Stockport, Chelford, Sandbach and Crewe, but temporary provision will be made at other points for carrying on the traffic, and suitable buildings will be erected as soon as its nature and extent shall have been ascertained.

Calls.—The immediate demands upon the Company having been abundantly provided for by loans on mortgage, the Directors have felt disposed to treat with forbearance those proprietors who have failed to pay the several calls made upon them, but they consider that any further indulgence would be prejudicial to the interests of the Company; and with a view to enforce payment they have recently declared forfeited 1,343 shares on which the 7th call of 5*l*. per share has not been paid.

Loans.—On account of the favourable change in the money-market the Directors have declined to accept any more loans on mortgage at a higher rate of ieterest than 4½ per cent., at which rate several sums have already been received.

Proposed Junction with the Leeds Railway.—The proprietors are no doubt generally aware that proposals for effecting a junction of railways terminating in Manchester have lately occupied the attention of the several Boards of Directors. The Directors of this Company consider that a communication with the Manchester and Leeds Railway would materially promote the interests of both Companies, and they believe a junction to be made by a tunnel extending from the Manchester and Birmingham station in Store-street to the intended station of the Manchester and Leeds Railway at Hunt's Bank, would be the most advantageous method of accomplishing this object. With the view of avoiding the loss of an entire session of Parliament, the Directors have caused the requisite notices to be given, and plans to be prepared to enable the Company to apply to Parliament in the session of 1843; and so soon as they shall have obtained the necessary information to enable the shareholders to form a correct opinion upon the subject, they will call a special general meeting of the proprietors and submit the whole question for their decision.

ENGINEER'S REPORT.

To the Board of Directors of the Manchester and Birmingham Railway.

GENTLEMEN,—All the works of the railway between Stockport and Crewe are so nearly finished, that I consider it unnecessary to give a detailed account of the state of the several contracts, inasmuch as I have no doubt that the railway will be completed all the way to the junction at Crewe by the specified time, namely, the 12th of next month.

Manchester Station Contract.—The approach from Ducie-street is completed, except the parapets and paving of the road and footpaths. All the vaulting between Store-street and Ashton-street, constituting the site of the station, is erected; nearly the whole of the station is ballasted; the foundations of the turntables and other parts of the superstructure are laid; the walls of the engine-house are built to the height of four feet above the level of the rails; the booking-offices are advancing rapidly; the two bridges over Ashton-street, and the arches of the viaduct between Ashton-street and the present temporary station, I expect will be turned in three weeks from this time. Nearly all the iron work for the roofing is prepared, and the whole will be ready by the time it will be wanted. The opening of the railway throughout, will depend upon the completion of this station; and although the time will in some measure depend upon the weather and upon the faithful performance of the contracts of several parties, you may, nevertheless, expect it to be open in the month of April; but it is obvious that the precise week cannot be yet stated.

Longsight Depot.—The progress of these buildings has been much impeded by the severity of the winter, but I expect they will be ready for the reception of engines and carriages by the end of next month.

Chelford, Sandbach, and Crewe Stations.—Are just commenced, and, although they will not be in a finished state for the opening of the railway, such exertions shall be made as will insure their being so far advanced, as to afford sufficient accommodation for carrying on the traffic.

All the works in the several contracts have been closely measured up, and I am consequently enabled to state, that I entertain no doubt of the correctness of my opinion, as stated in the last two preceding half-yearly Reports, as to the smallness of the excess upon the aggregate amount of the lettings of the main line between Stockport and Crewe.

I am Gentlemen, your most obedient Servant,
GEORGE W. BUCK.

1842, February 22nd. Audited, J. H. STANWAY, Accountant.

* The apparent excess over the estimate for land given in March, 1841, is occasioned by the purchase of land for the accommodation of the Sheffield Railway Company at the Manchester station, and for which an adequate rent will be received; and by payments for land which will be re-sold.

GARNKIRK AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

DIRECTORS' REPORT.

The Committee have again the pleasure of meeting the proprietors of the Garnkirk and Glasgow Railway, after the lapse of another year, the business of which has realised the favourable anticipations expressed in the Report to the general meeting in February last, notwithstanding the very great depression in the general trade of the country.

The gross revenue for 1841, as detailed below, amounts £18,756 3 2½

That of 1840 amounted to 15,713 17 4

Increase in 1841 £3,042 5 10½

	T.	C.	Q.
The tonnage of 1841 was	300,858	11	0
Ditto of 1840 was	254,010	11	0
Increase of tons	55,848	0	0

The number of passengers in 1841 was 155,151

Ditto in 1840 was 116,187

Increase of passengers 38,964

The increase of traffic in all the departments has arisen regularly, during the whole year, down to the three or four concluding weeks, when the extreme depression in business of every kind, which had been felt for some months throughout the whole kingdom, became apparent on the railway traffic.

REVENUE OF 1841.

Tonnage dues for use of railway	£9,113	5 1
Haulage dues, locomotive engines, exclusive of working the passenger trains	3,380	3 7
Waggon dues, use of Company's waggons	1,515	13 10
Cranage dues, use of Company's crane (erected in October)	4	16 1½
Passenger fares	4,580	9 3
Rents	161	15 4
Total ordinary revenue	£18,756	3 2½

EXPENDITURE, 1841.

Advertising and printing	£76	9 5½
Brick shed repairs	0	4 0
Coach expenditure	1,236	6 8½
Counting-house expenditure, including stationery	96	11 10
Depot repairs	293	10 1
Direction	76	4 0
Engine-house and work-shop repairs	11	15 3½
Gartsherrie Inn repairs	1	5 0
Insurance	13	10 0
Keppoch road repairs	185	18 2½
Law expenses, including commission on cash transactions out of Glasgow	52	4 0½
Locomotive engine expenditure	2,447	18 7
Miscellaneous charges	78	9 7
Overseers' wages	155	16 0
Police and gate-keepers	537	1 4
Railway maintenance	1,022	12 8
Salary account	571	10 0
Stable expenditure	371	17 8
Taxes and stamps	716	8 3
Waggon repairs	883	2 1
Weigh-house repairs	0	8 0
Weighing account	120	18 2
Total ordinary expenditure, including dues and horse hire on other railways, and omnibus expenses, 875*l.*	£8,950	0 11½
Revenue, as before stated	£18,756	3 2½
Expenditure, do.	8,953	0 11½
Excess of revenue	£9,806	2 3
Interest of debt £3,204 11 5		
Feu duties 374 9 11		
	3,579	1 4
Divisible surplus	£6,227	0 11

With regard to the expenditure, there are several items which are increased above the corresponding articles in last year's account. The first of these which it may be proper to notice, for explanation, is "locomotive engine expenditure." It is 315*l.* more than in the former year, and is accounted for, chiefly, by some important repairs, and the increase of work done. In 1840, the haulage by the engines was 181,214 tons, and in 1841, 207,194 tons, or 25,980 tons additional, exclusive of passengers. The second item showing a large increase of charge is "railway maintenance," which exceeds that of the former year by 386*l.* The requisite accelerated speed of some trains, and the working of a great part of the traffic on the north line of rails, during the relaying of the south line, and some improvements in the draining and ballasting of the former, have entailed this additional outlay. The whole south line of new rails will be completed in a few weeks. The relaying of the north line, it will be recollected, was completed in 1839. The speed of part of the trains may thus be lessened by the trade being equally distributed on both lines, and more time thereby got, between the periods of passage of the trains, for making repairs during regular working hours with the aid of fewer hands; and a diminution of expense under this head, this year, may accordingly take place. If, however, the present general mercantile stagnation is, as previous experience would show, only temporary, and as there is good reason, in that case, to believe that the traffic would will continue to increase, as heretofore, it would of course be unreasonable to calculate on any great or permanent reduction in any of the tear and wear accounts. The "waggon repairs" account is more than last year's by 188*l.*; but the effective state of repair in which the stock of waggons at present is, some having been entirely renewed, and seventy new axles, of additional strength having been supplied, will account for this increase of charge. The increase of traffic during the year will, of itself, account for the additional expense in several departments, and there is only one other item which may be particularly noticed, viz., the "police and gate keepers" account. The additional charge here is 192*l.*, and it will be much increased in the current year, owing to the precautionary measures recently imposed by Government on all railways, in consequence of the fatal accidents on some of the extensive and recently opened lines in England. Without entering into the question of the efficacy of legislative measures, compared to those which result from experience and self-interest, for preventing accident and damage, it may be observed that the promptitude of Government, in this matter, is at all events most praiseworthy, and contrasts remarkably with the delay in altering and improving the operation of the passenger tax, the injustice of the mode of levying which has been so long admitted by Government to require an immediate amendment. This delay must, however, be interpreted as indicative of a strong desire, and a pains taking effort, being in progress to mature and administer a complete and satisfactory remedy.

STOCK ACCOUNTS.

The extraordinary expenditure which falls to be added to the stock of the Company has now to be stated. During the past year the depot at Glasgow has been greatly enlarged and improved by fencing, with sufficient stone walls, paving, and otherwise. Accommodation can now be given for accumulation of coal and other articles, which, during the recent falling off in the consumpt and demand, must, without that accommodation, have found some other place of deposit,

Digitized by Google

and the Company's revenue been minus the dues exigible on these articles. There is now also room for new traders, temporary or permanent, and portions of the ground are, from time to time, applied for by, and appropriated to, the use of such traders. Ten houses have been built, and one purchased, for workmen on the railway, at different places along the line, and are let at a reasonable per-centage on the cost. These were indispensable for the men in charge of stations and crossings, and it is of great advantage to have the workmen of every kind resident near to their places of employment.

The relaying of the way is completed, excepting about a mile of the south line—the rails, blocks, and chairs for which are ready on the ground, awaiting the return of favourable weather. The low price of iron induced the providing a stock of rails beyond what was immediately required; and as many have been procured, on the most favourable terms, as will not only finish the relaying of the old line, but as will serve for the extension to Coatbridge, now to be noticed.

As authorised by the general meeting last year, the Committee finally arranged to proceed with the branch railway by Summerlee to Coatbridge. This improvement had been long urgently called for, and had been surveyed, and the requisite ground in part bargained for, since the year 1834, in consequence of the impossibility of getting nearer the town of Coatbridge with the passengers than to the Howes, on the Monkland and Kirkintilloch Railway; the want of a proper station there, and the restriction of this Company, on that railway, to the use of horse-power for their passengers. With the exception of the sum of purchase-money appearing in the following account, the ground is paid for by an annual feu rent, redeemable within certain periods. A delay, regarding certain points, on the part of one of the landowners, prevented the work being proceeded with so soon as was intended, but it has been contracted for on reasonable terms, is now in operation, and to be completed by Martinmas next.

The following is a particular account of the above mentioned and other expenses, forming additions to stock:—

	£ s. d.
Railway account, for new rails, chairs, timber, blocks, and work, relaying and widening banks	8,491 11 9½
Ditto, for settlement in full of Messrs. Hill and Davidson's account during formation of railway, extension of Gartgill depot, and sundries per separate detailed statement	2,121 2 2
Keppoch road, compromise of claim relative to toll by Inchbelly-road Trustees	426 16 3
Gartsherrie station-house, additions to	2 12 0
Engine-house and workshop, do.	53 15 3
St. Rollox depot extension, for masonry, paving and weigh-houses	2,246 14 3
Brick sheds, purchase money to Garnkirk Coal Company for their building at St. Rollox depot	420 0 0
New houses at St. Rollox depot, repairs on	1 0 0
Coatbridge Railway, on account of price of ground, and plans for contractors, &c.	807 14 0
Overseers' house and coach sheds, additions to	13 10 6
Waggons, two new do., for goods, &c.	29 10 8
Locomotive engines, new engine, tender, &c.	878 14 0½
Coaches, two new ones, malleable iron bound wheels for whole stock, and two timekeepers	506 4 8
Working tools, sundry additions to, 34l. 6s. 9d., and stable account, 6s.	34 12 9
Counting-house furniture, one timekeeper and desk	15 11 2
Workmen's houses on railway	795 11 11½
Total	£16,846 1 5½

The above sum, added to 136,936l. 5s. 3d., the permanent stock, shown by the previous year's balance-sheet, makes a total, as at 31st December last, of 153,782l. 6s. 8½d. sterling, conform to the balance-sheet to be laid before the meeting. This sum will be reduced by the amount of the price of the old rails and other materials retained on hand, owing to the present low price of iron.

DIVIDEND.

In fixing on the amount to be divided for the past year, the Committee, taking into view the present general depression of trade, and the additions to the Company's stock, the returns from part of which cannot be realised for some time, are of opinion that they should adhere to the plan followed in former years, and only divide the profits of the year, without drawing upon the reserved fund. The capital of 69,050l., and the three instalments of the new issue of stock, amounting to 14,165l., which became payable, and are entitled to share in the profits of last year, amount to 83,215l., upon which sum 5,941l. 1s. 8d. of the surplus revenue of 6,227l. 0s. 11d. will give a dividend of 8 per cent., or 40s. per share on the old stock, and 8s. 10d. per share on the new stock, calculating 8 per cent. thereon, to 31st December last, from the respective periods at which the first three instalments came into operation, viz., 25th May, 11th August, and 22nd November; and a balance of 285l. 19s. 3d. will remain, to be added to 3,971l. 12s. 2d., the reserved dividend fund, increasing it to 4,257l. 12s. sterling.

The sanction of the meeting is asked to the issue of a further amount of stock, at or after Whitsunday ensuing, when the final instalment of the price of the shares, issued last year, becomes payable. The whole subscribed stock, including the issue now in course of payment, is 3,706½ shares of 25l., or 92,658l. 6s. 8d. Were 1,853 shares of 25l. allocated, being one share for every two now held, the stock authorised by Parliament would be completed; but as there seems no need for paying off so much of the debt, while it can remain at moderate interest, it might be expedient in resolving on an issue of shares, to the extent mentioned, to postpone the payment of part of the price for an indefinite time; to be made definite at the discretion of the Directors, on due notice; or, at least, to fix a more extended period for final payment than was allowed in the case of the last issue.

The branch of the Forth and Clyde Canal, between Port Dundas and St. Rollox, is in course of being enlarged and adapted for sea-going vessels, and the Committee have agreed to convey to the Canal Company a portion of the Railway Company's ground at St Rollox depot, for the purpose mentioned. They have also, in view of this improvement, feued ground between their present western terminus and the line of Canal-street.

The Committee have no doubt of the approval of the above measures, by the shareholders; and to the Committee to be elected for the current year, the usual powers are requested for carrying out these so far as not completed, and for promoting and protecting the interests of the Company.

Signed by a quorum of the Committee,
MARK SPROT.
J. JEFFRAY.
ROBERT STEUART.
CHAS. ALEX. KING, Secretary.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

Last week we gave an abstract of the Report of the Directors, as well as some notice of the proceedings. We now give the official documents at length:—

DIRECTORS' REPORT.

The Directors, in their several Reports heretofore submitted to the shareholders have only been able to state the progress made from time to time in the works of the railway, but they have now the satisfaction of informing them that they have opened that portion of the line between Manchester and Godley, and the result has been more than commensurate with their expectations.

Since the opening of the line 113,744 passengers have been conveyed; the amount received for them 3,102l. 4s. 7d.; for parcels, 31l. 16s. 5d.; making a total of 3,137l. 19s. 8d.; out of which sum the Company has paid for toll to the Manchester and Birmingham Company 755l. 2s. 8d.; leaving the net receipts 2,382l. 17s.; and the continued increase of this traffic engages the attention of the Directors to provide the requisite means of accommodation for it.

In their last half-yearly Report the Directors, from motives of economy, declared their intention to open with only one line of rails, which was accordingly done, but the continued development of traffic has rendered it necessary to have an additional line from Fairfield to Newton, and the Company's Engineer has accordingly been instructed to lay one down with as little delay as possible; this, with the increased number of trains recently announced to the public, and some other arrangements which are in progress of completion for the more economical conveyance of passengers from the surrounding districts to the stations, will enable the Directors to furnish the additional accommodation required.

Circumstances which the Directors could not control, prevented the opening of the line so soon as they desired, but, notwithstanding the lateness of the season to which they were compelled to defer it, the traffic has fully justified their expectations.

The works contracted for on the other portions of the line are satisfactorily advancing; but the proprietors are referred to the Engineer's Report for detailed information upon this subject.

Mr. Locke's Report and estimate of the probable cost of the whole line, which was authorised by the resolution of the last August meeting at Sheffield, has, in conformity therewith, been printed and distributed among the proprietary; and it must be cause of great congratulation to the supporters of that resolution, in which it will be remembered the Directors most cordially concurred, that it should have produced an estimate so confirmatory, as well of the calculations previously made by other Engineers, as of the great resources of the railway.

The Directors are gratified in being able to state, that the further progress of the works, up to the present time, fully sustains the correctness of Mr. Locke's calculations; thus affording additional proof that the railway will be completed for the amount of his estimate.

By the Report from the superintendent of the tunnel works, it appears that the total expenditure, up to the 19th instant, has been—

	£ s. d.
On engines, surface-roads, timber, &c.	19,760 1 3
On cottages, &c.	3,805 8 8
On sinking shafts	20,185 18 1
On driftways, 1,537 yards	16,809 9 6
Total	£60,560 17 6

The materials from the driftways and open ends of the tunnel have formed nearly a mile of embankment ready to receive the permanent way, thus considerably reducing the amount properly chargeable to the tunnel works, and proving that the progress up to this time has been within the estimated cost.

The Directors beg to advert to those passages in their former Reports which relate to the tardiness of payment of calls by the proprietors, in justification of the frequent and heavy demands which have been made upon them; but they have the gratification of announcing, that considerable payment of arrears have already been induced by the recent resolution to pay interest to the shareholders, and they therefore hope that the continued influence of this measure, with the others sanctioned by the proprietors at the late special general meeting, will enable them to complete the remainder of the works with the requisite energy.

The subject of a junction of the principal lines of railway in Manchester has lately become an object of great public interest, and your Directors are gratified at being able to state that there is every probability of a connection being effected between the Liverpool and Manchester Railway and your station at Manchester.

A survey has also been made of a junction line branching from our railway near Penistone, to join the North Midland by Barnsley.

The Directors consider it unnecessary to enlarge upon the beneficial effects which either or both these measures must produce. They will consider it their duty to render every assistance in their power to promote objects so important to the public interest, the completion of which cannot fail to give your railway that high place in public estimation which its moderate rate of cost, its local resources, and its geographical position so justly entitle it to.

After a careful revision of the share-list, the Directors have concluded to recommend 230 shares for forfeiture, and have taken the preliminary steps required by the Act of Parliament. They now submit them to the proprietors for confirmation.

The amount paid on these shares 16l. 12s. 2d. per share.

Agreeably to the resolution passed at the last half-yearly meeting, copies of the annexed accounts for the preceding half-year have lain at the respective offices at Sheffield and Manchester during the last seven days.

In concluding their Report, the Directors have to inform the shareholders that four of their number, William Sidebottom, Esq. (the Deputy-Chairman), William Butcher, Esq., John Dalton, Esq., and Cornelius Randall, Esq., vacate their seats, agreeably to the Company's Act of Incorporation; but these gentlemen are all eligible for re-election.

[For Balance Sheet see next page.]

ENGINEER'S REPORT.

To the Directors of the Sheffield and Manchester Railway Company.

Gentlemen,—I beg to submit to you, for the information of the proprietors, the following Report of the progress of our works since the last general meeting.

The length of seven miles from the junction with the Manchester and Birmingham Railway has been completed for a single line of rails, and was opened to the public on the 17th November last. The cuttings and embankments, with one or two exceptions, are ready for laying the second line of rails, the ballasting being finished to the proper level. Arrangements are now making, in accordance with the order of your Board, to complete this second line of rails from the Fairfield station to Newton, and the contractors are busily engaged in providing the blocks, sleepers, &c. that are required for this purpose, and a quantity of them are already on the ground.

Hattersley Contract.—The principal work here is the tunnel at Hattersley, 150 yards of which are now completed. It is proceeding steadily, and with the intention to save time the contractor is cutting open nearly one-half of the entire length in order to build the tunnel in the bottom. The viaduct at Harewood, which has been purposely delayed, will be re-commenced immediately. The remainder of the works on this contract are in a very forward state.

Etherow Viaduct.—A large quantity of stone and timber to be used in the construction of this viaduct is now on the ground, and the contractor having diverted the river and road near Mr. Marsland's mill, is now at work upon the piers and abutments. From the quantity of men employed, and the number of quarries from which the supply of stone is obtained, there is every prospect of a rapid progress here.

Gamesley Contract.—The earthwork here is going on

Digitized by Google

well. A large quantity of material has been put into the embankments, both from the cutting at Gamesley and also from side cutting at each end. The five-arched bridge for carrying the Gamesley turnpike road over the railway is now finished, and the road diverted.

Summit Tunnel.—The progress here during the last six months has been exceedingly favourable, as will appear from the following measurements:—

	Total.	Work.	To sink.
No. 1 shaft	182	134	48 yards.
No. 2 ditto	189	142	47
No. 3 ditto	162	157	5
No. 4 ditto	189	189	finished
No. 5 ditto	135	135	finished.

The driftways at the western face are now 730 yards from the entrance; those at No. 4 are 40 yards in length; at No. 5, 78 yards. The eastern drifts have advanced to the distance of 680 yards from the entrance; No. 1 shaft has been delayed for some time, but we have now overcome the water there, and expect almost immediately to enter upon a bed of shale, which will materially increase our progress.

No. 2 is now in shale, and is progressing steadily at the rate of five yards per week. No. 3 is now at the level of the upper drifts, and in very favourable material, with little water. The drifts at No. 4 and 5 are proceeding very well, the water at the latter having diminished very considerably within the last few weeks. Upon the whole the works present a very favourable aspect, and the water, which was our only difficulty, having now been overcome, the certainty of our rapid and favourable progress is now placed beyond a doubt.

In conclusion, I have great pleasure in reporting that our permanent road is in excellent condition, notwithstanding the late wet season. The progress on that portion of the line from Godley to Glossop is so satisfactory, that there is no doubt of its completion at a short period from the present time.

I have the honour to be, Gentlemen,
Your obedient servant,
ALFRED S. JEE.

Dinting Vale, February 21, 1842.

BALANCE SHEET.

General Abstract of the Receipts and Expenditure of the Sheffield, Ashton-under-Lyne, and Manchester Railway Company, from the formation in 1836, *to December* 31*st*, 1841, *inclusive.*

December 31, 1841.	Amount received to June 30, 1841. £ s. d.	From June to Dec. 31, 1841. £ s. d.	Total. £ s. d.

Audited, and found correct,
THOMAS PEET, Accountant.

February 14, 1842.

EDINBURGH AND GLASGOW RAILWAY.

THE following is a descriptive account of the line, as appended to the notice of the late opening, given in the Glasgow journals:—

The improvement of the intercourse between the east and west of Scotland, by uniting the two cities of Edinburgh and Glasgow, and with them the two opposite seas of the German Ocean and Atlantic, has been long agitated in this country. So long ago as the year 1797, the whole intervening country was surveyed, and various levels and lines laid down, in the view of determining, by the advice of John Rennie, and other eminent engineers, the best line for a navigable canal. These plans ended in the construction of the Union Canal about the year 1810; but there still seemed wanting a more direct line of communication, and about the year 1825, when the advantages of railways were then only beginning to dawn upon the world, a plan was proposed of a railway between Leith Docks and the Broomielaw of Glasgow, and surveys made of a line by Mid-Calder, Whitburn, Shotts, and Holytown, running to the south of, and nearly parallel with the existing south line of turnpike road; but this plan not being prosecuted with vigour, and in the meanwhile the progress of railways in other parts, and the increased knowledge and experience derived from their practical operation, unfolding more clearly the inexpediency of inclined planes or steep gradients on a great passenger thoroughfare, a new line was brought forward, and accurate surveys made, running generally, and in some parts six or seven miles more to the north, and upon a much lower level, passing by Ratho, Bathgate, Slamannan, and three miles to the north of Airdrie, to a junction near Gartsherie Iron Works, with the Garnkirk and Glasgow Railway. In this line the summit level of the intervening country was only 500 feet above the level of the sea, while that of the former was upwards of 800 feet. For various reasons, however, this line was also abandoned, and a new Company having been formed in the year 1835, the present line was adopted by the advice of eminent railway engineers called down from England for the purpose of determining this great and important preliminary question.

The line thus resolved on, and now executed, proceeds greatly more to the north than either of the others, and on a level still much lower, traversing the great valley of the Forth and Clyde, and the Union Canal, passing by Cortsorphine, Kirkliston, Winchburgh, Linlithgow, Falkirk, Castlecary, Birchbriggs, and Cowlairs, to Glasgow. The summit level of this valley is extremely low; but being pre-occupied by the Forth and Clyde Canal, and the course beset with a vast ridge of whinstone rock, this very low summit could not be attained. By cutting the Croy Ridge, however, 60 feet deep, it has been reduced to 226 feet above the level of the sea, being 270 feet lower than the middle line, and 570 feet below that of the south line. This low summit level, then, forms the grand characteristic of the present line. Rising only 18 feet above the Edinburgh terminus in the course of 34 miles, and only 50 feet above the top of the inclined plane near Glasgow, it presents, were the country equally regular throughout, almost a dead level from end to end, rising only at the rate of about two and a half feet in a mile for 34 miles on the east, and descending again at the rate of only five feet per mile the remaining ten miles on the west. Such regularity, however, is not to be found on the natural surface of the country; and hence it has been necessary to form very extensive works of excavation and embankment, tunnels, and viaducts, in order to reduce local inequalities, and render the various inclinations in different parts of the line somewhat conformable to the originally small amount of altitude between the two termini and the intervening summit. These works, therefore, which distinguish this railway, great and stupendous as they no doubt are, and well calculated to excite our interest and curiosity, have not been constructed for mere effect, or to astonish the traveller on the road. Their great object has been to reduce the inevitably retarding effects of gravitation, and the consequent wasteful expenditure of locomotive power in passing daily by either of the termini over the summit of the country. Much labour and expense have been bestowed for this great end, and the works themselves present a specimen of skill, and of tasteful and appropaiate design, as well as substantial and excellent workmanship, as must reflect much credit indeed, on the talents of the Engineer of the line, and on the spirited exertions of the respectable contractors by whom he has been seconded. The result of all has been a set of gradients or inclinations amounting nearly to perfection, the greatest rise in any part, from end to end, being only six feet per mile. and the whole forming an arena for displaying, in the fullest extent, the magnificent powers of the locomotive engine.

The whole length of the line is 46 miles. It passes successively through the counties of Edinburgh, Linlithgow, Stirling, Dumbarton, and Lanark, including a population in and near the line of upwards of 600,000. From the terminus at the Haymarket, the line runs westard for eight miles, where it sweeps round to the north, and crosses the wide and low valley of the Almond Water by the great viaduct, consisting of 36 arches, each 50 feet span, and rising from 40 to 100 feet; and immediately adjoining there is a another smaller bridge of seven arches across the turnpike-road. The line still sweeping round, passes Winchburgh-hill by a tunnel 360 yards in length. Emerg-

Digitized by Google

ing from this, the line has been cut through vast clay and rocky excavations, extending in one continued cut for nearly four miles, and in some parts 50 feet deep. The line now runs nearly due west to Linlithgow, partly on the natural surface of the ground, and partly on various small embankments and cuts; and from Linlithgow still westward about a mile further, to the next great valley of the Avon, which is crossed by another magnificent viaduct, also formerly described, consisting of 20 arches, 50 feet span, and rising in the deepest part 100 feet, besides three smaller arches. The line proceeds westwards, and parallel with the Union Canal, towards Falkirk, and passes under Callander-ridge by a second tunnel, 830 yards in length, and 130 feet under the surface. Emerging from this, the whole low country of the Carse of Falkirk opens into view, and the line runs westward to Lock 16, where it crosses the Union Canal by a magnificent bridge, of a single span, 130 feet across.

From this point the line runs westerly, and nearly along the surface, for seven or eight miles, when it enters the great whinstone cut of Croy-ridge, extending about a mile in length, and in the deepest parts, at the summit level, consisting of very hard rock, fifty and sixty feet deep. The line then continues westerly, inclining to the south, and passing over several mosses and soft alluvial hollows, enters the Crosshill-cutting, and then the last great rocky excavation of Colston and Kenmuir, consisting of solid freestone rock for nearly a mile, and upwards of fifty feet deep in the centre, terminates at Cowlairs, where the inclined plane and tunnel descends for 2,200 yards to the Glasgow station and terminus, at the head of Queen-street, forming, in point of convenience and vicinity to the centre of the town, one of the most perfect termini to be found on any railway.

THE PROPOSED RAILWAY TO LEAMINGTON.

To the Editor of the Railway Times.

SIR,—Your correspondent "Investigation" has shown your correspondent "Investigator" to be wrong, in pointing out Rugby as a better place than Coventry for the commencement of this line, but not quite so clearly as he might have done, with regard to the passengers from the north, for Rugby is out of their way entirely; they may come from Derby to Coventry in less time than they would go to Rugby, and, when there, would be nearer Leamington. But "Investigation" is himself wrong in a similar way, and that too by his own showing (with regard to visitors from a distance), in preferring Coventry to Hampton as the point of junction. He says, Leamington is chiefly supported by the Irish nobility; be it so. Then the Irish nobility, whether they land at Liverpool, Holyhead, or Bristol, in order to reach Leamington, must first come to Birmingham: and why, when there, should they be sent round by Coventry instead of going direct by Hampton? "Investigation" is right in representing Leamington as much frequented by the Irish; and, not only so, but considerable numbers of the Irish who do frequent it, and of other visitors also, are people who circulate between the fashionable inland watering-places, Bath or Cheltenham and Leamington on the one hand, and Bath, Cheltenham or Leamington, and Buxton or Harrowgate, on the other, moving from one to the other with the decline or rise of their respective seasons, and migrating in crowds, especially from Cheltenham and Leamington to Harrowgate previously to Doncaster races (at which time about two-thirds of the visitors at Harrowgate are Irish,) or, if they have come to Harrowgate direct from Ireland, moving thence after the races to Leamington and Cheltenham for the winter. For all this fashionable travelling Hampton is the proper point, and Coventry out of the way; especially is it more convenient to travellers coming down the North Midland line, who would save one change of railways, and most likely a change of carriage, by not having to run along the London and Birmingham line at all. Very few persons, I believe, visit Leamington from London (for Londoners generally prefer the sea side), and few, if any, from beyond London on the south. Now, a junction at Coventry would be more convenient than one at Hampton for *one* line of railway only, that from the south (and for that less convenient than Rugby), whilst *four* lines of railway—the Midland Counties' leading from Nottinghamshire, Lincolnshire, and the last by way of Nottingham and Derby; the North Midland, leading not only from the large towns of Yorkshire, from Newcastle and Edinburgh, but also the much-frequented watering-places, Matlock, Buxton, Harrowgate, and those upon the Yorkshire coast; the Grand Junction, leading not only from the great town of Cheshire and Lancashire, but also from North Wales, the lake country, the west of Scotland, and *Ireland*; and the Birmingham and Gloucester line, leading from the south of Ireland, South Wales, Bristol, Bath, and Cheltenham—all point to Hampton as the preferable point of junction. It is manifest, therefore, beyond all fair controversy, that for a great majority of travellers that is the proper point, and ought to be selected, unless that majority be counter-balanced by a preponderance, on the other hand, of *local* intercourse.

I admit the claims of Coventry. Its present intercourse with Warwick and Leamington is large (though consisting in a great measure of that which would take place if a railway were made to Hampton), and demands the best accommodation it can have consistently with the general convenience. But has Birmingham, on the other hand, no claims with respect to the local traffic? The intercouse is and must be great between the principal town of central England and its nearest place of fashionable resort, and Warwick its county town, to which, at certain important periods of the year particularly, it has the credit of furnishing a very large amount of the serious business transacted there. Hampton would be in the direct line of this intercourse, and Coventry out of the way; and with regard to the passing *from* Warwick and Leamington, it is very materially to the interest of Birmingham that the junction should be at Hampton, whereby it would be placed at an equal distance with Coventry from those towns; whilst if the railway comes round by Coventry, a great deal will stop there which would otherwise come to Birmingham. I mention this, having previously admitted the claims of Coventry, because it is fair to consider the advantage and the convenience of both. If, then, the claims of Birmingham are not quite equal to those of Coventry (which I doubt) to the best line of communication, yet in conjunction with the convenience of far the greater portion of the distant traffic, I believe that, impartially considered, a decided preference should be given to the Hampton junction on its own merits; and when we look at the united and determined opposition of the landowners to the line from Coventry, and the great expense which will be necessary to overcome or buy off that opposition, on the one hand, and the general consent (as I understand) of the landowners on the line from Hampton, the preference due to the latter is more apparent still. No doubt, the former would be somewhat *more* profitable to the London and Birmingham Company, but the latter would be advantageous to it; and if they take a lease of the line, the rent of it (being of course proportionate to the outlay) would be less in proportion to the length of line. This, too, is *practicable*, and the other perhaps is not.

Another not unimportant consideration is this, that a line from Hampton, or even from Coventry, would be the best route from the north to Oxford; but the former would be the more direct, and to passengers from the north-east would save one change in the lines of railway.

I am, Sir, yours obediently,
INVESTIGATORIS ET INVESTIGATIONIS INVESTIGATOR.

Birmingham, February 16, 1842.

THE PROPOSED RAILWAY TO LEAMINGTON.

To the Editor of the Railway Times.

SIR,—Why does not your correspondent "Investigation," give us some of his *half-dozen* reasons why the railway should go from Leamington to Coventry, and not to Rugby? I will give him one to begin with, and that is, that it would be a greater advantage to the Derby and Birmingham, because then the traffic from the north would come that way instead of by Leicester. When I have been at Leamington, I have paid *ten post miles* to Coventry, and *thirteen* to Rugby, which makes a difference of three miles instead of five; but as the road to Rugby is any thing but a straight one, I conclude that that thirteen miles can be shortened.

What I said about the railway going through Lord Leigh's park, was by way of a joke (for which I beg his Lordship's pardon), but I contend that a line cannot be taken direct from Leamington to Coventry without cutting up Lord Leigh's property in a most abominable way (and during the whole time it is making, there will be a lot of railway labourers playing the very deuce with every thing), and if it can be made by any other route, I doubt very much if parliament will sanction the line. But a line from Warwick and Leamington to Rugby, would run quite clear of Lord Leigh's property, and the difference would not be more than two miles, because they cannot take a *direct* line to Coventry without going through Stoneleigh Park, which I cannot think will be permitted.

I do not at all wish to deprive the line to Coventry, of the patronage of the Coventry *weavers*, but I contend that by far the greater number of persons who go to Leamington either come from London, or from the north-east, or eastern part of England, and those who come down the Midland Counties' Railway, will not at all approve of being kept at Rugby, nobody knows how long, waiting for a train to take them forward to Coventry; and it would be *very much* cheaper, and not take above half an hour more time, if they went direct by coach from Rugby to Leamington, rather than go round by the railway.

I am not at all disposed to carry on a paper war upon this subject; I hope, therefore, you will allow this letter to be inserted in the next *Railway Times*, as I do not intend to trouble you again.

INVESTIGATOR.

P.S.—I would have "Investigation" remember, that the line I marked out to Rugby was to go about a mile to the south of Princethorpe, and cross the old London and Birmingham road, about two miles to the west of Dunchurch; and I do not think this line will receive any opposition from the landed proprietors.

SOUTH-WESTERN, GREAT WESTERN, CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

MAILS AND COACHES,

TO

Falmouth,	Farnham,

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

LONDON AND CROYDON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-Yearly General Meeting of the Proprietors of the London and Croydon Railway, will be holden at the London Tavern, Bishopsgate-street, within the City of London, on Thursday, the 10th day of March next ensuing. The Chair to be taken at One o'Clock precisely.

The Directors who go out by rotation, pursuant to the Company's Act of Parliament, are James Whiskin and John Lewis Ricardo, Esqrs., but who are eligible for re-election.

The election of an Auditor will also take place, in lieu of Henry Tudor, Esq., who has resigned, and John Norbury, Esq., has been nominated to fill the vacancy.

WILLIAM ARTHUR WILKINSON, Chairman.

205, Tooley street, February 22, 1842.

The books for entering memorials of the Transfer of Shares will be closed from the 2nd to the 10th of March, both days inclusive.

R. S. YOUNG, Secretary.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of SLATER and HEELIS, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

BITUMEN WORK.—JAMES HARVEY, of Waterloo Saw Mills, Commercial-road, Lambeth, begs to inform the public generally, that, having executed works of considerable extent on the Blackwall Railway, Northern and Eastern Railway, Finch's Granaries, Rotherhithe and Gravesend, is now prepared to give estimates for any quantity of work. The above description of Bitumen has many advantages over any other, particularly for foot pavements, terraces, garden walks, barn floors, stabling, warehouse floors, and the covering of arches, to prevent the percolation of water; and J. H. begs further to add, that flooring of this kind can be laid down at a cheaper rate than any other material, and with fair treatment will last a considerable time longer. Deals, planks, battens, &c. sawn by patent machinery.

A spacious wharf for storing and piling Deal, with capital water frontage, and all goods fetched and delivered free of expense.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B.—Castings, Slide Lathes and Planing Machines, on sale.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

EDINBURGH AND GLASGOW RAILWAY.—At the Eighth Half-Yearly General Meeting of Shareholders in the Edinburgh and Glasgow Railway Company, held pursuant to the Act of Incorporation, in the Company's Head Office, North Queen Street, Glasgow, on Tuesday, the 22nd February, 1842, at Eleven o'Clock, a.m.

JOHN LEADBETTER, Esq., in the Chair,

After the advertisement calling the Meeting had been read, and the Minutes of the last General Meeting of Shareholders confirmed, the Report of the Directors and Balance-sheet were also read, and the following Resolutions were proposed, seconded, and passed:—

1. Moved by the Chairman, and seconded by—Crosfield, Esq., of Liverpool,—

"That the Report and Statement of Accounts now read, be received, approved of, and circulated among the Shareholders;" which was carried, with the exception of the clause in the Report relating to the proposed alterations in the scale of voting introduced into the new Bill; this, on an amendment, moved by the Rev. Mr. Dempster, and seconded by Mr. Maitland Makgill Crichton, was remitted back to the Directors for further consideration.

2. Moved by Robert Dykes, Esq., and seconded by John Learmonth, Esq., of Dean,—

"That the Resolution of the Board of Directors, declaring the forfeiture of 93 shares, as per signed list, be now confirmed; and that the Directors be authorised to dispose of the said shares, at such times and in such portions as they may think best."

3. Moved by Peter Brough, Esq., and seconded by William Napier, Esq., W. S.,—

"That the Meeting feel gratified to learn that this undertaking has now been brought to a completion, and opened for public traffic under auspicious circumstances; and that a vote of thanks be given to the Directors for their services." Mr. Charles Phillip and Mr. M. Makgill Crichton dissenting in so far as the vote approved of that part in which they recommend the running of trains on the Lord's-day.

4. Moved by Gilbert Kennedy, Esq., and seconded by James Watson, Esq.,—

"That the following gentlemen, who have gone out of office in terms of the Act, be now re-elected Directors, viz., J. F. Zoller, Esq.; Sutherland Mc Kenzie, E.q.; Peter Forbes, Esq.; Hew F. Cadell, Esq., J. G. Hamilton, Esq., and John Learmonth, Esq.; and that William Nicol, Esq., be elected in room of Theodore W. Rathbone, Esq., who declines being re-elected."

5. Moved by the Chairman, and seconded by John Crune, Esq.,—

"That the common seal of the Company be affixed to the Register of Proprietors"; which was done accordingly in presence of the Meeting.

6. Moved by G. E. Russell, Esq., and carried by acclamation,—

"That the thanks of the Meeting be given to the Chairman for his conduct in the Chair."

JOHN LEADBETTER, Chairman.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

TO RAILWAY DIRECTORS.—Wanted Employment, as Traffic Manager or Superintendant of Goods, by a Young Man, perfect master of the Carrying Trade, possessing a thorough practical knowledge of Railway Goods Transit, and fully capable of undertaking the entire management of the whole duties connected with such department. References for ability, integrity, &c. &c.

Address, free, to W. G., office of this paper.

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

Just published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 122, Fleet-street.

Just published, in foolscap 8vo., with four engraved plates, and eight wood-cuts, price 6s. in cloth,

A MANUAL OF THE STEAM ENGINE, by RICHARD D. HOBLYN, M.A., Oxon., Authur of "A Manual of Chemistry," &c. Contents.—1. Preliminary observations on Heat and Steam.—2. Early applications of Steam Power.—3. Watt's Single-acting Steam Engine.—4. Watt's Double-acting Steam Engine.—5 Applications of the Expansive Force of Steam.—6 and 7. Of the several Parts of the Modern Steam Engine, considered separately.—8. Of the Mechanical Power of Steam, and of the Power and Duty of Engines.—9. Of Locomotive Engines on Railways.—10. Of Steam Navigation. And Appendix.—1. On the Causes and Prevention of Slips or Falls of Earth from the Slopes or Excavations on Railroads.—2. Of Explosion of Steam Boilers.—3. Electro-magnetic Railway Train Controller.—4. Of Rotary Engines.

London: Scott, Webster, and Geary, Charterhouse-square.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,

JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

MANCHESTER AND LEEDS RAILWAY.—Notice is hereby given, That the Books, which are kept in the Office of the Clerk of this Company for the Registration and Transfer of Shares in the Manchester and Leeds Railway, will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday, the 8th day of March, to Thursday the 17th day of March, both days inclusive. HENRY HOULDSWORTH, Chairman.

Clowes's-buildings, Hunt's Bank, Manchester,
February 14th, 1842.

MANCHESTER AND LEEDS RAILWAY.—Notice is hereby given, That the next Half-yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Clowes's-buildings, Hunt's Bank, in Manchester, on Thursday the 17th day of March next, at Twelve o'Clock at noon precisely.

Dated this 17th day of February, 1842.

HENRY HOULDSWORTH, Chairman.

Clowes's-buildings, Hunt's Bank, Manchester.

BRISTOL AND GLOUCESTER RAILWAY. EXTENSION LINE.—Call of £10 per cent., being £5 per share.—The Committee of Management of this undertaking having resolved, at a meeting held in Bristol this day, to call, under the provisions of the Acts of Parliament relative to the said undertaking, for an instalment of £5 per Share, Notice is hereby given, That the Subscribers to the said undertaking, and Proprietors of Shares therein, are required to pay, on or before the 21st day of March next, to any of the undermentioned bankers, the sum of £5 on each of their respective shares, viz.:—

London—Messrs. Barnett, Hoare, and Co.
Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillie, Ames, and Co.; Messrs. Stuckey's Banking Company; the West of England and South Wales District Bank.
Gloucester—The Gloucestershire Banking Company.
Manchester—Messrs. Jones, Lloyd, and Co.

By order of the Committee of Management,

GEORGE JONES, Chairman.
ROBERT FLETCHER, Secretary.

Interest at the rate of £5 per cent. per annum will be charged to all parties who may remain in arrear for this call after the above named 21st day of March.

Office, Exchange Buildings, Bristol,
28th February, 1842.

VAN GOODS to CHELTENHAM and GLOUCESTER.—The GREAT WESTERN RAILWAY COMPANY give Notice, that they have established DAILY VANS from their station at Cirencester, to and from the towns of Gloucester and Cheltenham, in order to secure a direct and punctual conveyance of goods to all parts of Gloucestershire, and South Wales. Their prices, including all charges for collecting and delivering in London and the aforesaid towns are, from 1s. for small parcels, up to 6s. for packages of two cwt. and for aggregate quantities, 40s., 44s., 48s., 52s., and 60s., per ton, according to the description of goods, of which full particulars may be obtained. Receiving Houses—London: Princes-street, Bank; Bull and Mouth, St. Martin's-le-Grand, and Regent-circus: and the Paddington Station. Gloucester; King's Head Van Office. Cheltenham: Plough Hotel Van Office.—1st March, 1842.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LLANELLY RAILWAY AND DOCK COMPANY.—The Committee of Management of the Llanelly Railway and Dock Company give Notice, That, pursuant to the powers of the Act of Parliament in that behalf, they do hereby make a Call of FIVE POUNDS per Share, on each Share subscribed for or held by the several proprietors of stock in the above undertaking; and such Call is to be paid to Messrs. Cocks, Biddulph, and Co., Bankers, 43, Charing Cross, London, to the credit of the Company, on or before Thursday, the 24th March instant.

By order,

JOHN BIGG, Secretary.

59, Old Broad Street, London, 4th March, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TENDERS FOR LOANS.—Notice is hereby given, That pursuant to a resolution of the General Meeting of Proprietors, the Directors of this Company, are prepared to receive Tenders for a limited amount of Loans, in sums of not less than £300, on security of Loan Notes under the Common Seal of the Company, which will bear interest at the rate of 5 per cent. per annum, payable half-yearly.

Tenders expressing the sums and the term of years for which the loan is proposed to be made, to be addressed to the Secretary at the office, 12, Waterloo-street, Birmingham.

By order,

GEORGE KING, Secretary.

March 1, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—UNPAID INSTALMENTS UPON SCRIP.

Second Instalment—£5, due 25th August, 1841.
Third Instalment—£5, due 25th November, 1841,
Fourth and last Instalment—£5, due 25th February, 1842.

By a resolution of the Proprietors, at the half-yearly general meeting held at Gloucester, on the 18th February, 1842, the period of payment of the Second or Third Instalments, which remained unpaid upon the Scrip issued by this Company, was extended to the 25th March next. Any person, therefore, holding Scrip upon which either of these Instalments are not paid, is required to pay the same on or before that date, together with interest at the rate of 5 per cent. per annum, from the day at which such instalment was originally due, to the Birmingham Banking Company, at Birmingham; as if the same shall not be paid by the said 25th of March, the Scrip will be absolutely forfeited, with the sums paid upon them, and will be sold, at the discretion of the Directors, for the benefit of the Company.

The fourth and last Instalment is due on the 25th instant, from which day, if unpaid, interest will be charged at the rate of 5 per cent. per annum; and if the same shall remain unpaid for one calendar month after the day abovementioned for its payment, the Scrip will be absolutely forfeited, with all moneys previously paid thereon.

Each holder of Scrip is requested, so soon as he shall have paid his instalment, to bring or send his Scrip to this Office, together with the Banker's receipt, in order that the payment may be duly registered on the Scrip and in the Company's books.

By order,

GEORGE KING, Secretary.

12, Waterloo-street, Birmingham, Feb. 22, 1842.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—Notice is hereby given, That in pursuance of a resolution of the Board of Directors, Proprietors of New Shares in the said undertaking, are required, on or before Tuesday, the 22d day of March next, to pay into any one of the undermentioned Banks, the further sum of £1 10s., as a Third Call on each new share held by them spectively, viz.:—

Edinburgh—Royal Bank of Scotland.
Glasgow—Ditto.
Greenock—Any of the Banks there.
Liverpool—Liverpool Commercial Bank.
Lancaster—Lancaster Banking Company.
London—The Chief Office of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry,—Branch of the Provincial Bank of Ireland.

Discount at the rate of 5 per cent. will be allowed on all payments made previously to the 22d March, and the Bankers have been instructed to charge interest from that date until payment.

By order of the Board of Directors,

WYNDHAM HARDING, Secretary.

Railway Office, Greenock, 26th February, 1842.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

LONDON AND CROYDON RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the proprietors of the London and Croydon Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, William Arthur Wilkinson, Esq., in the chair, and was very numerously attended.

The advertisement convening the proprietors having been read, it was unanimously resolved that the common seal of the Company be affixed to the share register, which was accordingly done in presence of the meeting.

The Secretary (R. S. Young, Esq.) then read the Report of the Directors, as follows, a printed copy having been given to every shareholder on entering the room:—

REPORT.

Gentlemen,—Since our last general meeting, your Directors have had to contend with difficulties of a most vexatious and unprecedented character, difficulties which not only could not be foreseen, but which could not fail to be seriously detrimental to the traffic of the railway, and in consequence they are obliged to submit a Report and statement of accounts very different from those which they had hoped they should have been enabled to present, and which the concluding paragraph of the last Report had, doubtless, led the proprietors to expect.

From the period of its opening, to November last, then nearly two years and a half, the traffic of your line had never once been interrupted, not even by the partial closing of one rail, a matter of frequent occurrence on railways, although through the whole of that time, the earthworks have been a constant source of trouble and expense; but on the 2nd of that month, a land slip occurred at New Cross, by which many thousand tons of earth were thrown upon the line, so as to block it up, and entirely prevent the passage of the trains.

In the unfortunate position in which your Directors were placed by this circumstance, they felt it to be their duty to adopt the readiest measures, so that as little inconvenience as possible might be sustained by the Croydon and Brighton passengers; they were perfectly aware that the best arrangements they could make, could not but be attended with considerable discomfort to travellers, and no exertions were wanting on their part, or on that of your resident Engineer, and the other officers of the Company, to render the state of things as little annoying and uncomfortable as the nature of their misfortune would admit. The slip took place at about nine o'clock in the evening, and before the first train of the next morning, a pathway had been cut, boarded and sanded on the opposite slope, about 300 yards in length, for the purpose of enabling the passengers to walk past the obstruction, from one train of carriages to another placed ready to receive them; as this path, however, was necessarily very steep and exposed to the weather, omnibuses were likewise provided at the Dartmouth Arms, in time for the first train, by which the passengers were conveyed to New Cross. This mode incurring a considerable loss of time, as well as great expense, was afterwards abandoned with the concurrence of the passengers, and a covered way was constructed lower down the slope by which they passed over, with very slight inconvenience and delay. The most energetic measures were at the same time adopted to clear the line, under the advice of your Consulting Engineer, Mr. Cubitt, who was immediately on the spot, and by a large force of men working day and night, this was effected in about seventeen days; the trains again passed regularly, and your Directors had every reason to hope that they would continue so to do. On the 2nd of December, however, another slip took place, which again blocked up the line until the 23rd of that month. Again on the 7th of January an extension of the slip at New Cross covered both lines of railway, and from that time almost to the present, with scarcely an interval, one fall after another has occurred, by which, although through the greatest exertions of the officers of the Company, the means of traversing the line at the slip have always been presented to the passengers; the traffic has been, nevertheless, greatly and seriously interrupted. Your Directors are conscious that the traffic of the Brighton Railway has suffered materially from this interruption, and they desire to bear testimony to the great good nature and forbearance with which the necessary inconveniences have been submitted to by all parties, and the readiness with which assistance has been afforded by the Directors of the Companies on either side of them. But the disasters on the Croydon Railway have not been the only impediment to the development of the Brighton traffic. The unfortunate occurrences on that railway soon after its opening, by which the weekly receipts were reduced from 3,584*l.* to little more than half that amount, previous to the first obstruction on the Croydon line, have no doubt contributed largely to the defalcation of those receipts.

It must be expected that in consequence of these interruptions to the traffic, and the bad state of the weather, the income of your railway both from fares and toll has fallen very short of the former anticipations of your Directors, and that under these circumstances, the hope previously held out of a division of profits at the present time would be likely to be disappointed; nevertheless, as will appear by the annexed account, the result of your own traffic for the last half year, together with the toll received from the Brighton Company, have sufficed to defray the ordinary expenses of the railway, and pay the interest of your borrowed capital; and as the position of the Company is such that its income can scarcely fail to improve very considerably in the next six months, the proprietors may perhaps be justified in dividing the remainder of the sum accumulated to the credit of the traffic account, to which course, if it should be desired, your Directors do not wish to make any objection, since the only item fairly chargeable to this account is the depreciation of the Company's stock, which, under the circumstances above alluded to, may doubtless be safely deferred.

Your Directors regret to say that the serious character of the land slips at New Cross, Forest Hill, and indeed throughout the cuttings on the inclined plane, together with the necessarily great cost of removing these slips, and the attendant expenses of working the traffic under the existing circumstances, will not only exhaust the whole of their available funds, but will render it necessary *eventually* to make application to the proprietors for a further advance of capital, which, six months ago, your Directors hoped that their arrangements had enabled them to avoid. Your Directors, however, trust that this application will not be required until the resources of the railway have been still further developed.

Your Directors are happy to inform you that they have concluded an arrangement with the South-Eastern Company, for the joint working and management of their locomotive power, upon the principle that the cost to each Company shall be in proportion to the use thereof. By this arrangement the greatest possible economy will be effected, and the public safety essentially promoted, and the further benefit will accrue to this Company, that it will be thus enabled, without unnecessary loss, to accommodate the quantity of its traffic to the operation of the toll levied, or to be levied for the future, by the Greenwich Company.

Your Directors cannot allude to this subject without drawing the attention of the proprietors to the toll arrangement about to be concluded between the Northern and Eastern, and Eastern-Counties' Companies. These Companies are somewhat similarly situated to the Croydon and Greenwich Companies, having an agreement for a 4d. toll for a distance of 3¾ miles. The Eastern-Counties' Company is reported to have agreed to a reduction of this toll to 3d., 2½d., and 2d., for the first, second, and third class passengers respectively, between Ponder's End and London, which for the distance of the Eastern-Counties Railway used, is equivalent to an average of less than ¾d. per mile, while the present charge of the Greenwich Company to the Croydon is more than 1¾d. per mile, and the contemplated charge more than 2¼d. per mile. The fact that the Eastern Counties' Company has seen the good policy of modifying their original agreement, is a strong proof of the soundness of the views of your Directors upon this subject, and will, it is to be hoped, sooner or later carry conviction to the minds of the proprietors of the Greenwich Railway.

With a view to facilitate access to the Croydon and other lines from the western end of London, and to afford a goods and cattle station for the South-Eastern Railway, which cannot be so conveniently obtained at London Bridge, your Directors have entertained a proposition, for which the necessary Parliamentary notices have been given, to join the latter Company in procuring an approach to your railway at Corbet's-lane from the Grange-road, a spot about two miles from Westminster Bridge. The Bill for this object, however, will be submitted to your consideration at a special meeting, to be called for that purpose.

The Directors, who go out by rotation, pursuant to the Company's Act of Parliament, are James Whiskin and John Lewis Ricardo, Esquires, but who are eligible for re-election.

¶ Your Directors have received the resignation of Newman Smith, Esq., and have elected Charles Sedgfield Crowley, Esq., of Croydon, in his place. Your Directors have likewise received the resignation of Robert Hollond, Esq., M. P. but as this gentleman, and John Lewis Ricardo, Esq., M. P., who goes out by rotation, have ceased to take any active part in the direction of your affairs during the past six months, in pursuance of an understanding with the proprietors that the number of Directors should be reduced, it is proposed that the vacancies occasioned by the retirement of these gentlemen shall not be filled up.

The vacancy among the Auditors, occasioned by the resignation of Henry Tudor, Esq., has been filled up by the election of John Norbury, Esq., and Richard Sterry, Esq. is proposed in the room of Charles Sedgfield Crowley, Esq. who has been elected a Director.

WILLIAM ARTHUR WILKINSON, Chairman.

			11,125 14 7½

Examined, 7th March, 1842,

WILLIAM BOLD,
JOHN NORBURY, } Auditors.

The CHAIRMAN said, in rising to move that the Report just read be received, adopted, and, as usual, printed for circulation among the proprietors, he trusted he should be excused for making one observation personal to himself. He was quite aware that his duty as Chairman on that occasion was rather to preserve order with a view that others might have an opportunity of delivering their sentiments, than that he himself should speak; but he stood there in the two-fold capacity of President of the meeting and organ of his co-Directors, and therefore he would throw himself upon the forbearance of the proprietors, should circumstances compel him to address them more at length or more frequently than otherwise he could wish. (Hear, hear.) With this preliminary remark, he would now, with the permission of the meeting, say a few words upon the various subjects embraced in the Report, and as there were matters of great importance to discuss, or rather to discourse about—for he supposed there would be very little discussion respecting them—and as the Report pledged the proprietors to nothing, unless perhaps to the arrangement entered into with the South-Eastern Company, to which he thought not one gentleman present would object, he would take the liberty of proposing that the meeting should first pass the Report and transact the other immediate business of the day, and then enter upon whatever discussion might be deemed desirable as to the general policy of the Management, and the present condition of the undertaking. They were now in the crisis of their fate—they were about, he hoped, to receive the long looked-for reward of their labours and their anxieties, and he trusted, that after he had made a few observations, and the Report had passed, the matters then to be brought forward, would receive the best consideration of the meeting. The Report was of necessity long. The difficulties with which the Directors had had to contend, since they had last the pleasure of meeting the proprietors, had rendered it imperative that they should enter somewhat into detail, although no Report could adequately describe the difficulties thus imposed, not on the Board, but upon the officers of the Company, upon whom they had chiefly fallen, and to whom he thought the thanks of all parties concerned were eminently due, for the zeal and ability which they had displayed, in the unexampled position in which they had been placed. (Hear, hear.) Gentlemen who had seen nothing but the result of these anxieties and these toils, who had merely passed over the platform to which reference was made in the Report, could but feebly appreciate what had been undergone by the Company's officers, when night after night, amidst rain and wind, and with what should have been the "firm-set earth" slipping from beneath them, they accomplished so much for the accommodation of the public. (Hear, hear.) They had laboured most earnestly and efficiently, he was going to say in their several departments, but *in* their departments and *out* of them. Mr. Gregory, the Engineer, Mr. Colson, the Superintendent of the works, his son Mr. Henry Colson, Mr. Pulford, the Accountant—in a word, every officer of the Company had acquitted himself most admirably. (Hear, hear, hear.) With respect to the character and extent of the slips, Mr. Cubitt, the Consulting Engineer of the Company, was present, and he had no doubt would willingly give any information. As to their cause, the Directors had received a Report from Mr. Phillips, the eminent chemist, from which it appeared that a peculiar formation going on in the bowels of the soil had assisted in some degree these extraordinary slips—for extraordinary he might venture to call them, when the banks, having stood firmly for two years, might reasonably have been supposed capable of standing for twenty years or two hundred. Mr. Cubitt would further explain what had occasioned so large an expense in the removing of these slips, which it was evident could be done neither so readily, nor so cheaply, while the ordinary traffic was proceeding, as if the line had been wholly unoccupied. These circumstances combined had led to the disappointment which was noticed in the next paragraph of the Report—a disappointment which was the more vexatious, as never perhaps had Directors a better prospect of immediate prosperity than the Croydon Board on the occasion of the last meeting. The Brighton line was then just opened, with a traffic rising to between 3,000*l.* and 4,000*l.* a-week, while the Croydon toll from that amount of receipts was about 400*l.* or 500*l.*, leading the Directors to cherish and to express the most sanguine anticipations that at the present meeting they should have been able to declare a dividend of 10s. or 12s. a share. There came, however, first, the fatal calamity on the Brighton line, and the subsequent slips, which created so great an alarm in the public mind; and then the series of disasters on the Croydon line itself, the effect of which combination of circumstances was, that they had but a small available balance of profit in hand. If it were the opinion of the meeting that such balance ought to be divided, the Directors would offer no objection to the proposition. It was, he might say, the only point upon which there was any diversity of opinion prevalent among members of the Board, but they left it to the decision of the proprietors themselves, and to that decision the Directors would cheerfully bow. With respect to the additional expense caused by the slips, Mr. Cubitt would, he begged to repeat, give any further information; but it was not that circumstance alone which required the providing of further capital. What the amount of such additional capital might be, depended in some measure on con-

Digitized by Google

tingencies, but, so far as the Directors could form an opinion, the sum required—*eventually* required—would be about 50,000*l.*, and it arose thus. The slips would cost in all about 30,000*l.* or 40,000*l.* The Directors also thought it desirable that the level crossings on the line should be got rid of, since at those points there was considerable traffic on the common roads. The proprietors were aware that already one of these level crossings had been got rid of by carrying the road under the railway at Penge, and to effect a similar improvement at the Dartmouth Arms and Norwood crossings would, it was estimated, cost about 5,000*l.* Then the joint station at London Bridge would cost more than had originally been anticipated—about 30,000*l.* more. There was likewise the approach to the Grange-road, as adverted to in the Report, the portion of expense falling upon this Company for which was estimated at 15,000*l.* If all these improvements were carried out, the total further capital required would, as he had already said, be about 50,000*l.* It was for the proprietors, therefore, to consider whether, under these circumstances, they would divide the balance now in hand. (Hear, hear.) The next topic alluded to in the Report was the arrangement entered into with the South-Eastern Company--an arrangement upon which he thought he might congratulate the proprietors, and which he hoped would satisfy them that the Directors were anxious to enter into any plans which might appear likely to conduce to the best interests of the undertaking, although they could not consent to be hurried into schemes which they conceived to have a contrary tendency. (Hear, hear.) The Directors of the Croydon Company had long felt that they were carrying on their trade with an establishment necessarily larger than the amount or character of the traffic required, and the arrangement with the South-Eastern Company was eminently calculated to effect an economy in this item. It was proposed that the whole plant of the Croydon Company, including the workshops, tools, and machinery at New Cross—in fact, everything except the carriages and waggons, should be accounted for to a Joint Committee, and placed to the credit of the Croydon Company, and that any stock, such as engines, furnished by the South Eastern-Company, should in like manner be accounted for to the Committee and placed to the credit of the South-Eastern Company. The whole was then to be worked for the benefit of both Companies, each to have whatever amount of locomotive power they might require, and to pay exactly in proportion to what was used, and no more. (Hear, hear.) The advantage of this arrangement to the South-Eastern Company would be, that they would be able to dispense with part of the establishment which otherwise would be required, and would, moreover, have the benefit of workshops near London. To the Croydon Company there would be the additional benefit, that to whatever course the policy of the Greenwich Directors might compel them to resort, they had the means of increasing or diminishing their locomotive power as circumstances might suggest. If the 4½d, toll were insisted upon by the Greenwich Directors, and the fares of the Croydon Company were in consequence raised, they might run but two trains; or if a more liberal view were taken of the toll question, they might run twenty, by merely paying in proportion to the work actually done. This was an unspeakable advantage to the Croydon Company in the position in which they were at present placed. (Hear, hear, hear.) If he had not made this matter sufficiently clear, he should have great pleasure in giving any further explanation. He begged to add, that the proposition with regard to locomotive power had been made to the Brighton Directors in precisely the same terms as to the South-Eastern—not precisely as now agreed upon, but the proposition to the South-Eastern which was in the first instance the same as to the Brighton, had resulted in the present arrangement. The Brighton Company were not, it was but fair to say, in the same position as the South-Eastern in respect to this matter, as the one Company had already provided a large part of the requisite establishment for working their line, while the other had not. There was a clause in the agreement, that if the arrangement should be found effective in practice, the Brighton Company should at any time be at liberty to join the other two Companies on the same terms. (Hear, hear.) In that case there would of course be a still further saving in the locomotive expenses of the lines; for whereas there were now two establishments for the three railways, there would then be but one. The next point of which mention was made in the Report was, the toll question, but as he should have occasion to refer to that in a subsequent stage of the proceedings, he need not at present enter into it at any length. Since the passage in the Report relative to the Eastern Counties' and Northern and Eastern Companies was written, a meeting of the former Company had taken place, from the reported proceedings of which it appeared that the arrangement for the modification of toll had not yet been carried into effect; but he was authorised to state, that it was not to the principle of such modification that either Company objected, but to some collateral disputes respecting the payment of the Government tax, and the use of certain rooms at the Shoreditch station. With regard to the approach at the Grange road, it was, he thought, eminently the policy of the Croydon Company to carry out the proposed improvement. It had always been the object of the Directors to afford the greatest possible extent of accommodation to the Companies using the line, and this projected road supplied facilities for a cattle station, not to be found at London Bridge. This would, of course, prove highly convenient to the South-Eastern Company, while it would give the Croydon Company the benefit in some degree of a west-end terminus, and he could not but regard as highly advantageous, any arrangement which would bring them within two miles of Westminster Bridge, and thus secure the principal object which had been contemplated in the formation of another line from Croydon. (Hear, hear.) As regarded the re-election of the Directors mentioned in the Report, it had been understood at the last meeting that six Directors were quite competent to conduct the affairs of the Company, and accordingly during the last six months Mr. Hollond and Mr. Ricardo had taken no active part in the management. Acting, too, under this feeling, the Directors, although they had for several months been in possession of the resignation of Mr. Ricardo, had not proceeded to nominate Mr. Crowley to a seat at the Board until Mr. Newman Smith had announced his retirement. It would be recollected that Mr. Crowley was elected by the former Board of Directors, but had most handsomely retired, it being then understood that he should be re-elected on the first vacancy. (Hear, hear.) As to the election of Auditors, the Directors had been obliged, as only one remained, to choose a colleague for him, and, therefore, Mr. Norbury had been appointed. To fill the vacancy caused by Mr. Crowley's appointment as a Director, Mr. Sterry was now proposed. Without trespassing further upon the time of the meeting, he would move the adoption of the Report.

The honourable gentleman sat down amid loud applause.

Mr. Lewis Levy referred to the passage in the Report which speaks of the Grange-road Approaches Bill, and inquired if the Bill had not been thrown out in the House of Commons.

Mr. Burchell (the Company's Solicitor) said the petition for a Bill had been referred to the Standing Orders Committee, who were of opinion that the Standing Orders had not been complied with.

Mr. Levy wished to know why the matter had not in the first instance been submitted to the proprietors.

The Chairman said, all that had been done was merely preliminary, and the measure would be submitted to the proprietors when it had arrived at a certain stage.

Mr. Capel in a few words seconded the adoption of the Report.

Mr. Pollard inquired if they had power to reduce the number of Directors.

The Chairman believed that the number could not be formally reduced without the sanction of the legislature, and in any future application to Parliament powers would be taken to effect that object, but for the present they were acting according to the wish expressed at the last meeting.

Mr. Goodall inquired if the expenses of the slips up to the present time were included in the accounts now before the meeting.

The Chairman said, the accounts were made up to the 31st of January last, and included everything due up to that date. The expenses were paid weekly.

Mr. Bailey inquired if the amount was charged under "permanent way?"

The Chairman said, it was not; it was comprised in the capital account, under the head of "construction."

Mr. Goodall inquired what was the expense, up to the present time, not included in the accounts.

The Chairman said, up to the present time the expense was about 21,000*l.*

After some further conversation,

The Chairman said, it would be seen that the accounts were made out somewhat differently from previous half-years. There was a "road account" of 5,539*l.* which had been so set forth because it had been said that nothing was got by the Croydon traffic. It would be found, however, that against a current expenditure of 9,634*l.* there had been receipts from traffic amounting to 14,174*l.*, so that, during the half-year, they had realized a clear profit of about 4,500*l.*, thus showing that when persons spoke of giving up the line they were giving up a profit of about 9,000*l.* a-year, since whether they worked the Croydon traffic or not, the road must be kept up. (Hear, hear, hear.)

Mr. Goodall had no fault to find with the Directors, to whom, on the contrary, he considered the proprietors were deeply indebted—but he wished to know the exact position of the Company. He had understood, at the last meeting, that the expenses of the Joint Station at London Bridge were to be borne equally by all the three Companies; whereas he found that the expenses of the Croydon Company under this head were actually increased.

The Chairman said, the expenses of the Joint Station had hitherto been borne by the Brighton and Croydon Companies alone. When the South-Eastern line came into operation, that Company would bear one-third part of the current expenditure. The expense to the Croydon Company during the last half-year had been 428*l.*, or about 857*l.*

Digitized by Google

per annum. Previous to the junction, the Croydon expenses at this station were 819*l.* per annum, so that only the very small excess of about 40*l.* had been incurred. This had arisen from the number of porters required for the Brighton traffic—an item in which experience would probably teach economy.

Mr. BAILEY had supposed that the Croydon Company were to pay a fixed sum towards the expenses of the Joint Station.

The CHAIRMAN said, they had to pay even thirds.

Mr. BAILEY inquired if the same booking clerks were employed for both lines.

The CHAIRMAN—Yes.

Mr. PARE had understood the Chairman to say, that the Joint Station would cost 30,000*l.* more than was originally anticipated. Was this 30,000*l.* to be divided among the three Companies, or was it the Croydon proportion alone—in other words, was the excess upon the station to be 30,000*l.* or 90,000*l.*?

The CHAIRMAN said, the expense of the station had originally been 111,000*l.*, or about 37,000*l.* to each Company. It was now computed that the whole expense would be, making a large allowance for contingencies, about 240,000*l.* or 250,000*l.* so that each Company would have to pay 83,000*l.*, being an addition of about 46,000*l.*

Mr. PARE inquired the cause of this additional outlay.

The CHAIRMAN said, it had arisen from the necessity of making the station of greater extent than had at first been deemed sufficient. It had always been quite evident that 37,000*l.* paid by each Company, would not be sufficient to furnish the requisite accommodation. In fact, it had from the first been intimated that an additional sum of 90,000*l.* would be required. That was now increased to 120,000*l.*, which was to be divided among the three Companies.

Mr. ROBERTS (Architect to the Company) said, the original cost to each Company had been reckoned at 37,000*l.*, with an additional outlay of 90,000*l.* now increased to 120,000*l.*, so that the actual increase was only about 30,000*l.*, or to each Company 10,000*l.*

Mr. PARE asked if this were occasioned by the estimates being too low, or by the necessity of providing further accommodation?

Mr. ROBERTS said, it had arisen solely from the necessity of providing further accommodation. The works had been let within the estimates.

The CHAIRMAN said, an additional expense of about 8,000*l.* had been occasioned in consequence of some misunderstanding with the Greenwich Company, for the purchase of about 6,000 feet of land.

Mr. BARCLAY inquired, when the time in which the Greenwich Company ought to complete the new works would expire.

The CHAIRMAN said, it had expired on the 7th of February last, and every day after that date the Greenwich Company were liable to a penalty of 50*l.* for non-completion. A little before the 7th of February, the Greenwich Directors had applied to the joint Board for further time, and it had been extended to the 8th of March. They had received an official notification that the works were now completed.

Mr. BARCLAY had understood from the Report of the Greenwich Directors, laid before their late meeting, that the works would be completed within the time specified.

The CHAIRMAN said, the honourable proprietor would see by referring to the Greenwich Report, that the phrase was "the time granted"—namely, granted by the joint Board—not the time specified in the Act of Parliament.

Mr. MAJOR wished to know if the arrangement with the South-Eastern Company precluded the adoption of any plan by which the Croydon establishment might, as many proprietors deemed desirable, be hereafter entirely done away with.

The CHAIRMAN could not suppose that it would have such an effect. Any arrangement now existing was not more voidable than the new arrangement, so that if the one did not preclude the adoption of the plan to which the honourable proprietor referred, so neither could the other.

Mr. MAJOR inquired, if the arrangement with the South-Eastern Company could be annulled at any time.

The CHAIRMAN said, there would be a clause expressly providing that it should be terminable at the option of either party on giving due notice.

Mr. BOLD had understood that a guarantee had been given to the Croydon Company respecting the cost of the station at London Bridge.

The CHAIRMAN said, the only guarantee given was, that if any portion of the station were used exclusively for the purposes of the Brighton or South-Eastern Company, rent should be paid by the parties so using it.

Mr. GOODALL wished to know whether it was to be understood that contracts had been entered into for the new Joint Station.

Mr. ROBERTS said, such contracts had been entered into yesterday.

Mr. GOODALL presumed, therefore, that that estimate would not be exceeded?

Mr. ROBERTS—Certainly not.

Mr. MAJOR asked if the draft of the agreement with the South-Eastern Company were drawn up, as he wished particularly to know if any period were assigned for the termination of the arrangement.

The CHAIRMAN said, the draft was not yet ready, but in the heads already agreed to there was a proviso that in the event of separation, the matter should be referred to arbitrators. It was not apprehended, however, that any cause for separation would arise. (Hear, hear.)

Mr. BAILEY presumed, that the South-Eastern Company would pay for the use of the Croydon Company's premises at New Cross?

The CHAIRMAN said, it was stipulated that an account should be taken at the end of every six months of the use which had been made by each Company of the plant and premises during these six months, and the capital of each would be assimilated to such use.

Mr. BAILEY—Our premises are reckoned at cost price?

The CHAIRMAN—Yes.

Mr. BAILEY inquired why the carriages were not included in the arrangement?

The CHAIRMAN said, the traffic of the two lines would be of a different character, so as to render an arrangement under this head difficult. At present the question was one of haulage merely.

Mr. LEVY thought the Company would deceive themselves if they were now to divide the small balance in hand.

The CHAIRMAN said, the honourable proprietor would have an opportunity of adverting to that point hereafter. Perhaps, as a matter of form, it would be better first to pass the Report.

Mr. PARE would inquire before the motion was put, upon what terms the Grange-road was to be constructed.

The CHAIRMAN said, each of the two Companies, the Croydon and South-Eastern, were to bear one-half of the expense, but as in the case of the London Bridge station, if any part of the Grange-road station were used exclusively by the South-Eastern Company, as a cattle station or a goods station, neither of which the Croydon Company required, an adequate amount would be paid by them.

Mr. LEVY was of opinion, that as the London Bridge station had already cost so much, and was certain to cost more, this Grange-road project should, for the present at least, be abandoned. (Hear, hear.)

A PROPRIETOR inquired what the total expense of the Grange-road approaches would be.

The CHAIRMAN said, about 30,000*l.*

The PROPRIETOR put it to the Chairman, whether it was not premature to incur such expense.

The CHAIRMAN said, the South-Eastern Company did not think so, and it was for the advantage of the Croydon Company to assist in whatever might tend to develop the traffic of the other lines over the Croydon Railway. (Hear, hear.)

Mr. MAJOR thought, that as there was a diversity of opinion as to the propriety of the course taken with regard to the Greenwich toll, it would be desirable for the present to pause before entering into any arrangement for evading that toll. Let the Croydon Company first get fairly on its legs. (Hear, hear.)

The CHAIRMAN said, they must perforce wait for some time. Nothing could be done immediately.

The PROPRIETOR was sure that no one charged the Directors of the Croydon Company with any want of integrity of purpose; but really the proprietors had been called upon so frequently—almost at every meeting—[The CHAIRMAN—Not lately]—that he thought this proposition had better be deferred, more especially as it appeared that the Bill could not be entertained during the present session.

Mr. MAJOR thought the Directors ought not to have filled up the vacant office of Auditor, although he was ready to admit that they could not have selected a more respectable gentleman than the one appointed. As, however, the Auditors were nominated for the purpose of checking the accounts of the Directors, he thought the appointment of them at least—if not of the Directors themselves—ought always to be vested in the body of proprietors. It was a very invidious thing to oppose a party nominated by Directors. (Hear, hear.)

The CHAIRMAN said, the Directors were under the necessity of appointing an Auditor, as one of the previous Auditors had resigned.

Mr. MAJOR thought a special meeting ought to have been called, as the matter was one of great importance. (Cries of "no, no," and "hear, hear.")

The CHAIRMAN believed that the importance of the office of Auditors was very much over-rated. Some gentlemen seemed to suppose that Auditors could control the expenditure of a Railway Company; but *that* was a duty pertaining to the Directors alone. All that Auditors had to do was to see that the accounts were correct, and in that view the appointment was not of very great moment.

Mr. MAJOR thought the duty of Auditors was not only to examine the accounts, but to see the receipts for every payment. (Hear, hear, from the Chairman.)

Mr. CAPEL had understood that the cost of the Grange-road was included in the estimate of 50,000*l.* as the further sum to be provided. Was it so?

The CHAIRMAN—Most certainly.

Mr. CAPEL, for his own part, thought any plan highly desirable which should give them a west-end terminus. (Hear, hear, hear.) If they could only get two miles nearer to Westminster Bridge, it would be extremely beneficial to them, for it might, and probably would, divert other parties from thinking of another line from Croydon to the west end of town. (Hear, hear, hear.)

Mr. BARCLAY hoped that the Directors would be left wholly unfettered in this matter. (Hear, hear, hear.)

The resolution for the adoption of the Report was then carried unanimously.

A resolution was next carried unanimously for the re-election of Mr. Whiskin as a Director.

The CHAIRMAN then proposed the election of Mr. Sterry as Auditor, in the place of Mr. Crowley.

Mr. CAPEL had great pleasure in seconding the nomination, as he knew Mr. Sterry to be most efficient.

In answer to a question, it was stated that Mr. Sterry resided at Croydon.

The resolution was then carried unanimously.

The CHAIRMAN then called upon Mr. Levy to resume the question of a dividend.

Mr. LEVY had only to repeat his opinion that it would be impolitic, under present circumstances, to divide the surplus of 11,125*l.* that was in hand. He hoped none of the proprietors were so needy as to make it an object to receive 5*s.* or 6*s.* per share,

Digitized by Google

when, perhaps, they might soon be called upon to advance 5*l.* or 6*l.* He would not, however, make any motion on the subject.

Mr. PARE, in order to bring the matter before the meeting, would move that a dividend of 6s. per share be declared. It was but fair to the original proprietors, who had borne the burden and heat of the day, and many of whom might from various causes be compelled to retire from the Company—it was due to these parties that the balance in hand should be divided. (Hear, hear.) For what purpose, he would ask, could it be retained? It surely was not proposed to add it to capital? [The Chairman—No.] Was it then to remain in the hands of the Company's bankers, to be brought forward on a future occasion? He thought such proprietors as might desire to dispose of their shares, ought to have the benefit of whatever profit had heretofore been made. (Hear, hear, hear.)

Mr. CAPEL begged to second the motion, and he did so because the balance now in hand was profit fairly earned. (Hear, hear.) It was not as if they were proposing to pay a dividend out of capital. (Hear, hear.) Any money that might hereafter be required would of course be added to the capital account. If the balance now in hand were kept for six months, it would then be necessary to divide it; and why not at once? (Hear, hear.) There might be those who, like himself, had been for years looking for a dividend, and it was but right they should have it, however small, now that it was earned. He did not speak so much for his own sake as in support of the principle. (Hear, hear, hear.)

Mr. LEVY thought, as a call would soon be made upon them for 50,000*l.*, they would be deceiving themselves if they divided the 11,000*l.* now in hand.

The CHAIRMAN said, the Directors thought the balance now in hand was not in fairness applicable to the purposes for which further money would be required, but it might be borrowed for a time, so as to defer the necessity of coming so soon upon the proprietors.

Mr. LEVY did not like the idea of paying money with one hand and borrowing with the other. (Hear, hear.) He was quite as willing as others to receive his dividends, and they would be very acceptable, but he thought it would be more prudent to apply the money to another purpose. As, however, he was unacquainted with the tactics of the Stock Exchange, and as there might exist some reason with which he was unacquainted for making this dividend, he should not offer any opposition.

Mr. BAILEY would be glad to know the sentiments of the Directors on this point.

The CHAIRMAN said, his own mind really was not made up, and he believed the same was the case with some of his colleagues. The surplus now in hand of the capital account would enable them to go on for a few months, but at the end of four or five, or six months, a further call would have to be made on the pockets of the proprietors.

Mr. LEVY took it for granted, that if this profit, as it was called, were divided, the Directors in the event of another slip would not have funds to remedy the evil.

The CHAIRMAN said, it might be so.

Mr. BOLD said, if the 11,000*l.* would suffice, it might be well to appropriate it, as the honourable proprietor desired, but it was clear that it would be utterly inadequate to meet the requirements of the case.

Mr. BAILEY inquired if the Directors had exhausted their Parliamentary powers to raise money.

The CHAIRMAN said they had still power under their several Acts to raise 43,000*l.* and an additional amount for the station in their last Act.

Mr. BAILEY presumed therefore, that no new shares would be created?

The CHAIRMAN said, the Directors had not considered the subject.

Mr. COOKE inquired if the balance in hand would not admit of a dividend of 6s. 8d. per share.

The CHAIRMAN said it would produce exactly 6s. 8d. per share, without leaving any reserve.

Mr. COOKE thought if they were to have a dividend at all, it should be as large as possible. He would therefore move as an amendment, that 6s. 8d. per share be the amount declared.

The CHAIRMAN and several proprietors thought this was dividing too closely.

Mr. WALEY could not see under what head the 21,000*l.* stated to have been expended on the slips had been placed.

The CHAIRMAN said, it was included in the construction account.

Mr. WALEY thought it would be highly proper that a dividend should be declared, now that they had waited nearly seven years for it, provided it could be declared prudently; but he would put it to the honourable Chairman whether he could recommend to the Board, and through the Board to the proprietors at large and the public, the declaration of any dividend under the existing circumstances of the Company, when what they termed profit had been more than swallowed up by the unfortunate occurrences of the last six months. The public acts of individuals should be guided by the same principles as their private actions, and he pointedly appealed to the Chairman, as a gentleman of the strictest integrity and the soundest judgment, whether he could concur in the proposition now made for dividend, or whether he thought the expenses occasioned by the accidents should be placed to a by-gone account. If a stack of chimnies were to fall in the house of any proprietor, would not the expense of replacing them be put to the account of his annual income? (Cries of "hear, hear," and "no, no.") So it ought to be with these casualties on the railway. Such at least was his opinion, and he could not consent to a tacit vote, feeling it to be his duty to relieve himself from any share in the responsibility which out of doors would be attached to the course now proposed. Besides, he saw no charge for wear and tear of moveable stock, an allowance for which ought to be deducted before the declaration of a dividend. In short, it seemed to him that the Directors ought not to meet the cravings of any party, but to act for the permanent welfare of the undertaking.

The CHAIRMAN said, as he had been specially appealed to, he could only repeat what he had already stated, namely, that he had hardly been able to form a definite opinion on the matter. He certainly had been considerably swayed by the consideration, that it was not wise to pay with one hand and borrow with the other, but Railway Companies generally appeared to think differently. After all it was not of any great consequence whether a dividend were declared or not. The proprietors could not have it both ways, and if they received the money now, they would have to pay it again hereafter; and as it was usual, even when lines were unfinished, to divide whatever profits might have arisen from the working of the portions opened, he did not see that any great harm could arise in the present instance from following the customary course. (Hear, hear.) At the same time it might be open to objection, and, therefore, the Directors had left the question to be determined by the proprietors, as they might deem fit.

Mr. PARE presumed, that whatever difference of opinion might exist among the Directors as to the policy of declaring a dividend, they were unanimous in thinking, that the receipts from traffic, ought not to be applied to the repair of the slips.

The CHAIRMAN—Most undoubtedly so. (Hear hear, hear.)

Mr. V. KNIGHT concurred with Mr. Levy, from whom the proprietors usually heard a good modicum of common sense. The profit was set down at 11,000*l.*, while the loss already incurred was admitted to be 21,000*l.*, and yet it was proposed to declare a dividend.

After some further conversation, the question was put, when the Chairman said he feared the amendment was carried. [The numbers were in the proportion of about 3 to 2.]

The announcement was received with much applause.

Mr. PARE inquired when the dividend would be paid.

The CHAIRMAN said it would be paid as soon as possible, and due notice would be given. If they had been certain of the carrying of the dividend they would have been prepared.

Mr. LEVY said the day for paying the dividend could be announced when the proprietors were called upon for the next loan. (Hear, hear, and laughter.)

Mr. ROBERTS, sen., inquired if the receipts from Sunday traffic were discriminated as in the Grand Junction Company, so that those who chose might be able to leave the quota of dividend derivable from such traffic.

The CHAIRMAN said, the account was not made out, but it might be had at the office in five minutes, and he had no doubt that if any proprietor objected to receive that portion of the dividend, his fellow proprietors would be glad to take it.

The CHAIRMAN then said, that as the formal business of the day was now at an end, he would briefly advert to a subject of very considerable importance, bearing closely upon the welfare of the Croydon Company. Since the last meeting the Directors had had an offer from the Brighton Company to lease the Croydon line, and although his colleagues and himself did not think that the proposition could be entertained as an offer, they were anxious that the proprietors should know exactly how the matter stood, and, therefore, he would, with the leave of the meeting, request the Secretary to read the correspondence which had passed on the subject between the two Boards, after which he would trouble them with a very few observations.

The SECRETARY accordingly read as follows:—

(COPY.)

10, Angel Court, March 1st, 1842.

Gentlemen,—The Directors of the London and Brighton Railway Company, in availing themselves of the opportunity you have so promptly afforded them, for a conference regarding the lease of your railway, beg to lay before you in writing the views which they take of the importance of such a measure to all the parties concerned.

The experience which the Directors have had since the opening of their line, has convinced them that frequent detention of their trains, not without some degree of risk from collisions, is inseparable from the continuance on the Croydon line of a short traffic over which they have no control, starting at frequent intervals and stopping at the intermediate stations; and the difficulty they have found in framing their timetables with a view to avoid such detentions as much as possible, is likely to be greatly increased when they have an increased number of trains conveying goods, cattle, &c., and when in addition the traffic of the South-Eastern Railway Company is brought upon the line.

As by the frequent passage of these longer trains over the Croydon Railway, every accommodation for the intermediate traffic between Croydon and London may be afforded without any interference with the Brighton or Dover trains, and as the conveyance of this traffic by the Croydon Railway Company has not been attended with a profitable result, there can be no doubt that the interest of all parties would be promoted by placing the whole traffic to and from London under the control and management of one or both of the Companies conducting the long traffic.

The Directors advert to the recent unfortunate slip on the Croydon line, only for the purpose of reminding the Croydon Board of the much more serious injury inflicted by such an occurrence on a long traffic, such as that from Brighton, than can fall on the shorter traffic; and in order to draw from this the conclusion, that it would be desirable that the maintenance of the works should be placed in the hands of the parties most deeply interested therein.

They further feel that the toll at present charged on their passenger traffic, is such as must prevent that development which could only be obtained by carrying a lower class of passengers than at present; and that some modification would be absolutely necessary, so as to leave them at full liberty to pay the toll in the most convenient way for themselves, by charging such fares as experience might show to be best warranted by the nature of their traffic.

Digitized by Google

In order to combine all these objects, the most comprehensive mode, and in their opinion the most advantageous to all parties, would be, for the Croydon Railway Company to grant a lease of their line for a period of years to be agreed upon, terminable by either party by a four years' notice; and the Directors of this Company suggest the following terms;—

1st. The Croydon Railway Company to cease being carriers of goods and passengers.

2nd. The locomotive engines and tenders, carriages, trucks, &c., to be disposed of to the Brighton Company, at a valuation.

3rd. The whole right of toll, subject to any agreements with any other party being first recognised, to be vested in the London and Brighton Company.

4th. The Brighton Company to undertake the maintenance of all the works and permanent way, and to have the sole and complete use of the stations on the Croydon line.

5th. All rates and taxes to be borne by the Brighton Company.

The rent which the Brighton Company are prepared to offer for a lease of the line under such conditions as the above, is 5 per cent. per annum on the capital actually expended, which would thus constitute a net income to the Croydon Company.

This, of course, is intended only as an outline of the arrangements which would be necessary to carry out the proposal, but the Directors will be prepared to meet the Croydon Board, as early as possible, on all the minor arrangements, provided the above offer should be favourably received.

I have the honour to be, Gentlemen,
Your obedient servant,

(Signed) CHAS. R. MACKENZIE, Sec.

To the Directors of the London and Croydon Railway Company.

London and Croydon Railway Company,
205, Tooley-street, March 2nd, 1842

Gentlemen,—The Board of Directors have instructed me to acquaint you that they have considered the various topics adverted to, and the final propositions contained in the letter which they had the honour to receive by the hands of a deputation from your Board yesterday.

The chief inconveniencies which the Brighton Company appear to complain of, and from which they seek to be relieved by leasing the Croydon line, are the detention of trains, and the difficulties of forming time-tables. These cannot, in the apprehension of this Board, be attributable to the present mode of conducting the traffic on the line, the former having arisen partly from the want of accuracy in the arrival of the Brighton trains, but principally from the consequences resulting from the unfortunate slip which, without question, could not under any management have been averted, the parties most deeply interested in keeping it free from obstruction being doubtless the proprietors of the trunk line itself; and in respect to the regulation in the times of starting trains, the Directors have always endeavoured to give every facility in their power, consistently with their responsibility for securing the safety of the public. The interruptions (such as they are) attending the intermediate traffic between London and Croydon, if that traffic be continued, the Board conceive, would still remain, were the control and management confided to other hands.

On the subject of toll, the Directors cannot fail to be gratified by observing how exactly your sentiments coincide with the position maintained in their letter addressed to you on the 4th of October last, namely, that it is highly desirable that every main line should be able to regulate its own fares, without reference to the trunk line over which its traffic may pass, and which the modification of toll there proposed was calculated to effect.

Nothing, therefore, in the estimation of this Board, remains of the points touched upon in your letter by which the situation of the Brighton Company is likely to be improved, except in a mercantile relation, and certainly the Directors of this Company cannot recommend their proprietors to accept the sum offered by you for the total leasing of their line, with all its prospective advantages, since, according to the estimate of traffic made by the Brighton Company in Parliament, which this Board hope eventually to see more than realised, the toll payable to the Croydon Company by your Company *alone*, would be nearly equal to that sum, independently of the Croydon traffic and the toll from the South-Eastern Company.

I have the honour to be, Gentlemen,
Your very obedient servant,

(Signed) R. S. YOUNG, Sec.

The Directors of the London and Brighton Railway Company.

The concluding paragraphs of the answer elicited strong marks of approbation.

The CHAIRMAN said, he should really begin to think the Croydon Railway was a good concern, were it only from the anxiety which other parties displayed to get possession of it. (Hear, hear, hear.) He believed that the very first occasion on which he had addressed a public meeting was in opposition to a similar proposal made by a Company, then, he might say, struggling for existence—certainly not under the superintendence of its present Management—and now they were assailed in like manner by another Company. They were, he thought, like the man in the fable, upon whom the alternate influence of sun and wind was tried to induce him to lay aside his cloak. He thought their best policy would be to retain the cloak until the state of the weather enabled them prudently to dispense with its use. (Hear, hear.) At the period alluded to, the wind blew from the south-east; now it was more from the south. (Hear, hear, and a laugh.) He was not at all surprised that the Brighton Company should desire to gain possession of the Croydon line. It was very natural that they should have such a wish—that they should wish to have a complete line from Brighton to London, and not as now, a line from Brighton to Redhill, and a line from Merstham to Croydon; and if the profits of the Croydon line could be handed over to the Brighton proprietors, so much the better. He was not surprised, therefore, at the offer, but he *was* surprised at the time chosen for making it. (Hear, hear.) Now that the Croydon Company had been waiting for seven years and paying 5 per cent. for the use of the capital embarked—*now* they were to be offered 5 per cent. per annum for all their prospective returns! The Brighton line was expected to pay 5 per cent. and more, and for his own part, he should not look upon any dividend as profit until 5 per cent. were paid. He must repeat that this was an unfortunate moment for making such a proposition. If this Company had been going on losing the traffic of the one Company after the other, they might perhaps have been glad to accede to any terms, so as to relieve themselves from difficulties; but it was not so. Although they had met with disasters during the last six months, the main line of policy pursued by the Directors had been proved to be sound and correct. There was a time when it was doubtful whether they would ever receive the traffic of the Brighton line, much more so that of the South-Eastern, but now matters wore a very different aspect. (Hear, hear.) In fact he could not see the necessity of buying or selling at all, unless it were to attain economy in working the line, and he hoped that by the arrangement with the South-Eastern Company, this essential object had already been secured. If the whole Croydon establishment were swept off at once, scarcely any greater degree of economy could be arrived at, and therefore he could not discern why they should bargain at all. No doubt there were some proprietors in the Croydon Company, as in all other Companies, who would prefer a small present advantage to a larger one in prospective, and who would be glad to sell their shares at 13*l.* or 14*l.*, but the Directors, to whom the administration of the Company's affairs was entrusted, did not set any such limit to the worth of the stock, and were desirous of consulting the permanent interests of the undertaking. He could not see any difficulty in retaining their present position, as, from the Brighton Company alone they would receive 5 per cent. on their outlay. (Hear, hear.) As to the toll, the Brighton Company had proposed a reduction upon third-class passengers, whom they proposed to carry. This was very reasonable, but the Directors of the Croydon Company had told the Directors of the Brighton that the fares upon the Brighton line throughout were much higher than the proportion which the Croydon Company received. If the Brighton Company charged 14s. for the trip to Brighton, and thus carried comparatively few passengers, and consequently returned to the Croydon Company but a small amount of toll, it was not fair, and so it had been represented to the Brighton Board, to ask the Croydon Company to take 1s. from these high fare passengers, when they ought to be receiving 2s., and then to offer them 6d. upon a 4s. or 5s. fare. The Croydon Directors had offered, if the Brighton Company would reduce their fares generally, to modify the tolls to that reduction. (Hear, hear.) They should not object, even if the Brighton Company undertook to carry the public throughout for 1s. to receive their fair proportion of that shilling, because they knew that the Brighton Company would not do so unless it were attended with profit, and if profitable to them it must be so to the Croydon Company. The same proposition which they had made to the Brighton Directors they had made also to the Greenwich, and he hoped therefore the meeting would agree with what had been done. (Great applause.) He collected from this expression of feeling that the proprietors approved of the course which had been taken by the Directors. (Hear, hear, hear.) He would therefore now call their attention to an offer which the Board had felt it their duty to make to the Greenwich Company. His colleagues and himself were very desirous that at this (as he had already called it) the crisis of their fate, the proprietors should understand the matter in all its bearings, in order that if it appeared right to them they might give expression to an opinion upon the course which the Directors had pursued. Now that the tolls upon the Greenwich line were about to be raised, it was especially desirable that this question should be thoroughly understood. (Hear, hear.) Very soon after the last meeting the Croydon Directors made a proposition to the Greenwich Board for a modification of the toll, which, however, was not acceded to, and they had subsequently addressed them again. He would request the Secretary to read the correspondence which had taken place, from which the exact position of the two Companies might be gathered.

The SECRETARY then read as follows:—

(COPY.)

London and Croydon Railway Company,
205, Tooley-street, March 4th, 1842.

Sir,—The Directors of this Company having in contemplation the constantly decreasing traffic on the Croydon Railway, occasioned partly, no doubt, by the bad weather of the late season, and the unfortunate occurrences of the slip at New Cross, but partly, nevertheless, by the increasing competition of metropolitan railways carrying at lower fares, are desirous of trying the experiment of a lower rate of fare on the Croydon line. But they feel it to be impossible to make this attempt under the operation of a fixed toll of 3d. per passenger, still more in the face of a proposed toll of 4½d., which will render necessary an advance, instead of a reduction, of the present fares. Anxious, however, to avert the consequences which past experience has taught them must ensue from an increase in the present rate of toll and fare, and wishing sincerely to promote the interests of both Companies, they are willing to take upon themselves the risk of this experiment, provided they can only secure their fair share of its success.

I am instructed, therefore, to propose, on the part of this Board, to commute the toll levied, or to be levied, by the Greenwich Company for the next five years in respect of the Croydon traffic, for a fixed payment of 6,000*l.* per annum. And inasmuch as the greater number of passengers, which lower fares will induce, must have the effect of increasing the amount of Government duty payable by the Greenwich Company in respect of passengers from the Croydon Railway, under the present system, and in the expectation that this system will shortly undergo some alteration, the Board will undertake that the duty so payable, shall not exceed the largest sum paid by the Greenwich Company in any one year on this account; and that if at the end of five years, the number of passengers then carried in the next year shall be so great, that the proportion of the fare then charged according to the scale formerly proposed by this Board, shall amount to *more* than 6,000*l.* per annum, the Greenwich Company shall be entitled to such increase; but if such proportion according to such scale shall be *less* than 6,000*l.* per annum, then the Croydon Company shall be at liberty to choose between the sum of 6,000*l.* per annum and a toll of 4½d. per passenger, upon such number of passengers, for a further term to be agreed upon. Toll to be paid quarterly.

Digitized by Google

I am further instructed to draw the attention of your Board to the fact, that the toll paid by this Company to the Greenwich Company in the last year has very little exceeded 4,000*l.*, and that the proposed sum of 6,600*l.* is therefore in effect an offer to pay a toll of 4½d. upon the present number of passengers, which number cannot be maintained under any *increase* of the rate of fare, and to express the hope of this Board that as your Directors have thought it expedient to lower the fares on the Greenwich Railway, with a view to the increase of gross income, they will likewise see the propriety of commuting their toll for the same purpose, and that they will justly appreciate this last endeavour on the part of this Board to avoid the inevitable consequences to both Companies of a further increase of the Croydon fares, and thus happily terminate the differences prevailing between them upon the subject of the toll arrangement.

I am, Sir, your very obedient servant,
(Signed) R. S. YOUNG, Sec.

J. Y. Akerman, Esq.,
Secretary Greenwich Railway Company.

(COPY.)

London and Greenwich Railway Office,
London Terminus, 8th March, 1842.

Sir,—In reply to your letter of the 4th instant, I am instructed to say that the Directors, having given their best attention to the proposition you have therein submitted, are of opinion that they are at present not in possession of proper data to enable them to entertain the subject of a commutation of tolls levied on the Croydon Company, at a time when the new lines of railway for the erection of which such large sums have been expended by their proprietors, on the faith of the tolls secured by their Act, are about to be opened.

I am, Sir, your most obedient servant,
(Signed) J. Y. AKERMAN, Sec.

R. S. Young, Esq., Secretary,
Croydon Railway Company.

The CHAIRMAN said, the offer of the Croydon Board might appear extravagant, but they had proceeded on the supposition that during the next year, or the next five years, the number of Croydon passengers using the Greenwich line would be equal to the number of last year, which, at 4½d. per passenger, would produce 6,000*l.* At the same time, it seemed to be an excellent offer so far as the Greenwich Company were concerned; for it was quite clear that if the 4½d. toll were exacted, the Croydon Company could, and would, raise their fares, so that the number of passengers would be diminished, and the Greenwich toll fall short of the 6,000*l.* So good for the Greenwich Company did he consider the proposition that had been made, that he was surprised it was not at once embraced. He could only express a wish that the Directors and proprietors of the Greenwich Company understood what was their true policy. He certainly thought the Brighton Board had proceeded as if the charge once made against the Croydon Directors, of being deficient in common sense, were well founded. Whether the Greenwich Directors did so likewise, he could not say; but he would briefly recapitulate the points of the case. In the autumn of 1839 the Select Committee of the House of Commons had made their famous Report, to the effect that the Brighton and Dover passengers ought not to be allowed to pass over the Greenwich Railway in its then state. This was a misfortune on the Greenwich Company, for it was tantamount to saying that their line was not fit for the purposes for which it was intended, just as little fit as if one of the arches in their viaduct had fallen down; but this deficiency was clearly not attributable to any of the other Companies. Three methods were proposed for remedying the defect. The first was a new railway from Croydon; the second, a branch from the Dartmouth Arms; and the third, the widening of the Greenwich line itself. He need scarcely say, that none but the last of these propositions could be entertained by the Directors or proprietors of the Croydon Company. They had, therefore, applied to the Greenwich Board to induce them to render the line suitable for the reception of the traffic, but the Greenwich Directors were unwilling to make any addition to their line, alleging that as it then stood, it was fully sufficient, and they accordingly urged the Croydon Directors to assist them in an attempt to convince Parliament and the public that such was the case. Finding the Greenwich Board indisposed to comply with the requirements of the Select Committee, the Croydon Directors applied to the other two Companies to widen the Greenwich line, of course paying the Greenwich Company for their land. For doing this they had been called "robbers" and "thieves," but the ultimate consequence was, that the Greenwich Company undertook to widen the line themselves. To this the Croydon Board could have no objection, but the Greenwich Company applied to Parliament for power to exact an additional toll equivalent to the further capital to be expended. The Greenwich Directors no doubt argued that if under the present arrangement of 3d. per passenger they secured 6,000*l.* per annum from the Croydon Company, they would, by raising the toll to 4½d., secure 9,000*l.*, and from the other Companies in proportion, so as fully to meet the further outlay. The Croydon Directors had represented to the Greenwich Board that the toll of 3d. was excessive, and therefore that 4½d. could never be paid. Unfortunately, however, the Greenwich Company had succeeded in persuading a Parliamentary Committee—which the meeting were aware usually consisted of landed proprietors having a great respect for other landed proprietors (in which relation the Greenwich Company then stood), and for vested rights—they had succeeded in persuading the Committee that a toll of 4½d. ought to be imposed, and accordingly the preamble of the Greenwich Bill had been passed. The talented counsel of the Company—Mr. Austin—had therefore withdrawn all further opposition to the Bill, and he did not know that he could more completely show that the Croydon Board had absolved themselves from any responsibility in respect of the Greenwich Bill than by reading a short extract from Mr. Austin's speech on the occasion. The hon. gentleman then read as follows:—

"Now, Sir, you having adopted in the preamble of this Bill a passage to the effect that a further toll is to be conceded for the purpose of enabling the Greenwich Railway Company to make the two additional lines, we having given our ultimatum, which we did after the greatest deliberation, and knowing that we could not advance upon it, either to make the railway ourselves, if you should think fit to pass our Bill at the threepence toll, or to make it on the terms as we proposed in the arrangement, or to allow them to make it at the threepenny toll, that is, to allow them to make it without the advance of toll which is contemplated in your preamble, we have been compelled to take this early opportunity of stating to you precisely the position in which we stand. I could not interfere when the preamble was read this morning, because I understood from you that the preamble having been adopted, I was not entitled to be heard on the preamble. I was very anxious, in order that I might not be mixed up in the proceedings of the Bill, as far as the clauses were concerned, that my friend should at once consider the toll clause, which toll clause is in effect the clause I complain of as relating to the objectionable passage in the preamble of the Bill. Now they have proposed their toll clause; I do not propose to comment on that toll clause, or to show to you by evidence or argument that the toll clause itself is an improper one; that it is inartificially constructed; that the toll they propose can never be levied. I do not propose to use any argument of that description, because when I have told you that *we cannot, as appears to us, on great deliberation, pay any toll beyond the threepence which we have already contracted to pay*, we knowing that upon that present agreement, to which, notwithstanding, we must abide, because it is an agreement we have made and entered into; we knowing on that present agreement we are losers, and that to no inconsiderable extent; we knowing that we cannot maintain our present rates of fare, probably not even with that toll, certainly not if that toll is to be increased, what is the position in which we find ourselves? My friend has told you candidly enough, and truly enough, if their toll, which they ask of you under the present Bill, should be raised beyond what would be necessary, as he says, to construct the line, the Dover and Brighton lines would come to Parliament with a proposal for a new London terminus, and so compel them to lower their rates. Now that phrase of my learned friend is an important one; it is perfectly true and just. No doubt they would come to Parliament; no doubt they would be authorised to come to Parliament for that purpose; but if those two lines, and if the Croydon line were now to appear before this Committee for the purpose of disputing this toll clause, whether it be a penny or a farthing, by making themselves parties to the decision of this Committee, they might hereafter be thought in some measure to be so far implicated in the passing of this Act as to be hampered in future proceedings. That they are most anxious, not only for their own sakes, but for the sake of the public, to avoid; they think, therefore, that the Committee having determined to pass the Greenwich Bill, and having determined to pass it for the purpose I have already dwelt on, somewhat, perhaps, at too great length, it may be fairly left to the Committee to complete the Bill, so as to render it sufficient for the accomplishment of those objects. They think so, and amongst other things they have no doubt that the Committee will adjust the toll clause, as well as the other clauses of the Bill. They, therefore, with great respect to the Committee, think they ought not to interfere in that discussion; because as they feel they know their own case, as they feel that they cannot pay a larger toll than they have already agreed to pay without further impositions on the public, which they think improper, and *without a loss to themselves, which they cannot sustain*, they therefore think that the course *which is imperatively marked out for them by the facts is to abstain from interfering in the discussion.* That is the course which they think they ought to adopt. They do not, therefore, point out to this Committee any of the defects in the clauses of the existing Bill; it is not necessary to point out those defects to you, because you will see that such defects are remedied; *you will see that the Bill shall be such as to carry out the objects you had in view when you passed the preamble.* They feel themselves, therefore, called on to keep themselves completely clear from anything that might be construed into a contract or undertaking from any interference in passing this Bill, by which they might be considered parties to it. They know that if an additional toll be levied on the passengers on the Croydon line, that it is quite impossible that they should be enabled to carry on their business to the public advantage, and so as to reap the necessary profit to themselves to enable them so to carry it on; and they therefore desire to retain to themselves the position which they now occupy, that is to say, the right of making any applications to Parliament hereafter for the public convenience, and for their own convenience, to enable them to carry on their own works with profit to themselves and with advantage to the public. • • •

"We wish to deal as fairly both with the Committee and the Greenwich Railway Company, as it is possible for us under these circumstances to do. Our object is not so to mix ourselves up with the Bill, as to commit ourselves to the payment of tolls which may end (I will not use strong language, I will not say ruin to the Croydon Company), which may end in such serious embarrassments to the Croydon Railway; they cannot involve themselves in any such liability. Under these circumstances we are perfectly content to leave the future fashioning of this Bill to the care of the Committee; and the Greenwich Railway Company must be responsible for taking the Bill from the hands of the Committee. We are perfectly certain you will see your objects are carried out. What we want to do on the present occasion is to retire from the Committee without having in the least degree committed ourselves so as to change in the least the position we occupied when we entered the room. I am sure the Committee will feel that we are entitled to have a minute of what is stated on behalf of the Croydon Railway, as well as on behalf of the Brighton and Dover, entered on the minutes of the Committee; it is a matter we are clearly entitled to, and which can be done, because a short-hand writer's note has been taken of what has passed before the Committee on the present occasion, in order that if the Croydon Railway (having acted as they have done, and so fairly as they have done)—in order that they may not be damnified by any involuntary act."

The proprietors would see exactly the position in which the Greenwich Directors were now placed. They had carried the imposition of a further toll, and on the strength of that clause they had raised money to construct the new works, and on that account they were, so to speak, pledged to the increased toll. They said they had no data on which to proceed, in fact they seemed anxious to have the 4½d. toll put in force to prove that they were in the wrong. (Hear, hear.) He was sorry for it, because both Companies must in the meantime suffer a loss. The policy of the Croydon Board, was, however, to let the Greenwich Directors see that they were in the wrong, and when that had been proved to them by the best of all arguments, dear-bought experience, and when it was found by the Brighton Board, on the other hand, that the Croydon Company were not disposed to give up the advantages which they possessed, he had no doubt that if the Directors were fully supported by the present meeting and by the proprietors at large, matters would soon sink to their proper level, so that each Company should have its due share of profits, and no more. (Hear, hear.) When they had once succeeded in convincing the parties concerned that neither the one nor the other of them would be allowed to dip their hands into the pockets of the Croydon Company, and that their—he would not call it a conspiracy but their desire—to get rid of the Croydon Company, which both of them appeared to regard as a nuisance; when they found that this would utterly fail, he had no doubt that the Croydon Company would attain its proper position. (Hear, hear.) Under these circumstances it would be highly satisfactory to the Directors if the meeting would express its confidence in the policy which had been pursued in these matters. (Hear, hear, hear.) It had been alleged that the Croydon Board quarrelled with

Digitized by Google

every body, and it had been prophesied that they would quarrel with the South-Eastern Company. Now he begged to say, that they quarrelled with no body, and for this very simple yet sufficient reason, that the interests of the Croydon Company would thereby not be advanced, and because they were anxious that all the Companies should be placed upon an equal footing. (Hear, hear.) The South-Eastern Company had addressed them in a very different strain from that which had been adopted by other Companies. They had said, "we might desire a railway of our own to London, but you are there already, and we shall be happy to pay you a fair and equitable proportion of our receipts, and to enter into any arrangements that may be likely to prove mutually beneficial." It was quite impossible to quarrel with parties holding and expressing such sentiments as these, and he was happy to say that the utmost cordiality and harmony existed between the two Boards, because neither sought to gain more than they were fully entitled to. (Hear, hear.) He trusted such was the feeling of the Croydon Board, and he believed that the same was true of the South-Eastern, and he could only express a hope that the same sentiments would animate others when they saw that they would thereby best promote the interests of their several undertakings. (Hear, hear, hear.) If anything were wanting to show that the course pursued by the Croydon Directors was a just and a right course, it would be found in the expression of public opinion, as shown by the relative value of the shares at different periods. He was by no means fond of taking the fluctuations of the share-market as a rule of conduct in the management of a Company's affairs, but on looking back to the year 1839, it certainly was somewhat singular that on October 22, about the time when this contest as to tolls commenced, and when the policy of the Croydon Company was for the first time fully developed, the shares of the Greenwich Company should stand at 14, and those of the Croydon Company at 9, whereas on the 26th of February last, when the two (which was a rare occurrence) happened to be again quoted together, the Greenwich stock stood at 6¼, and the Croydon at 11¼. (Hear, hear.) He took this as in some measure a guide to the opinion of the public on the merits of the question at issue between the two Companies. He had to apologize for trespassing so long on their patience, and would conclude by once more expressing a hope, that the course followed by the Directors would meet with the confidence and secure the support of the proprietors. (Great applause.)

Mr. Mortimer inquired if it had been meant that the offer to the Greenwich Company of 6,000*l.* per annum should apply solely to the traffic on the Croydon line carried by the Croydon Company, as it was quite clear that the other Companies would abstract a portion of the traffic which was legitimately due to this Company.

The Chairman said, the point had not escaped the notice of the Directors, and although they meant the 6,000*l.* to apply exclusively to the Croydon Company's carriages, they knew that the reduction of fares, which would have followed the adoption of these terms, would effectually have prevented competition on the part of the other Companies, as of course they would not have reduced the shilling toll to enable the Brighton or South-Eastern lines to carry at lower rates than themselves.

Mr. Levy thought every gentleman present would agree with him in thinking that the answer to the Brighton Directors was a most proper answer. (Hear, hear.) Indeed it was monstrous that such a proposition should have been made to them, now that they were on the very eve of a prosperous result. With respect, however, to the Greenwich Directors, he thought the same licence should be extended to them as was claimed by the Croydon Board, when they said they had no true data upon which to proceed. He was satisfied that the Greenwich Directors would accede to any reasonable terms. They were men of the strictest honour and integrity—(hear, hear, from the Chairman,)—but he knew that the Greenwich proprietors—for he held shares in the Greenwich, and also in the Brighton line—would never consent to anything of the sort proposed. He was sorry to see so much of the time of the Croydon meetings taken up with abuse of the Greenwich Directors. (Loud cries of "No, no.")

The Chairman begged to correct the honourable proprietor. No man could entertain a deeper respect than himself for the members of the Greenwich Board, collectively and individually, more especially for the Chairman (Mr. Shadbolt), who had uniformly exhibited the utmost courtesy, and the greatest anxiety to bring the negociations between the Companies to a favourable issue. (Hear, hear.)

Mr. Levy said, the very reason adduced by the Croydon Board for refusing—and very properly refusing—the offer of a fixed sum from the Brighton Company, was pleaded by the Greenwich Company.

The Chairman said, the remark of the honourable proprietor had reminded him of an omission in his previous statement, namely, why the Croydon Directors had proposed a fixed payment. They had done so, because they had found it impossible to bring the Greenwich Board to agree in any proposition for a division of profits. The Croydon Directors were quite willing, that if by increasing the accommodation on their line, or by lowering the fares, they could attract a larger number of passengers, the Greenwich Company, although taking no part, and running no risk in effecting those improvements, should enjoy a fair proportion of the increased revenue, but this it seemed would not satisfy them. Let him take an exaggerated case more fully to illustrate the present position of the two Companies. Supposing the Croydon Company to carry in a definite period 400,000 passengers at an average fare of 1s., this would realize 20,000*l.*; then suppose the working expenses to amount to 50 per cent., there would remain 10,000*l.* to the Company. But then the toll of 3d. per passenger came in, amounting on the number supposed to 5,000*l.*, thus leaving to the Com- Company 5,000*l.* as net profit. Then suppose that by lowering the fares one-half, the number of passengers could be increased four-fold, the receipts would in that case be 40,000*l.*, or after deducting 50 per cent. for working expenses as before, 20,000*l.* But the toll upon this increased number carried, would, at 3d. each, just be 20,000*l.*; so that instead of the 5,000*l.* derived as net profit from the smaller number, the Company would positively receive nothing from the increase of traffic induced by the lowering of the fares. (Hear, hear.) Such was the inevitable effect of a fixed toll per passenger. (Hear, hear, hear.) The Croydon Directors were willing to participate with the Greenwich Company in any benefit that might be derived from an increase of traffic, provided they would be satisfied with what was their fair proportion. They had no desire, he would repeat, to abuse them. Far from it. On this question of the toll, the Greenwich Board unfortunately were prejudiced, and so perhaps were the Greenwich proprietors; but so satisfied was he that the Croydon Company were only asking for what was right, that he was sure they would ultimately succeed in securing it. (Hear, hear.)

Mr. Smyth said, he was a large holder of Greenwich shares, and for his own part he quite approved of the course which the Croydon Directors had pursued. (Hear, hear.)

Mr. Cooke was satisfied that no one could have watched the conduct of the Directors during the last six months without awarding them the highest credit for the course they had adopted. (Hear, hear.) This was almost the first meeting at which he had witnessed an unanimous feeling among the proprietors, and as to the Directors they had acted with so much integrity, and so much firmness, that there was little room to suspect that they would hereafter swerve from the interests which they had been appointed to protect. (Hear. hear, hear.) At first he had been disposed to think that one item of the further capital about to be called for was unnecessary, but the explanations that had been given satisfied him as to the propriety and policy of having a terminus nearer to the west-end of the metropolis. (Hear, hear.) When they saw that the increased Greenwich toll was likely to destroy, or nearly so, the Croydon Railway, he though the plan contemplated in respect of the Grange-road was most judicious. (Hear, hear.) The Greenwich Company had a perfect right to go to Parliament—(hear, hear, from the Chairman)—and they had a perfect right to ask for a remunerative toll, but the question was what that remuneration ought to be. He thought that it would be much better that they should have three three-pences than two fourpence-halfpennies; and he ventured to express a hope that the Greenwich Directors would speedily see what was their true interest in that respect. With regard to the mode in which the Directors had treated the proposition of the Brighton Board, he thought they were entitled to the very highest praise. (Hear, hear, hear.) A more monstrous proposition could not, in his opinion, have emanated from a public body. In everything the Croydon Directors had shown themselves most watchful of the interests of their constituents, notwithstanding that their own individual interests, as large holders of shares, might have been promoted by a different course of conduct. (Hear, hear.) He begged, therefore, to move that the best thanks of the proprietors be given to the Directors, for the attention, perseverance, and good management which they had displayed in the conduct of the Company's affairs during the last six months. (Applause.)

Mr. Levy seconded the motion.

Mr. Ricardo fully concurred in all that the honourable proprietor had said, but he did not consider the motion specific enough. He thought they ought to give an express and decided opinion as to the course which had been pursued by the Directors with respect to the other three Companies, and perhaps such an expression of feeling would best emanate from him as the largest shareholder in the Company. (Hear, hear.) He was sure that the Directors in their arrangements with other Companies, were desirous only of what was likely to prove mutually beneficial, and therefore he would move, "That this meeting fully approves of the policy pursued by the Directors with regard to the proceedings they have adopted in respect to the South-Eastern, Brighton, and Greenwich Companies, and hereby expresses its perfect confidence in the conduct and management of the questions now under consideration with those Companies." (Applause.)

Mr. Cooke said, he had no object but to express the feelings of the proprietors, and therefore would at once withdraw his motion in favour of the more specific one now presented. (Hear, hear, hear.)

Mr. Ricardo's motion having been seconded by Mr. Knight,

The Chairman said, the Directors did not ask for this vote simply as an approval of the course which they had pursued, but because they thought its results would be useful to the proprietors themselves. The Directors hoped that by a firm, and at the same time a conciliatory policy—by showing that while on the one hand they asked for nothing to which they were not justly entitled, so on the other they were resolved to keep what was legitimately their due—they hoped that by such a policy as this they would secure the support of all honest men, and at the same time promote those interests which they were placed there especially to guard. (Much applause.)

The motion was then carried unanimously.

Mr. Barclay suggested that the correspondence as read should be published.

The Chairman said, copies would be handed to the Editors of the Railway papers, as the most effectual and most ready means of giving publicity to the matter, for he supposed there was scarcely any railway proprietor who did not see the one or the other of these journals—at least who ought not to do so. (Hear, hear.)

After some further conversation,

Digitized by Google

The Chairman said, it would perhaps be interesting to the proprietors to be informed of the results of the last half-year's working of the line. The duty paid to the Government for the six months ending February, 1841, had been 674*l.* 12s. 9d., whereas for the six months ending February last it had amounted to 687*l.* 11s. 3d., thus showing that, in spite of their disasters, they had carried a larger number of passengers. There had, however, been a falling off in the Greenwich toll to the extent of 425*l.* 6s. 8d., and, while the number of passengers carried to London Bridge had been diminished by 32,000, the increase upon the whole line had been 32,292, thus showing that they had upon the whole carried 292 persons more than during the corresponding period of the preceding year, while the number of passengers from New Cross, from which point low third-class fares were adopted, was increased by 30,000. (Hear, hear, hear.)

Mr. Pare inquired what was the expense of the locomotive power per mile.

The Chairman said, they could not at present state precisely what it was. The arrangement with the South Eastern Company would however necessarily lead to the greatest exactitude on such points.

Mr. Whiskin took an opportunity of returning thanks for his re-election.

Mr. Capel said, that Mr. Ricardo's motion, although most suitable for the occasion, was so far imperfect, and therefore he would move, that the best thanks of the proprietors be given to the Directors for their indefatigable services during the last six months. The duties which they had discharged were most onerous, and could not be too warmly acknowledged. (Much applause.)

Mr. Knight seconded the motion.

Mr. Pare fully concurred in what had been said as to the Directors, but as it was likely that on the passing of that vote the meeting would break up, perhaps it would be desirable that Mr. Cubitt should first give them some information as to the slips. (Hear, hear.)

Mr. Cubitt said, he had not come prepared to make any formal Report, and as he was not used to public speaking, probably any information required would be best elicited by specific questions.

Mr. Capel would inquire, therefore, if the slips were such as could have been foreseen or guarded against?

Mr. Cubitt said, he certainly had not foreseen them, and they could have been guarded against in no other way except in having had additional land at first, and the want of which had so much increased the delay and expense arising from the slips. He had been called in on the morning after the first slip had taken place, and he had concurred with the Directors that the first consideration was the public safety, the next the public accommodation, and the third the interest of the Company. They had not been able to remove the slip from the top, but had been compelled to work from the bottom, which, as the trains were regularly running, was a somewhat tedious and expensive process. Under these circumstances, it would have been impossible to let the work by contract, so as to provide for the public safety, and hence in the first instance every considerable expense had been incurred. The line had been clear for some time, and his advice had been acted upon by the Directors, namely, to let out the work by contract. At present they could not procure sufficient land to increase the slopes, but he made no question that the Railways' Regulation Bill now before the House of Commons would provide against that inconvenience. (Hear, hear, hear.) At present the work was done by contract.

Mr. Pare wished to know whether the proprietors were to understand that Mr. Cubitt was waiting for the passing of the general Bill, in order to enable him to carry out his object.

Mr. Cubitt said he was not waiting, as the work was now in hand.

Mr. Pare understood that the removal of the slips, and of their effects, could not be completed until the general Bill had passed into law.

Mr. Cubitt signified his assent.

Mr. Bold thought the question had not yet been answered as to whether the slips could have been foreseen or guarded against.

Mr. Cubitt said, the slips might have been prevented if, in the first instance, the slopes had been three times more flat, but then the amount further chargeable to capital would have been as large as the additional expense which these slips had occasioned—if not larger.

A Proprietor said, a friend of his, an eminent botanist, whose name, however, he was not at liberty to mention, had told him that a Scotch shrub, called, he believed, *ononis*, was admirably adapted for such cuttings, as it struck its roots very deeply. The same party had offered to plant it gratuitously on a portion of the Great Western line.

Mr. Cubitt said, no planting that could have been made since the opening of the railway could have prevented the slip or slips. A mass of hill side to the thickness of 50 or 60 yards, and which had stood the experience of two years, had, by the incessant rains become so thoroughly soaked, that it was impossible it could keep its position any longer. In fact it became a sort of pudding or dough, and no planting could have prevented the slip; nor had there been any means of evading it, except by incurring an expense for the purchase of land—which expense would have been fully as large as that now incurred. It was now proposed to flatten the slopes. The whole additional expense from the Dartmouth Arms to New Cross would not exceed 30,000*l.*, making a further expenditure (included in the former sum) of about 7,000*l.* or 8,000*l.*

Mr. Knight presumed, therefore, that Mr. Cubitt did not anticipate any further expenditure than the sum named, on slips?

Mr. Cubitt—Certainly not.

Mr. Goodall said, reference had been made by the Chairman to a chemical decomposition of the materials of the banks. Now, he would ask whether they were not exposed to similar contingencies hereafter. He referred to this point particularly because he had that morning travelled by the Brighton line, and had witnessed the present condition of the Earlswood embankment, which he believed was composed of somewhat similar materials, but which, although an embankment, was not yet settled.

Mr. Cubitt said, in order to guard against such a contingency they had laid at the bottom of the bank a heavy footing of ballast, sufficient to bear up against the fluid or semi-fluid mass from above. As yet this plan had been found sufficient.

Mr. Bold said he should have been glad to second Mr. Capel's motion if it had not been previously seconded. The Chairman had referred to the zealous labours of the officers of the Company by night and day, although he had modestly said nothing of the labours and anxieties which himself and his colleagues had undergone. (Hear hear, hear.)

The motion was then carried by acclamation.

The Chairman in returning thanks said, it happened unfortunately that his position forced him to take a prominent part at these public meetings, and hence it had been said that he was an autocrat among his co-Directors. Now he would appeal to his colleagues whether the greatest unanimity had not at all times characterized their proceedings as a Board. (Hear, hear, from the Directors.) He must say that although he had perhaps expressed his sentiments with more energy than some persons would have done, he had never forced them upon his colleagues, and he had at times met with opposition to his views to which, as in duty bound, he had cheerfully yielded. He would repeat that as much harmony and concord had distinguished the proceedings of the Board of Directors as he was happy to find had been exhibited at the present meeting. (Hear, hear, hear.)

A long and very desultory conversation followed with referrence to the Company's Bill now before Parliament. Mr. Adams contended that it ought to be at once submitted to the proprietors, and not to be deferred till it had reached the House of Lords. Several proprietors thought such matters had better be left to the judgment of the Directors.

The Chairman said, a special meeting should be be called as soon as possible—he could not say how soon, but he would pledge himself that the proprietors should in no respect be committed by any proceedings taken in the interim.

Mr. Capel, in very complimentary terms, then proposed the best thanks of the proprietors to Mr. Cubitt, the Consulting Engineer, Mr. Gregory, the Resident Engineer, and the other officers of the Company.

The motion having been seconded,

The Chairman said, he had great pleasure in bearing testimony to the extraordinary kindness and attention shown by Mr. Cubitt on all occasions. He and his colleagues had leant upon Mr. Cubitt as upon a rock. Had it not been for the sanction of Mr. Cubitt's name, their difficulties would have been much increased. (Hear, hear.) For himself, he placed the most implicit confidence in Mr. Cubitt's judgment, and when that gentleman had once undertaken the matter, all care was removed from his (the Chairman's) mind, save as to the accommodation of the public. (Hear, hear, hear.) With respect to the officers of the Company, he could only repeat what he had already said, namely, that all of them had exerted themselves to the utmost. (Hear, hear.)

The motion was carried by acclamation.

Mr. Cubitt returned thanks for himself and those with whom his name had been associated. It was principally (he said) to their exertions that the success of his plans was to be ascribed. For himself, he should feel a pleasure and a pride in devoting his best services to the Company, while his connection with it continued. (Applause.)

The meeting then broke up.

DUBLIN AND DROGHEDA RAILWAY COMPANY—GENERAL MEETING.

On Thursday, March 3, the half-yearly meeting of the above Company was held at their house, Marlborough-street, Dublin, for the purpose of receiving the Report of the Directors, a statement of the accounts, and electing six Directors in the room of those who retired from the directorship in rotation.

Shortly after one o'clock, George Alexander Hamilton, Esq., was called to the chair.

Mr. Eckersley read the Report of the Directors.

Mr. Kidd read the statement of accounts.

Mr. Eckersley also read Mr. Macneill's Report in reference to the progress of the works upon the line.

Mr. Miles O'Reilly proposed the first resolution, which was to the effect—that the Report be printed, and the half-yearly statement of the accounts, as audited, and the Engineer's Report, be appended thereto, and circulated for the use of the shareholders. He was quite sure that every gentleman who heard the Report read was highly gratified at the way in which the affairs of the Company were conducted, and that the concern was placed in very excellent hands. (Hear.) He felt bound to say that every Report which had been within his experience presented for the consideration of the Company was highly satisfactory. He had, therefore, great pleasure in proposing the resolution entrusted to his care. (Hear, hear.)

Mr. Purcell seconded the motion.

Mr. Charles Hayes said, that before the sense of the meeting was taken in reference to the resolution, he felt himself justified in offering a few observations to the proprietors. (Hear, hear.) He had originally opposed the establishment of the railway to Drogheda, because it was about being conducted under circumstances of which he did not approve, and because he anticipated objections to it, which he had with regret, seen in some degree verified. When the proprietors had paid 5*l.* or 10*l.* upon their shares, he opposed the formation of the railway under the impression that it would not be then prudent to persevere in the undertaking: but he now considered that the circumstances of the case were greatly altered, and that the Company were so identified with the railway and its success, that they should proceed with it vigorously. Actuated by these feelings, he attended there that day to give his humble support to the undertaking. He had examined the accounts of the Company, as might be perceived from his name being affixed to the document, and they had given him great satisfaction. (Hear.) He had been requested to move the adoption of the Report, but as there was a portion of it which did not meet with his approbation, he thought it right, with the same spirit of straight-

Digitized by Google

forwardness and candour with which he now supported the Company, having previously opposed them, to decline proposing a Report, to which he could not assent in all its details. (Hear, hear.) The part of the Report to which he alluded, and of which he did not approve, was that in reference to the extension of the Drogheda Railway to meet the Ulster Railway. He thought that the Drogheda Railway Company should have no connection at present with the Ulster Railway. They had business enough upon their hands, and when the business was completed, or nearly completed, they might then take into consideration an extension of the contemplated line of railway, but not till then. They should bear in mind that their shares, upon which they paid 30*l.*, were now at a discount of 15*l.*, and it would be extremely injurious for the Directors to proceed upon new lines of railway, and increase their responsibility, in the face of that discount. He opposed the construction of the railway originally upon the ground that it would be imprudent to go on with works while the shares were at a discount, and he now objected for the same reason to their increasing their responsibilities by the proposed extension of railway communication to Belfast. He should, in conclusion, observe that the project of making a line of railway to Drogheda, had now his hearty concurrence, and he could not sit down without stating that he and his brother Auditor received from the accountant or book-keeper of the Company, as well as from Mr. Eckersley, the most particular and explicit attention and information, while engaged in inspecting and auditing the accounts. (Hear.)

The CHAIRMAN observed, that the Company were not called upon to risk anything as regarded the extention of the railway; but the Directors thought it their duty to refer the matter in their Report for the information and satisfaction of the proprietors. As a matter of course, if the Government proposed adopting any measure for the establishment of railways in Ireland, which would be likely to effect the interests of the Company, a meeting of the proprietors would be immediately called to take the subject into their consideration. (Hear.)

Mr. HAYES said, that the explanation given by the Chairman was quite clear, so far as the Directors were concerned; but if the Report were adopted, a reference would be made to it at any future meeting as a proof that they had sanctioned and approved of the proposed extension of the railway to the Ulster line. This was the reason that he was opposed to the paragraph in the Report.

Mr. MOONEY remarked that the extended line would be carried on under the auspices of a new Company. If no exertion were made by that Company to originate a body who would carry on the project, competitors might appear; and it was a great inducement to them to undertake the matter, as Government had pledged itself that if they took up the project no competing Company should meet with their sanction. No proprietor was bound to incur any responsibility by the extended line of railway; he might join the new Company if he thought proper so to do, or continue connected merely with the Drogheda Railway Company.

Mr. HAYES said, he believed that Mr. Mooney was mistaken in his statement. He understood that the Company should advance 300,000*l.*, whereupon Government would advance a similar sum, and on the payment of 150,000*l.* the Company would receive certain privileges.

Mr. ECKERSLEY said, that Mr. Mooney was incorrect in his statements, and that Mr. Hayes was incorrect in his impression of the facts of the case—namely, that the Company would be connected and identified with the extension to the Ulster line.

Mr. HAYES remarked, that if the proprietors were not committed by the Report as regarded the extended line, he would most zealously support the Report, but he would not commit himself to anything farther than the Drogheda line of railway. (Hear.)

Mr. HODGES said, his view of the case was, that it was optional with a proprietor to take shares in the new project.

Mr. HAYES asked, if this were the case, at whose expense were the deputation sent to Newry? Was it not at the expense of the Company? And he, for one, thought that if they were to be saddled with expenses of that description, their funds would not be applied to the purposes for which they were intended. It was his wish that every irrelevant topic should be avoided in their discussion that day; but he had been forced to make the observations with which he had troubled the meeting.

Mr. ECKERSLEY said, that the feeling of the Directors was, that any discussion upon the subject now would be premature; but they felt it their duty to introduce it into the Report to give the proprietors an opportunity of maturely considering it—(hear, hear.)—and when the time came he thought it could be proved that an identification of the extension line with their own would greatly promote their interests.

The CHAIRMAN said, that it was the duty of the Directors to put the proprietary in possession of the project. They wished to deal with them in an open and "above-board" manner; but they did not intend that any man should be committed in any measure to the proposed extension of the railway without his consent. (Hear, hear.)

Mr. HAYES said, that the Chairman knew perfectly well that the Report could be referred to by any future meeting as a proof that the proprietors had acquiesced in the project.

The CHAIRMAN said, that the document could not be referred to for the purpose of binding or committing any proprietor to the project, inasmuch as they did not adopt it, but merely resolved to print and circulate it for the use of the proprietors. (Hear, hear, hear.) The Directors would act unworthily, indeed, if they sought to entrap any proprietor. (Hear, hear.) The project was in embryo, and nothing practical would be done in it without the knowledge and concurrence of every proprietor. (Hear, hear.)

Mr. BRODIGAN said, that the depression in the price of shares was common to every railway undertaking. It was not felt by the Drogheda Company more than by any other in the same state of progress; on the contrary, he might say that their shares were less depressed. (Hear.)

Mr. HAYES said, he did not wish to make any other observation in reference to the subject; but he did not think that even the remark made by Mr. Brodigan was sufficient to induce gentlemen who had paid 30*l.* for the shares which were now only worth 15*l.*, to incur any further liability in a new undertaking.

The discussion then dropped.

The CHAIRMAN put the resolution, and it was adopted.

Mr. HODGES then moved that the registry of the proprietors be sealed, and adopted as the registry of the Company.

Mr. WRIGHT seconded the motion, which passed.

Mr. JOSEPH SCOTT moved that the following gentlemen be elected Directors for the ensuing year:—

Thomas Brodigan, Esq., Piltown, Drogheda; Joseph Pasley, Esq., North Frederick-street, Dublin; George Hoyte, Esq., Sackville-street, Dublin; David Scott, Esq., Manchester; Samuel Horne, Esq., Manchester; Joseph Owen, Esq., Manchester.

Mr. RICHARD HILL seconded the motion, which passed.

Mr. HOYTE moved that the declarations of forfeiture of the several shares in the capital stock of the Company (which were specified) be confirmed, and the Directors authorised to dispose of the shares so forfeited.

Mr. BALL seconded the resolution, which was adopted.

Mr. BRODIGAN proposed a vote of thanks to the late Auditors, Charles Hayes and Francis Purcell, Esqrs., for the services rendered by them to the Company.

Mr. ECKERSLEY, in seconding the motion, said that the Auditors were eminently entitled to the gratitude of the Company.

The resolution was then cordially and unanimously adopted.

The next resolution was, that Joseph Scott and Henry Mooney, Esqrs, should be appointed Auditors for the succeeding half-year.

Mr. HAYES suggested the propriety of adding Mr. Purcell's name to the number of Auditors, as it was advisable that an outgoing Auditor should give the incoming Auditors the benefit of his experience and advice (Hear, hear).

The CHAIRMAN expressed his approbation of the suggestion, and observed that public confidence in Companies was always created by the critical auditing of their accounts, and the facility of every proprietor to inspect them (Hear, hear.) This was the case in the Company's office: their accounts were critically examined before the audit, and the books were open to the inspection of every proprietor. (Hear, hear.)

Mr. Purcell's name was added to the list of Auditors, and the resolution carried.

Mr. HAYES then moved that a vote of thanks be passed to Mr. Eckersley, the Managing Director, and Mr. Kidd, for their services during the half-year. He was sure that the motion would meet with the concurrence of the meeting, as the gentlemen alluded to were well deserving of their gratitude. (Hear, hear.)

Mr. PURCELL seconded the motion, which was adopted.

Mr. ECKERSLEY, in returning thanks, said that the affairs of the Company were in a very satisfactory condition. At the same time he would not feel satisfied at the progress of the undertaking until the Company were able to give 6 or 7 per cent. each half-year as a dividend; and he felt convinced that the day would arrive when they would be enabled to give such a dividend (Hear, hear).

Mr. KIDD also returned thanks for the compliment paid him

Mr BOLTON proposed a vote of thanks to Mr. Macneill, the Company's Engineer, for his valuable services.

General LUSCOMBE seconded the motion, which was enthusiastically adopted.

Mr. MACNEILL, in expressing his thanks for the honour paid him, said he would, by a careful and assiduous attention to the works of the Company, merit a continuance of their kindness. (Hear.)

Mr. SCOTT proposed a vote of thanks to the Chairman and the Directors.

The resolution, having been seconded by a proprietor, was adopted.

The CHAIRMAN said, that the Directors had only discharged their duty in attending assiduously to the affairs of the Company; and they regarded themselves as trustees, who were bound to discharge their duty with fidelity, assiduity, and care. The prosperous state of the Company afforded him great satisfaction; and he hoped to be able to announce, before many more meetings of the proprietors were held, that the railway was opened to the public. It would be extremely satisfactory if the proprietors were to inspect the works themselves, and see the progress made in them. He had been at Killester; and he was delighted to see hundreds of men at work there; the order and the system observable in their labours was the source of great satisfaction to every man who was acquainted with the unemployed labourers in Ireland. (Hear, hear.)

Mr. BOLTON moved that the cordial thanks of the meeting be given to the Rev. Mr. Taylor and Mr. Hamilton, for their liberality in permitting a portion of the Drogheda line of railway to run through their demesnes, which has saved the Company great expense; no less a sum than 10,000*l.* had been saved to the Company by the liberality of these gentlemen. (Hear, hear.)

General LUSCOMBE seconded the motion, which was carried with acclamation.

The CHAIRMAN said, he did not deserve the compliment paid to him, but it was difficult to estimate the sacrifice made by the Rev. Mr. Taylor. When he found that the Company would be saved upwards of 9,000*l.*, he gave permission to Mr. Macneill to remove nearly the whole of a young plantation of trees, which he had watched and cultivated with the care and anxiety of a planter. (Hear.)

Shortly afterwards Mr. Hoyte was called to the chair, a vote of thanks passed to Mr. Hamilton, and the meeting adjourned.

[The Report and Resolutions will be found in our advertising columns.]

ACCIDENT ON THE ULSTER RAILWAY.—On Friday last, as the four o'clock train from Seagoe was approaching Moira, an incautious and apparently reckless man, who was a passenger in one of the third-class carriages, clambered out of the carriage in which he was, and, at great risk, got upon the top of one of the second-class carriages. The outside guard, who was on the adjoining carriage, observing this, got on the top of the carriage on which he had been seated, and moved towards the man referred to, with the view of cautioning him of his danger, or taking some means for his safety. While the guard was standing on the roof of the carriage, and his attention was occupied with the man, he did not observe that he was approaching a bridge or viaduct which crosses the way; and the train being in full motion, the bridge struck his head, and drove him into the next carriage, fracturing his skull severely. Surgical aid was obtained as soon as practicable, and a special train was dispatched to convey him to the Lisburn Infirmary. From the accounts of the injury sustained by him there can be little doubt that he is dead before this time. The man who was the occasion of this lamentable occurrence is in custody.—*Northern Whig.*

NOTES TO THE TRAFFIC TABLE,

(On the opposite page.)

2. *Minus* toll to London and Birmingham 32*l.* 2s. 3d.
3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.
4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*
8. Receipts include the Northern and Eastern toll, &c.
9. Goods and Sunday Trains not yet commenced.
12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)
14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The rent of the branch lines is together 903*l.* 16s. 11d. per week.
16. The 00*l.* 0s. 0d. from goods, &c. is for toll only.
17. Ten per cent. is the maximum dividend allowed by the Company's Act.
18. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.
19. The dividend is from the opening, and on the old shares alone.
20. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (1,640), 55*l.* 5s. 11d.; goods (196 tons), 16*l.* 16s. 8d.; total, 71*l.* 16s. 7d.
21. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.
22. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.
23. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.
24. Including Toll, &c., from Sheffield Company.
25. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.
26. The 4,133*l.* 9s. 1d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.
27. The receipts for goods, &c., include, carriages, 54*l.* 1s. 0d.; horses, 60*l.* 5s. 0d.; dogs, 1*l.* 2s. 6d.; parcels, 196*l.* 4s. 4d.; cattle, 46*l.* 8s. 6d.; corn, 9*l.* 19s. 8d.; heavy goods, 486*l.* 1s. 3d.; coal, 104*l.* 2s. 1d. — Total, 958*l.* 4s. 4d.
30. The details of the receipts are as follows—Passengers, 1,944*l.* 0s. 1½d.; parcels, carriages, horses, and mails, 260*l.* 1s. 1d.; merchandise, 1,229*l.* 11s. 5d.; minerals, 237*l.* 1s. 10d.; cattle, 43*l.* 16s. 7¾d.—Total, 3,714*l.* 11s. 1½*l.*; including North Midland proportion of Manchester and Leeds traffic, amounting to 114*l.* 12s. 6½d.
31. The receipts are after deduction of Leeds and Manchester toll.
32. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.
33. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).
34. The returns are inclusive of Manchester and Birmingham toll.
36. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED LAST WEEK.

Birmingham and Gloucester Railway.—*Week ending February 25, number of passengers,* 4,747*; receipt from passengers* 1,194*l.* 5*s.* 8*d.*; *goods &c.,* 255*l.* 11*s.* 10*d.*; *total,* 1,449*l.* 17*s.* 6*d.*

Brandling Junction Railway.—*Week ending February 26th, number of passengers,* 9,024*; receipt from passengers,* 353*l.* 10*s.* 0*d.*; *goods, &c.,* 520*l.* 14*s.* 9*d.*; *total,* 874*l.* 4*s.* 9*d.*

TO CORRESPONDENTS.

The Junction of the Manchester Railways.—*In the reply of the Leeds Directors, inserted in our Supplement of last week, there was, at page 280, an error of some consequence. Instead of "between Liverpool and the manufacturing districts," it should have been the "Manchester district." The passage should read thus:—"Although the discovery of this misconception destroys the whole argument of the Liverpool Directors on this subject, it does not at all affect the conclusion drawn by the Chairman of the Leeds Company, viz., that if the statements of traffic on which the Liverpool Directors relied were correct, say 62,000 tons per annum, the existing traffic between Liverpool and Yorkshire did not exceed* one-tenth *of the traffic between Liverpool and the Manchester district, which is in this report admitted to be 375,000 tons per annum in* one direction, *and is therefore probably not less than 620,000 tons in both directions."*

Liverpool and Manchester Railway.—*We have perused the correspondence that has passed between Mr. Benton of Manchester, and Mr. Booth and Mr. Lawrence of the Liverpool and Manchester Railway Company, respecting a money parcel lost on the railway many months ago. We have not at present room for the letters, but our opinion is, that, under all the circumstances of the case the Directors would do well to reimburse Mr. Benton's loss, notwithstanding that they are not compelled by law to do so. The letters are left in the publishing office, Fleet-street, for Mr. Benton, and shall be forwarded, if desired.*

We feel much indebted to Mr. Bernard, of Cardiff; he will see that his suggestions have been attended to.

Mr. W. B. W.—*The system of cogs was one of the first things suggested, but was abandoned as totally useless. Mr. W.'s friend is quite right.*

One of the Fleeced *complains of the prices at the Swindon refreshment station, on the Great Western Railway, inasmuch as (he says) "they charge* 1s. *for a cup of coffee with a Vauxhall slice of bread and butter;* 1s. 6d *for a basin of soup, not so large as a breakfast cup; and* 3d. *for a Banbury cake (probably less than half an ounce weight), which at* 1d. *would render a profit of cent. per cent." Our correspondent suggests that the Directors should lower the rent of their canteen, if it be that which leads to the heavy charges to which he refers. If not, he contends, the Directors ought to interfere.*

F.'s *case is by no means a singular one. We have seldom known a correspondent who did not deem himself "ill-treated," if, from any cause, his communications were rejected. We cannot help it.*

"What to teach, and how to teach it."—*We have to acknowledge the receipt of Part I. of a treatise under this title, on the principles and means of intellectual education. It is extremely well written, and developes not a few views, the novelty of which is the least of their recommendation. The publisher is Smith, 113, Fleet-street.*

A Constant Reader *on the Croydon Railway, will find some information elsewhere on the subject of certain points of his letter. The discussion of the other points would, we conceive, be premature: but we shall be glad to hear again from our correspondent at a less busy season.*

The statement from Sheffield with respect to a recent law case, is totally inadmissible.

A. B. C., *a Greenwich proprietor strongly urges upon his Directors "to be firm, and not listen to any proposition for an abatement of the toll the Company has a right to." We are sorry we have not room for his letter, but the above is the pith of it.*

Eastern Counties' Railway.—*The letter of an* Investment Proprietor of upwards of 500 Shares, *as soon as possible.*

Jacob *wishes to know who the parties in England are that are connected with the railway that is about to commence in Russia, from St. Petersburg to Moscow. Also, who the parties in this country are that are connected with those railways that are about to be undertaken under the Prussian and Austrian Governments.*

If A Holder of Shares *will look at the note in the Traffic Returns, he will find the information required.*

The extreme pressure occasioned by the length of the Croydon meeting, (occurring too at so late a period of the week) has compelled us, very reluctantly, to displace one or two original articles, many letters, and several country meetings, besides, our Parliamentary and law notices, all of which were intended for this number. We hope our correspondents generally will accept this notice, and acquit us of inattention to their communications.

To-day we have transferred to a preceding column the "Notes" to the Traffic Table—an arrangement which has left us room to add to these notes, and likewise to enlarge the Share List. We have, moreover, at the suggestion of several correspondents, placed horizontal lines at intervals between the "returns," so as to enable the eye more readily to catch the different items. Any suggestion for the further improvement of these lists shall be duly attended to.

THE RAILWAY TIMES.

SATURDAY, MARCH 12, 1842.

We once more call the attention of our readers to the important subject of railway communication with Scotland. As long since as February 1838, we urged the following question, "how can this great object be best, most easily, and most securely effected?" The same question is still agitating the public mind, although the Commissioners appointed by Government to inquire into the subject partly supplied an answer by their Report of the 15th March, 1841, in which they recommended the western line from Lancaster by Penrith, Carlisle, Lockerby, and Symington to Glasgow, with a branch from Symington to Edinburgh. We could have wished that Sir FREDERIC SMITH and his colleague Prof. BARLOW had also taken into consideration the most economical method of carrying out this particular project. A recommendation from these authorities for the adoption of one of the efficient plans we have already prominently brought forward in our pages, would doubtless have been attended to by the parties who are now endeavouring, by every means in their power, to carry out to a successful issue this most desirable object.

The subject before us is by no means a new one. In 1837, Mr. GEORGE STEPHENSON reported, in reference to the "Grand Caledonian Junction Railway," which, it is well known, was intended to cross Morecambe Bay by an embankment, and skirt the coast of Cumberland, as far as Maryport, there to join the railway to Carlisle, that it was the "most expeditious, certain, and safe conveyance" which could be obtained through the country; and towards the end of the following year, Mr. RASTRICK, the Engineer-in-Chief of the London and Brighton Railway, was employed to examine the same project, which had, however, then changed its title to that of the West Cumberland Railway. His Report, dated the 24th December that year, recommended that "every one interested in the prosperity of West Cumberland should exert himself in setting manfully to work to forward this project," and, in one of the concluding sentences, added, "if you do not bring forward this line of railway, and support it with all your might, West Cumberland will for ever after remain in the back settlements." Mr. RASTRICK could not possibly have made a more just remark, and which is alike applicable to the slumbering inhabitants of many other parts of the kingdom. Moreover, Mr. RASTRICK was quite aware that there was an inland line, which, taken altogether, was a much more feasible scheme, whether regarded as an integral line between Lancaster and Carlisle, or as an important link in one of the great national chains of internal communication, being by far the shortest and most direct line of the two. Now, Sir FREDERIC SMITH and the Professor, who went about their allotted task with unbiassed minds, having but one interest to serve, viz., that of the public, clearly demonstrated that the inland line was the right one, without, in the first instance,

Digitized by Google

fixing on the precise route to be taken. Two distinct inland lines between Lancaster and Penrith, were laid before them, the one passing up the valley of the Lune by Kirkby Lonsdale, Orton, Crosby, Ravensworth, and Clifton, to Penrith; and the other running altogether to the west of the Lune line, and passing near to the following places, commencing at the Preston and Lancaster Railway, viz., Bolton, Warton, Burton, Milnthorpe, and Kendal; thence by the valley of Long Heddale, and skirting the west side of Hawes Water, and continuing by Askham to Penrith.

The Commissioners, upon the whole, gave the preference to the Lune line suggested by Mr. LARMER, who had explored the whole country, far and wide, to discover the right direction; but then, Mr. LARMER's scheme did not embrace the important and flourishing town of Kendal, the inhabitants of which had for a long time busied themselves in endeavouring to get the line as near as possible to their own doors, till, finding that the Commissioners were so much in favour of the Lune project, it was suggested by some of the Kendal gentlemen, that the country lying between the valleys of the Lune and Kent, should be examined by an engineer, in order, if possible, to effect a junction between the two lines. Mr. LARMER was accordingly applied to for that purpose, and very soon discovered that a practicable junction line could be effected, leaving the Kendal line at a place called Scaltherwaitrigg Stocks, distant from Lancaster 22¼ miles, and about a mile and a half to the north of Kendal, and running by Grayrigg into the valley of the Lune to join Mr. LARMER's original line, thus connecting the northern portion of the Lune line with the southern portion of the Kendal line, and by adopting some slight modifications throughout, and an important deviation of the Kendal line at Lancaster, being somewhat similar to that proposed by Mr. WHISHAW, in April, 1840, by which the proposed tunnel under Lancaster will be avoided, and the line shortened by about two miles. This bijunct project, called by the Commissioners the "Grayrigg line," is rendered, perhaps, the best that can, by any possibility, be obtained through that rugged district. With a few trifling modifications, it forms part of one of the plans for the grand scheme between Lancaster and Glasgow, the other being by the valley of the Lune, avoiding Kendal, and which is now being surveyed under the general superintendence of Mr. LOCKE, whose notions of economical construction approach nearer to our own views than those of almost any other of the leading railway engineers, most of whom have, throughout their practice, shown a total disregard of every thing like a saving in first cost, but have rather, on the contrary, committed themselves to a most wasteful expenditure of the funds left at their disposal. We have only to express a hope that Kendal will not be left out; in other words, that the Grayrigg line will be adopted. We need not here do more than allude to the route proposed on the east coast from Darlington to Edinburgh. It is quite reasonable to anticipate, that if railways are henceforward constructed at one-half the hitherto extravagant cost per mile, there will, ere many years shall have elapsed, be not only a western, but also an eastern railway route to Scotland.

At present, however, we cannot do better, provided that the parties in the west are determined on having their railway constructed in the most economical manner, than recommend, most strenuously—notwithstanding the prediction of the Chairman of the York and North Midland Railway, that "the western line will not be carried out,"—the primary grand trunk line from Lancaster, by Kendal, Penrith, and Carlisle to Glasgow, as being altogether the one best suited in the first instance to serve the interests of the public; and we trust that all those capitalists, intending to support a line to Scotland, and who are not wedded by peculiar ties to the rival scheme, will at once come forward to effect this national object. We would at the same time suggest the propriety, nay, the absolute necessity, of every subscriber to the project inquiring for himself, whether Mr. LOCKE has maturely considered the plan of working the traffic by single lines, aided, of course, by the electro-galvanic telegraph. We should be glad to find Mr. LOCKE's views on this important subject embodied in a Report to be at once laid before the railway community, as we are satisfied that were the plan of Telegraphic Railways once practically carried out on so important a route, the railway system would within a few years be extended into every district of the United Kingdom.

In examining the section of the Grayrigg line, as submitted to the Commissioners, we find the ruling gradient to be 34 feet per mile, whereas if the gradient of 52.80, or 1 in 100, were here and there substituted, a considerable saving would be effected in some of the heaviest earthworks, particularly the summit tunnel cuttings, which are upwards of 90 feet in extreme depth. Moreover, by this alteration, the tunnel shafts would also be decreased in depth.

The cost of the whole line from Lancaster to Glasgow and Edinburgh, although intended by the present plan to have a double way throughout, is only estimated at and after the rate of 16,000*l.* per mile; but if the single line plan, with sidings at every quarter of a mile, be adopted, the whole cost per mile, including the stations, and the locomotives and carriage stock, with every appurtenance for the effectual working of the railway, may safely be put down—nay, many persons would be ready to undertake it—at 14,000*l.* per mile. If the cost of stations, and of completely furnishing the railway with every requisite for carrying on the traffic, be added to the already low estimate for construction, &c. alone, the gross cost per mile cannot be set down at less than 20,000*l.*, so that a saving would accrue to the shareholders, by the adoption of the plan we earnestly recommend, of not less than one million two-hundred-and-fifty thousand pounds—*enough in truth, to construct and furnish upwards of eighty-six miles of railway!*

Our remarks as above having chiefly applied to the western line, we would not be understood to wish to damp the ardour of those who are endeavouring to effect nearly the same end by a different means; but as we are fully aware that the Engineers of the eastern scheme are so wedded to the double way constructed altogether in the most extravagant manner, and have likewise so often expressed their opinions with regard to gradients, we despair of the lines in that direction ever being carried out, unless Engineers of much more moderate notions be employed than those who have already made their fortunes, and may take their stand on whatever ground they please. "We shall be happy [say they] to carry out your project, but you must not dictate to us as to the economy in first cost, by the adoption of steep gradients, or the necessity of adopting the single way."

If then the parties interested are ready to fall into the economical and really useful mode of effecting a communication by railway with Scotland on the east side of the kingdom, a new question at once arises, which of the two, the eastern or western route can be most economically and speedily completed—for it must be borne in mind, that the comparison made by the Commissioners with respect to the various lines submitted for their consideration, were guided by the sections laid before them? They did not consider it as within their province to recommend an alteration in the gradients. Had they done this with regard to the eastern line—we are still keeping in mind second and third class gradients—very different results would have been presented.

By the Carlisle or western route, the number of miles of new railway required to reach the two principal places in Scotland—we mean, of course, Glasgow and Edinburgh—is 202½; whereas, by the Newcastle, or eastern route, the length of the new railway required is only 132¾ miles, provided the northern union scheme, objectionable, we think, for a main trunk, as having to pass over so many coal railways, be adopted; but if the unfinished, or northern portion of the Great North of England, be taken, then the whole length to be made will extend to 146 miles.

Some notion of the character of the respective eastern and western lines may be formed by mentioning that the earthworks on the eastern line amount to upwards of 120,000 cubic yards per mile, while on the western scheme the rate is about 90,000 cubic yards. The whole length of tunnelling in the former is 3,522 yards, while by the latter it is 2,552 yards.

The arching or viaducts on both lines will form a very heavy item in the expenditure. The principal work of this kind on the western line is the proposed viaduct over the Nethan water, 232 feet in extreme height, and 85 feet long—a work which, as we think, must be built in two or three tiers of arches, as those of the Roman aqueducts. It never can be constructed with piers of the dimensions shown by Mr. ERRINGTON in his drawing of that work. On the eastern line in Mordington parish there is a somewhat similar work required; the height, however, is only 175 feet. This also, if ever executed, must be built in tiers of arches one above the other. There are likewise the crossings of the Tyne and Tweed, both works of magnitude.

Upon the whole, the eastern line, taking it as a completely furnished single way, cannot be set down at less than 16,000*l.* a mile; so that the total cost by this route, from Darlington to Edinburgh would amount to 2,336,000*l.*, or nearly half a million of money less than by the western project; but with an equal amount of traffic per mile, the receipts by the western route would amount to one-third more than by the eastern project.

In conclusion, we would recommend that whatever engineer or engineers shall be employed to superintend the execution of either of these projects, or indeed of any other public railway, they should be bound—as Mr. STOREY is to be, with respect to a proposed railway in the county of Durham—to undertake the works on their own responsibility. We know of no other method by which to save harmless the innocent shareholders; and we doubt not that the share-list—were this suggestion really and truly, and not in mere name, followed out, either on the east side or the west—would be filled up in the course of a very short time

Digitized by Google

after this important arrangement had been properly made known to the great supporters of railway communication.

Since the above was in type we have received, from a gentleman on whom the utmost reliance may be placed, a letter from which the following is an extract:—

"You are aware perhaps that the Parliamentary plans and notices for the railway between Lancaster and Carlisle are lodged. This is called the first section of the 'Caledonian Railway.' The line now finally laid down is very much improved. It is shortened some miles; the cuttings and enbankments are reduced—the gradients not materially altered, and the much-talked-of tunnel, at Shap, now reduced to 880 yards, through very favourable material. There is now no heavy work. The landowners are friendly, and will take the value of their ground in shares. The final estimate is not yet received, but there is reason to believe that it will not exceed one million. The second section of the Caledonian Railway, from Carlisle to Edinburgh and Glasgow, will, with the plans and notices, be lodged on the 1st of April. The merits of this line are not yet so well defined, but there is reason to believe that they will present equally favourable results with the one already lodged."

We have not room to do more than call attention to the very copious account which we give elsewhere of the proceedings at the Croydon Company's meeting on Thursday last. Many of the topics treated of are of great importance, not only to this particular Company, but to railway proprietors generally, and, therefore, we were unwilling to abridge our report, notwithstanding that it encroaches greatly upon other articles. It will be seen that the offer of the Brighton Company to lease the Croydon line was at once scouted. The proposition, even if unobjectionable in other respects, was manifestly premature. If the Croydon proprietors can secure a larger interest from leasing the line than they have good reason to look for from working it themselves, they will of course not hesitate to accept a fair offer, but to rush into any such arrangement now, while there is no true test of the ultimate and permanent value of the line, would indeed be to make a bargain in the dark. The other matters brought before the meeting we shall doubtless have occasion to advert to hereafter.

The appearance of the South-Eastern Railway, for the whole distance between Red-hill and Tunbridge, gives token of an early opening. Bletchingley tunnel, which is generally allowed to be one of the finest specimens of brickwork in the kingdom, and which moreover is perfectly dry, not one drop of water percolating through any portion of it, may be said to be completed. The whole of the stations are contracted for by Messrs. Grissel and Peto, and are to be finished by the end of April. The same firm have also undertaken the construction of some miles of the way in the Folkstone district.

No doubt whatever exists that the line, as far at least as Tunbridge, will be opened to the public early in May, and through other successive portions (Staplehurst—Ashford—Folkstone) as speedily as possible afterwards. The traffic on this partial opening must be considerable, that to Tunbridge Wells alone being large, independent of the Maidstone, Canterbury, and Hastings traffic, which will necessarily come upon the railway. We heartily congratulate the proprietors upon not only the progress, but the very superior character, of the whole of the works from end to end of the line. A competent authority, who has recently inspected them, assures us that they are such, both as to conception and execution, as will redound to the credit of Mr. Cubitt, the Company's Engineer-in-Chief, and prove of lasting benefit to the proprietors.

Considerable interest is felt in the railway world as to the character of the forthcoming Report of the Brighton Railway Investigation Committee, to be laid before the proprietors on Thursday next. Various and very contradictory rumours are afloat in the City with respect to it; but we have reason to believe that they are without any basis but conjecture, as we understand that the Committee, at their first meeting, agreed to refrain from communicating the smallest information in answer to any inquiries that might be made, until they should have an opportunity of placing the whole matter before their fellow shareholders. We shall of course give ample details of the meeting in our next.

We have too frequently had to record the gross extortions attempted (not seldom with success) by landowners upon Railway Companies, not to hail with delight every indication—alas that they should be so few—of a different feeling on the part of those at whose mercy the promoters of the most useful works of modern enterprise and skill are in a great degree placed. It is for this reason that we call the attention of the public to the concluding paragraphs of the notice of the proceedings at the Dublin and Drogheda Railway meeting elsewhere reported, from which it will be seen, that through the liberality of two gentlemen (one of them the able Chairman of the Company), no less a sum than 10,000*l.* has been saved to the proprietors of the Drogheda line. The Chairman modestly disclaimed any particular merit as attaching to himself, but bore strong testimony to the sacrifice made by the other gentleman alluded to—the Rev. Mr. Taylor. "When he found [said Mr. Hamilton] that the Company would be saved upwards of 9,000*l.*, he gave permission to Mr. Macneill (the Company's Engineer) to remove nearly the whole of a young plantation of trees, which he had watched and cultivated with the care and anxiety of a planter." If complimentary votes of thanks were always as well-deserved as the vote which called forth this statement, it would indeed be well with the proprietors of railways. Who would not prefer the position of Messrs. Hamilton and Taylor, to that of my Lords Howden and Petre?

A special meeting of the Liverpool and Manchester Railway Company is called for Tuesday next, "for the purpose of taking into consideration, and deciding upon, the most expedient course to be pursued with respect to the several proposed lines of communication with the Manchester and Leeds Railway, namely, the line from Cross-lane, Salford, *via* the New Bailey and Hunt's Bank to St. George's-road; and the south or new line from Ordsall-lane, *via* Castlefield and Store-street, to the Manchester and Leeds station, Oldham-road."

A copy of an address issued to the shareholders has been sent to us, but we regret that we cannot find room for it in full. The following extract, however, will explain what course it is intended to pursue:—

"The course which the Directors are prepared to recommend to the proprietors at the ensuing meeting, is the adoption of resolutions, expressing, *first*, their conviction of the superiority of the south line for the proposed objects, over the line by Hunt's Bank, and consequently the expediency of abandoning the latter; *second*, expressing the desirableness, upon public grounds, that the south line of communication accomplishing the best practicable junction between the four great railways, should be carried into effect by the united efforts of the four Companies; and *third*, a resolution empowering the Directors to open a negociation with the other Companies for this purpose, with authority to undertake to bear such proportion of the whole expense as may fairly be considered to belong to this Company; with powers, should it be deemed expedient, to agree, before a Committee of Parliament, or otherwise, to leave to competent referees of high station and character to determine (within certain limits) the proportion of the whole expense which shall be borne by each Company."

—o—

The case of "Kavanagh *v.* the Eastern Counties' Railway Company," was tried at Chelmsford, on Thursday, before a special jury, when a verdict was returned for the defendants. We are sorry that our limits will not allow us to give a detailed report of the trial. The short facts are these. Kavanagh received from the Company 2,000*l.* for severance and compensation, and 150*l.* per acre for six acres of land. The conveyance recited that he was entitled to his rights of way "over the several pieces or parcels of land conveyed to the Company," and as there were *seven* pieces, he insisted on having *seven* distinct communications, by bridges or archways—a "monstrous construction," as the judge (Baron Gurney) told the jury in his admirable summing up.

—o—

On Tuesday a special train on the Brighton Railway brought up her Majesty's stud, and on the following day the 250 soldiers of the Coldstream Guards, who had been sent down previous to her Majesty's visit, were brought to town by a similar train. During the week the following individuals have travelled by the line:—Earl and Countess of Carnarvon, Lord Porchester, Sir Griffin Wilson, Count Moucerau, General Grant, Colonel Fox, Colonel Webster, Mr. and Mrs. Read and family, Mr. and Mrs. Trelaneday, Mr. and Mrs. Dugdale, Capt. Moser, Sir Edward and Lady Anson, Earl of Athlone, Bishop of Chichester, Lord and Lady Teignmouth, Capt. Wyatt, &c., &c.

—o—

We learn with much regret that Mr. Miller, the Resident Engineer of the London and Greenwich Railway, has met with a severe misforture from the accidental discharge of a loaded gun, the contents of which passed from the wrist upward to the elbow, shattering and dreadfully mutilating his arm along its whole course, to an extent so fearful that the loss of the limb, by amputation, was the least calamity then dreaded. We are happy, however, in being able to state that Mr. Callaway, the eminent surgeon who attends him, has expresed strong hopes that the arm may be saved. This accident to so amiable a gentleman and so zealous an officer, will, we are sure, be most sincerely deplored by every person acquainted with him, and by none more so than by the shareholders in the Greenwich Railway, who have profited so much by the economy introduced by him into the Engineering arrangements of their line.

—o—

The Railways' Regulation Bill was considered in Committee on Wednesday night, and reported. The subject will be resumed on Monday next.

RAILWAY OFFENCES AND OFFENDERS.

At Union Hall Police-office, on Wednesday, William Jones and Joseph Griffin were fined 10s. and costs, for riding up from Gosport in one of the second-class carriages on the South-Western Railway, having previously paid for seats in the third-class. The defendants argued against the decision, alleging that they were shown into the second-class carriage by one of the Company's servants, and that it was not their fault, never having journeyed by railway before.

At the recent Yorkshire Assizes an action was brought against the North Midland Company by a man named Matthew Coggin, who had been employed by the Company as policeman and point-keeper, to recover 1*l.* for the wages of the current week in which he was discharged; 4*l.* for a month's wages in advance, in consequence of the discharge without a month's wages, stipulated for in the regulations; 1*l.* stopped out of his wages, and 10s. paid by him into a friendly society established among the servants of the Company. The amount of the last two items had been paid into Court; with regard to the rest the Company pleaded that they had dismissed the plaintiff for drunkenness and misconduct. The replication denied this. There were some other points in the plea and replication, but the trial went upon the issues of drunkenness, misconduct, and neglect of duty. The case was clearly made out against the plaintiff, and the jury returned a verdict for the Company. We daresay some speculating attorney was at the bottom of this action. The Directors of the Company deserve credit for resisting the extortion attempted to be practised upon them—more especially as the offender's alleged claim upon them was for so trifling an amount. But they have not *quite* done their duty, otherwise, instead of being defendants in such a case, they would have been the complainants, and we should, we hope, have had to record that this man, Coggin, had been sent, for a month or two, to the experience of prison discipline. The danger likely to result from drunkenness and inattention on the part of a switchman is too obvious to require remark. In every such case, we repeat for the hundredth time, the culprits should be treated with the utmost rigour of the law.

A short time ago two men, unknown, were apprehended by the Glasgow and Ayr Railway Police, and brought to trial before the magistrate acting for the district, for having been found in a state of intoxication on the railway, near Carnegie, and unable to take care of themselves. Being direct in the way of the luggage train, then due, their escape was really miraculous. They were fined 20s. each.

BIRMINGHAM AND DERBY RAILWAY—THE LATE MEETING.

To the Editor of the Railway Times.

Sir,—It appears that the usual detailed report of the proceedings of the Birmingham and Derby Railway meeting, held on the 16th of last month, has not been forwarded to you, and the absent shareholders are doubtless intended to infer, from the tenor of the few words with which the subject is dismissed in the published account, that the "explanations" *attempted* were deemed satisfactory by those who introduced the "long discussion" adverted to in that report. I, therefore, take the liberty of troubling you with an account of some of the matters which were brought before the meeting in question, and the absentees will thereby, if you think fit, be able, in some measure, to judge for themselves how far the alleged facts, none of which were disproved, may have had an influence, favourable or otherwise, upon the value of the property they have embarked in what was, at one time, considered a most favourite enterprise, but which is now, whether as regards traffic, dividend, or market price, nearly, if not quite, at the very bottom of the long list of railways.

The Chairman opened the meeting by congratulating the shareholders, as usual, on the satisfactory condition and flourishing prospects of the Company, the balance in its favour being actually less (a solitary instance in railway statistics) than for the corresponding period of the preceding year, after deducting the allowance for the carriage of mails, a service which was equally performed in both periods, but for which the rate of remuneration was only fixed and brought into operation within the last twelve months. After a few remarks on the late period at which the accounts had been placed in the hands of the proprietors, a few minutes only before the hour of meeting, and on the difficulty of forming an opinion at all on the subject, where details were kept so completely out of sight, a principal shareholder, who was also one of the Committee of proprietors appointed in August last to inquire into the condition and prospects of the Company, called the attention of the meeting to several heavy items of expenditure which had been incurred, and which appeared to testify a want of proper attention and supervision on the part of the Engineer of the Company, stating, at the same time, that, although he had applied, as a member of the said Committee, to the Board of Directors for a document, in elucidation of others, connected with the finances of the Company, which the Directors had themselves laid before the Committee in October last, such auxiliary document had been refused to him.

The items of expense above alluded to, had been either omitted or understated in the first supplementary estimate of 1839-40, which was the basis on which the terms and amount of the third shares issued in 1840 had been calculated, and on the faith of which estimate many original proprietors had been induced to incur a further responsibility by subscribing for the new capital. The consequence of these errors, omissions, and neglects, has been an alleged necessity for a still further increase of capital. It would be useless to state all the particulars adduced, but among the expenses which were said either to have been not foreseen in 1839-40, or to have exceeded the then estimated amount, was a large sum for wells, from which the Company had derived no benefit whatever, the water so obtained being found to be unfit for use, and an abundant supply of the proper quality having been finally procured, where it had always been at hand, by simply pumping it from the streams which flow under the railway. A further large sum was mentioned as charged for replacing bad ballast, which should never, under proper supervision, have been permitted to be put on the line, and a heavy amount also for broken chairs, which must have been faulty in the first instance. Another principal item which, singularly enough, was overlooked in the *supplementary* estimate of 1839-40, was a large sum for maintenance of way charged to capital, which, added to the sums charged under the same head to revenue, in the different half-yearly accounts, brought up the average cost of that one article, from the opening of the line in August, 1839, to the 30th June, 1841, to within a fraction of 300*l.* per mile per annum, the highest contract, at any time, on the line, being, for a part, and for the first year only, 250*l.* per mile. This had occurred on a line of peculiar facilities, without a tunnel, almost without a cutting, and with a lamentably small amount of traffic. Lastly, it was alleged that there was an excess in the actual assumed requirements of the Company, in the locomotive and carriage departments, above the estimate of 1839-40, itself supplementary, and made out some time after the line was open, of 60 per cent.(!) under both these heads. These allegations and others not here adduced, but all connected with the engineering disbursements, were not even adverted to, much less explained, by any of the Directors. A few words only were spoken by the Engineer respecting the bad ballast, which left the matter just where it was.

The same shareholder then proceeded to remark upon the singular inferiority of selection, as shown by the result, of individuals to fill the principal situations in the Company's service. The Engineer, having been made also general manager, was said, by the acknowledgment of the Chairman himself, to have been so hampered by his various duties, as to be unable to do justice to the Company in any, and least of all in the traffic department. The Secretary also, whatever his other merits might be, was said to be unequal to the situation, which he, nevertheless, still continues to hold, and that the Chairman had, in like manner, acknowledged the fact. Another principal servant of the Company, as was known to all the shareholders, was permitted last year to continue, for a length of time undetected, a system of the most inexcusable and mischievous blunders, whereby the returns and accounts of the Company were falsified, and he was discharged in consequence after the last general meeting. The principal servant of the Company at Derby, where activity and intelligence were most essential, was also dismissed within the last six months, on the representations of individual shareholders, as to his total want of the above-named qualifications. It was further said, that the principal servants of the Company at Tamworth were accused last autumn to the Directors, and had been accused a year previously to the Engineer of the Company, in whose department they were, of various irregularities, of living far beyond their ostensible means, and of perverting the Company's property to their own private uses. These charges were so far substantiated, on investigation, as to prove that the inculpated parties were totally unworthy the confidence of their employers. Nevertheless, one of them was permitted to remain until the situation which he filled was abolished as unnecessary, and the other, having been totally absolved by the Board of Directors, absconded almost as soon as that verdict had been pronounced, with several hundred pounds that had been entrusted to him. On this latter subject, only a discussion took place, but the attempt at explanation broke down altogether. The inference drawn from all this was, that the superior servants of the Company having been thus inefficient or worse, it was both probable and natural that the inferiors should follow the same track.

Such is the meagre sketch of part only of what occurred at the meeting in question, and which, together with many other matters, was disposed of in one short paragraph in the report forwarded to you; and you will doubtless admit, that enough has been even here adduced to furnish matter for serious reflection to those whose property is in such keeping. This outline has been furnished with the full knowledge and consent of the principal shareholder above alluded to, who holds himself responsible for the correctness of all these details, and who also takes this opportunity of disdaining any participation whatever in the vote of thanks proposed at the meeting. It would, undoubtedly, have been far better, had such information come to you in the usual way, from a reporter to the public press, but as that has not been the case, you will not perhaps, grudge a part of the space which such report, if properly given, would have occupied, in order to afford those who were absent some small idea of the "various matters connected with the management" which were brought under the notice of the meeting, and in which they, as well as the shareholders generally, may be supposed to be so deeply interested.

I am, Sir, your obedient servant,

A SUFFERER.

London, 8th March, 1842.

WEST LONDON RAILWAY COMPANY—GENERAL MEETING.

THE twelfth half-yearly general meeting of the proprietors of the West London Railway Company, took place on Thursday, at the offices of the Company, No. 11, Abchurch-lane, the DEPUTY-CHAIRMAN of the Company presiding.

The CHAIRMAN observed, that he had at present little or nothing to say, except that he felt it rather unpleasant for the Directors to meet the proprietors time after time, to say that they were in no way progressing since their last meeting. He would therefore call upon the Secretary to read the Report.

The SECRETARY (John Thompson, Esq.) then read the following

REPORT.

Since the last general half-yearly meeting, the Directors have had anxiously under their consideration several plans for raising the additional capital necessary to complete the line; and they are still of opinion that no better mode can be devised for accomplishing this object, than that which was submitted to, and adopted by, the proprietors, at the special general meeting held in April last.

Although fully impressed with the importance of completing the line, and bringing it into operation at the earliest possible period, the Directors have been prevented by the continued unfavourable state of the money market, and the unwillingness of some of the proprietors to subscribe additional money to the undertaking, from again bringing the measure forward.

The works remain in nearly the same state as they did at the last meeting, having sustained some damage by the extreme wetness of the late season.

In accordance with the wishes of the proprietors, the Directors have, since the last meeting, endeavoured to open a negociation through influential channels, with the London and Birmingham and Great Western Railway Companies, with reference to this line, but they regret to say that their efforts in this respect have been productive of no beneficial results.

In these circumstances, unless the proprietors are prepared to raise the funds necessary to complete the line, the Directors have determined that every expense shall be reduced to the lowest possible limit, and recommend that the undertaking shall remain in abeyance until more favourable circumstances arise. The chief obstacle to such a course of proceeding is, the heavy amount of the Company's liabilities, but the Directors trust, that by laying a full statement of the Company's affairs before the creditors, they may be induced to allow their claims to stand over.

Three of the Directors, viz., Mr. Sturch, Mr. Whitchurch, and Mr. Lewis, go out of office, by rotation, at this meeting, and being eligible for re-election, offer themselves accordingly.

A statement of the receipts and disbursements of the Company, for the half-year ending on the 31st December last, is subjoined, viz.—

Statement of Receipts and Disbursements to 31st December, 1841.

RECEIPTS.

Receipts to 30th June, 1841..		£126,787	16	10		
Less bills receivable returned		4,225	0	0		
					122,562	16 10
To 31st December, 1841—						
Calls on old shares		1,032	5	0		
Ditto, on new shares		25	0	0		
Surplus land sold		16,848	4	6		
Mr. Whitchurch's contribution towards expense of making new sewer		250	0	0		
Kensington Canal tolls, &c.	229 8 11½					
Less expenses ..	41 10 10					
		187	18	1½		
Rents	208 9 0					
Less expenses ..	9 1 9					
		199	7	3		
less sold		0	18	6		
					18,543	8 4½
Total					£141,106	5 2½

DISBURSEMENTS.

Disbursements to June 30th, 1841		£128,315	6	7		
Less bills payable returned..		6,771	10	8		
					121,543	16 4
To 31st December, 1841—						
Land and compensation		16,782	2	2½		
Conveyancing and other expenses on account of land and compensation		888	10	9		
Mr. George Robins' bill for putting up Eynham Farm to sale by auction		258	0	10		
Mr. Moore on account of purchase of the Kensington Canal		190	1	10		
Works		219	11	8		
Legal expenses		2	13	4		
Office expenses, including rent, salaries, &c.		216	9	9½		
Printing and stationery		9	17	1		
Deposit on new shares returned		874	10	0		
					19,342	2 3
Balance					220	6 7½
Total					£141,106	5 2½

11, Abchurch Lane, March 10th, 1842.

Mr. J. BRITTON moved, that the Report be adopted and printed, and circulated amongst the proprietors. He could not, as an old subscriber, help regretting that the establishment had been so unfortunate. In all their undertakings the Directors had made great sacrifices of time and trouble in order to bring the concern before the public under more favourable auspices. Notwithstanding circumstances had hitherto occurred to deter the prosecution of the works, he (Mr. Britton) felt convinced, if they could only manage to carry it on as far as Knightsbridge the line would prove itself one of the most successful near the metropolis, and the Great Western Railway traffic must of necessity compel that Company to avail themselves of its advantages to go to the west-end of the town. He hoped that at the next meeting of the Company something would be done to effect this object.

Mr. GODWIN, sen., seconded the resolution, which, on being put, was carried by a majority of 7 to 2.

Mr. BRITTON then moved that Mr. Sturch, Mr. Whitchurch, and Mr. Lewis, the three Directors who retired by rotation, be re-elected. He did so as he was sure they could not get more efficient or attentive gentlemen to perform the office. Mr. Lewis very frequently came up from Bath to attend the meetings of the Directors. (Hear.)

Mr. CRAUFURD seconded the proposition, which was carried unanimously.

Mr. THORN, who said he attended as solicitor on the part of a very large creditor of the Company, wished to know if he could address a few observations to the meeting.

The CHAIRMAN said, he had no objection, if the meeting were willing, and he would put the question.

The meeting having assented,

Mr. THORN said, he had attended as solicitor to Mr. Justice, to whom Mr. Telfer, a creditor of the Company, had assigned his interest therein, for the purpose of watching the proceedings, and to ascertain, if possible, what was intended to be done with regard to satisfying the claims of the creditors of the Company. The affair had been almost the ruin of Mr. Telfer, and he now wished to know if the Directors had any proposal to make with regard to their debts.

The CHAIRMAN said, that if the proprietors had come forward and enabled the Directors to have carried the railway out they would in all probability have been in a situation to have done something. All they could do now was to explain to the creditors the exact position of the Company's affairs, and leave it to them to adopt what course they thought proper.

The SECRETARY observed, that Mr. Telfer was a creditor who, in common with others, had executed a letter of license to waive all claims up to the 1st of April next. All creditors had done so with the exception of those who had obtained judgments against the Company in respect of their land, and which they had been compelled to pay.

Mr. THORN thought it very unfair if what he had heard was true, that some creditors had been paid in full of their demands, whilst others were not paid at all.

The SECRETARY said, only two persons who had obtained judgments against the Company had been so paid, and had this not been done the Company would have had no control over, and been unable to sell, the land. There were a number of small creditors of the Company, whose claims in the aggregate amounted but to 798*l.* 15s. 6d. It was arranged that all creditors whose claims amounted to upwards of 200*l.*, should sign the letter of license. Mr. Rutty's claim was 206*l.* 5s., exclusive of costs, which were 13*l.*; but, notwithstanding this, he refused to come into the general arrangement, and he was paid. The creditors were all informed of this.

Mr. THORN hoped at all events that by the next meeting the Directors would be prepared to make some proposition to the creditors, and show their assets and liabilities.

The SECRETARY said, no doubt they would be prepared to do so, but he feared any proposition they could make would be with a view to gain further time.

Mr. WHITE said, he saw no prospect of improvement, or any means whatever by which the creditors were likely to get their debts paid. He had voted against the Report, for it said nothing of what the Directors intended to do at all. He thought the Directors had treated the last general meeting of the proprietors in a most disrespectful manner, for there were certain resolutions come to by them, and no mention whatever was made in the Report with respect to them. He again repeated, it was a slight upon the last general meeting. With regard to the creditors of the Company, he would say, let the Directors meet them rather than keep on doing nothing, and paying for these offices and other expenses out of the creditors' pockets. It was the duty of the Directors to call the creditors together, and give them a fair statement of the funds of the Company.

Mr. WHITCHURCH (a Director) said, the present Directors had reduced the expenses to the lowest possible limit. They were not answerable for the difficulties produced by their predecessors. The simple fact was, that the large proprietors had not given that support to the undertaking which had been expected, and therefore it could not be the fault of the Directors that they had not attained a successful result. Even within a few days ago the Directors had hopes that they should be enabled to carry out their project. It was the intention to call the creditors together immediately after the present meeting, and he believed it would be found to their own interest not to press upon the Directors.

Mr. WHITE said, the debts had been incurred by the determination of the Directors to carry out the plan of locomotive, instead of stationary power, which, considering its ascent, was in the opinion of Mr. Vignoles, the eminent Engineer, most improper and inapplicable There was no prospect of the undertaking being carried out, and the Directors might depend upon it, they could not do a better thing than to set to work, shut up the concern, and try if possible to pay the amount of debts contracted. He would move—"That the meeting at its rising adjourn to Thursday, the 24th instant, in order that some distinct proposition be laid before the meeting as to the means of meeting the demands of all the creditors of the railway, and some explanation of the course the Directors intend to pursue, whether for the disposal of any property belonging to the Company, or other business which the Directors may think it expedient to introduce."

Mr. CRAUFORD seconded the motion.

Mr. GUNTER (a Director) said, the Directors were not to be blamed for carrying out the locomotive plan. They were not all supposed to be engineers, and they had acted upon the advice of Mr. Stephenson, supported by the opinion of Mr. Cubitt, and Mr. Vignoles himself, who were all practical men. It was not their fault that engineers differed in opinion. As to winding up the affairs of the Company, he (Mr. Gunter) had been for doing so three years since. Other gentlemen, however, in the Direction differed with him, and they had gone on and had even so recently as a fortnight since, strong hopes of carrying out the concern. The Directors had used every exertion to sell or lease the line, but had been unable to do so. All they could tell the creditors when they were called together was the state of their funds, which they had done that day.

Mr. WHITE merely called upon the Directors to do that which he considered it was their duty to do.

Digitized by Google

If they refused, they had better resign at once, and let others do it.

Mr. THORN said, Mr. Telfer's claim upon the Company was 2,000*l.*

The SECRETARY said, it was but 1,400*l.* It was impossible that all the creditors could be called together and arranged with within a fortnight. They consisted of nearly 100, and their joint claims was something like 37,000*l.* The most business-like and proper way would be, to give time for the Directors to meet the creditors, and report to the meeting of proprietors what had been done.

Mr. THORN said, nothing had been done by the Directors to make a proposition to the creditors.

Mr. GUNTER denied this, and said, if Mr. Thorn referred to the *Railway Times* of September 11, he would find a full report of what had been done.

Mr. CRAUFURD said, he now saw the effect of the motion would be to tie up the Directors' and proprietors' hands, and he would withdraw from seconding it, and move as an amendment, "That at its rising the meeting adjourn to this day four weeks, to receive a Report from the Directors of their intentions, and the arrangements they have effected with the creditors of the Company." (Hear, hear.) He was quite satisfied that they should meet a month hence with the understanding that in the interim the Directors would meet the creditors, and report to such meeting.

Mr. BRITTON seconded the amendment.

The SECRETARY—That is the most proper and business-like mode of proceeding.

Mr. WHITE objected to the Secretary interfering.

The SECRETARY said he was a proprietor, and had as much right as Mr. White to offer his opinion. (Hear, hear.)

Mr. WHITE—Then I accuse the Secretary of tampering with the minutes of a previous meeting.

The SECRETARY denied the imputation, and called upon the Chairman to support his assertion. Mr. White had stated it before, and knew it to be false. The word "also," was introduced by Mr. Duncan, who drew up the resolution upon the suggestion of Sir John Scott Lillie, and before the resolution was put to the meeting, but the word "also" did not suit Mr. White, and therefore he objected to it. Mr. White had seen the original in Mr. Duncan's hand writing, and therefore knew that his charge was unfounded.

The Chairman and Mr. Gunter confirmed the Secretary's statement.

The question was then put, and the amendment carried by a majority of 8 to 4; when,

Mr. WHITE said, he should test the point, and handed in 14 proxies on the other side.

Proxies, amounting to 81 votes, were given in favour of the amendment, which was declared to be carried.

After thanks to the Chairman, the meeting separated.

JUNCTION RAILWAYS IN MANCHESTER

To the Shareholders of the Liverpool and Manchester Railway Company.

GENTLEMEN,—I am induced to address you for the sake of a class of persons (of whom I am one) whose interests may be seriously endangered by a continued struggle between our own and the Leeds Companies, respecting this vexatious junction line question. I allude particularly to the position in which executors, widows, unmarried ladies, and others may be placed, who have purchased shares in the Liverpool Company, as a source of steady and permanent income. In my case the shares were bought for a needy but respectable family, with a view of obtaining for them a larger income than the public funds would produce, and having been bought at prices considerably higher than the present, to sell them now would be attended with a ruinous sacrifice; I cannot pretend to go through all the arguments *pro* and *con* which have been advanced by the two Companies in their several statements, replies, and "counter-statements," but I can take a common sense view of the question at issue, and it is this—if the alleged smallness of the traffic between the Leeds and Liverpool lines, would not be sufficient to remunerate us for an outlay of 200,000*l.* (the cost of the Hunt's Bank Junction,) what is to remunerate us for the cost of the South junction line, where the cost must be *twice*, if not *three times* as large, and must be all borne by ourselves, since the Leeds and Birmingham Companies have both decided to go to Hunts' Bank?

Will our Directors please to say *distinctly* how it will repay us for the large outlay *without* the Leeds traffic, if it will not repay us for the smaller outlay *with* it? This I must confess is to me incomprehensible. I feel alarmed at a statement which appeared in the last *Railway Times* showing that our receipts from the 1st of January to the 18th of February, this year, were 3117*l.* less than the corresponding weeks of last year, and the following week is itself 1000*l.* less, making 4117*l.* less in eight weeks, or at the rate of 26,000*l.* per annum!!

This is most startling, and where must we look for our next dividend to come from? Besides, a ruinous competition is now going on between the railway and water interests—goods being now carried between Liverpool and Manchester at 5s. per ton, when, according to the early Reports of our Directors, it was demonstrated by figures that the cost of conveying a ton of goods on our railway was about 7s. per ton!!

I have recently obtained a sight of the list of our proprietors, and I there discovered what alarmed me more than all the other matters put together, viz., the very insignificant stake which our Directors (with three exceptions) have in the concern. I do not wish to impute to these gentlemen the least want of integrity towards our general interests in their present proceedings, but we expect too much from human nature if we suppose that any man, however respectable, having only a small interest in a concern, will work as diligently and zealously as if those interests were ten times as much. The loss of 1000*l.* or 2000*l.* would never be felt by a rich merchant or banker, but to such parties as I represent (and I find there are a great number of similar cases), such a loss would be a most cruel deprivation of even the ordinary comforts of life.

But why should any risk whatever of smaller dividends be incurred? The Leeds Company offer to guarantee us 10 per cent. on our present capital, as well as on the further outlay for the Hunt's Bank Junction, and by a circular letter which I have just received, signed by "Joseph Pease, of Darlington," a most able financier, if this offer were accepted he computes it would raise the price of our shares 40*l.* to 50*l.* each. Why, therefore, any hesitation about accepting it? The only point for our consideration is, would the Leeds Company be able to pay us the annual rent? If they make an improvident bargain it is their own fault; but it is clearly our interest to accept their offer. For my own part, I should not doubt their ability to fulfil any engagement they may enter into, from the known wealth and respectability of the proprietary. We could even stipulate for the rent being paid weekly if it were thought necessary.

I, therefore, call upon my brother-shareholders, but especially those who have invested their money as a source of permanent and steady income, to make known their sentiments at the approaching meeting, and in a calm, respectful, but decisive manner, *demand* that the offer of the Leeds Company shall be accepted.

I am, Gentlemen, your obedient servant,

AN EXECUTOR.

London, March 9th, 1842.

GREAT WESTERN RAILWAY—MAINTENANCE OF WAY.

To the Editor of the Railway Times.

SIR,—In your Editorial remarks of last week, you refer to the cost of maintenance of way; and that the comparison was in favour of the Great Western, so far as the reports unravel the mistery, is true; but it must be borne in mind, that the general contractor has to keep the embankments, cuttings, bridges, &c., in proper repair for 12 months from the date of its opening. This rule extends at present from Wallingford Road to Bath, and from Bristol to Bridgewater; also Mr. Hennett's contract for the permanent way, which extends from Bridgewater to Bristol, and from Bath to Wootton Bassett, is that he should keep the said two divisions in proper repair for 12 months from the date of its opening to the public, and these contracts will not expire until June and July next. The same remarks apply to Mr. J. Prichard's contract for the permanent way from Steventon, to join Mr. Bedborough and others to Wootton Bassett. Therefore the full amount for permanent way (which will ultimately be incurred on the Great Western) can not be stated in the Report.

I am Sir, your obedient servant,

W. PRICHARD.

Shoreham Harbour, Shoreham, Engineers' Department, 6th March, 1842.

RAILWAY AND CANAL CARRIERS.

To the Editor of the Railway Times.

SIR,—I perceive that several of the Canal Companies have Bills now before Parliament, for authorising them to become, themselves, the carriers upon their canals.

It seems to me an important question for all Railway Companies whether they should not, in any way they can, oppose the granting of such powers.

I am Sir, &c.,

YOUR CONSTANT READER.

London, March 7, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—In your very sensible remarks on the late meeting of the Greenwich Company, you are pleased to notice the toll question, and in terms which should command the serious attention of the Directors of these two Companies, particularly of the Croydon. The matter, you say, is fairly worth an experiment, and, as you think, reasonably enough, that the greater part of the risk ought in justice to be incurred by the parties anxious for a change, namely, the toll-paying Companies, you ask why the Croydon Directors, who assert that an alteration in the toll would be beneficial to the Greenwich Company, should not guarantee to the latter Company the *maximum* amount hitherto received under the existing arrangements; and I, Sir, would beg leave respectfully to repeat the question. They will answer, perhaps, that it is not reasonable to call upon one of two parties to guarantee the other in an experiment which is to be mutually beneficial; and this would be so, if both were dissatisfied, and anxious for the experiment, and were to benefit to an equal extent, if successful; but as the Greenwich Company are not anxious to try the experiment, and would not benefit to an equal extent if successful, it is only reasonable that the Croydon Company should give the required guarrantee, *which they may safely do if their theory be correct.* Without such guarrantee, the Directors would not be justified in trying the experiment; with the offer of such a guarantee they would perhaps not be justified in refusing it a trial. If the Croydon Company be sincere, they will give the guarantee; if they hesitate to do so, you, Sir, and the public, will know on which horse in future to place the saddle.

I am, Sir, your constant reader,

SPECTATOR.

February 21, 1842.

EDINBURGH AND GLASGOW RAILWAY.—The whole of the stage coaches from Glasgow to Edinburgh are now off the road, with the exception of the six o'clock morning coach, which is kept running in consequence of its carrying the mail-bags made up in the morning. The mail-coaches, of course, run twice a-day, and will continue to do so till the contract expires in April.—*Glasgow Courier.*

BRISTOL AND EXETER RAILWAY COMPANY—GENERAL MEETING.

LAST Saturday we published the Reports of the Directors and Engineer, and the balance-sheet approved of at the meeting held on the previous Thursday. We now give (from the *Bristol Journal*) some account of the proceedings:—

The eleventh half-yearly meeting of the Bristol and Exeter Railway Company was held on Thursday, at the White Lion Inn, and was very numerously and respectably attended. In the absence of the Chairman of the Company (Frederick Ricketts, Esq.) the meeting was presided over by the Deputy-Chairman, JAMES GIBBS, Esq.

The CHAIRMAN, in opening the business of the day, said, he should not take up much of their time by any preliminary observations, as the Report, which was most ample, had been placed in the hands of every gentleman. The traffic, although not equal to its estimated amount, was highly satisfactory. Another important portion of the line would be opened early in the summer; and he was happy to say that their finances were in a very flourishing condition, there being upwards of 100,000*l.* in their bankers' hands. (Hear, hear, and cheers.) Loan moneys were also, since the commencement of the year, coming in abundantly, which concurrent circumstances would, he trusted, enable them to prosecute the completion of their line with vigour. (Hear.) There was one other circumstance to which he would briefly allude, viz., the proposed arrangement with the Great Western Company, relative to the first year's rent. This subject was fully alluded to in the Report, and he would, therefore, only remark on the very friendly spirit in which the matter had been discussed by that Company at their late general meeting, and on the liberality, also, with which they had acted on that occasion. He thought he might be permitted to say that, in his opinion, it would be to the interest of the Company to accede to the proposed arrangement. He would now call on the Secretary, J. B. Badham, Esq., to lay on the table the list of registered proprietors.

E. DIVETT, Esq., M.P., moved that the corporate seal of the Company be affixed to the register of proprietors. The resolution was one of formality, to which he did not anticipate there would be any objection.

Dr. MILLER cordially seconded the motion, and would add, to show the healthy state of the Company, that a larger amount of money had been received upon the last call, within three days after its becoming due, than had been received in three months on any previous call.

Mr. DIVETT said, perhaps he ought to have mentioned this, but had not done so as he conceived the motion merely one of form. He was happy, however, that it had been alluded to by Dr. Miller, and he felt assured that on no occasion had a corporate seal been affixed to a more respectable register. (Cheers.) The motion was carried unanimously.

The Secretary then read the Reports of the Directors and Engineer.

The Venerable Archdeacon FROUDE rose to move the adoption of the Report, which he was sure would be received with great satisfaction in the part of the country in which he resided, as it showed not only the present favourable state of the Company, but that they were proceeding vigorously towards the completion of the railway. (Cheers.)

J. M. GUTCH, Esq., seconded the adoption of the Report, and said he did so for these reasons; first, from the very gratifying manner in which the Report had been received while being read; secondly, because it stated, that whilst the Directors looked forward to a large increase of traffic as the line was further extended, to the benefit both of this and of the Great Western Company, they were gratified to find their anticipations confirmed by the receipt of a larger net revenue under the lease, than would otherwise have been derived from this portion of the line—(hear)—which must, he felt certain, assure every shareholder that the Directors had conducted their affairs with the greatest attention both to the interests of this Company and the Company with whom they were connected; and, thirdly, because the Report showed in how much greater state of prosperity they now were, than at this time twelve months. He, therefore, cordially seconded the resolution, that the Report be adopted.

Mr BAKER begged to put a few questions to the Chairman, and he would first ask, whether he was to understand that the sum named at the last meeting, 115,000*l.*, was the total loss sustained by the Company on the forfeited shares?

The SECRETARY answered, that the total amount did not exceed 118,000*l.*

Mr. BAKER—Do you still say that 880,000*l.* is the total cost of the line to Bridgewater?

The CHAIRMAN—There are some contracts still out, so that we cannot say to 20,000*l.*, but it will most certainly not exceed the sum stated, by more than the amount I have mentioned.

Mr. BAKER—Mr. Brunel, at the last general meeting, stated it to be his opinion, that the expense of the remaining portion of the line, would be less in proportion than the cost to Bridgewater—that is, not quite 26,000*l.* per mile. Does he still think so, or have any circumstances since arisen likely to defeat that calculation?

Mr. BRUNEL certainly did not recollect having pledged himself to anything of the kind.

Mr. BAKER—I know you qualified it afterwards, but I am reading from the printed Report in the *Railway Times*.

The CHAIRMAN—The Directors are willing to say, without at all committing Mr. Brunel, that, according to all the calculations, the remainder of the line will cost much less than that sum per mile.

Mr. BAKER—The next question I wish to put, arises out of a letter inserted in the *Railway Times* of Sept. 25th, in which it is stated, that the Secretary to the Great Western Railway (Mr. Saunders) receives a salary of 250*l.* per annum from this Company; I wish to know if he still continues to do so, and what it is for?

The CHAIRMAN answered in the affirmative, and said it was for services necessary to the Company.

Mr. BAKER—It is also stated that we still occupy an office in London. I wish to know if that be the fact, and if so, what is the amount expended on it?

The SECRETARY—Such is the fact, and it is necessary that it should be so; but the whole amount thus incurred is under 400*l.* per annum.

Mr. BAKER—I wish also to know, Sir, whether the interest of 4 per cent. for the current half year, is to be paid out of the paid-up capital, or out of the revenue?

The CHAIRMAN—The Directors, after giving this subject their fullest consideration, have thought it better to pay the 4 per cent. interest on shares and the 5 per cent. on debentures out of the capital, until further openings of the line will enable them to meet these charges from the revenue.

A PROPRIETOR here asked, if adopting the Report would pledge the meeting to the completion of the proposed arrangement with the Great Western Railway Company?

The CHAIRMAN—No; there is a separate resolution on that head.

The Report was then about to be put, when

Mr. BAKER rose to move an amendment. It was with much diffidence that he did so in so full a meeting, when he considered the small amount of interest he had in the undertaking; still, however, he represented parties in Manchester who held 200 shares in the Company.

Mr. FRANCIS PARKER (the Manchester Director of this Company) asked the names of the parties alluded to by Mr. Baker, as he (Mr. P.) held the proxies of nearly all the Manchester shareholders?

Mr. BAKER resumed—Whether his share in it was large or small could not affect the case, as his small amount might be as valuable to him as a large amount was to others. He was prompted to rise by the fact that although an additional call of 10*l.* had been paid on each share, he found them to be less valuable in the market than they were at the period of the last meeting. He considered that so great a depression could not and had not arisen out of the state of the monetary affairs of the country, but that, very probably, it was caused by certain statements made at the last meeting by Mr. Gravatt. Those statements remained unanswered, notwithstanding that they had been followed up by additional details which had been published in a pamphlet, and which, if untrue, would have subjected Mr. Gravatt to an action at the hands of Mr. Brunel, and to the payment of heavy damages. (A laugh.) He knew that he (Mr. Baker) as compared with Mr. Brunel, was like the mouse nibbling at the lion; still, however, he felt that inquiry should be made, and that the motion at the last meeting for investigation had been withdrawn more from the manner in which Mr. Gravatt had proceeded to address the meeting, than from the merits of the case. He knew also that it might be said that Mr. Gravatt made the statement out of pique against Mr. Brunel, and he believed that this was so; he knew nothing of either of the gentlemen; but although the charges might have been made out of pique, the Company had nothing to do with that; they were to look to them as affecting their own interests. It was the common case of an approver turning king's evidence; and although they had nothing to do with his character or motives, they yet had to do with his testimony, so far as it proved true. When, therefore, he (Mr. Baker) saw accusations in print which, if untrue, would, as he had said, render Mr. Gravatt liable to be sued for damages—when he saw such grave charges as those allowed to pass uncontradicted and unnoticed, he had a right to suppose that they were not altogether devoid of truth; and, therefore, he contended that the proprietors had a right to make further inquiry into and to investigate the matter. When he looked to the immense cost of the other lines on which Mr. Brunel was engaged; when he saw that the shares of the Cheltenham and Great Western Junction line were worth only 15*l.*, although 75*l.* had been paid on them—the depreciation being entirely owing to the immense expenses which had been incurred; when the cost of the Great Western Railway, too, as they were aware, had by so large an amount exceeded the estimate (and what they would be by the time that undertaking was completed he could not say, their most expensive terminus, the London one, not having yet been made); when he saw these things, he thought it necessary they should look most carefully to their own expenses. It had been ascertained that their income for the next 14 or 15 years could not much exceed 100,000*l.* per annum, which on an expenditure of nearly two millions would barely pay the original proprietors 5 per cent. for their money, to say nothing of their loss of interest for some of the preceding years. Let them look to the other lines of railway, and they found them prosperous, and of those that were not so, their failure, to speak pecuniarily, had arisen not from their original traffic estimates having proved to be incorrect, but from the increase in the cost of their construction. Did not this show the absolute necessity of looking most carefully to their expenses? For, as he had shown, if the line cost 2,000,000*l.*, the shareholder could not receive more than 5 per cent. for his money; but how small would be his return should that amount be materially exceeded! The 33 miles already completed had cost about 26,000*l.* per mile, and he had been informed that the other portions of the line would cost more; but how could they expect the remaining 43 miles to be completed at a less cost unless the greatest economy were used? It was with these views he wished for explanation, and from no animosity to either Mr. Brunel or Mr. Gravatt, who were both in the room, and of whom he knew nothing; neither was he prompted by any want of confidence in the Directors; what he desired was merely that the *proprietors might cause an inquiry to be* made into the statements to which he had alluded, if they deemed them worthy their consideration. Mr. Baker then read the following amendment:—

"That certain grave charges and statements having been made against the Engineer-in-Chief, by his sub-Engineer, Mr. Gravatt, at our last general meeting, and since more formally reiterated by a detailed statement in the public prints, charges, which, if true, would at all events show that a great and needless expenditure of the funds of the Company had been incurred,—that the same having been as yet uncontradicted by Mr. Brunel, it be referred to ——— to make further investigation into the matter, and to report thereon at an adjourned special meeting of the proprietors, to be held for that purpose, on or before the —— of —— next."

Mr. Baker, in support of his view, read the following extract from the *Railway Times*:—"It behoves you, then—it is a vital point to you—to 'up and be doing.' It is not the puffing letters from the fluctuation man, nor tabular and statistical statements made to answer some temporary purpose of the framers, nor the confident promises of Engineers, oftener made than realised, that should lull you into slumber, or induce you to leave in the hands of permanent uncontrolled Boards the disbursement and receipt of sums equal in amount to the income of some states, if not kingdoms. The little interest, or at least the little trouble you take in railway affairs is perfectly unaccountable. The moment you meet as railway shareholders your individual acuteness and your whole energy disappear, you become as torpid as tortoises in cold weather, and from all I see of your conduct, I have little hope that you will ever, as public bodies, exert that union and moral courage, wanting which your interests do at present, and must in the end more largely suffer. You go to meetings, hear sums placed to your debit amounting to hundreds of thousands, and sanction their passing without a single inquiry. But admitting that you sometimes ask a wild question or two, what at last do you or can you know of the accounts as they are now produced."

The CHAIRMAN—Does any one second the amendment?

Digitized by Google

After a considerable pause, no other shareholder appearing to follow up Mr. Baker's views, that gentleman said he wished to put it more as a suggestion than as an amendment. The original motion, for the adoption of the Report, was then put and carried unanimously.

W. Tothill, Esq., rose to move the re-appointment of Messrs. Fred. Ricketts, W. D. Wills, Wm. Morgan, and F. Parker, Esqrs., the four retiring Directors; he thought the Board deserved great credit for the mode in which they had conducted the Company's affairs.

Mr. Baker had much pleasure in seconding the motion, and did so to show his confidence in the Directors!!!

The motion having been put and carried unanimously,

Mr. Parker, in returning thanks for the two re-elected Directors, who were resident, said that they had been most punctual in their attendance; the one having attended 86 meetings out of 89, and the other 101 meetings out of 106, being absent from only five meetings, during which time he was confined by illness.

Mr. Tyrrell rose to move confirmation of the agreement between the Bristol and Exeter and Great Western Companies, as adopted at the last meeting of the Great Western Company. He did so because the conduct of the Great Western Company in this matter had been most liberal, and because the conditions proposed were decidedly in favour of the Bristol and Exeter Railway Company.

Mr. Browne seconded the resolution.

Mr. Baker begged to ask, before it was put, whether there was not a proviso in the lease, granting them an extra three months after the agreed time of opening, on payment of the actual loss sustained thereby by the Great Western Company, the amount to be settled by arbitrators?

The Chairman and Mr. Savery explained, that the proviso only related to the finishing of stations for the accommodation of the goods traffic.

J. T. Kirkwood, Esq., begged to ask whether they were bound to open to Taunton by a stated time?

The Chairman—The 7th of July.

The resolution was then passed unanimously.

Mr. H. O. Wills had the greatest objection to the men working on the line on the Sabbath, which he trusted would be obviated.

The Chairman said, the Directors were most anxious to prevent it wherever practicable.

Mr. Browne said, it was illegal for the men to work on the Sabbath.

W. Hollister, Esq., then moved a vote of thanks to the Directors, which was carried by acclamation.

The Chairman, in returning thanks, said they had had great difficulties to surmount, but he trusted that they had now overcome them.

A vote of thanks was then given to the Secretary, who briefly acknowledged the compliment, and said that he would continue wholly to devote himself to the interests of the Company.

The meeting then broke up.

HULL AND SELBY RAILWAY COMPANY —GENERAL MEETING.

The annual meeting of the shareholders in the Hull and Selby Railway was held on Saturday last, in the Court of Requests Room, Hull. The President, H. Broadly, Esq., M.P., being absent, the chair was filled by Richard Tottie, Esq. There was a rather numerous attendance of shareholders.

The Chairman, in opening the business of the meeting, said, he regretted that Mr. Broadley, the Chairman of the Directors, was prevented from attending the meeting on account of his Parliamentary duties, which detained him in London. He did not think it would be necessary for him to say much upon the Report which had been already circulated amongst the shareholders, and which would be read to them by the Secretary, because those present must, from having had an opportunity of seeing it, be well acquainted with the state of the affairs of the Company. He would state, however, that the Company was now going on most prosperously. In August last a treaty was made with the Directors of the York and North Midland Company, and the effects resulting from that treaty had been most beneficial. During the last six months the traffic account had increased above 50 per cent. over any previous period. In the first six months of the year 1841, the traffic account was 4,313*l.*, while in the six months ending the 6th December, in the same year, it had amounted to 16,722*l.* (Hear, hear.) He could not help thinking, then, that with the increasing trade of the port of Hull, there would be an increase in the traffic of the Company; and he was certain that the railway had greatly contributed to the advancement of the trade and commerce of the port. It had also enhanced the value of land throughout the whole line, but more particularly of that portion which lay near to Hull. He was not aware that it was necessary for him to make any further observations, but if any gentleman had any questions to put, or desired any explanation, he was sure that the Directors would be glad to answer them as well as they were able. The shareholders had, however, seen the Report, and were able to form their own opinions. In conclusion, he would call upon the Secretary to read the Report.

Mr. Locking then read the Report.

[This document appeared in the *Railway Times* of last week.]

Mr. Carlill moved the first resolution. He said he was glad to be able to congratulate the meeting on the position which the Hull and Selby Railway then occupied. He considered that a great improvement was beginning to manifest itself, and he doubted not but that this improvement would continue. He had no doubt the traffic on the railway would still more increase when trade in general recovered from the stagnation in which it now was. (Applause.) For his own part he looked for such an increase that the Company would be able to declare a dividend of 5 per cent. at no distant period. At a former meeting of the Company he had deemed it necessary to animadvert on the great sum which had been expended on the construction of the railway. The railway was now, however, formed, and such a great expense having been incurred in its construction, he would again urge the Directors to use the strictest economy in carrying on the operations of so great an undertaking. (Applause.) He did not wish at all to shackle the Directors, but was of opinion that they should endeavour to work the line economically as well as efficiently, for if this were not attended to they would experience a great deficiency in the receipts. He saw that the Company was likely to want more money, and he would say, if so, borrow it, for they had better do so than be restricted in their operations. He would urge upon the Directors that they might materially lessen the expenses by personally and individually visiting the whole of the line, and inspecting every work upon it. If the Directors paid such strict attention to the affairs of the Company, as a man would to his own private concerns, he had not the least doubt that the railway would be made to pay well. The information which they received at the general Board would not alone be such as they could act upon with safety, but, in order to come to a right conclusion and confer the greatest benefit upon the shareholders, it was necessary that they should personally inspect the various works.

Dr. Ayre seconded the first resolution. He said, that he had found under the head "charges for locomotion," a somewhat large sum this year, whereas last year it had been a very small one. He supposed that some of the charges which ought to have come under this head the previous year had been placed in some other part of the account. He thought it very desirable not only that the accounts should be accurate, but that they should be in uniformity with each other. In one case there was an item "coke," and in another "coke, &c.," and from these items it appeared that the amount of coke consumed, notwithstanding the increase of traffic, was less than in the preceding year. Last year the item "maintenance of way" was kept separate: this year it was mixed up with several other items, and it appeared that there was a difference of 600*l.* in that one item. In one instance there were several charges placed together, while in another instance these charges had been put to some other account. He thought it necessary that the accounts should be so made out in uniformity with each other, that the shareholders might understand them, and compare them with ease.

The Chairman said, the Directors would be glad to give every information in their power. It was impossible that the Report could enter into every particular, but it had been made as full as possible. The Directors wished nothing to be kept back from the meeting, but were anxious that the shareholders should have all the information required.

Dr. Ayre thought that there must be some mistake in the item for "locomotion."

Mr. Gresham said, he agreed with Dr. Ayre in the opinion that the Reports should be uniform, so that the shareholders might see where the increase or decrease took place. The expenses for locomotion ought, he thought, to be kept separate every half-year, and if more uniformity was kept in the several items, the accounts would be greatly simplified.

Mr. Schofield said, he entirely agreed with Dr. Ayre. He had observed that in the present statement there was no item of debts uncollected.

Mr. Locking said, there had formerly been a balance owing to the Company of about 5,000*l.* which was now reduced to about 2,000*l.*; that balance had been brought into the account, and regularly entered in the journal. They had followed this year the system approved of by other railways, and had arranged the accounts under a smaller number of heads for the sake of simplifying them. At the same time, if the shareholders wished to have a greater number of items it could of course be done.

Mr. Schofield said, that it would be more satisfactory to have a larger number of items.

In answer to a question from Dr. Ayre, Mr. Locking said, the expense for coke had been about 1,200*l.*

Mr. G. Liddell said, he thought it would be desirable that the coke account should be kept separate. He said, it would be observed that the traffic had increased very considerably within the last six months, and therefore more coke must have been used than previously. There were necessarily a great number of small items in the accounts, but he supposed the shareholders would not think it necessary that every little thing should be stated separately. In making out the general statement the plan adopted by other Railway Companies had been adopted. But at the same time, if it were thought desirable to go into detail with the items, it would be better that it should be done so in future.

Mr. M'Turk asked what interest was paid on the sum of 22,000*l.*, which remained unpaid of the property bought of Mr. Broadley.

Mr. Locking replied, five per cent.

This Mr. M'T. thought too much.

Mr. M'Turk said, he thought the Report must have been very gratifying to the shareholders. A great additional traffic in goods had taken place, and the trade of the town had been thereby so greatly increased that it might be almost said the destinies of the town were in the hands of the Dock Company and the Railway Company. He hoped that additional dock room would soon be given to the town, in order that it might still sustain its character in the manufacturing districts as a large and commodious port, and he doubted not that it would attain yet greater commercial prosperity.

Mr. John Foster said, he wished to ask a question relative to the maintenance of way. In the last half-yearly Report the expense under that head was 1,868*l.*, a sum more than had been expected, although it was explained by stating that it was desirable to have the line firm and permanently good. In the present Report the sum under this head was 2,491*l.* Now, as this was an increase of 600*l.*, and they had been assured at the last meeting that the expense under this item would considerably decrease, he thought there was something wrong.

Mr. Locking said there was no railway in the kingdom which had cost less in keeping in repair than the Hull and Selby. It had only cost 110*l.* to 115*l.* per mile, whereas others had cost from 250*l.* to 350*l.* per mile, and, in some instances, even more than that He believed the present expenses were as low as they could be made.

Mr. Foster said, the expenses on this line amounted to 55 per cent., while on some railways it did not exceed 40 per cent., and on the York and North Midland line it was only 35 per cent.

Mr. Locking said that the rates on those lines were about 3½d. per mile, while on the Hull and Selby it was only 2d. This, of course, would make the difference.

Mr. Foster said, he hoped that the Directors would petition Parliament—and get other Companies to join them—against those rates, which pressed heavily on the poor. He thought every reduction possible should be made, for the lower the fares were, the greater number of persons would travel. He thought, also, that the second-class carriages ought to be provided with some kind of shelter—(hear, hear, hear)—for, by making the second class carriages uncomfortable, they drove more persons to the third-class than to the first. In Belgium and on the Continent second class carriages were made very comfortable, and provided with cushions, and he thought that the wind ought to be kept out here as well as there. There was another improvement which he would suggest, and that was, that little books of the railway fares and times of starting should be printed, and sold by the booksellers for one half-penny each, as they were in London. (Hear, hear.) And then again, the bills of fare might be put into lamp-posts, and covered over with glass, as was done with the shipping accounts at

Digitized by Google

Rotterdam. Such a plan, he thought, would be a great public accommodation.

Mr. LOCKING said, with regard to the second-class carriages being made more comfortable, he would state that the Directors of the Hull and Selby Railway were in communication with the Directors of the York and North Midland Company on the subject, and that the latter had agreed to make them more comfortable. One of the Hull and Selby Company's carriages had been already furnished with slides, and others would soon be ready. At the same time it would not do to make them as comfortable as the first-class. The time-tables alluded to by Mr. Foster, had usually been sent to the different inns and lodging-houses, the banks, the news-room, &c., but not to the Exchange; and every information was diffused as widely as possible. At all the stations tables are hung up, including all other railways, so that persons had every opportunity of getting information on the subject.

Mr. GRESHAM remarked that the charges from Hull were lower than on any other line in the kingdom, a person being able to go from Hull to Leeds, a distance of 60 miles, for 3s. 6d. (Applause.)

The first resolution was then carried unanimously.

Mr. King moved, and Mr. Thomas Meynell seconded, the 2d resolution, which was carried *nem. con.*

Mr. GRESHAM proposed the third resolution, and in doing so reminded the meeting that it had been thought that a dividend of 3 per cent. would not be declared for some years. He agreed with an observation made by Mr. Liddell, at a former meeting, that the Company was yet in its infancy, and did not doubt that before long a larger dividend would be declared. Although the balance left in hand was small, still the increase in the traffic, and the good state of repair in which everything now was, justified the Directors in declaring the dividend they had done. In a few years it would be necessary to provide a larger sum for the wear and tear of engines, &c. In conclusion, he hoped that the Directors would never declare a less dividend than 3 per cent.

Mr. JOHN BOWES seconded the resolution, which was carried unanimously.

Mr. Henwood moved, and Mr. C. Whittaker seconded the next resolution, which was carried without opposition or comment.

Dr. Ayre moved the next resolution, which was seconded by Mr. Simpson. Mr. Foster moved an amendment, which was, however, lost, and the original motion carried.

Mr. FOSTER, in proposing the sixth resolution, said, that he had received a letter from Marseilles, stating that coals from Hull were scarcely known there, and would only fetch 20s. a chaldron, while Newcastle coals sold for 27s. This might be worthy of notice.

Mr. FARTHING seconded the resolution. Carried.

On the motion of Mr. G. Liddel a vote of thanks was passed to the Chairman for his able conduct in the chair, after which the meeting dispersed.—Abridged from the *Hull Advertiser*, March 4.

The *Havre Journal* states that M. C. Laffitte, Director of the Paris and Rouen Railway Company, came to Havre on Saturday, in order to communicate to the Mayor the plan of a Company, which proposes to execute the line of railway from Rouen to that town. "According to the statements of M. C. Laffitte," says this journal, "it would appear that the ministry is waiting only for the favourable concurrence of our place before it presents to the Committee on railways the project formed by the Company in question, and of which M. C. Laffitte will be Director, although this new undertaking will be quite distinct from the Paris and Rouen Company. The works on the Havre line, for which the *materiel* which has already served for the Paris and Rouen line would be employed, would be commenced as soon as the Bill for authorising it should have passed the Chambers, and three years would suffice for their entire completion. The Municipal Council of Havre is convoked for Wednesday, to deliberate upon this important commuication."

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of this undertaking will be held at the London Tavern, Bishopsgate-street, in the city of London, on Thursday, the 17th day of March instant, at One o'Clock precisely, to receive the Report of the Committee appointed at the General Meeting, held on 20th day of January last, and take the same into consideration.

JOHN HARMAN, Chairman of the Board of Directors.
CHARLES R. MACKENZIE, Secretary.

10, Angel Court, Throgmorton Street, 4th March, 1842.

LONDON AND BRIGHTON RAILWAY.—NOTICE is hereby given, That the Five o'Clock Express Train will continue to run as heretofore every Afternoon, until further notice.

CHARLES R. MACKENZIE, Secretary.

10, Angel Court, Throgmorton Street, 11th March, 1842.

WARNING TO PERSONS TRAVELLING BY RAILWAY.—An accident of a very distressing nature happened on the Leeds and Manchester Railway, on Tuesday afternoon last, the effect of what is termed "having a lark." The party injured is Mr. J. Whitnall, a young gentleman of highly respectable connections, residing at Wakefield. On the afternoon referred to, Mr. Whitnall and two friends were on their road to Leeds, in a third class carriage, and when the train had reached about a mile this side of Woodlesford, the guard perceived that the party were smoking cigars. This being contrary to the rules of the Company, he descended from his seat, and requested them to discontinue the practice. They at first refused to comply, but on his hinting at the consequences, they threw the cigars away. The guard having left them, and resumed his seat, they commenced "larking," and whilst this was going on, Mr. Whitnall was pushed violently against the door, which owing, it is supposed, to some defect in the fastener, flew open, and he was precipitated from the carriage. The train was travelling at a very rapid rate, and it was at once concluded that the unfortunate gentleman would be killed on the spot. On being taken up, however, by the policemen on the line, he was found alive but quite insensible. His left foot was nearly severed from his leg, and only hung by a small tendon of skin. With the exception of this, and a slight bruise upon the head, he had sustained no other injury. Mr. Thomson, the Company's representative at Wakefield, happened to be in the train at the time, and on being informed by the guard of the circumstance on his arrival at the Leeds station, he gave orders for the immediate return of the engine and a carriage, and accompanying the same found the unfortunate gentleman as described. Mr. W. was carefully placed in the carriage and conveyed back to his own residence at Wakefield. By this time he was restored to consciousness, and during the journey home bore his sufferings with great patience and fortitude. On reaching Wakefield, surgical aid was called in, and the injury sustained was then found to be of so serious a nature as to render amputation of the leg necessary, which operation was performed the same night. We understand that the unfortunate sufferer is favourably advancing towards recovery. It may be proper to state that many contradictory accounts are afloat with reference to the real cause of this accident, and we perceive that the *Wakefield Journal*, of yesterday, gives a totally different version of it, attributing the occurrence to the neglect of the Company, in not having proper fastening to the door of the carriage, and making no mention whatever of cigar smoking, or of any culpable conduct on the part of Mr. Whitnall and his friends. As regards the fastening alluded to, all the doors of the waggon carriages on the Manchester and Leeds line have *two* fastenings, the ordinary carriage handle and catch, with an additional sneck at the top of the door, this sneck was said to have been absent, but if there (which was the case) how could it protect the door from the unlooked for violence described to have taken place, when it was actually forced off the carriage, and found on the line the day after the accident. If our account of the matter should be incorrect in any particular, we shall, of course, be prepared to state the authority on which it is founded.

AYLESBURY RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of the said Company will be held at the White Hart Inn, in Aylesbury, on Thursday, the 17th day of March instant, at Twelve o'Clock at Noon, pursuant to the Act of Incorporation of the said Company, at which Meeting two Directors will be elected in the place of the two Directors going out of office. The Chair will be taken at One o'Clock precisely. Given under my hand this 1st day of March, 1842.

THOMAS TINDAL,
Deputy-Chairman of the Directors.

BRISTOL AND GLOUCESTER RAILWAY COMPANY.—EXTENSION LINE.—NOTICE is hereby given, That the Annual General Meeting of the Shareholders in this undertaking will be held at the White Lion Inn, situate in Broad-street, in the City of Bristol, on Thursday, the 31st day of March instant, at One o'Clock in the Afternoon.

By order of the Committee of Management,
GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Bristol, 2nd March, 1842.

The Chair to be taken at One o'Clock precisely.

The Transfer Books will be closed on Saturday, the 26th day of March, and not re-opened until after the said General Meeting, on the 31st of the said month.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That on and after MONDAY, the 14th March, the Trains on this Railway will run as follows:—

DOWN TRAINS.

	8	o'Clock, morning,	to Spelbrook.
Half-past	9	,, ,,	Do.
,,	11	,, ,,	Do.
,,	1	,, afternoon,	Do.
,,	3	,, ,,	Do.
,,	4	,, ,,	Do.
,,	5	,, ,,	to Broxbourne.
	8	,, evening,	to Spelbrook.

UP TRAINS.

Half-past	5	o'Clock, morning,	from Spelbrook.
	8	,, ,,	from Broxbourne.
Half-past	8	,, ,,	from Spelbrook.
,,	9	,, ,,	Do.
,,	11	,, ,,	Do.
,,	2	,, afternoon,	Do.
,,	4	,, ,,	Do.
,,	6	,, evening,	Do.

AND ON SUNDAYS.

DOWN TRAINS.

	8	,, morning,	to Spelbrook.
Half-past	9	,, ,,	Do.
,,	2	,, afternoon,	to Broxbourne.
,,	3	,, ,,	to Spelbrook.
	8	,, evening,	Do.

UP TRAINS.

Half-past	5	o'Clock, morning,	from Spelbrook.
,,	9	,, ,,	Do.
,,	1	,, afternoon,	Do.
	4	,, ,,	from Broxbourne.
,,	6	,, evening,	from Spelbrook.

By Order,
WM. BOURNE, Secretary.

NORTH MIDLAND RAILWAY.—At the ELEVENTH HALF-YEARLY GENERAL MEETING of the Shareholders of the North Midland Railway Company, held at the Station at Leeds, on Saturday, the 26th of February, 1842,

WILLIAM LEAPER NEWTON, Esq., Chairman of the Board of Directors, in the Chair,

It was moved by Edward Baines, Esq.; seconded by — Alston, Esq., and resolved unanimously—

"That the Report now presented be adopted, and circulated among the shareholders."

It was moved by George Carr Glyn, Esq.; seconded by Joseph Baxendale, Esq., and resolved—

"That the three Directors—Charles Tee, Esq.; John Walbank Childers, Esq., M.P.; and Lorenzo K. Hall, Esq., now going out by rotation, according to the provisions of the Act of Parliament, and who have offered themselves for re-election, be now appointed."

It was moved, seconded, and resolved unanimously—

"That the thanks of the meeting be given to Mr. Alston and Mr. Brancker, the Auditors, for their valuable services, and that they be earnestly requested to continue them."

It was moved, seconded, and resolved unanimously—

"That the thanks of this meeting be given to the Board of Directors, for their important and able services."

It was moved, seconded, and resolved unanimously—

"That the thanks of this meeting be given to William Leaper Newton, Esq., the Chairman, for his gentlemanly and impartial conduct in presiding."

LONDON AND CROYDON RAILWAY.—A Resolution having been passed at a Half-yearly General Meeting, held on the 10th instant, that a dividend of 6s. 8d. per share be paid to the Proprietors of all registered shares, NOTICE is hereby given, That the Book for entering Memorials of Transfers, will be closed from Monday, the 14th instant, until Monday, the 28th instant, both days inclusive; and the holders of Scrip Shares are hereby reminded of the necessity of registering the same before the Books are closed, to avoid being excluded from the benefit of the dividend.

R. S. YOUNG, Secretary.

205, Tooley-street, 12th March, 1842.

NORTH UNION RAILWAY.—The Directors invite TENDERS for supplying the Company with good COKE for one year certain (or such term as may be agreed on), from the 1st day of May next ensuing. The Coke to be screened through two and a half inch riddle, and delivered in the maker's own sacks.

Tenders, stating the price per ton, and the place of delivery, may be addressed not later than the 28th instant, to the Secretary of the Company, at Preston, of whom any further information may be had.

North Union Railway Office, Preston,
4th March, 1842.

TO BRASS FOUNDERS, ENGINEERS, IRON FOUNDERS, AND EXPORT IRONMONGERS.—To be LET on LEASE, a Brass Foundry fitted up with Eight Furnaces upon the best plan; size of Foundry 53 feet by 35 feet, with a shaft 90 feet high. Also, a Warehouse well adapted for an Export Ironmonger, 60 feet by 35 feet. Also, an Iron Foundry 53 feet by 35 feet, with a shaft 90 feet high, within a mile of the Royal Exchange, and contiguous to the river.

For further particulars apply, pre-paid, to A. Z., at Mr. Smith's, Upholster, 72, Old Broad street, City.

DUBLIN AND DROGHEDA RAILWAY.—

At the General Half-yearly Meeting of the Dublin and Drogheda Railway Company, held at No. 22, Marlborough-street, on the 3rd day of March, 1842, the Reports from the Directors, the Auditors, and the Engineer, having been read, it was

Proposed by Myles O'Reilly, Esq.; seconded by Francis Purcell, Esq.—

Resolved—That the Report now read be received and printed—that the half-yearly statement of the accounts, as audited, and the Engineer's Report be appended thereto, and circulated for the information of the shareholders.

Proposed by W. Hodges, Esq.; seconded by Richard Wright, Esq.—

Resolved—That the Registry of the Proprietors of this Company, as now prepared, be sealed in the presence of this meeting, and be adopted as the Registry of the Company.

Proposed by Joseph Scott, Esq.; seconded by Richard Hill, Esq.—

Resolved—That the following gentlemen, being duly qualified, be elected Directors of this Company:—

Thomas Brodigan, Esq., Piltown, Drogheda.
Joseph Pasley, Esq., North Frederick-street, Dublin.
George Hoyte, Esq., Sackville-street, Dublin.
David Scott, Esq., Manchester.
Samuel Horne, Esq., Manchester.
Joseph Owen, Esq., Manchester.

Proposed by George Hoyte, Esq.; seconded by Andrew S. Ball, Esq —

Resolved—That the declaration of forfeiture made by the Directors of this Company on the 19th day of November, 1841, of the several Shares in the Capital Stock of the said Company, numbered respectively,

2470 to 2479—1636 to 1641—2645 to 1648—5478 to 5487
4496 „ 4515—2916 „ 2940—1024 „ 1073—3173 „ 3192
3961 „ 3973—5376 „ 5380—5386 „ 5337—4951 „ 5025
2049 „ 2148—2319 „ 2323—3708 „ 3732—5616 „ 5620
3308 „ 3357—3218 „ 3247— 813 „ 862—1914 „ 1963

all inclusive, be, and the same is hereby confirmed.

Ordered, that the Directors of this Company be, and they are hereby directed to dispose of the Shares so forfeited in manner directed by the Company's Acts.

Proposed by Thomas Brodigan, Esq.; seconded by Thomas Mooney, Esq.—

Resolved—That the thanks of this meeting be presented to Charles Hayes and Francis Purcell, Esqrs., for their important services in auditing the last half-yearly accounts of this Company.

Moved by the Rev. William Betty; seconded by Thomas Hodges, Esq.—

Resolved—That Messrs. Joseph Scott, Henry Mooney, and Francis Purcell, be requested to audit the accounts of the Company for the present half-year, previous to the next general meeting, and that it be suggested to the auditors to attend monthly, or at such other more frequent periods as may suit their convenience.

Proposed by General Luscombe; seconded by Joseph Scott, Esq.—

Resolved—That the cordial thanks of the shareholders be given to the Hon. and Rev. Mr. Taylor, of Ardgillan Castle, and George Alexander Hamilton, Esq., for their liberality in permitting an alteration in the line of the Railway through their demesnes, whereby great expense will be saved to the Company, and future damage to the works, by reason of the wash of the sea, completely obviated.

Proposed by Charles Hayes, Esq.; seconded by Francis Purcell, Esq.—

Resolved—That the thanks of the shareholders be given to Mr. Eckersley, the Managing Director, and to Mr. Kidd, the Secretary, for their excellent management of the business of their respective departments.

Proposed by William Edward Bolton, Esq.; seconded by General Luscombe—

Resolved—That the thanks of the shareholders be given to John Macneill, Esq., the Company's Engineer, for the satisfactory manner in which he has conducted his department.

Proposed by Joseph Scott, Esq.; seconded by R. D. Kane, Esq.—

Resolved—That the cordial thanks of the shareholders be given to the Directors for their assiduous attention to the affairs of the Company.

G. A. HAMILTON, Chairman.

George A. Hamilton, Esq., having vacated the chair, and George Hoyte, Esq., having been called thereto, it was

Proposed by Charles Hayes, Esq.; seconded by Francis Purcell, Esq.—

Resolved—That the cordial thanks of this Company be given to George Alexander Hamilton, Esq., for his uniform attention to the welfare of this undertaking, and for his able and impartial conduct as Chairman this day.

GEORGE HOYTE.

REPORT,

In presenting their half-yearly Report, your Directors refer to the satisfactory statement of your Engineer-in-Chief, which will be now presented, for a detailed account of the progress of the works during the last six months.

In reference to their purchases of land, your Directors have to report that two inquisitions have been held since the last meeting of the shareholders. The first was held for the land required across the estuary of Clontarf, when a very large sum was claimed by Mr. Vernon of Clontarf Castle, for an alleged injury to the view of the house known by the name of the Convent, and the ground adjoining, by reason of the railway embankment to be carried over the estuary. This claim was successfully resisted by your Directors, as the jury gave a mere nominal award for both land and damages.

The second inquisition was held for the land required from Kilcreagh point to Skerries, a distance of seven and a-half miles, and it is satisfactory to your Directors that they were able to make private agreements with every one of the parties interested in the whole of the land over this district, by which the expense of the inquisition was greatly diminished, and no feeling of hostility created on the part of the several parties interested, whether as owners or occupiers. Nor were these advantages purchased by a sacrifice of the interests of the shareholders, as the sums agreed for in respect of the land and severances and all other consequential damages, amount to only 600*l.* per mile.

On the 28th of October last, your Directors entered into a contract with Mr. William Dargan, for the construction of the railway over this portion of the country, for the sum of 46,000*l.*, and the works are now in active progress. Another portion of the line, from the termination of Mr. Dargan's contract to a short distance beyond the harbour of Balbriggan, is now nearly ready for being let, and no time will be lost in completing the preparations for the remaining portions of the entire line, which your Directors expect within a short period to have in complete operation.

The portion of the line already in course of active formation includes nearly the whole of the heavy works which require the longest time for their completion, and as the remainder can be executed in a comparatively short period, the opening of the whole line can take place with the greatest facility at the same time.

It is a source of great satisfaction to your Directors to find, that the heaviest portion of the cuttings and embankments which are now considerably advanced, has stood in a remarkable manner the test of severe weather during the last four months, not a slip or other unfavourable circumstance having occurred. This, however, is attributable to the character of the soils through which the railway has to be formed, and to which favourable circumstance, as regards the economy of construction and subsequent expense of maintaining the line, your attention was called on a former occasion.

To this circumstance also, but more especially to the careful and complete manner in which your Engineer has prepared the plans and specifications for the several works now in progress, and to the plan which is adopted of discharging monthly any claim for extra work, may be referred, the almost entire absence in your accounts of any expenditure for extra works, which on many railways have been a most fruitful source of expense and disappointment.

In connection with the subject of their purchases of land, your Directors have great pleasure in recording thus publicly the handsome and liberal conduct of the Hon. and Rev. Mr. Taylor, of Ardgillan Castle. By their Act of Parliament, the Company were not authorised to take any portion of his demesne for the purposes of the railway, and were consequently under the necessity of carrying it over the Ardgillan cliffs, upon which the sea has for some time made encroachments; to stem these encroachments, and to provide a sufficiently firm foundation for the railway would have been attended with considerable expense, and on a full representation of the circumstances, Mr. Taylor has consented to allow the railway to be made through a portion of his demesne, without any extra charge for his land, and requiring only that convenient approaches, &c., shall be made to his house, and proper fences to his demesne intersected by the railway. The immediate advantage to the Company which arises from this arrangement, although considerable, is not so great as the ultimate saving of expense which would otherwise have to be incurred in repairs, by reason of the action of the sea on the railway works.

On referring to the half-yearly statement of the accounts you will perceive that the Directors have been able to discharge the liability which they incurred some time ago, to meet a large and urgent payment for land, and at the same time to meet all their engagements, and to keep a good balance in the hands of their bankers. As, however, during the ensuing summer, they will have to provide for the payment of the land required for the remainder of the Railway and terminal stations, not already paid for, and at the same time have to meet very heavy demands for the works, they are not sanguine enough to hope that their funds will be in so flourishing a condition at the next half-yearly meeting.

In a previous Report your Directors referred to a clause in the Company's last Act of Parliament, authorising the payment of 4 per cent. interest on 30*l.* per share when that sum was called up and duly paid. That amount being now called, all parties holding shares on which 30*l.* have been duly paid, are entitled to 4 per cent. interest on that sum, which the Directors have arranged to pay half-yearly on the 1st of January and 1st of July, until the public opening of the railway, (that time being fixed by the Act of Parliament for the discontinuance of such payment, as the profits from the working of the line will then commence,) while all parties who neglect to pay up, are not only excluded from the receipt of interest so long as they are in arrear, but are charged at the rate of 5 per cent. for all sums which they may be in arrear, and in order to prevent any misunderstanding on this point, your Directors have thought it advisable to lay this explicit on the subject.

In accordance with a resolution passed at a former meeting of the shareholders, your Directors proceeded in November last, to declare certain shares in your undertaking forfeited for non-payment of calls, the parties holding them having become insolvent or having left the country, or from other causes being unable to pay, and you will be called upon to confirm the forfeiture of a large portion of these shares at the present meeting, and to give the requisite authority for their sale, at such time and upon such terms as your Directors may, upon mature consideration, deem advisable.

In reference to the resolution passed at the last half-yearly meeting, recommending the establishment of a provident society, under the sanction of the Friendly Societies' Act, for the relief of such labourers as may be injured by accident while employed on the works, and in case of death to provide a sum for the wife or family of the deceased, your Directors have to report that the Society is now in full operation, and they have no doubt but it will be eminently useful in fulfilling the benevolent objects for which it was established.

In bringing under your notice a subject which, from its importance, has engaged the frequent and serious consideration of your Directors, namely, the connection of the Dublin and Drogheda Railway with the Ulster line, so as to form a continuous railway communication between Dublin and Belfast, it may be necessary to state that their attention was first called to it by Lord Morpeth, in an interview which a deputation of your Directors had with his Lordship a short time before he resigned the office of Chief Secretary for Ireland. The interview was sought on the part of your Directors in consequence of their finding that a clause had been inserted in a Bill which his Lordship had just laid before Parliament on the subject of Irish railways, which authorised, under certain circumstances, the construction of a railway to the north of Ireland, and which clause your Directors conceived might be prejudicial to your interests. While his Lordship admitted the claims of your undertaking to protection, he directed the attention of the deputation to the public necessity which existed for a continuous line of railway from Dublin to Belfast, and stated that in the event of the Drogheda line being connected with the Ulster Railway, no other line would be allowed to interfere with its interests.

There can be no doubt that the public interests will demand, in the event of any general system of railways being introduced into Ireland, that a continuous line should be formed between Dublin and Belfast, and it is equally certain, that the formation of such continuous line by the connection of the Dublin and Drogheda with the Ulster Railway, would be essentially for the interest of this Company, and if accomplished by parties whose interests were the same or identical with your own, would render your undertaking one of the most profitable investments in the United Kingdom.

In consequence of their attention being thus called to the subject, your Directors proceeded to consider in what way and by what means this object of paramount importance to the Company, could be best attained, on the supposition, that the Government would bring forward some measure for the prosecution of railways in Ireland, and the result of such consideration has led to the conclusion, that such extension by a common fund with Government co-operation, would be a most advantageous arrangement for the proprietors of the Drogheda line.

It is obviously unnecessary, and would be premature at the present time to enter fully into the reasons which have led to this conclusion, the more particularly as the course which the government may take in reference to this question is still undecided, and as the whole subject would have to be submitted to the Proprietors for their full consideration at a special meeting, before any definite steps could be taken which would commit them as a body. It may not, however, be undesirable to state some of the principal considerations in favour of this position, in order that the attention of the shareholders may be directed to the question.

In the first place it may be remarked that such extension would effectually secure the stability of your undertaking as a permanent investment, as no apprehension of any rival line could then exist. In the next place it may be observed that the traffic on the Drogheda line would be increased in a most important degree, by the continuation of the Railway to Belfast, (now becoming the second town in Ireland), as it is obvious that although a line to Drogheda only, would greatly increase the present traffic, yet that such increase would be mainly derived from the district immediately surrounding Drogheda, and the intermediate places between Drogheda and Dublin; while Dundalk and Newry, and Belfast, with a great number of other towns, to which the proposed extension would afford the immediate facility of railway communication with the metropolis, would not contribute in any proportionate degree to the ratio of increase which would take place supposing the entire line to be constructed; nor could it be expected that the Scotch traffic, which would be very considerable if a line were completed to Belfast, would be available for a line requiring a long intermediate common road conveyance to reach it. Independently of these considerations it is well known that a long line can be worked with greater profit than a comparatively shorter one; and that from the cheapness with which the connecting line can be executed, (the estimate not exceeding 12,000*l.* per mile,) and the populous district through which it is proposed to make it, no doubt can be entertained of its being, in itself, a highly remunerative undertaking in the event of its being connected with the Drogheda line, and worked by its officers and stock.

In addition to these considerations it may be observed, that the convenience of the public would be much more consulted by the uniformity of the arrangements which would exist in the management of the traffic, supposing the whole line to belong to one Company, than if it were under the controul of different Boards; and thus both the interests of the public and of the Proprietors would be promoted by the concurrence of the Government in the plan to which reference has been made; and it is believed that such concurrence is more likely to be given to a great national work of this character than to any isolated undertaking however important.

Having stated thus much, it may now be proper to lay before you the nature of the communications which have been made to the Government, and which in the event of their being favourably received, your Directors with your concurrence, would endeavour to carry out for the accomplishment of this great object.

Digitized by Google

First—That this Company should find half the capital required for the construction of a great Northern Railway from Dublin through Drogheda to some point on the Ulster line, which sum is estimated at 600,000*l.*

Second—That the Government should guarantee 4 per cent. interest on the other moiety, thereby enabling the Company to raise such moiety on such guarantee.

Third—That so soon as this Company have paid up 150,000*l.*, they shall have the power to raise 100,000*l.* on the Government guarantee. Afterwards 100,000*l.* to be raised alternately by the Company and the Government guarantee until the works, &c. are completed.

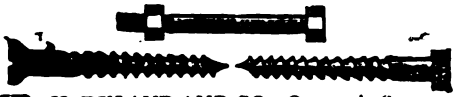
Fourth—That the whole property of the Company should form a security to the Government for such guarantee.

Fifth—That the maximum fares for passengers, &c. should be fixed by Parliament, the measure brought forward as a public measure to save Parliamentary expense and litigation, and the line of Railway made subject to such Government controul as might be found conducive to the public good.

In the present position of this question it will be altogether unnecessary to enter into any explanation of the manner in which the additional Capital required for the accomplishment of this object would have to be raised. It may suffice to remark that it would not be proposed to increase the liabilities of the present shareholders, nor to interfere with the dividends which would accure to the proprietors from the opening of the line to Drogheda, as these might be paid in due course until a dividend could be declared from the proceeds of the entire line.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:
By J. L. CURTIS and Co., Consulting Surgeons, London.
SEVENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Bowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.



"This is a work that we fear there exists too much need for, to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

TO CIVIL ENGINEERS, &c.—A Gentleman in the above Profession wishes for Employment. As the principal object of the Advertiser is to gain a more thorough practical knowledge of his profession, no salary would be required for the first year; or a small premium would be given with a view to a Partnership in a year.

Address, T. B., Messrs. Swale's, 21, Great Russell-street, Bloomsbury.

GREAT NORTH OF ENGLAND RAILWAY.—At the Twelfth Half-yearly General Meeting of the Proprietors of the Great North of England Railway, held in Darlington, on Tuesday, the 1st of March, 1842,

THOMAS MEYNELL, Jun., Esq., in the Chair;

The following Resolutions were passed:—

1st.—That the Common Seal of the Company be affixed to the Register of Proprietors now produced.

2nd.—That the Report of the Directors now read be adopted, and circulated among the Shareholders.

3rd.—That a Dividend of £2 5s. per Share be now declared, and be made payable on the 31st of March, 1842.

4th.—That the following additional Bye-law be adopted, viz:—

"Every passenger travelling in a first class carriage, having only paid a third class fare, shall pay in addition a second class fare for the whole distance travelled by him or her; and if in a first class carriage, having only paid a second class fare, or in a second class carriage, having only paid a third class fare, shall pay in addition a third class fare for the whole distance travelled by him or her; and every such passenger shall, in addition, be liable to a penalty of 40s."

5th.—Resolved, and it is hereby ordered, that this Company do borrow and take up at interest, any sum or sums of money, not exceeding in the whole (exclusive of the sums already ordered to be borrowed by this Company) the sum of £100,000; and do secure the re-payment of the money which shall be so borrowed, with interest, in the manner authorised by the Acts of Parliament relating to this Company.

6th.—That the following Shareholders be appointed Directors of the Company, in lieu of those gentlemen who go out of office by rotation:—Mr. Wilkinson, Mr. Stobart, Mr. Cargill, Mr. Elsley, Mr. Smith, of Hall Garth, and Mr. Hopkins.

7th.—That a list of the Shareholders, with the names of persons eligible for the office of Director, marked with a star, be printed before the next annual meeting, and forwarded to each Shareholder, prior to the meeting.

8th.—That copies of the future Balance-sheets of this Company be printed prior to the next half-yearly meeting, in time for the Shareholders to receive them before the Meeting.

THOS. MEYNELL, Jun., Chairman.
W. O'BRIEN, Secretary.

HULL AND SELBY RAILWAY.—At the Annual General Meeting of the Proprietors of the Hull and Selby Railway, held pursuant to Notice, in the Court of Request Room, Town Hall, Hull, on Saturday, February 26th, 1842.

RICHARD TOTTIE, Esq., in the Chair.

The following Resolutions were passed:—

1st—Moved by Mr. Thomas Carlill, of Hessle; seconded by Dr. Ayre—

"That the Report now read be received and adopted."

2nd—Moved by Mr. Henry King; seconded by Mr. Thomas Meynell—

"That the thanks of the Meeting be presented to Henry Broadley, Esq., M.P., the Chairman of the Directors; to Richard Tottie, Esq., the Deputy Chairman; and to the other Directors, for their continued attention to the management of the affairs of this undertaking."

3rd—Moved by Mr. John Gresham; seconded by Mr. John Bowes—

"That in conformity with the recommendation of the Directors contained in their Report, a dividend of 15s. upon each share in the capital stock of the Company, being at the rate of £3 per cent. per annum, be now declared; and that the same be payable (subject to the directions of the Act of Incorporation) on or at any time after the 11th day of April next; and that the Transfer Books be closed on the 28th March, for fourteen days."

4th—Moved by James Henwood, Esq.; seconded by Charles Whitaker, Esq.—

"That the following shares, numbered 1040, 5818 to 5837, 1601 to 1605, 4494 to 4497, 5111 to 5120, 7572, 2843 to 2857, 3868, 5045, 6996 to 6999, having been declared by a Resolution of the Board of Directors to be forfeited for the non-payment of the Calls made thereon, and the notice of such declaration of forfeiture required by the Railway Act having been fully given, such forfeiture is confirmed by this meeting; and the Directors are hereby empowered to sell such shares at the times and in the manner which they may deem expedient."

5th—Moved by Doctor Ayre; seconded by R. W. Simpson, Esq., of Leeds—

"That Mr. Tottie, Mr. Pease, Mr. J. G. Marshall, Mr. Egginton, and Mr. Kirk, the Directors who retire in rotation be re-elected."

6th—Moved by Mr. John Foster; seconded by Mr. John Thompson—

"That Mr. William Farthing and Mr. Henry King be requested to audit the accounts."

RICHARD TOTTIE, Chairman

The Chairman having left the chair, it was moved by George Liddell, Esq.; seconded by James Henwood, Esq., and carried by acclamation—

"That the thanks of this meeting be presented to the Chairman for presiding on this occasion, and for his conduct in the chair."

HENRY COBBETT, Nurseryman, Horsell, near Woking, Surrey, begs to apprise Planters and Railroad Contractors, that he has on sale a quantity of two and three years old Transplanted Quicks, at a reasonable price for cash, near Woking Station, South-Western Railway.

TESTIMONIAL TO I. K. BRUNEL, Esq.—It is proposed to raise by Subscription, and to present to I. K. Brunel, Esq. a Testimonial of the cordial esteem and admiration entertained of his great talent, integrity, and zeal, in the execution of the important Works in which he has been professionally engaged, and upon which it must be needless here to enlarge.

It is designed that the Present should consist of a Service of Plate, commensurate with the amount of Subscription, and it would seem best to accord with the object of testifying to Mr. Brunel the general sense of his eminent services to the Public, as well as to his Employers in the professional capacity of a Civil Engineer, that the Subscription should not exceed Ten Guineas from each person.

Those who may be willing to unite in paying this well-merited tribute to Mr. Brunel, are requested to transmit their Names and Subscriptions to either of the undermentioned Gentlemen, who have formed themselves into a Provisional Committee for carrying the proposal into effect, and will be glad to associate any other Subscribers with themselves for the same purpose.

It is also requested that the earliest intimation of persons desirous of subscribing may be communicated, in order that the Testimonial may be presented with the least possible delay, of which due notice will be given to each Subscriber.

The amount of Subscription may also be paid to the credit of the Committee, at the bank of Messrs. Glyn, Hallifax, and Co., Lombard-street, London, or be remitted to them through any Bank in the country.

Letters or communications for the Committee may be addressed to Charles Russell, Esq., M.P., No. 27, Charles-street, St. James's, London.

PROVISIONAL COMMITTEE.

The Viscount Barrington, M.P.	Raymond Cripps, Esq.
E. Divett, Esq., M.P.	James Gibbs, Esq.
W. G. Hayter, Esq., M.P.	W. H. Hyett, Esq.
P. W. S. Miles, Esq., M.P.	P. Miller, Esq., M.D.
Charles Russell, Esq., M.P.	Frederick Ricketts, Esq.
Robert Bayly, Jun., Esq.	C. F. Sage, Esq.
Robert Bright, Esq.	Vincent Stuckey, Esq.

Amount already received, 933*l.* 7*s.*

The names of Subscribers will appear in a future advertisement.

5th March, 1842.

THE TESTIMONIAL TO MR. BRUNEL.—A letter, of which the following is a copy, has been written to Charles Russell, Esq., Chairman of the Great Western Railway Company, and by the desire of the writer, and with the sanction of the receiver, it is here published as an advertisement, as the readiest way of forwarding its object:—

To Charles Russell, Esq., Chairman of the Great Western Railway.

Dear Sir,—I have read in the *Railway Times* of the 26th instant, the proposition made at your half yearly meeting of the 24th instant, to present to your Engineer, I. K. Brunel, Esq., a Service of Plate; and that the highest individual amount permitted to be subscribed by any one proprietor is 10*l.* However adequate the amount of the general subscription from the numerous proprietors of the Great Western Railway may be, and I feel convinced will be, for a splendid Testimonial to your talented Engineer; and however gratifying such complimentary acknowledgement of his merits may be to that gentleman, and to the shareholders who contribute to it, I feel that there is another party interested in the Great Western Railway who will cordially join in the well-deserved compliment,—though not shareholders,—and to whom it will be a gratification, and not otherwise, I think, to the Engineer,—to be permitted to make their acknowledgement of the superior comfort, accommodation, and speed, which are afforded to them on the Great Western over those of any other railway in the kingdom. I allude to the passengers resident upon the line of the Railway, as one of which, travelling regularly upon it, I beg to be permitted to enrol my name as a subscriber of 10*l.* to the Service of Plate intended to be presented to I. K. Brunel, Esq., and my check, for which I enclose.

May I be allowed, Sir, as a party deeply interested in Railways, to add that, whether the width of the gauge of the Great Western Railway be the precise point to which the distance between the rails should be extended, or not, it is to Mr. Brunel to whom the merit of the first breaking from the trammel of the 4 feet 8½ inches gauge is due; and that whatever difference of opinion may exist as to the exact width which is most advantageous for a Railway in every respect, there is none, I apprehend, that a deviation from the old arbitrary gauge of 4 feet 8½ inches was wise and desirable, and for this first departure from what was not the best,—but which was likely to be persevered in throughout the country,—we are indebted to your "spirited and talented Engineer;" and I only add, "*Palmam qui Meruit ferat.*"

I am, dear Sir,
Your very obedient servant,
(Signed) WILLIAM CRAWSHAY.

Caversham Park, near Reading.
February 28th, 1842.

TO WHEELWRIGHTS AND OTHERS.—WANTED, Two or Three thorough, handy, willing, good Men, to undertake, on a very heavy contract, the repairs of all the earth waggons, barrows, and general Plant; they must thoroughly understand Smiths' Work. None need apply excepting with good characters, and who have been used to the work for some length of time.

Address, Mr. McKeone, Northern and Eastern Railway Sawbridgeworth, Herts.

HUNGERFORD AND LAMBETH SUSPENSION FOOT-BRIDGE COMPANY.

Directors—

The Right Honourable The Earl of Devon, Chairman.

William Cory, Esq.	James Lys Seager, Esq.
Charles W. Christie, Esq.	Daniel Sutton, Jun., Esq.
Thomas Harrison, Esq.	James Ruddell Todd, Esq.
Benjamin Hawes, Esq.	George Vaughan, Esq.
William Hawes, Esq.	G. F. Walker, Esq.
James Rhodes, Esq.	

Treasurer—Alexander Rogers, Esq.

Bankers—London and County Joint Stock Bank.

Engineer—I. K. Brunel, Esq., F.R.S.

Surveyor—J. B. Banning, Esq

Solicitors—Messrs. Few, Hamilton, and Few.

Clerk—Mr. Lawrance.

At the Half-yearly General Meeting of the Proprietors, holden at the Company's Offices, No. 9, Villiers-street, Strand, the 26th day of February, 1842, the following Report of the Directors was read:—

REPORT.

Your Directors have to report that the contractor has proceeded as rapidly as the weather has allowed him, in the performance of his contract, and the work has been executed so far, to the entire satisfaction of your Engineer, whose Report upon the present state of the works will be read to the meeting.

In the course of a month the works will be proceeding at both coffer-dams and abutments.

The Contract for the Iron-work is completed, and the Contractors, Messrs. Carne and Vivian, are proceeding with it.

Your Directors have not yet disposed of any of the Forfeited Shares, and feel they cannot bring this subject too prominently before the Proprietors, having relied upon their assistance in disposing of them.

The Balance Sheet of the Company's Half-yearly Accounts, ending 31st of January last, and signed by the Auditors, will be read by the Clerk.

ENGINEER'S REPORT TO THE COURT OF DIRECTORS.

18, Duke-street, 25th February, 1842.

Gentlemen,—I have the satisfaction of reporting to you that the works are proceeding regularly and successfully, and that nothing whatever has as yet occurred to create any difficulties, beyond those anticipated and provided for.

The foundations on the north side are completed; and as soon as the last of the castings, which form the means of attaching the chains, shall have arrived, the abutment itself will be rapidly built up. On the south side, the foundation for the abutment has been excavated, and the ground exposed, and the result of my examination is perfectly satisfactory: the pile driving and foundations for this abutment will now be proceeded with. Of the river pier one coffer-dam is complete, and an engine is being erected for the purpose of pumping the water and removing the mud. The bed of the river appears to be hard, and well fitted for founding the piers.

The iron work for the suspended portion is commenced; and I am happy to say that we have every right to expect that this part of the contract, upon which, of course, so much depends, will be well executed. The works of Messrs. Harford, at Ettonvale, are capable of furnishing very excellent iron, and I cannot doubt that they will use their best endeavours to manufacture the best material in the present case; and so far as it is safe to form an opinion from the first delivery of the chains for the Clifton Bridge, which are similar to ours, Messrs. Carne and Vivian, our contractors, can, and I have no doubt will, execute the work in a very excellent and creditable manner.

Upon the whole, we have every reason to be satisfied with the present state and progress of the works, and to expect that during the ensuing summer a very considerable and a much more apparent advance towards completion will be made. I am, Gentlemen, your obedient servant,

I. K. BRUNEL.

To the Directors of the Hungerford Bridge.

It was moved and seconded, and resolved—

That the Report be received, and printed and circulated amongst the Proprietors.

It was moved and seconded, and resolved—

That the Thanks of the Meeting be given to the Chairman, and to the Directors, for the care and assiduity they have manifested in the affairs of the Company.

By order of the Board,

RICHARD LAWRANCE.

NOTICE is hereby given, That a Special General Meeting of the LIVERPOOL AND MANCHESTER RAILWAY COMPANY will be held at the Cotton Sales' Room, in the Exchange Buildings, in Liverpool, on Tuesday, the 15th day of March instant, at One o'Clock in the Afternoon, for the purpose of taking into consideration and deciding upon the course to be pursued with respect to the several proposed lines of communication with the Manchester and Leeds Railway, and other Railways and places of traffic in Manchester and Salford, namely, the line from Cross-lane, Salford, to Hunt's Bank and Saint George's road, in Manchester, and the south, or new line, from Ordsall-lane, by Castle field and Store-street, to the Manchester and Leeds Railway Station, in Oldham-road, in Manchester, and on other special affairs. Dated the 1st day of March, 1842.

R. W. CLAY, Clerk of the Company.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.

DIVISION OF PROFITS AMONG THE ASSURED.

Surgeon.—F. Hale Thomson, Esq., 48, Berners-street.

Secretary.—Patrick Macintyre, Esq.

This Joint Stock Company, established by Act of Parliament, without limited responsibility, affords the most perfect security in an ample paid-up capital, and in the great success which has attended it, since its commencement in 1834, and the large accumulation of Premiums which has taken place

On the 1st of July 1841, the Company, at their General Meeting, declared an addition of one-half to the sums paid by the stockholders, and appropriated to those holding Assurances at the participating rate £2 per cent. per annum, from the dates of their policies, so that the addition to a policy for £1000, in force for the previous 5 years, has been £100, making it in all £1,100. The Premiums are nevertheless very moderate, and only one half of them, when the Insurance is for life, need be paid for the first 5 years after the date of the policy.

Insurances may be effected on lives however far advanced, and the credit for 5 years is found particularly convenient on such Insurances, and for the security of Temporary Loans.

Annuities are granted on very liberal terms.

The facilities afforded by this Company to the public, in these and other respects, are so great, that it is obviously a moral duty in every parent, not possessed of a fortune, but in the enjoyment of an income, however moderate, to Insure his life for a sum which may yield a provision to his family.

RATES OF PREMIUM.

Age.	Without Profits.	With Profits.	
25	£1 18s. 5d.	£2 2s. 11d.	per Cent.
30	2 3 10	2 8 2	do.

50	4 6 0	4 10 7	do.
60	6 15 3	6 17 9	do.

Every information will be afforded on application to the Resident Director, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.

The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,

JOHN WHITEHEAD, Secretary.

CRANES, ROPE BLOCKS, AND SCREW JACKS,

manufactured by ELLIS and NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

BRISTOL AND EXETER RAILWAY.—

Call of £10 per Share, being the Eleventh Instalment, and making with former Calls, the sum of £70 per share.—The Directors of this Company, under the provisions of the Act of Incorporation, hereby give Notice, That the Proprietors of Shares are required to pay, on or before the 31st day of January instant, at any of the undermentioned Banks, the sum of Ten Pounds on each of their respective shares, viz:—

London—Messrs. Glyn, Halifax, Mills, and Co.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. Wm. Jones, Loyds, and Co.; the South Lancashire Bank.

Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillies, Ames, and Co.; Messrs. Stuckey and Co.'s Banking Company, or at either of their Branches; the West of England and South Wales District Bank, or at either of its Branches; the National Provincial Bank of England.

Exeter—Messrs. Sanders, Sons, and Co.; Messrs. Cole, Holroyd, and Co.; the Devon and Cornwall Banking Company; Messrs. Milford and Co.; the West of England and South Wales District Bank, or at either of its Branches.

The Bankers are instructed to charge interest at the rate of 5 per cent. per annum on all arrears.

FREDERICK RICKETS, Chairman.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, January 7, 1842.

Interest at the rate of 5 per cent. will be allowed on payments in anticipation of calls.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention

RAILWAYS IN GENERAL.—R. B. WATSON and Co., of Leeds, beg to intimate to those interested in Railway Property, chiefly in the Northern Counties, that they are enabled to give information, *and an opinion* as to those lines in which it would be advisable to invest money at this particular period, founded upon a knowledge of the Trade of this district, acquired during a residence of Twenty Years in Hull, and Twelve in Leeds, Ten of which R. B. W. has been a Commercial Broker, and Six a Share Broker; thus giving them an advantage that few possess.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of 5 per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Princes-street, London, or Broad street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad street, Bristol.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—Notice is hereby given, That the Directors of the Bristol and Exeter Railway Company will receive on Saturday, the 26th of March, at 12 o'clock, at their office, Broad-street, Bristol, TENDERS for the execution of the following Works:—

Contract, No. 1. D.—The formation of the Railway, and the execution of all works connected therewith, excepting the laying of the Permanent Way, of that portion of the Line extending from the field next adjoining the proposed Station at Taunton, to the crossing of the Grand Western Canal, in the parish of East Ninehead—a distance of about four miles and fifty chains.

Contract, No. 2, D.—The formation of the Railway, and the execution of all works connected therewith, excepting the laying of the Permanent Way, of that portion of the Line extending from the last mentioned Contract to a field in the parish of Wellington, and joining the Wellington and Milverton Road; being a distance of about two miles and forty chains.

Contract, No. 3, D.—The formation of the Railway, and the execution of all works connected therewith, excepting the Laying of the Permanent Way, of that portion of the Line extending from the last mentioned Contract, to a point near Beam's-bridge, in the parish of Sampford Arundel; being a distance of about two miles.

Drawings and Specifications of the above Works will be exhibited at the Engineer's Office, in Temple Meads, Bristol; and Printed forms of Tender may be had at the same Office, or at the Company's Office in Broad-street, on or after Monday, March 7.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the parties to attend at the Office, Broad-street, Bristol, at Twelve o'Clock, on Saturday, March 26.

By Order of the Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol,
March 1, 1842.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I shall feel obliged if you or any of your readers, "learned in the law," will have the goodness to inform me by what authority the Directors of this Company are about to dispose of what they call the "forfeited scrip."

By their first Act of Parliament, dated April 22, 1836, they are empowered to raise 950,000*l.* in shares of 100*l.* each, and 316,666*l.* on mortgage, or by issuing new shares, "provided that all such additional shares, so to be issued, shall be shares of 100*l.* each."

The whole of this money has been raised long since, and of course expended.

Their second and last Act gives them no power to raise further capital.

In May last, the Company at a special meeting, resolved to borrow money in sums of 17*l.* 10s., payable by instalments, with the understanding that application should be made to Parliament, at a future period, to convert such loans into quarter shares of 25*l.* each.

Certain instalments on the loans being unpaid, the Directors at the last general meeting, proposed and carried a resolution, authorising them, in case the same should not be paid by the 25th instant, to forfeit what they call the "scrip," (but what I maintain is, till converted by authority of Parliament, nothing but a *loan*,) and to dispose of it for the Company's benefit.

Now, Sir, I have always understood that Railway Companies are bound to keep strictly within their Acts of Parliament, and I am quite at a loss to understand by what right a general meeting of proprietors can authorise Directors to borrow money, (*their Act giving them no power even to that extent*,) and because the borrower neglects or refuses to increase the loan, to confiscate what he has already lent. The Birmingham and Gloucester is, I believe, the only Company that has ever attempted such a palpable absurdity. I take the liberty of stating my view on the subject to you, because, if wrong, I shall doubtless be immediately corrected, either by yourself, or some of your numerous talented correspondents; and if right, I may probably be the means of inducing the Company to abstain from committing an act which, if persisted in, will assuredly lead to litigation.

I am, Sir, your very obedient servant,
W. B.

March 2, 1842.

ACCIDENT ON THE GREAT WESTERN RAILWAY.—The *Mazeppa* train was delayed yesterday upwards of an hour and three-quarters, in consequence of an accident which occurred about three miles up the Cirencester line. We have not been able to gather full particulars. Our information, however, is to the extent that the engine was thrown off the line, in consequence of the embankment having given way; and that the engineer and guard were much injured, although no accident happened to any of the passengers. Since the above was in type, a gentleman, who came down by the mail train, has furnished us with the following additional particulars:—It appears that a part of the rail had been taken up at Kemble, for the purpose of being repaired, and that the policeman whose duty it was to give the signal, gave the wrong one, and thus led the engineer astray—who, on coming up with the train to the point mentioned, was immediately precipitated, with the engine and luggage-train, down the embankment. The engineer and guard, owing to the sudden jerk, were thrown off to a considerable distance, and thus escaped any serious injury, although we understand they were much bruised. In consequence of the serious accident which occurred some two months since, on the Great Western line, Mr. Brunel gave instructions that the luggage train should be attached to the engine, instead of, as heretofore, behind the passengers, consequently no accident happened to the passengers, and they were enabled, after a delay of about one hour and a-half, to proceed on to Cirencester.—*Cheltenham Chronicle* of Wednesday.

MIDLAND COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

GREAT NORTH OF ENGLAND RAILWAY COMPANY—GENERAL MEETING.

[From the *Yorkshireman*, March 5.]

THE twelfth half-yearly general meeting of the Great North of England Railway Company was held on Tuesday last, in the Company's offices, Darlington. The attendance of shareholders was very numerous.

Mr. PRIESTMAN moved that Mr. THOMAS MEYNELL take the chair. This was seconded and agreed to.

Mr. W. O'BRIEN, the Secretary, then read the advertisement calling the meeting, after which

The CHAIRMAN said, the first business of the meeting would be to affix the Company's seal to the registry of proprietors. Perhaps some gentlemen would be kind enough to step out, and see that the seal was affixed.

The Secretary and one or two of the shareholders then left the room, and affixed the seal accordingly.

The CHAIRMAN then said, the seal of the Company having now been affixed to the registry of proprietors, he might open the business by declaring, that, although it was always pleasing to the Directors to meet a large body of the shareholders, it was more particularly so at that time, when they were enabled to report to them that a considerable revenue was then arising from the opening of the railway—that it was then yielding a very considerable profit. (Applause.) These, however, were matters which would be so much better expressed by the Report, which was about to be read, than by anything he could say, that, without occupying any further time, he would request the Secretary to read the Report which had been prepared by the Directors.

The Secretary then read the following

REPORT.

The Directors have much pleasure in meeting the proprietors after the experience of an uninterrupted half year has enabled them to ascertain the present value of the traffic, and supplied some data for calculating its future capabilities. The revenue account will show a profit on the half-year ending 31st December, 1841, of 16,841*l.* 9s. 2d. Out of this the Directors recommend that a dividend should be declared of 2*l.* 5s. per share, being at the rate of 5 per cent. on the 90*l.* per share then called, and be made payable on the 31st March. This will amount to 15,729*l.* 15s., leaving a balance of 1,111*l.* 14s. 2d., which, with the balance remaining from the last half year of 789*l.* 19s. 3d., and the amount of dividends forfeited, 2,367*l.*, will form a reserve fund of 4,268*l.* 13s. 5d.

It should be observed that the items of merchandize and coal traffic do not include the whole of the revenue accruing under those heads for the month of December, which would amount to 1,973*l.* 6s. more than is stated; and also that various expenses, amounting to 1,688*l.* 8s. 1d. have been incurred in the same month, but are not payable till a future period. The next half-yearly statement will show the exact revenue and expenditure for six months. The Directors need hardly observe that no just comparison can be made between this and any other railway from so fallacious a basis as the ratio of expenses to receipts, as such ratio must vary on different lines, according to the nature of the traffic. An increase of expenditure must be anticipated for the current half year, from the maintenance of way becoming chargeable to the revenue from the 31st March; but, on the other hand, the increase of traffic will not be attended with any perceptible increase of expense in working it, with the exception of the coal trade, any augmentation of which is accompanied by an additional expenditure of locomotive power.

An examination of the traffic will show clearly that every branch of it is susceptible of a great extension. The passenger traffic, which directs itself more quickly than any other towards a railway, can only be considered in its infancy until a direct railway communication is opened with Newcastle, and the present branch lines connecting Darlington with Sunderland, Shields, Hartlepool, and other populous places, brought to a greater state of perfection.

The carrying trade between Newcastle and the manufacturing districts is as dependant as the passenger trade on the same communication. In fish a trade has already been established, with the prospect of being greatly extended; but in this, as in the lime trade, considerable time elapses before the requisite capital is invested. The cattle and coal trade have to be turned from their former channels, and the first year presents little more than a series of experiments whereby parties satisfy themselves as to the advantages presented by the railway. The increase of the cattle trade is certain, many of the dealers having arrange for using the railway only; and in the coal trade, the sal at York, where the principal competition exists, ha this year increased 300 per cent. over those of the corresponding period of last year. This is doubly valuabl as every advantage gained over the long-established co nection of the Yorkshire coals facilitates a future increas and leads to an entension of the Durham coal trade b water from York, to districts where it has been hitherto unknown.

Since last summer, additional accommodation has been given to third-class passengers, and several small stations opened; and the Directors entertain no doubt that, by the facilities thereby afforded to trade of every description, and the general animation of the district consequent on the advantages of a railway being brought home to all classes and every village, they have laid the surest foundation for future prosperity, and for ultimately establishing a fair local traffic. The Directors are gratified in having to state that the winter has passed away without any collision having taken place, or the slightest accident having occurred to any passenger. The number of passengers conveyed during the quarter endiug 30th June, 1841, was 32,954, and in the last half year, 80,548.

The Directors have not had recourse to a valuation of the stock, believing that but little reliance can be placed upon it; but they recommend that a reserve fund should be set apart to meet the depreciation of the stock, and the present surplus of 4,268*l.* 13s. 5d. appears fully adequate to the purpose.

The forfeiture of shares announced at the last half-yearly meeting was confirmed by the special general meeting held on the 28th of December last. The stock of the Company was reduced from 9,095 to 6,991 shares; and the Directors cannot but congratulate the Company generally on being relieved from the unsound part of the proprietary. None of these shares have been re-issued, as with a prospect of an increasing income it will be more advantageous to raise the required capital by means of loans.

The arrangements for obtaining a railway communication with Newcastle by means of the Newcastle and Darlington Junction Railway have already been laid before the proprietors, and have been successfully conducted to the point of applying for the sanction of Parliament. Concurrent with this, the Directors are now applying to the same authority to enable this Company to abandon altogether that part of the line between Shincliffe and Newcastle, and to transfer to the Newcastle and Darlington Junction Railway Company their Parliamentary line between Darlington and Shincliffe.

According to the intention expressed at the last half-yearly meeting, the duties of Secretary and Superintendent are now combined in one office, and other reductions have been made, so as to reduce the establishment to the smallest possible efficient state. Captain O'Brien, the Company's former Secretary, has been elected a Director, in the place of Mr. Shields, who retired. Mr. Rutson and Mr. Priestman have also retired from the Directory; and it is recommended that these vacancies should not be filled up.

The following Directors go out of office by rotation, and are eligible for re-election: Mr. Wilkinson, Chairman, Mr. Stobart, Mr. Cargill, Mr. Elsley, Mr. Smith, of Hall Garth, and Mr. Hopkins.

The usual statements of receipts and expenditure, on the capital and revenue accounts, are submitted to the proprietors.

Revenue Account for the Half-year ending 31st December, 1841.

EXPENDITURE.

Locomotive account	£1,995 19 7	
Coaching account	1,428 5 9	
Merchandize department	178 8 6	
Coal department	595 2 3	
Carriage and waggon department	393 1 3	
Stores, balance of account	67 11 3	
Direction and office charges	268 11 7	
Rates and taxes	828 15 3	
Mileage duty	976 12 7	
	£6,282 8 0	
Interest, payable 15th January, 1842	9,385 17 1	
Balance which is in the Treasurer's hands	16,841 9 3	
Total	£32,459 14 3	

N.B. Sundry expenses were incurred previous to the 31st December, but are payable at a future period, amounting to 1,688*l.* 8s. 1d.]

INCOME.

Passenger traffic	£22,604 13 6
Merchandize traffic	4,000 16 10
Coal traffic	5,162 14 5
Conveyance of mails since the opening of the line	466 10 0
Rent	224 19 6
Total	£32,459 14 3

N.B. Part of the dues for merchandise and coal traffic for the month of December, are not included in the above statement. They amount to—

Merchandize	£583 10 2
Coals	1,389 15 10
	£1,973 6 0

MAINTENANCE OF WAY.

Extract from the Engineer's Report, 1st March, 1842.

"The cost during the three months, August, September, and October, was at the rate of 220*l.* 1s. 6d. per mile per annum; during November, December, and January, notwithstanding being winter months, we have been able to reduce the expense to the rate of 174*l.* 4s. 3d. per mile per annum.

"Though I do not think it advisable to attempt any further reduction during the spring months, yet there is no reason to doubt that in the early part of summer, and during the succeeding winter, the cost will not exceed 154*l.* per mile per annum, and will gradually decrease until it reaches the minimum of expense."

The CHAIRMAN—The Reports having now been read, if any gentleman has any observation to make, or any question to ask, we shall be happy to hear him. We desire to afford all the information in our power. (Applause.)

Mr. WATSON—There is one subject alluded to in the Report, upon which I think it is of the greatest importance the shareholders should be furnished with some information. I allude to the extension of the line northward, and I wish to ask the Directors whether the Stockton and Darlington Railway Company have any intention of effecting a deviation in that line northward, and to oppose the application of the new Company for an Act of Parliament, and whether they still adhere to it?

The CHAIRMAN—The only answer that we can give to that question is, that the new Company which is now being formed has, we believe, determined to carry an independent line of railway from Darlington to Shincliffe. It rests with that Company to do entirely as they like upon the subject, and I can only say we are not fully aware of what is their exact intention. As far as we can learn from what has transpired, we believe it is their intention to construct an independent line northward, until it meets with the new railway which is to be formed from Shincliffe, and nearly in the direction of the original line as laid down by this Company. (Applause.)

Mr. WATSON—I do not doubt the intention of this Company, but my question has reference to the intentions of the Stockton and Darlington Company. (Applause.) Whether they have any intention of opposing our Bill in Parliament or not? There can, I am sure, be no difficulty in answering this question, as many of the Directors now present are shareholders in the Stockton and Darlington Railway Company, as well as the Great North of England Railway; consequently, I again repeat, there can be no difficulty in answering the question.

The CHAIRMAN—We are not aware that any opposition will be offered by the Stockton and Darlington Railway Company, or whether they contemplate any. They have not presented any petitions.

Mr. WATSON—There are Directors in this Company who are also Directors in the Stockton and Darlington Railway Company. They have come here to meet their brother shareholders; and surely they will not hesitate to give an answer to the question at once. I do not understand why there should be any hesitation. (Hear, hear, and applause.)

The CHAIRMAN—I cannot give any other answer: I am not aware of any opposition being contemplated, nor are the Directors, I believe, better informed upon the subject.

Mr. KELL—I am by no means satisfied with the answer given to Mr. Watson's question, and I now beg to ask the Directors of this Company whether they have not received intimation from the Stockton and Darlington Company, or from some other person, of their determination to oppose the construction of this extension line? (Applause.)

Mr. OXLEY—I believe our Chairman feels himself placed in a rather difficult position, being one of a body to whom this question has particular reference. I have nothing, however, to do with the Stockton and Darlington Railway—I am entirely independent; and as a Director of the Great North of England Railway Company, perhaps I shall be able to give an answer which may meet the views of the shareholders now present. (Applause.) I may preface my observations by stating that the Directors of the Great North of England Railway Company have nothing which they wish to conceal from their brother shareholders. I think the proprietors present will give us credit for having throughout this concern acted with the most open, straightforward, and manly conduct. (Applause.) It will doubtless be known to many of the shareholders present, that the Stockton and Darlington Company have been surveying the country northward, from a point near to Aycliffe, in a direction towards which the Great North of England Railway line was intended to be carried, in order to ascertain the practicability of constructing an extension of their line of railway. It is due to that Company to state, that as soon as a Report was made upon the subject, they laid it not before their own body, but before the Directors of the Great North of England Company. Before it was published, it was presented to us, and was taken into consideration, as everything ought to be coming from such a respectable body. When the Report was presented, certain gentlemen, forming a deputation from the Stockton and Darlington Company, also attended at our Board, and gave a full explanation of the subject then before us. After they had gone thoroughly into the question, the Board, when the deputation had retired, took the matter into consideration, independent of the parties who had attended to afford explanations, and we came to a resolution upon the subject. That resolution is upon the books, and as the Directors have nothing to conceal from the meeting, the best way will be to read it. (Applause.)

The Chairman then read the resolution which was was passed on the 8th of February last, by the Directors of the Great North of England Railway Company, in reference to the subject which had been brought forward by the Stockton and Darlington Company. The resolution was in effect as follows:—That the Board having read and attentively considered the Report presented by the Stockton and Darlington Railway Company, and having also heard the explanations of the gentlemen who had attended as a deputation from that body, were of opinion, that having entered into an agreement with other parties for the purpose of carrying out the line to Newcastle, they could not consistently entertain the proposal made by the Stockton and Darlington Company.

Mr. WATSON—That resolution is just what I expected from the Railway Directors of this Company. They have entered into an agreement, and as men of honour they are bound by it. But I do not want to know what has been done by this Company. I want to know what the Stockton and Darlington Company have done. Have they made known their intentions with respect to the proposed new line northwards. There are certain gentlemen present who are Directors both in this and the Stockton and Darlington Railway Companies, and why they hesitate to give an answer I do not know. I must again press the question. (Applause.)

The CHAIRMAN—As a Director in the Stockton and Darlington Railway Company, I can assure you I should have no hesitation in answering the question, were I able, but I have no knowledge whatever that it is the intention of that Company to oppose your intended application to Parliament for a new Act. I suspect the matter has been referred to a Committee from that Board of which I am not one, and consequently I am totally ignorant as to the intentions of the Company. (Hear, hear.)

A SHAREHOLDER—Perhaps some other gentleman amongst the Directors can answer the question.

Mr. HENRY PEASE—As a member of the Board of Directors of the Stockton and Darlington Company, I have no hesitation in stating that no steps have been taken. In anything that may be done, I hope I shall be found endeavouring honestly to discharge my duty to all. (Applause.)

A SHAREHOLDER—I think the question is a very fair one, and that a distinct answer should be given—yes or no.

The CHAIRMAN—If there are any gentlemen present who can answer it, I shall be happy to hear them.

Mr. PLEWS said, it was only right that the shareholders of the Great North of England Railway should be made aware of the exact position in which they stood. He saw the difficulty in which they were all likely to be placed, and he put a motion upon the books of that Company, that upon the sale of the line one of the stipulations should be that the new Company should not diverge more than necessary beyond that originally laid down in the Parliamentary line. He afterwards attended a meeting of the new Company at York, and the subject was there brought forward, and it was there unanimously declared that the line should proceed by way of Shincliffe. He had no doubt that if the line was formed to Shincliffe, the line forward to Newcastle would then be easily managed. (Applause.) He then went on to point out the advantages of carrying out an independent line of railway. He said that if the Directors had once succeeded in effecting this great object, they would have placed themselves in direct communication with Carlisle, and they could then command traffic from Scotland. (Applause.) As every one must see that by having 60 and 33—that is 93—miles of railway before them, they should place themselves in that position that it must be a safe and good speculation. (Applause.)

Mr. HOPKINS was not aware why gentlemen should suppose the Stockton and Darlington Company would oppose the proposed new line.

Mr. WATSON—An attempt has been got up which I consider discreditable to the parties engaged in it, and injurious to this Company, and I call upon the Directors to say whether that attempt will be persevered in or not. I conceive if this attempt were to be successful—if the line of communication from Darlington to Newcastle is to be carried by the Stockton and Darlington and Clarence Railways, we may abandon all hopes of the east-coast line to Scotland, because any gentleman who sanctions the proposition for sending people round the country, will have the benefit of a Railway Company in view instead of the public convenience and good.

Mr. PEASE said, he had no hesitation in stating, as a member of the Stockton and Darlington Railway Company, what he knew upon the subject. It amounted to this—namely, that the attention of the Stockton and Darlington Company had been called to the subject of a proposed plan of railway between Newcastle and Darlington, and it was natural that they should consider how far this plan was likely to affect their own undertaking. It was well known, that the Directors of that Company had endeavoured to lend all the assistance they could, as far as their ample powers and means would admit to the Great North of England Company, in carrying out the line northward. He

Digitized by Google

knew of no opposition; he only knew the Stockton and Darlington Company had made a Report, and this Report satisfied him that there was something in the matter worthy of the consideration of the extension Company, in carrying out this line from Darlington to Newcastle. He distinctly denied that any opposition or anything of that nature to the proposed Bill of the new Company, had been stated to him by the Stockton and Darlington Company. (Applause.) In his opinion the matter stood exactly in this state; an arrangement had been entered into, so far as he was aware, by which it was understood, that the Great North of England Company should be perfectly passive, so far as regarded the extension of the line to the north—they were to take means to clear themselves of any responsibility with respect to the carrying out of the main line between Darlington and Newcastle. Notice had been given by their Company, of a Bill which was to be introduced into Parliament, in order to enable them to transfer their rights to another Company, and entirely to abandon all intention of proceeding from Shincliffe northward. In the meantime, the Extension Railway Company, had given notice of a Bill by which they proposed to take powers to approach a certain railway or railways. Then it would seem as though there had been a clear and explicit understanding with the extension Company, and that they were going to take up their (the Great North of England Company's) Parliamentary line, and proceed as far as Shincliffe, and afterwards embrace a certain line called the North Union line, originating with parties in Newcastle; and to go through Renton, and then by a series of railroads to Newcastle. Now, he wanted to know, whether any understanding or agreement existed, that their line was to be carried out as far as Shincliffe, or had they any real hold on these parties that this should be done; that was important in his estimation; and he would tell them why he wanted to know that. The Stockton and Darlington Company had given notice of their intention to construct a branch railway from a point to join the Great North of England Railway; that, he supposed, was what Mr. Watson called exceedingly discreditable; he, however, did not take the same view of it. If he understood the matter, the opposition amounted to this: inasmuch as the Great North of England Company had given notice of a deviation in their line, and the rules of the House of Commons requiring that notice should be given in March, the Stockton and Darlington Company very properly placed this notice on the books, in case any party should think it expedient to avail themselves of it. By the deviation, the proposed line would run within a half a mile of the Stockton and Darlington branch—he should not be surprised if it came within a quarter of a mile; then it would fall into the Clarence Railway, and notice was given to proceed to any distance along this railway, even to its terminus; it then seemed to take a direction proceeding from a point at the extremity of the Clarence line to Renton. They would thus see that there was a little intricacy, and it would take a clever man to see the position in which they really stood.

Mr. C. Bragg did not wish to say anything behind the backs of the Directors that he would not repeat before their faces, and he did regret that this proposition of the Stockton and Darlington Company had not been brought forward in a more open and manly way. The last time the shareholders entered that room, a proposition for forming a new Company was agreed to, and he very much marvelled that it was not then stated by the gentlemen in connection with the Stockton and Darlington Company that they intended to make a deviation in their line. (Applause.) If the plan was not then matured, they could have told the meeting that they entertained some such idea, and then they might have entered into the subject in a manner different from what had been done. (Applause.) The parties north of the Tyne would then, in all probability, have met that Company with open hands, and have considered what was most desirable to be done; for, after all, they only desired to adopt that plan which was the best for the public. (Applause.)

Mr. Pease denied that any steps had been taken to oppose the proposed new line by Shincliffe by the Stockton and Darlington Company. But, even supposing that this had been the case, if gentlemen would take the trouble of referring back even so far as the year 1822, they would find that George Stephenson had said that that was the only line by which they could get to Shincliffe; and therefore, if the Stockton and Darlington Company had made this proposition, as men of business they were perfectly justified in so doing. With respect to the observation about the monopoly in the coal trade, he stated that the Stockton and Darlington Company did not fear a competition with any other line; and if it was supposed the new Company would convey them at a cheaper rate, he believed they would find themselves greatly mistaken. (Applause.)

Mr. Priestman said, it struck him they had lost sight of that which was of the most importance to that meeting—namely, the interests of the Great North of England Railway Company; and it was not by what they, as Directors, nor was it by what any shareholder might have said or done, that that was best to be promoted. (Applause.) He was sure he could look back upon many circumstances which had taken place in the Directory, and to which he had been a party, with feelings of regret; but he could also look back upon his conduct with satisfaction, from the knowledge that he had always endeavoured to do his best under the circumstances. They were not now in a position to look back and say, "By whom were these errors made?" But it was of importance that that Company should ask of themselves, "Shall we not proceed in the very best possible manner for the interests and prosperity of the undertaking?" (Applause.) He conceived that it was of the utmost importance that, in prosecuting the line northward, the very best steps should be adopted. (Applause.) Circumstances had been alluded to, and hints had been thrown out that day which were new to him, and which would require the most serious consideration of the Great North of England Railway Company, in connection with the new Company that had undertaken to carry out the line of railway to Newcastle. (Applause.) And though some of the Directors were interested in the Stockton and Darlington Railway, he trusted and believed they would not lose sight of the interests of the Great North of England Railway Company, nor throw any obstacles or opposition in the way of the best line being taken. (Applause.) It had been his lot to hear various statements, both from engineers and other individuals, with respect to the best way of going from Darlington to Newcastle; and he wished particularly to impress upon the Directors of the Great North of England Company the necessity of not being hurried into the adoption of any one plan, because it was well known that that Company had been hurried into steps which afterwards they had cause to regret—(hear, hear)—but that they would support the line which was the best under existing circumstances. (Applause.) Although the Company might have been labouring under difficulties and discouragements, yet there was now every reason, from the state of their affairs, to take encouragement. (Applause.) He considered there was now no doubt as to the line being prosecuted northward; and he trusted that the Directors, having maturely and deliberately considered the subject, would be enabled to choose the very best line. (Applause.) The Directors having now so many lines to choose out of, would doubtless select the very best one to Newcastle. (Applause.)

Mr. Elsley—Will the Chairman permit me to ask a question? Although I am a Director of this Company, yet I am not a member of the Committee appointed to carry out the extension line, and I wish to know distinctly how we stand with respect to the new Company. I understand that certain terms were agreed upon—that is, that we were to abandon the remainder of our line to Thistleton Gap, upon certain terms—and I want to know whether the Committee have taken any steps or done anything to show that they will perform their part of the agreement entered into with the Great North of England Company. Perhaps there are gentlemen present who are members of that Committee, and can state whether any steps have been taken.

Mr. Oxley said, he would endeavour to give the fullest information in his power upon the subject. They had already stated at a former meeting that there had been a conference between the acting members of various Companies, and certain Directors, forming a deputation of the Great North of England Company, and that certain propositions were submitted to them, in consideration of which they (the Great North of England Company) were to dispose of the remainder of their line to them; that these terms were first issued or stated in the form of a letter, and afterwards their Solicitor was directed to place them in a legal form—that they had been so placed and laid before the Provisional Committee, who had given its assent to the general principle, but that they were waiting for a complete recognition of all the matters contained in the Act—that they were pressing for a complete recognition, and he believed the only point on which there was any difference arose from the fact of there being a piece of land which that Company had stipulated for, but which the new Company, in order to render the deviation of their line less, had signified that they only required a portion, instead of the whole of it. The Great North of England Company, however, having stipulated with the owner for the whole of it, considered they were bound to abide by that agreement, and they were now pressing for the settlement of this matter. (Applause.) As a member of that Committee, and as a Director of the Great North of England Company, he was of opinion that they ought not to relax in their endeavours to obtain the completion of this agreement. (Applause.) He would make one or two observations with reference to the Stockton and Darlington Railway Company, and he would say in the first instance that the best temperament in which any one could understand and accomplish that which was difficult, was to have a cool head and clear judgment. He considered, therefore, that they ought to endeavour to throw overboard anything like personal feeling or insinuation, or the attributing to parties motives which might be said to be unworthy. And he could only say with respect to the Stockton and Darlington Company, that setting unworthy motives aside, there were many established at that Board of Directors, whom he recognised as personal friends and neighbours, and who had stamped on their fronts the noble mark of being honest men. (Applause.) There were men, he was happy to say, who were members of the Board of Directors of the Stockton and Darlington Company, who would not be guilty of anything at all of an unworthy character; and he considered this was a sufficient reason why they should not cast an imputation of unworthy motives on the Directors of that Company. (Applause.) Many of the Directors were large proprietors in the Stockton and Darlington Company, and he saw no reason why those persons, as honourable men, and as men of business, should not do everything that they could in order that their property might not be destroyed. (Applause.) He called upon them not to be led by this cry or that, to turn either to the right hand or to the left, but to get to Newcastle by the best possible means. He considered that this competition was a matter rather of congratulation than otherwise, as they would in consequence be enabled to reach Newcastle on more advantageous terms. (Applause.)

Mr. Sams considered the observations which had been made, would tend to benefit the Company. He was glad that the questions had been asked, and that those explanations had been given; but as this subject had occupied a considerable portion of the time of the meeting, and as there were other matters which would claim the attention of the shareholders, he would, supposing that was the proper time, make a few remarks, which he felt, as a principle of duty he was bound to do, and which a number of gentlemen, many of whom were large shareholders, also considered ought to be made before they separated.

Mr. Elsley—Then I am to understand from what Mr. Oxley has stated, that no agreement has been signed, and that consequently we are at the mercy of the Provisional Committee, whether they will fulfil their agreement with us or not.

Mr. Oxley—We are expecting daily to receive the draft of the agreement, and having received it, we wil have it engrossed as speedily as possible and signed. I do not know that we can do anything more, as we have already pressed upon the Committee the importance of having it signed as speedily as possible. I do not suppose that any one worthy of the character of an honourable man, can refuse eo sign a document which has been prepared and assented to in the manner that this has been done. (Applause.)

A Shareholder—This Company yet retains its Parliamentary power. (Hear, hear.)

The Chairman then moved that the Report of the Directors now read be adopted and circulated amongst the shareholders.—Carried unanimously.

The Chairman next moved that a dividend of 2*l.* 5*s.* per share be now declared, and be made payable on the 31st of March, 1841, being 5 per cent. on the amount paid.—Carried.

The Chairman then said, it had been found necessary to make an addition to one of the bye-laws. He then moved that the following addition to the bye-laws be added, namely—"That every passenger travelling in a first-class carriage, having only paid a third-class fare, shall pay in addition a second-class fare for the whole distance travelled by him or her; and, in a first-class carriage, having only paid a second-class fare, or in a second-class carriage, having only paid a third-class fare, shall pay in addition a third-class fare for the whole distance travelled by him or her; and any such passenger shall, in addition, be liable to a penalty of 40*s.*"—Carried unanimously.

The Chairman next proposed the following resolution:—"And it is hereby ordered that this Company do draw and take up at interest any sum or sums of money, not exceeding in the whole, exclusive of the sums already ordered to be borrowed by this Com-

Digitized by Google

pany, the sum of 100,000*l.*, and do secure the repayment of the money which shall be so borrowed, with interest, in the manner authorised by the Act of Parliament relating to this Company.—Carried.

The Directors, who had that day retired from office by rotation, were then, after a short discussion, re-elected.

Mr. HOPKINS, one of the number, returned thanks for the honour which had been conferred upon him, and stated, that although he was a Director in the Stockton and Darlington Railway Company, he did not see why that should prevent him from doing his duty to the Great North of England Company. He believed Mr. Watson's question had been satisfactorily answered, and he trusted the shareholders were now satisfied that there had been no organised opposition on the part of the Stockton and Darlington Company, to the new line, nor was he aware that any was contemplated. (Applause.)

A SHAREHOLDER then moved, "That a list of the shareholders, with the names of persons eligible for the office of Director, marked with an asterisk, be printed before the next annual meeting, and forwarded to each shareholder, prior to the meeting."

The same gentleman next moved, "That copies of the future balance-sheets of this Company be printed prior to the next half-yearly meeting, in time for the shareholders to receive them before the meeting." After a short discussion, the resolutions were agreed to.

After some further business and complimentary votes of thanks, the meeting separated.

SHEFFIELD AND ROTHERHAM RAILWAY COMPANY—GENERAL MEETING.

[From the *Sheffield Mercury*, March 12.]

THE half-yearly general meeting of the Sheffield and Rotherham Railway Company was held at the Sheffield Station, on Monday last, at 12 o'clock; WILLIAM VICKERS, Esq., in the Chair.

H. VICKERS, Esq. (Solicitor to the Company) having read the advertisement calling the meeting,

The CHAIRMAN affixed the seal of the Company to the new list of shareholders, in compliance with the Act; and in answer to a question from one of the proprietors, it was explained that this formal confirmation was necessary to give the title to ten forfeited shares (Nos. 5,227 to 5,236, to a new possessor.

THOMAS BADGER, Esq. (also a Solicitor to the Company), was then called upon to read the Report, which seemed to give general satisfaction. It appeared that the amount of traffic during the half-year ending 31st December, did not differ materially from that of the preceding half-year. Whilst on one hand the Directors could not hold out the prospect of much increase until the long-continued depression in the trade of Sheffield should be alleviated; it could not, on the other, but be gratifying that as in such almost unprecedented times the undertaking was paying a dividend of 3 per cent., it could not fail to remunerate its proprietary to a much larger extent whenever trade should revive. The number of passengers during the half-year had been, by the local trains, 168,182 (an increase of 19,559); by the North Midland trains, 69,904 (an increase of 4,733); making a total of 238,086; and being a total increase of 24,292 passengers over the preceding half-year. The Report also congratulated the proprietors on the favourable termination of the Chancery suit instituted against them by the Sheffield Canal Company, in which it was sought to compel them to invest in the funds a principal sum, sufficient to raise 100*l.* a year, to be expended in the repair of the Wicker. The suit was commenced three years ago, and was dismissed by Lord Langdale on the 4th of last December, with costs. It appeared by the account of income and expenditure, that the half-year's receipts for passengers' traffic, by interest, and from the North Midland for engine power, &c., was 10,767*l.* 15s. 3d. The expenditure had been 5,462*l.* 14s. 4d.—leaving a balance in hand of 5,305*l.* 0s. 11d. Add to the latter the interest on calls for original shares, interest of new shares, together with the reserved fund, and a clear profit remained of 8,669*l.* 10s. 9d., out of which the Directors recommended a dividend on the original shares of 1*l.* per share, and on the new shares of 7s.; being equal to 3*l.* per cent. on the paid-up capital, and leaving a surplus for the reserved fund of 3,269*l.* 10s. 9d. (Applause.)

Mr. HARRISON, of Barnsley, moved, and Mr. RAYWOOD seconded—"That the Report of the Directors and the accounts now read, be approved, adopted, and passed, and printed for circulation among the shareholders."

After a few further words from Mr. M'Turk on the necessity of more minute detail in the rendering the accounts, which the Chairman and Secretaries said could easily be done on any future occasion if desired by the proprietors, the resolution was put and unanimously passed.

Mr. BRADLEY said, he had great pleasure in rising to move, "That, agreeably with the recommendation of the Directors, a dividend of 1*l.* per original share, and 7s. per new share, be now declared for the half-year ending December 31, 1841, being at the rate of 8 per cent. per annum."

Mr. LINDLEY seconded the motion.

Mr. INGLESON moved an amendment, that the dividend should be 10 per cent., which he argued the fund was competent to afford.

Mr. BRADLEY reasoned against so liberal a dividend, which, he said, would leave the reserved fund too small, or, at any rate, it was best to be on the safe side, since the current expenses would require something; and though he had good faith in the increase of that fund, the fact must not be lost sight of that it was not available to the ostensible amount. (Hear.)

Mr. INGLESON—I am, however, still of opinion we should have 10. (Laughter.)

Mr. M'TURK would like to know the condition the rails were in, before voting a greater dividend than that proposed.

Mr. BADGER said, they would soon need repairing, and further argued on the policy of confining the dividend to 8 per cent.

The Chairman then put the motion, which, as Mr. Ingleson's amendment had not been seconded, was carried without a dissentient.

The CHAIRMAN, after alluding to the high duty on railway traffic, and stating one instance in which it amounted to 50 per cent. of the proceeds after the cost of locomotion had been deducted, which was on the new Manchester line, called the attention of the meeting to a recent and singular project of that Company. They were, he said, applying to Parliament for power to carry the railway by Barnsley to the North Midland, by which Sheffield would be excluded from all advantages in the undertaking, unless it was the minor one from a branch in the neighbourhood of Penistone. Now, if they could come down by Wortley to the Blackburn Wheel, it would be better for Sheffield than the course intimated; and he should exceedingly regret if the Manchester Company should think of shirking Sheffield, by withholding from it all passengers which were not *bona fide* Sheffield and Manchester passengers. He mentioned these matters because several of the Company to which he alluded were present, and he thought the subject well worthy of consideration.

Mr. BADGER asked if the expense of a line coming from Penistone had been considered.

Mr. W. JACKSON said, the object was to compete with the Manchester and Leeds Railway; and if by the project mentioned Sheffield should lose some of the trade eastwards, it would, by the same rule, gain that to the west.

The CHAIRMAN—Yet it would ultimately be found that our receipts would not be so large as if it came through Sheffield.

A SHAREHOLDER here asked the cause of an apparent increase in the expense of locomotion on the Sheffield and Rotherham line.

The CHAIRMAN—It is the working of the North Midland trains; for which we shall, of course, get reimbursed. Under an old arrangement, they supplied the fuel, we the men; after that, in last May, we began to find the men and the fuel too.

Mr. IRONSIDE rose to make a proposition. During the discussion, several remarks had fallen which appeared to want reconciling. One Director had advised that they should go on with an 8 per cent. dividend till an improvement in trade would justify some increase; but as it had not been proved that bad trade was the cause of any deficiency, he would like to have the matter investigated. It might be that the expense of management was as low as possible; but let them bear in mind that the North Midland shareholders had recently had an inquiry made which elicited unexpected results; and for satisfaction sake, he should like their example in that matter to be imitated. (Hear.) He would, therefore, move for the appointment of a Committee, to inquire into the state of management, with a view to a reduction of the expenditure.

A Proprietor having seconded Mr. Ironside's motion, Mr. George Ridsdale moved an amendment in opposition to it, expressive of full confidence in the Directory, and Mr. Glover seconded it; but after some further conversation, in which Mr. Ironside said his motives had been misunderstood, the motion was withdrawn, and the amendment then proposed as an original resolution, was passed unanimously.

Mr. M'Turk then moved, and Mr. Bradley seconded, that each proprietor be supplied with a list of all the shareholders; which was supported by Mr Roebuck, opposed by Mr. Ingleson, and negatived on being put to the vote.

A Proprietor asked the cost of the works at the Rotherham station, which the Chairman said could not then be accurately stated, but would be reported next half-year. When finished, it would be one of the completest stations in the country, and might possibly cost about 3,000*l.*

It was then announced that the dividend would be paid on the 25th of March; and a vote of thanks to the Chairman having been proposed by Mr. Glover, seconded by Mr. Ironside, and unanimously passed, the meeting closed at two o'clock.

LONDON AND BRIGHTON RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL meeting of the proprietors of the London and Brighton Railway Company was held on Thursday, at the London Tavern, to receive the Report of the Committee of Investigation, appointed under circumstances that were fully detailed in our journal of the 22nd of January last. JOHN HARMAN, Esq., Chairman of the Board of Directors, presided, and there was a full attendance of proprietors.

The SECRETARY (C. R. Mackenzie, Esq.) having read the advertisement convening the present meeting, and the resolution of the previous meeting, nominating Messrs. J. M. Parsons, J. Lewis, J. C. Brown, G. E. Shuttleworth, and J. Thompson, as the members of the Committee,

The CHAIRMAN called upon Mr. Parsons, as the Chairman of the Committee, to bring the matter referred to himself and his colleagues before the meeting.

Mr. PARSONS said, the Committee had prepared a Report which they were desirous should, if the Directors had no objection, be read to the meeting by the Accountant, by whom the Committee had been assisted in their investigations.

The CHAIRMAN having stated that there could not be the slightest objection on the part of the Board to the course proposed, a motion that the Report be read was carried unanimously.

The ACCOUNTANT (Mr. Buckton) accordingly read as follows:—

REPORT.

GENTLEMEN,—For the purpose of carrying out the intention of the general meeting of proprietors, your Committee considered themselves called upon to endeavour to ascertain the causes of the excess of cost over the estimates, which, in the Directors' Report of December, 1837, were stated to amount to 1,120,000*l.*; namely, 920,000*l.* for the works, including, 80,000*l.* for management, and 200,000*l.* for land and liabilities, to various landowners.

The books, and other documents at the Company's office, not enabling your Committee to execute this intention, the requested to be furnished by the Directors with they estimate of the *quantities* of earth-work, brick-work, masonry, &c, distinguishing the viaducts, length of tunnelling, and cost of stations; and a return, under the same heads, of what had been actually executed; also, in a like form, the *sums* estimated, and those paid and due to the 31st of December last; the object being to determine how far the increase in the engineering expenses had arisen from augmentation of quantities of work performed, from advance in prices, or other causes. They also requested to be informed what quantity of land, &c. had been included in the estimate of 200,000*l.*, and the total actually taken; distinguishing the separate purchases, and the amounts paid respectively for land severance and compensation, where such items had been ascertained.

In consequence of this application, your Committee had an interview with the Chairman, and a Committee of Directors, on the 2nd of February, at which the Engineer, Solicitors, and Land-valuer, were present; when the Committee were informed, that no particulars of measurements had been supplied by the Engineer, except in the case of the Shoreham contract, which was finished, but that he purposed making them out upon the completion of the works; and the

Digitized by Google

the total quantity of land, or the details thereof, could not be then furnished, nor for some time to come, without considerable expense. The Chairman assured the Committee that it was the intention of the Directors to make out a complete and detailed account of all the expenses of the Company, from the commencement of the undertaking, and to lay the same before the proprietors.

Your Committee stated, in reply, that they had not anticipated much difficulty in obtaining information, as they were aware that the particulars sought for were supplied, in some Companies as the works proceeded; whereby parties having the management of an extensive work, might be enabled to form, from time to time, an approximate calculation of its ultimate cost, and of the adequacy or otherwise of the estimates.

It was the intention of your Committee, when entering upon their investigation, to class all the expenses of the Company under appropriate heads;—as for instance, under those of works and lands, the charges appertaining to each respectively; and so on with regard t - l the remaining expenses, distinguishing the various items as much as possible.

After their interview with the Directors, your Committee applied themselves immediately to an investigation of the accounts for the last half-year; they examined the vouchers minutely, and compared them with the books; and these with each other, in order to enable them to ascertain the manner in which the accounts were kept, and to form a correct judgment thereupon; but the length of time thus occupied precluded their extending a similar inquiry beyond the month of July, and for the residue of the half-year they made but a partial examination, and abandoned an intention originally formed, of taking a general view of the Company's affairs from the commencement of the undertaking.

The books of the Company relating to expenditure on capital account, are kept by single entry. The pass-books of the bankers constitute generally the groundwork of the accounts, whether in respect of payments or receipts. The entries are copied from the bankers' pass-books into the books of the Company, no original entries being made of receipts or payments at the office as the transactions take place, so far as your Committee can discover. Great difficulty has been found in connecting the vouchers with the books, and in ascertaining that the right sums have gone to the right accounts; and a few instances have been discovered where such has not been the case. The sums paid on contracts, and those for extra works thereon, are not separately stated, as the certificates of the Engineers include both in one sum.

The traffic accounts are kept at London Bridge station upon a plan of double entry, but the Committee are not enabled to express a decided opinion with respect to them, as they have been only incidentally referred to, for the purpose of examining vouchers, and clearing up balances included in the capital account.

Among the numerous bills that came under observation, your Committee noticed many which appeared to have been written by the same hand, though payable to different parties; and they were informed that the bills in question had been made out by two of the sub-Engineers, or their assistants. The Engineers were applied to, and they have afforded explanations, and the Committee only remark the circumstance, as the practice is irregular.

Occasionally receipts for payments were found wanting, and as the Committee ascertained that none had been received from one division of the line since the railway was commenced, they suggested that the receipts should be sent up; and a great number, as the Committee are informed, have since arrived at the office, and are in course of distribution to their respective bills. It is proper for the Committee to explain that the sub-Engineer in question, states that the late Secretary desired him to retain the receipts till asked for.

A few instances of obvious error in calculation, and omission of prices, were detected in some of the bills first noticed by your Committee, and they consider that greater care should have been generally exercised by the sub-Engineers, before certifying to the accuracy of bills. The duty of examining the bills of the sub-Engineers devolved upon a junior clerk in the office, whose remissness may be extenuated on the ground of inexperience.

The Clerks generally appear competent, under proper superintendence, to keep the Company's accounts, and they have shown readiness in the explication of them. The Committee, however, were enabled to make only very slow progress from day to day, being obliged to obtain frequent lengthened explanations to render the accounts intelligible.

The mortgage account was examined by the Committee from its commencement, and they remarked the great risk the Company incurred in the receipt of the money, from the want of precautionary measures having been adopted with respect to it.

In a paragraph in the last Report of the Directors, to which your Committee call the attention of the meeting, the amount of 2,639,000*l.* is stated in a way that led your Committee to the conclusion that the cost of the railway would amount to that sum; and as perhaps a similar impression may prevail among the shareholders, the meeting will be glad to learn that such is not the fact, as the expenditure should have been stated at 2,568,000*l.* The misstatement arose from the sum of 71,000*l.* having appeared twice, namely, once in the account to 31st December last, and a second time in the particulars of liabilities.

It appears to your Committee that a great misfortune has attended this undertaking throughout, from the want of some efficient person, in the capacity of Secretary or Accountant, or by what other name he may have been designated, who should have arranged the whole accounts upon a well-digested plan. The Committee are informed that the present mode of keeping the accounts was originally adopted by the late Secretary, assisted by the party who was then the Company's Accountant; but, in the opinion of your Committee, a Board of Directors, consisting chiefly of gentlemen engaged in commercial pursuits, should have had the accounts conducted upon a good system, the necessity of which, an examination of the accounts would have fully shown.

Your Committee, in compliance with the suggestions of the Chairman and Engineer, and accompanied by them made a journey over the line, on the 14th and 15th ultimo. The parts of the line where the chief additional expense had been incurred were pointed out; and as the heavy embankments had contributed largely to this result, the Committee were glad to learn, that the settlements had been inconsiderable, during the preceding two months. Various difficulties which had been met with, in the construction of the works, were stated at considerable length, as the Committee passed from point to point along the line: and in order to prevent any misconception on their part, they requested the Engineer to embody the substance of his remarks in a written communication, which he has accordingly done, and from which they make the following extracts:—

1st. The earthwork was originally calculated as the price of the day, but immediately afterwards a general rise of wages took place, and consequently a greater price was required for it.

2nd. The quantity of earthwork was increased to a very considerable extent, by the slopes in most of the cuttings having been made flatter, it being impossible to ascertain the exact nature of the soil at such great depths below the surface.

3rd. The slippery nature of the materials with which the embankments were made occasioned such very great slips, that the quantity of material to make the same good and increase the slopes, as well as the faggoting, draining, pounding, and puddling, occasioned a large additional expenditure.

4th. There was a very great proportion of the materials that came out of the cuttings, that was originally intended to have been made use of to form the embankments; but the experience of the use that had been made of material of the same quality, in other parts of the work, demonstrated that it was perfectly unfit and unsafe to be made use of for that purpose; the consequence was, that this bad material was obliged to be run out to spoil, and an equal quantity procured from side-cuttings; and in all these instances doubling the quantity of earthwork.

5th. The quantity of the brickwork in almost all the bridges, retaining walls, &c., was obliged to be increased to give that additional strength which the slippery nature of the earth, both in the cuttings and in the embankments, rendered necessary. Great additions were made to widen several of the bridges, and in other places bridges were demanded that had never been contemplated.

6th. The stone of the country was calculated to have been made use of; but comparatively little could be found that was of a sufficient degree of hardness, or that would stand the weather, and therefore stone was obliged to be had that came from other countries at a great extra expense.

7th. The weights of the rails and chairs, and their appendages, were all considerably increased; the experience of other railways having convinced the Directors that it would be most economical to add to their strength, as all other railways then in course of execution were adopting the same measures.

8th. The sleepers were not calculated to be Kyanised in the original estimate.

9th. The number and extent of the bridges and viaducts has been considerably augmented.

10th. The tunnels, and their culvert drains and adits, have cost nearly three times the original estimate, those through the chalk being originally calculated to require brick-arching only over the top; whereas they have required to be bricked throughout with an extra thickness of brick-work, and a considerable portion set in Roman cement., No water was ever expected to be found in the tunnels whereas during the winter season the water very much obstructed the operations and progress of the works, and on several occasions stopped them altogether for short periods.

11th. The extent and dimensions of the culverts through the tunnels, and in the deep cuttings in the chalk formation, were never anticipated to have been necessary, but fortunately they have been executed in such an efficient manner that they have been of the most eminent service during the late season, and could not possibly have been dispensed with.

12th. Circumstances have required the stations to be made of a much more extensive nature than could ever have been thought necessary; and, at all the stations on the line quadruple lines of rails have been laid down, so as to keep the main line always open, and land has been taken at the stations on the line for the use of traders, both for coal and merchandise, of which I expect a large traffic; for, unlike all other railways, there is no other communication that can compete with this railway, besides a multitude of other circumstances that it is almost impossible to enumerate.

13th. In the original estimate there was not anything set down for locomotive engines and tenders, first and second-class passenger carriages, vans, trucks, horse boxes, carriage trucks, coal waggons, coke waggons, goods' waggons, cattle waggons, engine houses, coach houses, passenger sheds, offices, warehouses, wharfs at Shoreham, coke ovens, coal stores, both at Shoreham and Brighton, and all the paraphernalia of the fitting-up and furnishing the same, &c. &c. &c. as all these articles and things were considered as belonging solely to the carrying department, and for which an estimate was originally made.

14th. In fact, the original estimate for the London and Brighton Railway was made out upon the same plan as two-thirds of all the railways that have been made were calculated upon.

15th. That is to say, for a railway with two lines of rails from terminus to terminus, with a crossing from the one line of rails to the other, at every ten or twelve miles, with a small portion of land for stations.

16th. In the same manner as all the canals in the country have been made, namely, a canal from terminus to terminus. Now, the cost of these works is the capital of the Company.

17th. The carriers upon the canal making and providing all their own wharfs, docks, warehouses, cranes, offices, boats, horses, &c. &c. &c. Now, the cost of all these establishments is the capital of the carriers.

18th. On a railway, if the Company are to become the carriers, they of course must provide themselves with the necessary means of carrying on the traffic, as enumerated in the 13th paragraph, and this capital ought to be considered as a separate and distinct capital from the railway capital.

Your Committee feel assured that their opinion on the works, considered as evidences of engineering skill, will not be expected by the meeting; their magnitude and variety are well known, and their execution has has called forth the strong commendation of the Government Engineer; but however admirable the works, or difficult their execution, it is not in such a light alone that the railway can be viewed by your Committee as individual proprietors, and still less so in their capacity as a Committee of Inquiry; they must necessarily regard it as an investment of capital, the profitable employment of which was calculated on the basis of the estimates; and as these have proved inadequate to the expenditure, a circumstance which led to their appointment by the proprietors, the necessity recurs to your Committee that the causes of excess should be explained with as much detail as possible. The works on the line are generally known, as stated by the Engineer, to be difficult of construction, and the increase of cost so far more excusable than in many other instances where similar excess has occurred; but it cannot be forgotten that the estimates were revised at leisure, by two Engineers so eminent as your own and Mr. Locke, and that, consequently, great reliance was placed upon their accuracy.

Your Committee are aware that the expense of engines and carrying establishment is not usually included in railway estimates, and that their cost must be deducted from any excess that has ocurred; but from the want of such exceptions being specified, many proprietors are liable to form an opinion that the estimate comprehends everything requisite for working as well as constructing the railway; and thus dissatisfaction is caused, which an explicit statement would have prevented.

Some of the observations necessarily made with respect to the engineering estimates, apply equally to those of land, which in our case, as in other railways, have been considerably exceeded.

The Committee may be expected to say something on the future outlay of the Company; it is a subject on which the meeting must be aware that they are not capable of forming an opinion, but they hope it will be satisfactory to state that the works, for which the additional expenditure was required, have been represented by the Engineer to be capable of correct calculation, and to have been fully provided for.

The Committee applied to the Land-Surveyor of the Company with reference to the value of your sur-

Digitized by Google

plus land, which was stated in the last Report of the Directors to amount to the sum of 60,000*l.*, and he has confirmed the statement.

The Chairman has assured your Committee, that the amount receivable from the South-Eastern Railway will be an available asset at your disposal.

It is considered by your Committee that the duty of making any remarks, except on the subject of the accounts, or incidental thereto, does not devolve upon them; but as many shareholders may expect them to offer some suggestions on the subject of the Board of Directors, they submit to the consideration of the meeting that the number should be considerably diminished; and as the Directors are divided into Committees, with defined duties, that the names of the members of each Committee should be entered in a book to be open to the inspection of any shareholder; and they urge upon the proprietary the exercise of an independent judgment with regard to the re-election of Directors going out by rotation.

The Committee in concluding their Report beg leave to offer the following recommendations:—

In the first instance. That the books of the Company should be re-constructed from their commencement, and upon a proper system, under the direction of a competent person; and be so conducted in future.

Secondly. That the payment of money on account should cease, except on delivery of bills.

Thirdly. That payments of money, raised by the Company, should be made to the bankers only, as far as the same is practicable.

Fourthly. That all bonds should in future be signed by at least two Directors, and that the seal of the Company should not be affixed to any instrument in the presence of a less number.

Lastly. That three shareholders should be nominated at the general meetings as Auditors, one or two of whom should be changed every year, and be ineligible for a period to be determined by the meeting.

The Committee beg to tender their best acknowledgments for the uniform courtesy and willingness to give information, which they have experienced throughout their inquiry, from the Chairman, Engineer, and other officers of the Company.

I. M. Parsons.
J. Lewis.
G. E. Shuttleworth.
C. J. Brown.
J. Thompson.

The concluding paragraphs of the Report, more especially those recommending a diminution in the number of Directors, and the appointment of Auditors from the share-list, were received with strong marks of approbation.

After a considerable pause,

Sir Isaac Lyon Goldsmid said, as no one seemed disposed to address the meeting, he would at once move that the Report of the Committee be received and printed for circulation among the proprietors, and that its further consideration be deferred (say) for a fortnight. There could, he thought, be but one opinion with respect to the Report of the Committee, to whom their fellow proprietors were deeply indebted for the pains they had taken in investigating the various subjects submitted to them. (Hear, hear, from the Chairman and the meeting.) It could not be expected, however, that the shareholders at large should be ready to decide at once upon matters which had for so long a time occupied the exclusive attention of the Committee, and which were of so multiform a character. Indeed he was quite sure that the opinion of the meeting would be unanimous, that a document touching upon so many subjects, and, as regarded the Engineer, embracing so many points of excuse and alleviation for the excess in the estimates to which they had been subjected—he was satisfied that such a document, however much or however little it might bear upon the main question at issue, ought not to be hastily dismissed. It was for that reason that he moved the present reception of the Report, and the future adjournment of the meeting, because he was satisfied that the Liverpool and Manchester proprietors were looking with extreme interest to the Report, not only as a guide to them in estimating the future prospects of this particular railway, but as forming the means of enabling them to judge of other similar undertakings which had now assumed a character of first-rate importance (Hear, hear, hear.) He begged, therefore, to move the resolution to which he had already referred.

Mr. Amory, after adverting in complimentary terms to the labours of the Committee, said, he had great pleasure in seconding the motion.

The Chairman said, he should feel exceedingly sorry to offer any, even the slightest, impediment to the passing of the motion of the honourable Baronet, but he could not help feeling that as the Report of the Committee was admitted on all hands to be so satisfactory, and as the honourable Baronet himself had asserted that the Liverpool and Manchester shareholders would be anxious to get possession of it, it would answer no good purpose to adjourn the present meeting. (Hear, hear.) They must all be aware, that under certain circumstances—under such circumstances as the present—the adjournment of a meeting had a tendency to depreciate the property of a Railway Company. The public would suppose that there must be some strong reason for such adjournment, and that it showed dissatisfaction with existing arrangements. Under these circumstances, he begged to suggest—although neither he nor his colleagues would offer any opposition to the motion of the honourable Baronet—whether it would not be better that the Report of the Committee should at once be received and adopted, and as the general meeting of the Company was not very far distant, that any questions which could not be fully and satisfactorily answered at the present moment, should be deferred till that time. (Hear, hear.) At the same time he would repeat, that the Directors would offer no opposition to the motion for an adjournment.

Mr. Mahon thought it desirable, before they decided upon not having an adjournment, that the Directors should pledge themselves to take measures for carrying into effect the recommendations of the Committee. (Hear, hear.)

The Chairman said, if the Committee's Report were adopted by the meeting, it would become the duty of the Directors to carry out the recommendations contained in it; and, for his own part, he had not the slightest objection to any one of them. (Hear, hear, hear.) He trusted the meeting would not imagine that he or his colleagues were averse to the appointment of a Committee of Inquiry. (Hear, hear.) For himself, he was most anxious that such a Committee should be appointed, and he had only felt afraid, towards the conclusion of the last meeting, that it would have been impracticable to carry out the motion. (Hear, hear, hear.) He was happy that the Committee had been appointed, and he gladly embraced that opportunity of expressing his sense of the extreme courtesy which on all occasions had been displayed by the gentlemen constituting it. (Hear, hear, hear.)

Sir I. L. Goldsmid thought it quite impossible that they could at once decide upon the suggestions thrown out in the Report. For his own part, he deemed them most important, but as he understood that the contents of the Report had never been promulgated till now, he thought they ought to be allowed a little breathing time to consider the character and extent of the propositions which it embodied. The engineering points were new to him, and new, he doubted not, to many others of the proprietors, and so too were the recommendations with which the Report concluded. They certainly appeared worthy of adoption, but there could be no harm in giving a little time for reflection.

The Chairman begged to say one more, that neither he nor his colleagues would offer the smallest objection to the motion.

Sir I. L. Goldsmid hoped he should not be understood as expressing any dissatisfaction with the Report of the Committee. It appeared to him at the first blush, as if their recommendations ought to be carried out to the fullest extent, but there were probably other points upon which the proprietors would desire to be informed. They might, for example, wish to know the extent not only of their current receipts, but of the corresponding disbursements, so as to ascertain the real value of their property irrespective of the fluctuations in the price of shares which from time to time occurred. The course which he suggested was adopted in Mine Companies, and Dock and other Companies, and the example might, he thought, be followed with advantage in this and similar undertakings. He did not say that he would offer, at an adjourned meeting, these or any other suggestions; but if such adjournment took place, he would turn his attention to them. Till July, the date of the general meeting, was a long time, and in the meanwhile the business of the Company was going on. He trusted, therefore, the adjournment would be agreed to, were it only in compliment to the Committee. (Hear, hear, from the Chairman.) He, and he supposed others also, had caught but imperfectly the Report of the Committee, and he hoped that the motion for postponement would therefore be unanimously agreed to. (Hear.)

Mr. Amory thought it would be as well to waive the latter part of the motion—namely, that relative to an adjournment—as it appeared from the statement of the Chairman that the recommendations of the Committee would be attended to.

Mr. Parsons hoped that Sir I. L. Goldsmid did not consider that the Committee had neglected the consideration of the working expenses of the line. Their attention, however, had been mainly directed—and he would assure the meeting that they had found quite enough to do—to the Company's capital account. It had only been incidentally, as explained in the Report, that they had investigated the traffic account, and therefore they had offered no suggestion respecting it. Further inquiry might perhaps have led to some practical suggestion, but the Committee had confined themselves to a particular department.

Mr. James Whishaw would be glad to know if the honourable Baronet meant to divide the meeting on his motion, because if so, it would be his duty to propose an amendment. He trusted, however, that they would be as unanimous with respect to the adoption of the Committee's Report, as they were in expressing their obligations to the Committee. (Hear, hear.) He could not see what beneficial results would arise from the adjournment of this meeting. If they were to adjourn for six months, they could not understand more completely than the Committee, the present position of their affairs, nor even so completely. (Hear, hear.) The adjournment, therefore, could not be useful to them, while it could scarcely fail to be most injurious to the undertaking. (Hear, hear.) He was satisfied that all the proprietors must concur in the recommendations of the Committee. (Hear hear, hear.) First, there was the diminution in the number of Directors, an arrangement which he

Digitized by Google

considered indispensable to the efficient conduct of the Company's business. Then, there was the reconstruction of the Company's accounts, a recommendation which he deemed of inestimable importance, since the Report of the Committee abounded in evidence that hitherto the accounts had not been kept in that regular and systematic, and satisfactory manner which ought to characterise the financial statements of public Companies. The Committee had shown sufficient reason why a better system—a system approved of and recommended by the practice of other commercial bodies—should be adopted. The recommendation that the Committee's bonds should be signed by at least two Directors, and sealed in their presence, appeared so necessary a precaution, and one so called for by the circumstances of the case, that he could not suppose there would be any opposition to it. (Hear hear.) The last recommendation, as to the appointment of Auditors, seemed a *sine qua non* in this Company. (Hear, hear.) If Auditors had been appointed displaying the same ability, zeal, and rigid scrutiny as this Committee, it was quite clear to his mind that there would not have been that extravagant, that vast, and as he conceived, unnecessary, outlay which from the first had characterised the operations of this Company. (Hear, hear.) Under all the circumstances, he thought there was no necessity for another meeting, as they could not come to it more fully acquainted with the position of the Company, nor better prepared to discuss its bearings, than at present. (Hear, hear.) The certain result of an adjournment would be, to depreciate the shares of the Company in the market, and have in every respect an injurious tendency upon their property. (Hear, hear.) If, therefore the proposition of the honourable Baronet were pressed, he should feel it his duty, as a humble proprietor, to move as an amendment, that the words relative to the adjournment of the meeting be omitted. (Hear, hear, hear.)

Mr. PARSONS said, the Committee had no opinion to express upon the subject. He did not believe that the motion of Sir I. L. Goldsmid had originated in opposition to the Report of the Committee, but quite the contrary. ("Hear, hear," from Sir Isaac.) If any further information were required, he should have great pleasure in giving it, taking care to say nothing that would tend to the injury of the undertaking—*there* the lips of the Committee were sealed. (Hear, hear, hear.) Whether now, or at any future meeting, the Committee were prepared to lay before the proprietors every information in their power; but he was not aware that they had anything of the slightest importance to communicate which was not already embodied in the Report. (Hear, hear, hear.)

A PROPRIETOR wished to know what was likely to be the entire cost of the railway?

Mr. PARSONS said, this inquiry did not at all fall within the department of the Committee.

The amendment was then put, when only two hands (those of the mover and seconder of the motion) were held up against it. Subsequently, in consequence of the omission of the word "*adopted*," the amendment was again put, and carried *nem. con.*

Mr. WALEY said, nothing could be more business-like than the Report of the Committee. (Hear, hear.) It was deserving of all praise; but in his mind the greatest praise that could be extended to it was, that the utmost secresy had been kept with respect to the Committee's proceedings. (Hear, hear, hear.) He (Mr. Waley) had been in a position to hear any rumours that might have emanated from the Committee-room, but he declared upon his honour, that neither his friends nor himself had the most remote notion of any one sentence of the Report until they had heard it read that day. (Hear, hear, hear.) He thought the promulgation of this fact would be gratifying to the feelings of those who had undertaken so arduous a task. (Hear, hear.) It was not, however, to express this feeling, but to ask a question or two, that he had risen on the present occasion. He should be glad, then, to know if the amount raised, and proposed to be raised on loan, would suffice to finish the railway and its appurtenances; and also when the sum to be paid by the South-Eastern Company was likely to be forthcoming; and whether it would be applicable to the general purposes of the Company?

The CHAIRMAN said, he had no difficulty whatever in answering the first question. The Directors had every reason to believe that the amount referred to would be quite sufficient. (Hear, hear, hear.) As to the payment by the South-Eastern Company, it was quite impossible for him to form any opinion, as the Board had received no definite communication on the subject.

Mr. WALEY might, perhaps, put the question more clearly, by asking if the amount derivable from the South-Eastern Company, when paid, would be available to the Brighton Company.

The CHAIRMAN—Most undoubtedly—most undoubtedly.

The DEPUTY-CHAIRMAN — (Mr. Maclean)— Every shilling of it.

Mr. WALEY said, he had put the question, although somewhat out of order, for the information of himself, and of many proprietors out of doors. It was not mentioned in the Report.

Mr. PARSONS begged the honourable proprietor's pardon. It *was* mentioned in the Report.

The Accountant thereupon, at the request of Mr. Parsons, read the passage in the Report, expressive of the Chairman's opinion that the amount to be received from the South-Eastern Company would form part of the available receipts of the Company.

The CHAIRMAN said, he had no hesitation in repeating that opinion. (Hear, hear.)

Sir I. L. GOLDSMID wished to know from what fund the interest upon the 600,000*l.* already authorised to be borrowed, and the 300,000*l.* now in the course of being raised, was to be paid. They were at present taking upon the line an average sum of about 1,900*l.* a week, which was not more than enough to pay the working expenses of the railway, and he should therefore be glad to know from what source the payment of interest was derived.

The CHAIRMAN thought the honourable Baronet was quite out of order. (Hear, hear.) The meeting had been called for a specific purpose, and to that purpose they ought to confine themselves. At the same time he had no desire not to answer any reasonable question, but he thought the question now put wholly unreasonable. If the honourable Baronet took as his data for the future prosperity of the railway the present earnings of about 2,000*l.* a week, he did not suppose that the other proprietors would be willing to agree with him—(hear, hear,)—at any rate he would submit to the meeting whether they ought at present to go into the question broached by the honourable Baronet. (Hear, hear hear.) He was not aware whence the honourable Baronet derived his information as to the present position of the railway.

Sir I. L. GOLDSMID said, he obtained his information from the newspapers.

The DEPUTY-CHAIRMAN said, the honourable Baronet was wholly mistaken in supposing that the railway did not do more than pay its expenses.

The CHAIRMAN would repeat that he did not conceive this to be a proper question. If he had thought that such a question would have been put, he would have come prepared fully to answer it. He might even now give an answer which, to the best of his judgment, he should deem right, but if it should happen to be in any respect erroneous, there was no doubt that he should be "twitted" with it at the next meeting. He begged therefore to decline answering the question of the honourable Baronet. (Hear, hear, hear.)

Sir I. L. GOLDSMID must, he supposed, be satisfied without obtaining full information as to the value of his property?

Mr. CATTLEY (a Director) thought the Chairman had exercised a sound discretion in refusing to answer the question of his friend the honourable Baronet. (Hear, hear.) He could not conceive any question framed by the ingenuity of man more likely than this to prejudice the undertaking. (Hear, hear, hear.) For what good purpose could it be proposed? If, as the honourable Baronet asserted, the receipts were now such as to leave nothing divisable among the proprietors, he was quite sure that it was not for the interests of the proprietors that it should be promulgated.

Sir I. L. GOLDSMID thought, if there were likely to be no receipts divisable among the proprietors, they ought at once to know it. He had long been anxious that some light should be thrown on the Company's accounts, and now that a beginning had been made, he hoped his friend Mr. Cattley would not seek to stifle inquiry.—[Mr. CATTLEY—never.]—The proprietors ought to know what were their weekly receipts—[Mr. CATTLEY—They are regularly published], and they ought moreover to know what was their current and corresponding expenditure. Their capital was now set down at 2,568,000*l.*, but as it was evident that the interest on loans must come out of the capital, it was probable that the amount must ultimately be increased. There was another question which, had the meeting been adjourned, he should have wished to put, namely, whether the Act of Parliament to legalise the borrowing of the further sum of 300,000*l.* was to be applied for during the present session.

The CHAIRMAN said, there could be no difficulty in answering such questions, although he did not think it prudent that the honourable Baronet's previous question should be discussed.

Sir I. L. GOLDSMID said, if the meeting had been adjourned he should have been prepared to lay a string of questions before the Directors. (Laughter.) Honourable proprietors might smile, but he would appeal to the Committee whether, if such inquiries had been commenced at an earlier period, the present position of the Company would not have been very different.

Captain KELLY said, the present meeting had been convened for a specific purpose, and it was not for the Directors to open up such matters as had been mooted by the honourable Baronet. Even

Digitized by Google

if it were competent for them to enter into this subject, he did not think it would be prudent or politic to do so at the present moment. (Hear, hear.) It would be much more wise to defer the consideration of these questions till July, or to a later period, when the traffic of the railway would be more fully developed. (Hear, hear, hear.)

The CHAIRMAN said, although the business for which the meeting had been convened was now at an end, he hoped they would not separate without agreeing with him in the propriety and justice of passing a vote of thanks to the Committee of Inquiry. (Applause.) The office of such a Committee was not the most pleasing, but the way in which the appointment of the Committee had been made at the last meeting, went far to extract the sting from the usual procedure in such cases. (Hear, hear.) Nothing, in his opinion, could exceed the good feeling which had been displayed at the meeting referred to, for although at first there had been some slight disagreement, the utmost harmony had characterised the close of the proceedings, and he was sure that no one had left the room without being convinced of the good feeling entertained by the Directors. (Hear, hear.) As for the Committee, he must say, that they had conducted everything in an excellent spirit, and he had no doubt that that body could reciprocate the acknowledgement as regarded the Directors. (Hear, hear.) Had the Directors exhibited any hostility or indisposition to give information, the difficulties of the Committee would have been much increased. (Hear, hear.) The Committee were fully entitled to the best thanks of the proprietors, and it was with the utmost cordiality that he proposed that such thanks be now tendered. (Much applause.)

The motion having been seconded from several parts of the room,

Mr. WALEY hoped that honour would be acceded to him, and for this reason, that at the last meeting he had proposed the resolution for the appointment of the Committee. A Report more business-like, or exhibiting more care, had never been presented to a public meeting; and he was quite sure that when its contents became known to the proprietors generally, and to the public, their confidence in the stability of the undertaking would be increased. (Hear, hear.) The proprietors ought to bear in mind, and he hoped the public also would bear in mind, that the Brighton Railway had at the outset to contend with many unforeseen difficulties, but he trusted that these difficulties were now overcome. The example of the past could form no sure basis for judging of the future. The errors and difficulties of by-gone days had been seen, and would hereafter be avoided; and he had no doubt that whatever anticipations might have been entertained as to the traffic of the line would ultimately be more than realised, and that the proprietors would have cause to congratulate each other upon their favourable prospects. The clouds which had hovered over them were now giving way to the sunshine which he trusted would henceforth continue to gild their path. He most cordially seconded the vote of thanks to the Committee, whose great exertions were beyond all praise. (Hear, hear.)

Sir I. L. GOLDSMID said, he entirely concurred in the motion; and although he might not quite agree with his friend Mr. Waley in thinking that the clouds which had enveloped the undertaking were now fully dispersed, he was sure that nothing would tend to effect that object so much as carrying into effect the recommendations of the Committee, as he had understood from the Chairman would at once be done. (Hear, hear.) He congratulated the proprietors on this first step. He was deeply interested, on many accounts, in the success of the Brighton Railway; and individually he begged to offer the warmest expressions of his gratitude to the Committee. (Hear, hear, hear.)

The motion was then carried by acclamation.

Mr. PARSONS returned thanks. He had to thank the meeting in his own name, and in the names of his colleagues, for their very flattering acceptance of the Report, which was in itself a sufficient recompense for all the labour they had undergone. The remarks which had been made as to the secresy observed by the Committee were most gratifying. The Committee had felt that every hint as to the character or results of the investigation ought to be withheld until the inquiry was fully completed, and an account rendered to those who had appointed them; and accordingly from the first they had carefully avoided giving any intelligence whatever. (Hear, hear.) With respect to the carrying out of the Committee's recommendations it was highly gratifying to his colleagues and himself that their suggestions had been received, as they desired them to be of a practical character, and he was glad to find that the Report was to be printed. He begged to add that the Committee had been much assisted by the indefatigable labours of Mr. Buckton, the Accountant, who had been recommended to the Committee from an influential quarter, and which recommendation had been proved to be amply merited. (Applause.)

After a pause,

Mr. PARSONS begged leave to propose a vote of thanks to the Chairman of the Board, for the uniform courtesy and kindness with which he had treated the Committee.

The motion having been seconded by another member of the Committee, was carried by acclamation amid loud applause.

The CHAIRMAN expressed his great gratification at receiving this additional mark of confidence and kindness. With respect to the recommendations of the Committee, he would remind the meeting that some of them—such as the entire re-modelling of the accounts—required time and reflection for carrying them fully into effect. All, however, that could be done for carrying out the views of the proprietors should be done, and in a word, the meeting might separate with a full understanding that the Directors were prepared and anxious to carry out the spirit of the Committee's recommendations. (Much applause.)

The meeting then broke up.

[We beg to express our acknowledgments to Mr. Parsons for his kindness in affording us facilities for obtaining a copy of the Committee's Report.]

KAVANAGH *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

To the Editor of the Railway Times.

SIR,—I have just read with much surprise in your usually correct paper a short report of a trial in which I am the plaintiff. Among other incorrect inferences, and which you call the "short *facts* of the case," you assert,—"As there were *seven* pieces of land, he insisted on having seven distinct communications by bridges or arches, a monstrous construction, as the judge (Baron Gurney) told the jury in his admirable summing up."

Had you published the trial, or read the report, I doubt not you would have discovered that the rights of way in dispute amounted to *two* only, and that one of them did not necessarily require a bridge or arch; that three of the pieces of land ran parallel to each other, and could not by possibility require more than one right of way across them; and that your statement of my insisting upon seven distinct communications by bridges or arches, is a monstrous untruth, and impossible.

What I then required, I shall still obtain, and you will yet have to report it, not in an exaggerated paragraph, but as the just right of

Sir, yours very truly,
W. H. KAVANAGH.

South Devon, March 15, 1842.

NOTE BY THE EDITOR:

In answer to the above we extract from the short-hand writer's notes now before us, the following sentences:—

"Mr. PLATT (in his opening speech for plaintiff) after quoting from the deed—So that here the Railway Company were content to take these pieces [the seven] subject to a right of way *over each and every* of them, to pass from the land on the one side [of the railway] to the land on the other.

"Mr. SERJEANT CHANNEL (for plaintiff)—With reference to this plan there are several parcels of land conveyed—*seven in number*, and *we claim one way over each of these seven pieces.*

"Mr. BARON GURNEY—The contention of the counsel for the plaintiff is this, that he is to have a distinct communication from every piece of land.

"Mr. PLATT—No my lord; over all these pieces of land that are conveyed, *each of the seven.*

"Mr. BARON GURNEY— * * * It would be just as reasonable, and I should think it the *most monstrous construction*, to say that you are either to abridge the pond, &c., &c. * * Then, gentlemen, the question will be whether the plaintiff has a right to have a cutting or to have a bridge there—whether he has a right to that at every one of these several [seven] points. Now I confess I cannot think that that is a reasonable construction of the deed," &c.

TRAFFIC RETURNS—GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—In common with many of your readers, I am desirous to ascertain how far the "Official Railway Traffic Returns," which you publish weekly, may be trusted as an index of comparative income?

I cannot satisfy myself that the returns are not influenced, to a very considerable extent, by the system followed. To explain my meaning more fully, let us look at the goods' traffic of the London and Birmingham and Grand Junction Railways. There is nothing in the system followed by the former to lead us to doubt the correctness of the returns; but is it so with the latter? Look, for instance, at their advertisement to charge earthenware, from the Staffordshire Potteries to London, at 55s. per ton. They are now, I believe, carrying it at that price. What portion of this charge do they include in their returns? When the expenses unconnected with their own line have been deducted, small indeed is the portion left for the proprietors, a few shillings per ton being the outside, from which to pay expenses and losses incidental to the trade and profit. (?) This is not a solitary case, their whole carrying trade being of the same character—heavy, very heavy, drawbacks on every article conveyed on to London. Other Companies are in the same plight, and may be making their gross returns without taking off those deductions which necessarily arise to lines in the same position as the Grand Junction, having canal charges and London and Birmingham Railway charges, as their net returns—as those returns in fact which ought to enable me to form a correct approximate estimate of the true value of a line—and net returns which, having on their faith invested my money, I find thousands of pounds to be deducted from at the half-yearly meeting.

I am, Sir, yours, &c.,
A HOLDER.

NOTES TO THE TRAFFIC TABLE,

(On the opposite page.)

2. *Misses* toll to London and Birmingham 39*l.* 13s. 2d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

9. Goods and Sunday Trains not yet commenced.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134⅓ (83⅓+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The rent of the branch lines is together 90*l.* 16s. 11d. per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works. The traffic being heretofore made up monthly, the receipts are for five days only.

17. The 32*l.* 6s. 7d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 16s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone. In consequence of some repairs having to be done to the machinery at Blackwall, the Trains on *Tuesday, Wednesday, and Thursday*, only ran every *half-hour* instead of every *quarter*.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (1,839), 60*l.* 6s. 11d.; goods (537 tons), 50*l.* 13s. 11d.; total, 111*l.* 0s. 10d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,188*l.* 4s. 2d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 22*l.* 18s. 0d.; horses, 24*l.* 18s. 0d.; dogs, 0*l.* 17s. 0d.; parcels, 206*l.* 16s. 5½d.; cattle, 48*l.* 19s. 0d.; corn, 13*l.* 0s. 10d.; heavy goods, 493*l.* 7s. 9d.; coal, 118*l.* 0s. 5d. — Total, 928*l.* 9s. 5½d.

31. The details of the receipts are as follows—Passengers, 1,850*l.* 16s. 9½d.; parcels, carriages, horses, and mails, 199*l.* 12s. 5½d.; merchandise, 1,220*l.* 11s. 1d.; minerals, 225*l.* 7s. 6d.; cattle, 40*l.* 14s. 10½d.—Total, 3,537*l.* 2s. 8½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 114*l.* 17s. 6½d.

32. The receipts are after deduction of Leeds and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED LAST WEEK.

Manchester and Leeds Railway	337

TO CORRESPONDENTS.

Vator Major.—*We are inclined to think that the blame rests with the* other *party, and should the irregularities again occur, it is probable that the matter may be investigated elsewhere.*

An Official.—*No Reporter of the name of* Thomas *is now, or ever has been, connected with the* Railway Times, *directly or indirectly. Will our correspondent oblige us with full particulars?*

Sir Robert Peel and Railways.—*Had our correspondent* Publius *(in whom, by the way, we think we recognise an old friend under a new name,) confined himself to the probable effects of the proposed income tax on railways and stage-coaches, we should have published his communication, notwithstanding that, as he will see by an article elsewhere, we hold views differing very materially from his own. But we cannot give currency to a political tirade.*

We think Mr. G., of Brighton, must be in error.

The London Saturday Journal.—*Several numbers of this cheap weekly periodical have been forwarded to us. It is now under the management of Mr. John Timbs, for many years Editor of the* Mirror, *and does credit to the acknowledged ability and taste of that gentleman.*
